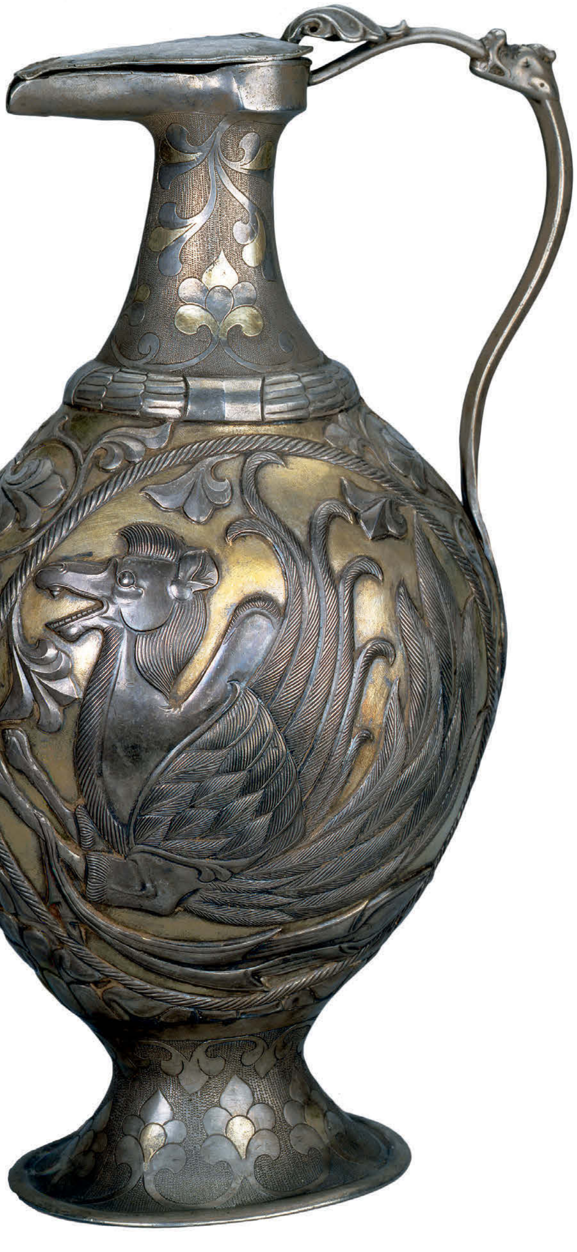
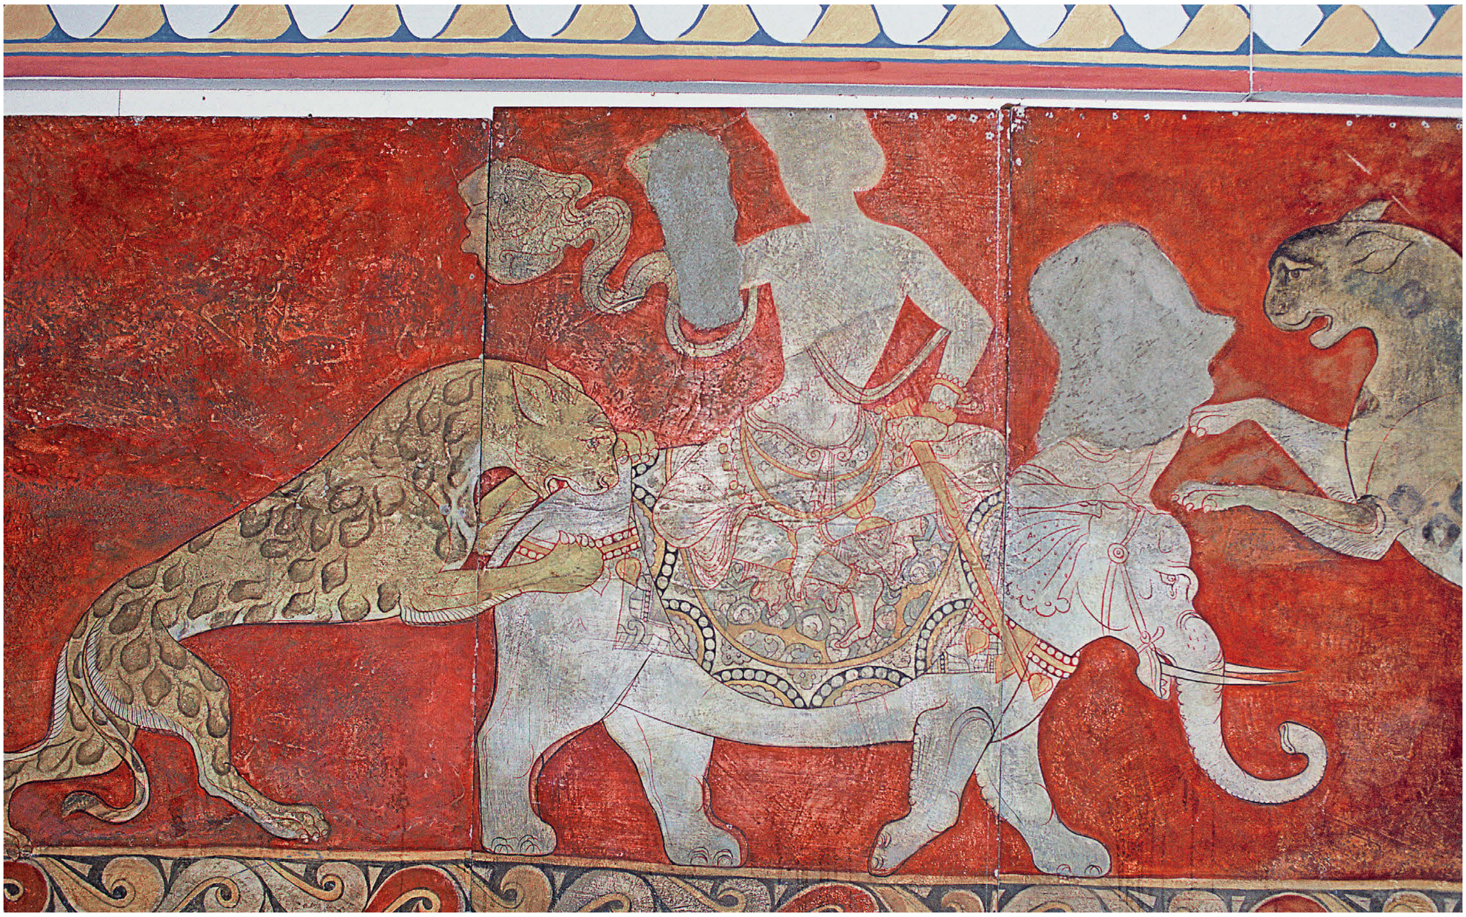
peacock. He probably represents the god of victory, **Vashagn**,[63] or the god of rain, **Tishtrya**,[64] although what speaks against the identification with Tishtrya is Grenet's and Marshak's suggested iconography of the rain god in which his mount is a white horse.[65] But if we assume that Karttikeya represents Tishtrya, then it is very likely that the camel god represents **Vashagn**.[66] Otherwise we should consider Grenet's interpretation according to which the camel god **Farn** was the personification of divine glory.[67]

A special place within the pantheon is held by the four-armed goddess **Nana** who rides a lion or sits on a lion throne and holds anthropomorphic representations of sun and moon in her upper hands (fig. 191). She was probably venerated as city goddess in Panjikant.[68] Nana was originally a Mesopotamian goddess named Inana, who took over many aspects of the goddess of fertility, love and war, Ishtar, who in the late Assyrian period was venerated as daughter of the moon god Sin and sister of the sun god Shamash.[69] Inana also adopted Ishtar's attribute animal, the lion.[70] Elements in Sogdian depictions of Nana that are not of Mesopotamian origin include her posture, which is that of a Sassanid king, her four arms and her conflation with the water goddess, Anahita.[71] Since in Sogdian and Chorasmian iconography Nana holds sun and moon in her hands, she was seen as mother of these two heavenly bodies in Sogdiana and Chorasmia. Whereas the most important deities were modelled on those from the Hindu pantheon, in Nana's case it is exactly the inverse. Nana figures on both pre-Kushan and Kushan coins as well as on the gold belt from Grave 4 of Tillya Tepe.[72] It can therefore be surmised that representations of the goddess Nana from pre-Kushan, Kushan and Sogdian times decisively influenced the iconography of the Hindu goddess Durga Simhavahini.[73]

The decoration of the sumptuous rooms of the citadel and of wealthy private houses in Panjikant from the late sixth or early seventh to eighth century resembled an illustrated compendium of Greco-Roman, Iranian and Indian legends and parables.[74] Among the best-known Hellenistic representations are the slaughter of the goose that laid golden eggs by its all too greedy owner, and the parable of the unbreakable bundle of arrows with which a dying ruler demonstrates the power of unity, which was also known to the Crimean Scythians.[75] Part of the heritage from Roman legends is the Capitoline Wolf from the Palace of Kala-i Kahkaha near Bunjikat, north-east of Panjikant.[76] The standing she-wolf, with her gaze directed behind her, suckles the two boys and later founders of Rome, Romulus and Remus. There is no doubt that what is represented here is the Roman state foundation myth and not the Old Turkic legend about the founder of the clan of the Ashina, for there are two boys with hands and feet in the image whereas in the Turkic fable there is a single boy whose arms and feet are amputated. Especially notable among the Indian parables in Panjikant are the one that tells of the clever hare who tricks the threatening lion into jumping into a well to fight his mirror image, and the one that concerns the resurrection of a beast of prey. In this parable, slightly adapted from the original tale in the *Panchatantra*, three learned brahmins and an uneducated brahmin come upon a pile of bones which are part of a lion skeleton. The three learned brahmins decide to try out their wisdom on the



196. Gilt silver jug with the depiction of a winged camel, produced in Sogdiana, 7th to 8th c. The winged camel very probably represents the Sogdian god of war and victory Vashagn or Farn. State Hermitage Museum, St Petersburg.

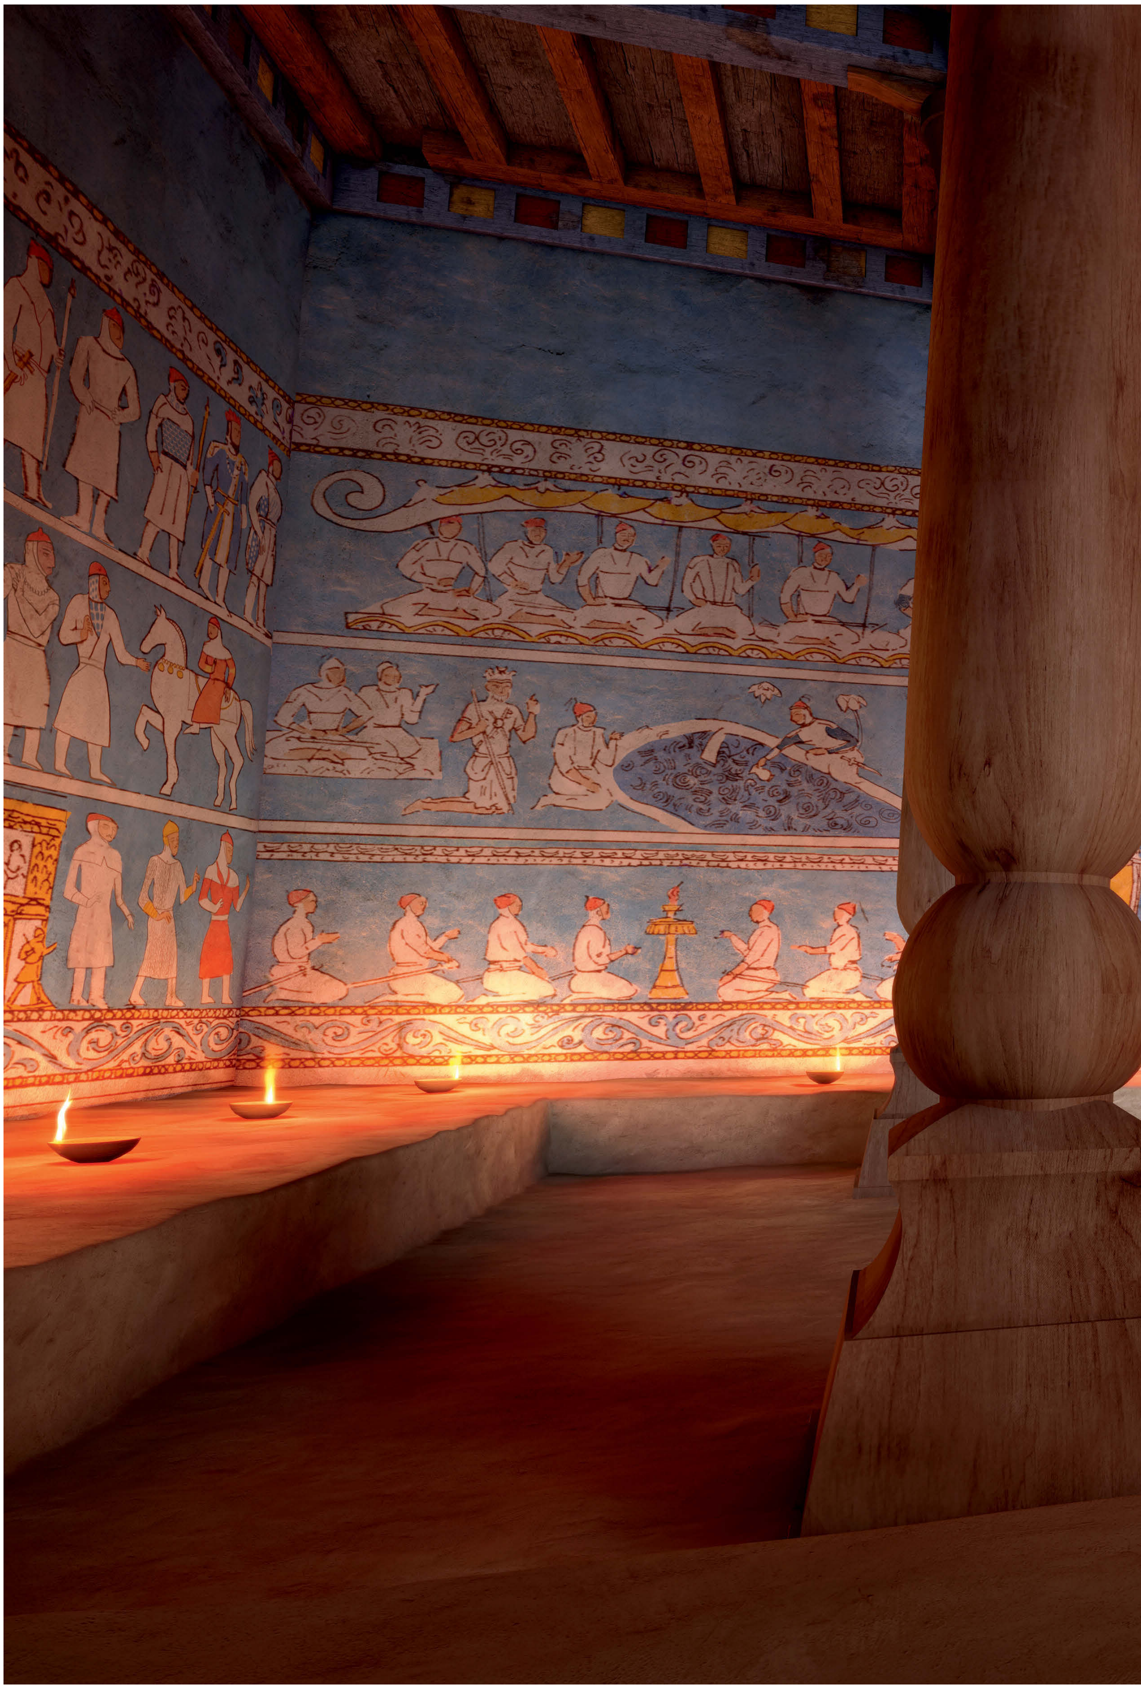


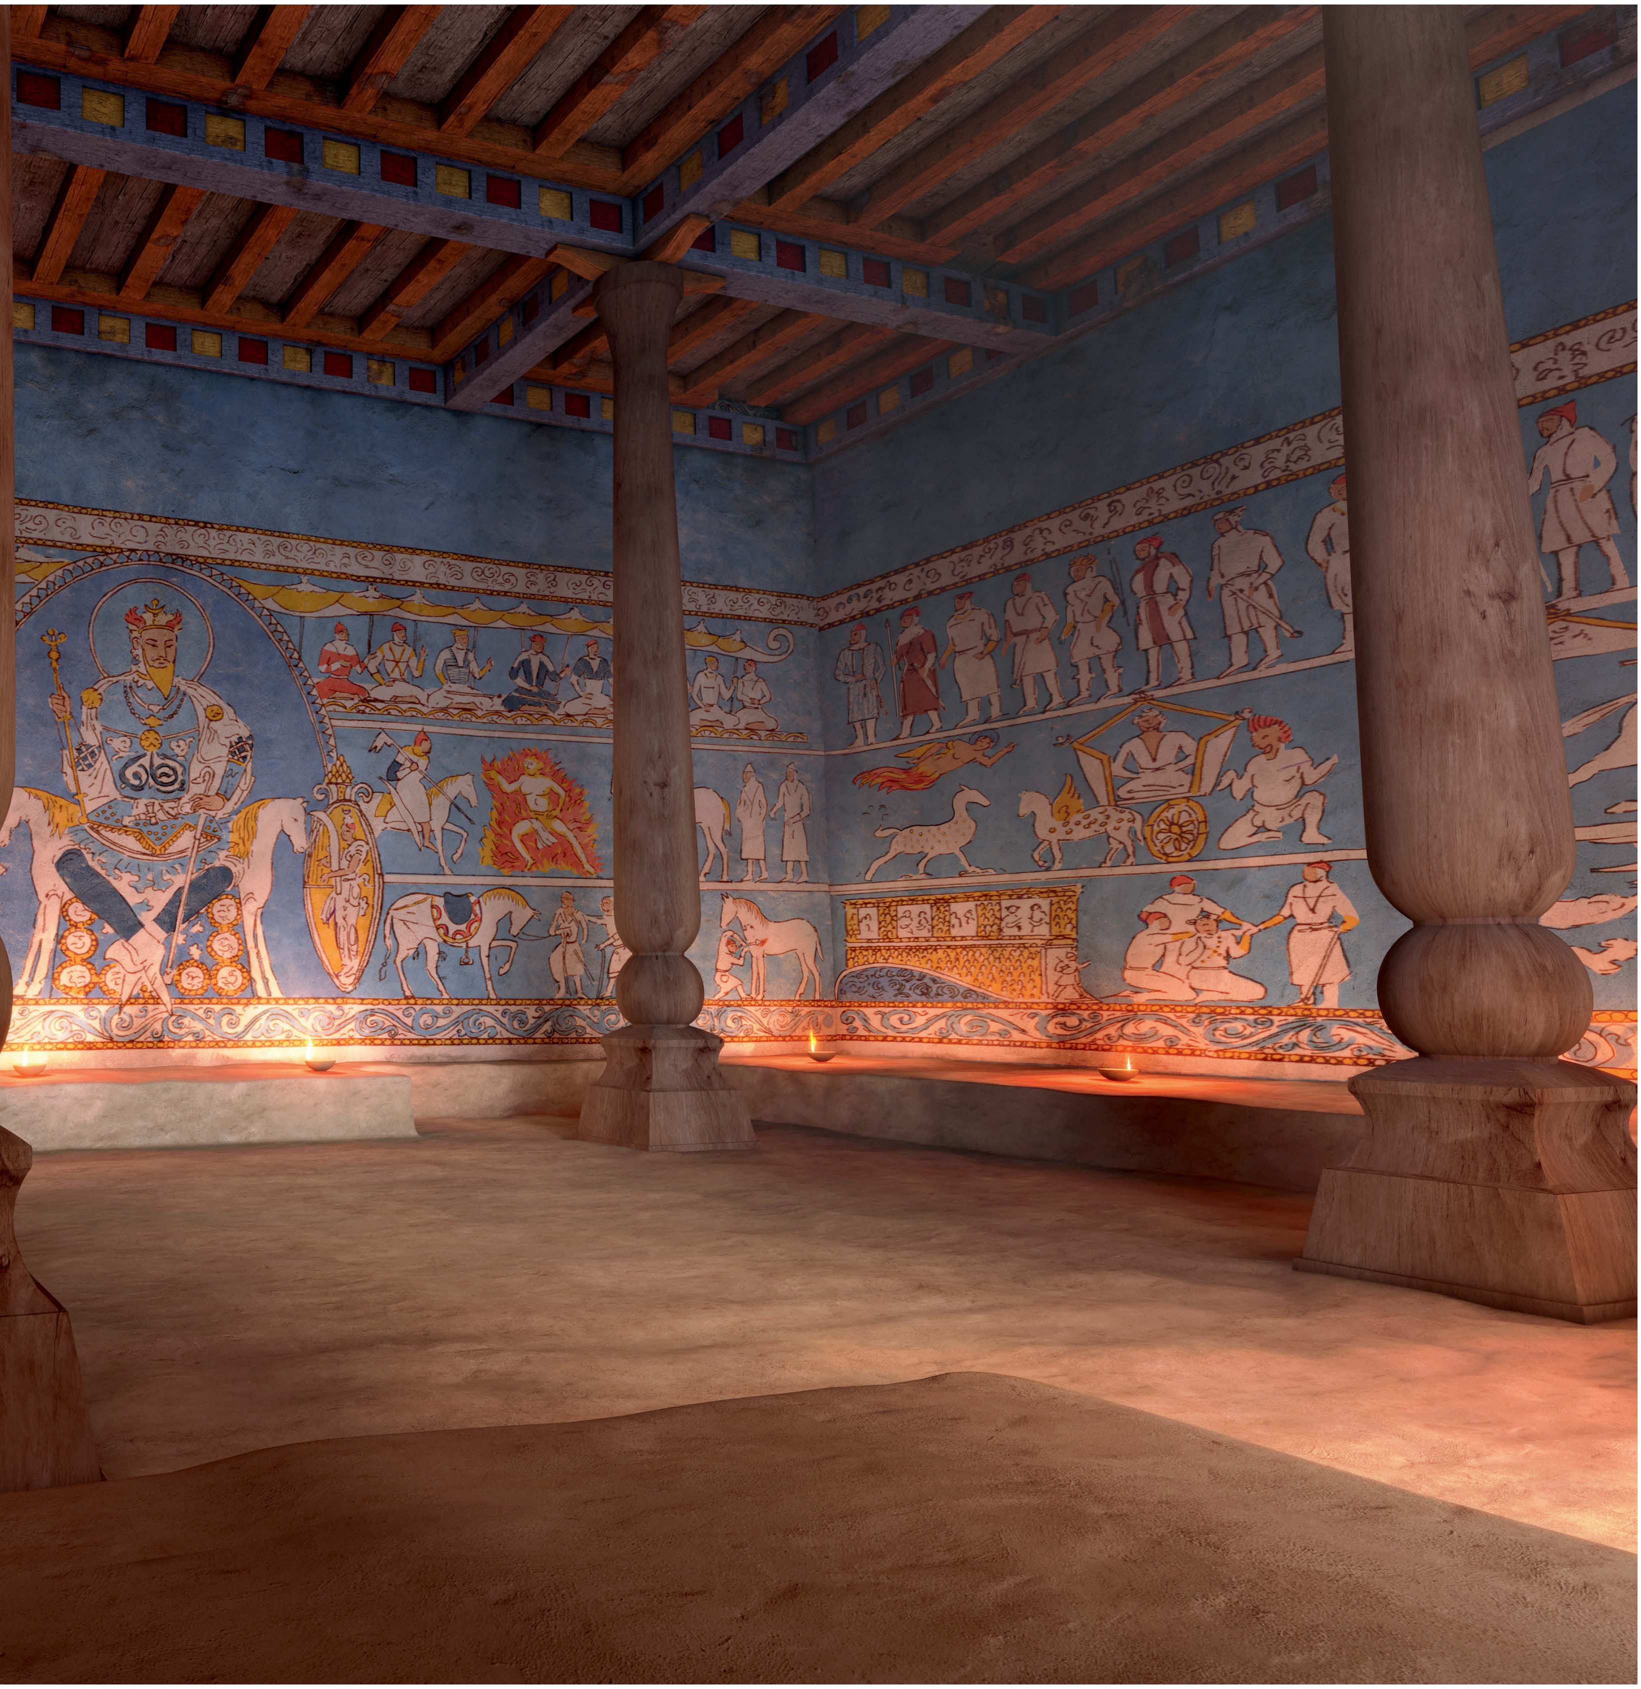
197. Sogdian wall painting from the palace of Varakhshah in the oasis of Bukhara, Uzbekistan. The paintings, which were produced in the 730s, contain encoded religious content; they either represent the supreme god of the Sogdian pantheon, Adbagh, in a battle with evil, or the victorious ruler himself who commissioned this painting. The faces were later scratched out. The State Museum of History, Tashkent.

bones. The first puts the bones back correctly as a skeleton, the second adds organs, flesh and blood, and the third is about to breathe life into the still lifeless lion, when the uneducated man, who nevertheless possesses good common sense, shouts a warning: 'This is a lion! It will kill us all!' The three learned brahmins call him an imbecile whereupon the uneducated brahmin swiftly climbs up a tree. The arrogant third brahmin then brings the lion back to life, and it immediately kills and devours him and the two others and goes away, its appetite sated.[77] Apart from fables, the murals also show ritual duels (fig. 194) in which both opponents are fatally injured, as well as equestrian battles, fighting women and refined banquets with female musicians. With the exception of the slightly standardised representations of deities, it is notable that most other figures, including ordinary warriors, are represented in a strongly individualised way.

The penultimate phase of Sogdian wall painting came after the Arab conquest, at the Palace of Varakshah (fig. 197) in the Bukhara Oasis. After King Tughshada ibn Bidun (r. 710–738/39) had submitted to the Arabs again in 728, he commissioned new murals for the Red Hall in his palace in Varakhshah in the 730s. The paintings consisted of monumental hunting scenes and friezes with saddled animals. Since Tughshada had converted to Islam for political reasons, Sogdian divinities could only be represented covertly in the shape of their saddled mounts. Depicted on the lower frieze, a prince rides on an elephant and fights tigers, leopards and griffins. These scenes represent either Adbagh, who fights evil, or the ruler himself as he allegorically battles with the enemies of his kingdom. Already in the early 720s, Tughshada commissioned paintings in the Blue Hall including a depiction of himself performing a fire ritual before the Sogdian god of war Vashagn.[78] From a slightly later period, the eighth to early ninth century, are the murals in the fortified palace of Kala-i Kahkaha near Bunjikat in the kingdom of Ustrushana, which until the end of the ninth century retained partial independence. The paintings, which show epic and cult themes, battle scenes and Sogdian divinities, are stylistically similar to the murals of Kizil and those from Chorasmia.[79]

198. Illustration based on archaeological finds of the painted small ceremonial hall in the palace of Kala-i Kahkaha I in the Sogdian city of Bunjikat, Ustrushana, northern Tajikistan, 8th–9th c.[25] Sitting on a throne in the centre of the western wall is the main figure of these murals, who is probably the supreme god in the Sogdian pantheon, Adbagh (Ahura Mazda). Shown beside him are a female harpist on the right and a female lutist to the left (hidden). The side supports of the throne are in the shape of horse protomes. Adbagh bears a crown with the emblem of the sun within a half moon, and has a long beard. In his right hand he holds a sceptre while his left is resting on the hilt of a sword. In the upper row, elegant Sogdian nobles are banqueting under canopies. In the middle, two men are kneeling in front of a pool, one of them wearing a crown. A man scoops water (?) out of the pond with a jug; on Adbagh's right stands a demon with an aureole of flames confronting an equestrian warrior. In the lower row on the left, men with long swords at their belts are sitting before a fire altar; on the right an armed man holds a saddled horse, and further right an animal surgeon pulls an arrow out of a wounded horse. On the northern wall at the top stand warriors armed with swords or lances. Below, a god sits in a chariot, and a winged creature with aureole is flying towards the chariot; to the right of the chariot a demon kneels. The god is probably preparing to fight the demon. On the bottom left the rock palace of the demon king is shown, with two crowned figures visible in the right-hand, upper window frame; below this a warrior is coming out of the door. On the right of the palace a hero, armed with sword and dagger, holds out his right hand to three men, one standing, two kneeling; they may be asking the hero for protection or thanking him. The scenes represented in this hall are probably episodes from a heroic epic.





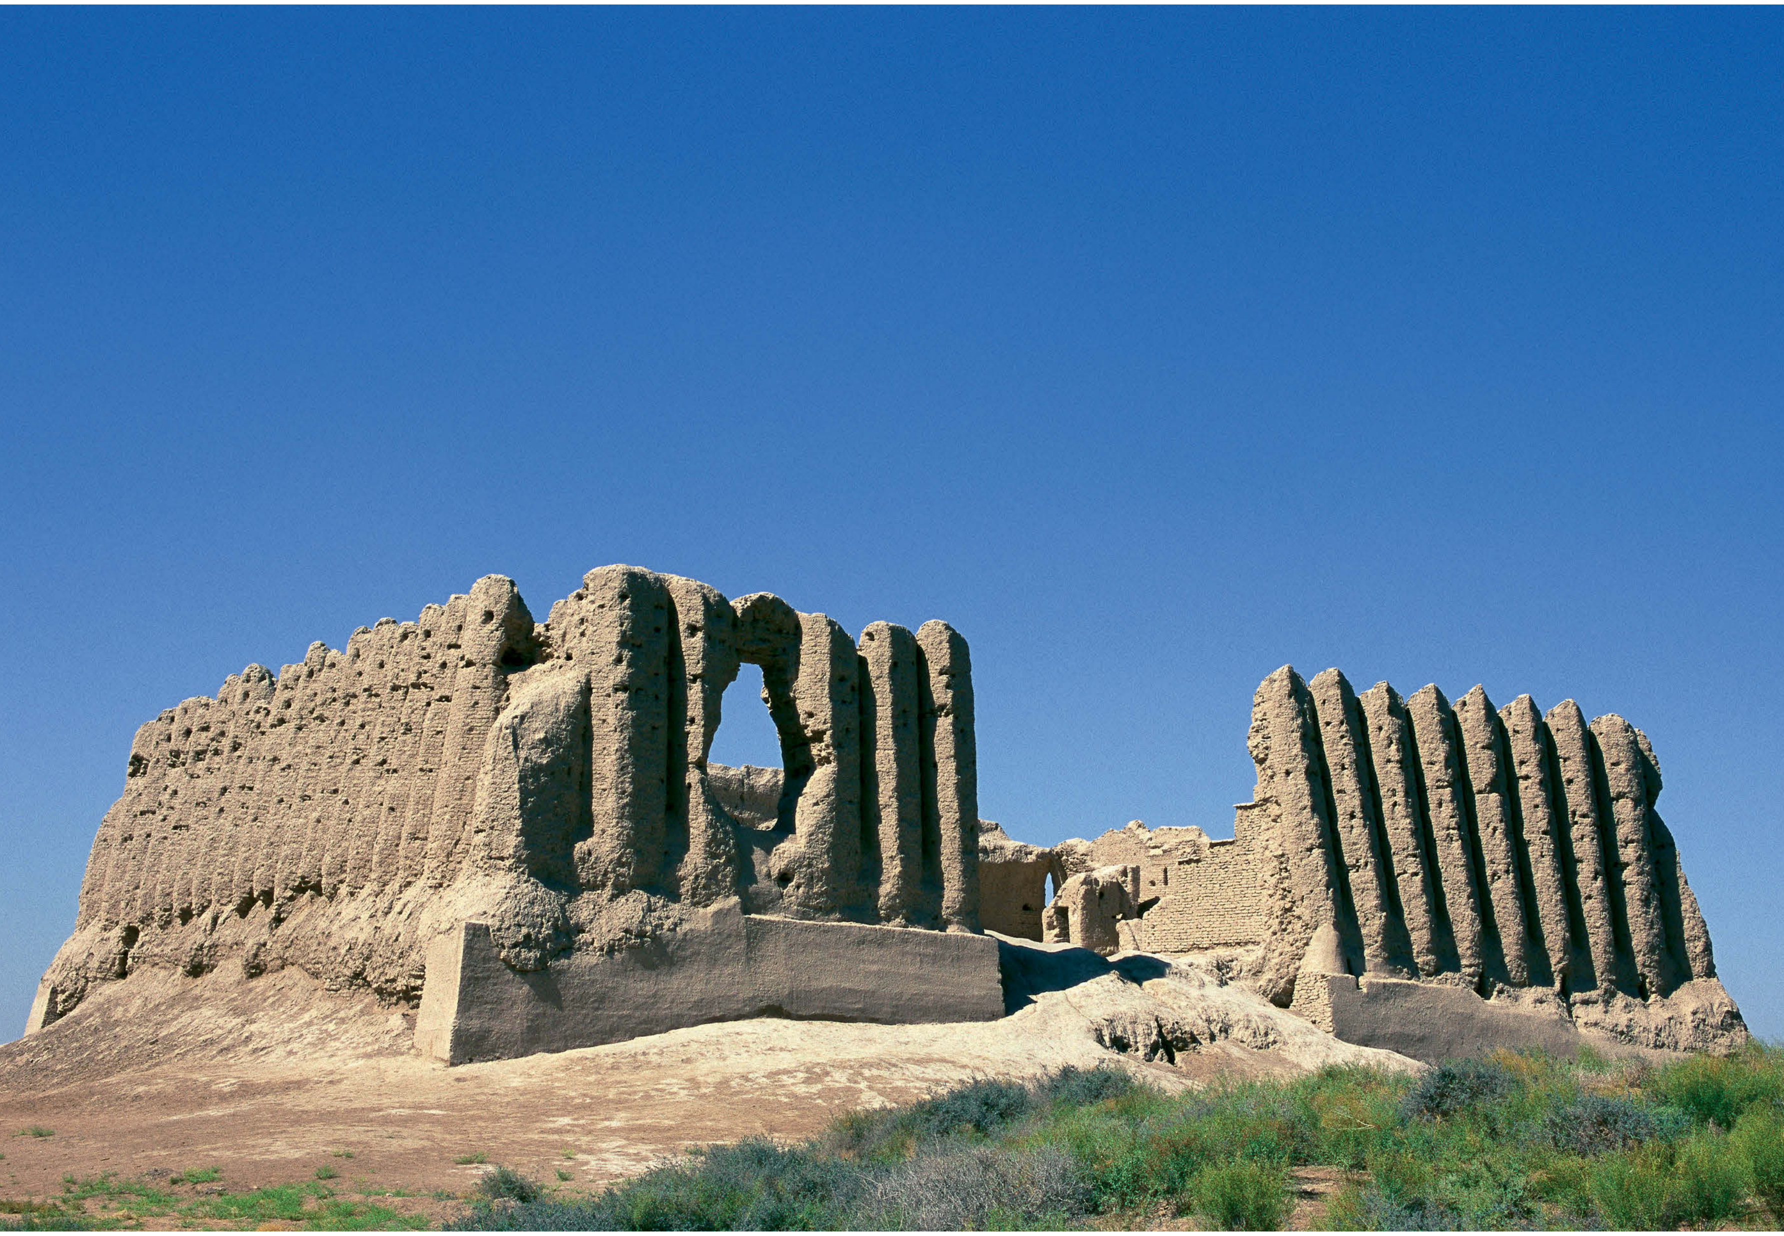
The Church of the East

Mazdaism and Manichaeism were not the only religions that flourished in Sogdiana; so, too, did the Christian churches, and in particular the Church of the East which is also often called the Nestorian Church.[80] But the term 'Nestorians' is wrong in several respects: Nestorius was Patriarch of the Imperial Church of Constantinople between 428 and 431 and was neither the founder of the Church of the East nor ever active in it. And the dogma of the Church of the East is not based on Nestorius' writings but on those of Diodore of Tarsus (d. 392) and Theodore of Mopsuestia (352–428). The Church of the East is an autocephalous and apostolic church which was based first in Seleucia-Ctesiphon, then, from 780, in the city of Baghdad, which had been founded in 762/63. At the synod of 410 it declared its independence, and at the synod of 424 it confirmed its autocephaly, according to which its patriarch conducted his office as a vicar of Christ on earth, just as St Peter had once done. These two declarations of independence did not include a schism in any way since they also confirmed the recognition of the Nicene Creed,[81] which formed their common ground with the Imperial Roman Church. But they equated the patriarch of the Church of the East to the western patriarchs; in this canonical vision the global Christian church did not consist of a single, hierarchically structured organisation but of an ecumenical community of independent churches.

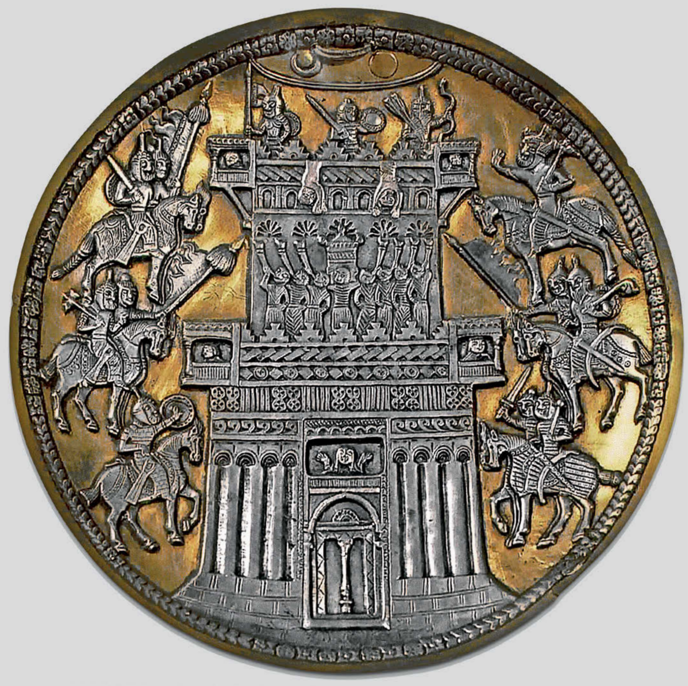
The Church of the East distinguished itself theologically from the Imperial church and the Miaphysite churches, such as the Copts and the Syriac-Orthodox Church, primarily by the way it defined the nature of Jesus Christ. Central to this was the question of how the divine and human are related in the person of Christ. The Miaphysites believed that the human nature and the divine nature merged in the person of Christ but that the divine nature dominated the human one. The Imperial Roman Church, on the other hand, maintained that the two natures remained separate but unite as hypostases, which are understood as concretisations of divine nature, as well as in the person of Christ. Finally, the theologian Babai the Great (551–628) formulated the creed of the Church of the East as follows: 'One is Christ, the Son of God, glorified by all in two natures; begotten by the Father without beginning before time; born of Mary in his humanity, united in the fullness of time in one body. His divinity is not of the nature of the mother, nor is his humanity of the nature of the Father. The natures are preserved in their qnome [hypostases] in one person of the one sonship.'[82] Thus Babai understood the essence of Jesus Christ as the union of two distinct and unmixed natures and two distinct hypostases, which is why this doctrine is called Dyophysite (from the Greek, 'two natures'). The only difference from the doctrine of the Imperial Roman Church was that Rome affirmed that there was a single hypostasis in which the divine and human nature were united, for which reason its Chalcedonian Confession was also called the Doctrine of the Hypostatic Union, whereas Babai positioned the union not at the level of the two hypostases but only in the person of Christ. What followed from this definition was that Mary could not be called *Theotokos*, mother of God, but had to be called *Christokos*, mother of Christ. The condemnation as heresy of the 'Nestorian' understanding of the nature of Christ, and the essence of Mary at the Councils of Ephesus in 431 and Chalcedon in 451 was not revoked by the Roman Catholic Church, the successor of the Imperial Roman Church, until 1994, in the joint declaration of Pope John Paul II and Patriarch Mar Dinkha IV. To this day, the Miaphysite Coptic Church refuses to recognise the Church of the East and continues calling it heretic in its teachings. The present patriarch of the church, Mar Dinkha IV (in office since 1976) lives in Chicago in the United States.

The Church of the East reached its zenith in the thirteenth and early fourteenth centuries. At this time it consisted of 27 archdioceses with six to twelve dioceses each, and stretched from the eastern Mediterranean to the Yellow Sea. Since it had been a Persian church from its beginnings in the second century, it was unable to do missionary work in the west and oriented itself exclusively towards the east very early on. Rome was the arch-enemy of Sassanid Iran, so Christianity had been the state religion of the enemy for the Sassanid rulers since the Constantinian shift[83] in 313 and at the latest since the Edict of Thessalonica, *Cunctos populos*[84] of 380, which elevated Christianity to the state religion of the Roman Empire and abolished the freedom of religion decreed by Constantine. At the end of the third century, the Sassanids made Zoroastrianism their state religion and equated apostasy with high treason, so the Church was unable to convert Zoroastrians since both the converted ex-Zoroastrians as well as the converting Christians would face the death penalty. For this reason Nestorian missionary efforts in the Sassanid Empire concentrated on Jews, Manichaeans and members of other Christian churches, but especially on communities of other creeds who lived to the east of the empire. By the early third century, there were significant Nestorian communities south of the Caspian Sea and among the 'Kushans',[85] that is, in west Afghanistan and perhaps also in southern Uzbekistan or Turkmenistan.

There is evidence for the existence of a diocese in 424 in Merv, which had been home to a significant Christian community since 334, and for others in Tus, Herat and Sistan. There was also a diocese of the Hephthalites in 549 (probably in Uzbekistan or in the northwest Afghan province of Badghis), and around 644 Metropolitan Elias of Merv converted a minor Turkic ruler and his people and named for them priests and deacon.[86] A major conversion of Turkic people then took place at the time of Patriarch Timothy I (in office 780–823) who wrote in a letter in 792 or 793: 'The king of the Turkāyē, with more or less all of his territory, has left the godless



199. The ruin of the fortress 'Great Kyz Kala' in Merv, Turkmenistan, from the 6th to 8th c. The outer walls, which are still 15 m high today, possessed narrow loopholes and were windowless; light reached the living quarters via an atrium and light shafts. A Christian community had lived in Merv from 324, and by 424 at the latest Merv was a diocese of the Church of the East.



200. **This gold-plated silver platter of Verkhne-Nildino, made in a post-Sassanid style, was found in a small shamanistic shrine beside the River Ob in western Siberia, Russia. Like another, almost identical platter found in the district of Perm, it was probably produced in the 9th/10th century in the Talas Valley, north-western Kyrgyzstan and southern Kazakhstan. This valley was famous for its silver mines and silversmithing and was settled by Nestorians at that time. On the platter are depicted ten heavily armed horsemen, who surround two fortresses, standing one in front of the other. As the platter features no inscription, interpretations of the image remain hypothetical. The most probable one reads the scene as the siege of Jericho by King Joshua. In the upper right, the mounted military commander Joshua, with his arm outstretched, stops the sun and the moon, visible above the upper citadel. In the window of the lower fortress is the maiden Rahab, who hid Joshua's messengers; in front of the upper fortress, the Ark of the Covenant is being carried in the centre, and the seven priests are blowing the seven rams' horns, which will bring down the walls on the seventh day.[26] Museum of the Institute of Archaeology and Ethnography of the Russian Academy of Sciences of Siberia, Novosibirsk.**

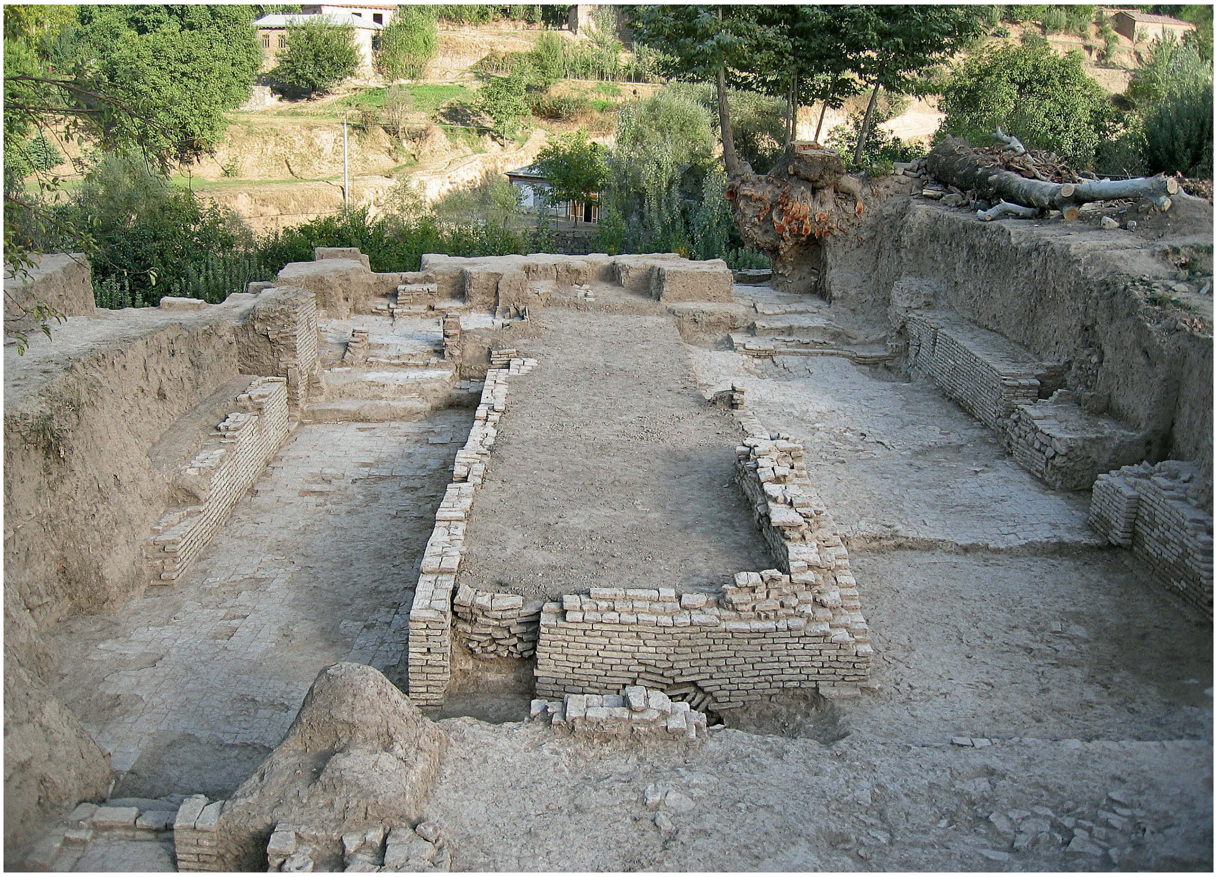
error from antiquity, for he has become acquainted with Christianity [. . .] and he has asked us how he might appoint a Metropolitan for the territory of his kingdom. This also we have done.'[87] In another letter the Patriarch confirmed: 'The Spirit has anointed in those days a Metropolitan for Beth Turkāyē and we are also preparing to anoint another one for Beth Tuptāyē', which is Tibet.[88] The Turkāyē mentioned in Timothy's letters are most probably the Turkic Karluks who had wrested power from the Türgesh over Semirechie in 766 and who had their winter capital in Taraz in today's southern Kazakhstan. That Karluk Semirechie had in the ninth century a significant Christian community we learn from the historian al-Narshakhi (*ca.* 899–959) and the geographer al-Moqaddasi (*ca.* 945/46–991), who mention that in 893 the Samanid conquerors in both Taraz and neighbouring Merke turned a large church into a grand mosque.[89] As Mark Dickens surmises, between 780 and 783 the Karluk yabghu chose Christianity for political reasons as new state religion: Buddhism and Manichaeism were the religions of his enemies, China and the Uyghur Khaganate, while Islam was the religion of the allied, yet threatening, great power of the Abbasid Caliphate. However, Christianity was recognised by the Caliphate and was hence not part of the *Dar al-Kufr*, the 'house (land) of the infidels' where plundering raids were permissible.[90]

During the time of Patriarch Saliba-Zakha (in office 714–28), at the very latest, the diocese of Samarkand was elevated to an archdiocese; further archdioceses existed in Herat and Balkh. In several Sogdian city states, including Samarkand, Varakhshah, Paykend and Kanka (in the Tashkent Oasis), coins dating from the sixth to the eighth centuries were discovered, which showed a cross or a ruler whose crown is decorated with a cross. These princes were probably Christians. Undoubtedly the most important archaeological find of the Church of the East in Sogdiana was made in the years 2004–07 when the double-naved monastery church of Urgut, south-east of Samarkand, dating from the late seventh to the early thirteenth century, was discovered.[91] This church had already been visited by the Muslim historian Ibn Hawqal (d. *ca.* 990) around 970 and described with the name Warkudah.[92] The second Christian community in Sogdiana mentioned by Ibn Hawqal, Weshgird in the oasis of Čač (Tashkent),[93] might be situated at Qarshovul Tepe, which has been archaeologically researched since 2010 and where Christian artefacts and tombstones have been discovered.[94] That the Church of the East was also represented in Chorasmia is shown by the ossuaries of Mizdakhan which are decorated with a cross.[95] And in Merv archaeologists have discovered a church, a monastery and a Christian cemetery.

Within the Sassanid Empire two other churches also flourished: the Christian Syriac-Orthodox Church, also called the Jacobite Church, and the Byzantine-Orthodox Melkite Church.[96] Since the Jacobites were Miaphysites, who rejected the Chalcedonian Confession of 451, they were persecuted intermittently in the sixth century by Emperor Justinian, who supported the orthodoxy of the empire, and they also stood in sharp theological contrast to the Church of the East. In Iraq and Iran, the Syriac-Orthodox Church and, to a lesser degree, the Melkite Church grew rapidly because the Sassanids deported hundreds of thousands of Byzantine Jacobites and Melkites from Syria during their campaigns into the Byzantine Empire between 540 and 614. Both the Syriac-Orthodox Church and the Melkite Church proselytised in Central Asia, albeit on a smaller scale than the Church of the East. The Jacobites had dioceses in Khorasan, Sistan and Herat, and there were communities in Xinjiang; the Melkites had held the Catholicosate of Romagyris, based in the Tashkent Oasis, from 762 or 766 to the first half of the ninth century whereupon it moved to Nishapur in Khorasan.[97] This Catholicosate of Čač, as it was also called, was possibly first located at or near Qarshovul (see above), south-west of today's city of Tashkent.[98]

The Church of the East advanced much further eastward, to Semirechie in southern Kazakhstan and to western Kyrgyzstan;[99] to the Tarim Basin, to Kashgar, and to Khotan, which had two churches; to Turfan and Hami, and even further to Gansu. Further evidence for the spread of the Church of the East at this time was found in the monastery libraries of Bulayiq and Qurutqa in the Turfan Oasis, and in Dunhuang, where Nestorian manuscripts in at least eight languages were discovered. It is notable how much these texts emphasise Jesus's role as a healer and physician, and the resurrection of Christ and its consequences for believers. With the emphasis on the resurrection of the whole human being, including his body, and the affirmation of his physicality which is implied by this, the Central Asian church differed markedly from Buddhism and Manichaeism. The latter did not strive to spiritualise the body but to relinquish it as an obstacle which inhibited human development. For Buddhists and especially Manicheans, bodily life is a place of suffering and ruin whereas Central Asian Nestorianism sees it as a gateway for the return to prelapsarian physical perfection.

In 635 the Nestorian bishop Alopen, who was probably called Yaballaha or Abraham, reached the Chinese capital Chang'an. Emperor Taizong received him with great respect, invited him to stay in his palace and ordered that the manuscripts that he had brought be translated for the state library. These unusual honours from the emperor suggest that Bishop Alopen might have been part of a Sassanid embassy or even come himself as ambassador of King Yazdegerd III (r. 632–51). Three years later Taizong issued an edict which recognised Christianity as true and worthy of support and ordered the construction of a Nestorian monastery in the capital.[100] As the stele of Luoyang from the year 829 – which was illegally excavated in the 1970s and only officially presented in 2006 – seems to indicate, the Church of the East was also established in the second capital, Luoyang.[101] While it was hit badly by the wave of religious persecutions unleashed in 843–45 by Emperor Wuzong, it saw spectacular growth in adherents among various Turko-Mongolian peoples from the eleventh to the fourteenth century, even sometimes among the ruling families. Genghis Khan's protector and later rival, for example, the khan of the powerful Kerait tribe which had converted to Christianity in 1007, was a Nestorian, as was Sorghaghtani Beki, the mother of the two Mongolian Great Khans Möngke and Kublai Khan and of the founder of the Iranian Il-Khanate, Hulagu Khan. Around the end of the fourteenth century, the fall of the Mongolian Yuan dynasty, the aggressive islamisation among the Chagatai Ulus, and especially the persecutions by Timur Lenkh (Tamerlane), destroyed the Christian churches of east and Central Asia.[102]



201. The double-naved monastery church of Urgut south of Samarkand, Uzbekistan. The monastery, which belonged to the Church of the East, was active from the late 7th to the early 13th c.

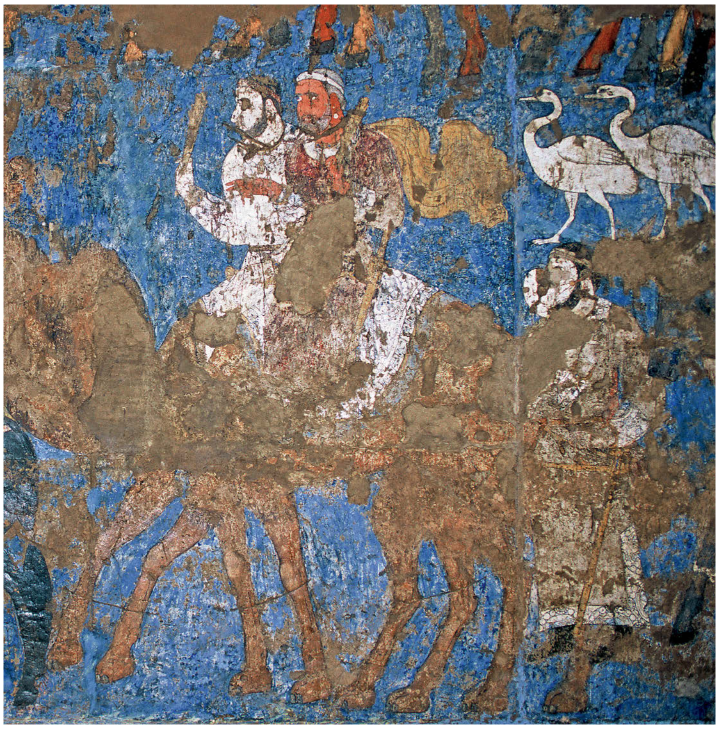
3. De Facto Independence under Nominal Chinese Rule

The decline of the Western Turkic Empire offered Sogdian cities, above all Samarkand, the possibility of new independence. After Emperor Taizong had declined Samarkand's request for Chinese protection in 631, and the city had been brought under Western Turkic control again by Illig Beg Tughluk (Yipiduolu) Khagan (r. 638–42, d. 653) in 642, Samarkand's king Varkhuman (r. *ca*. 648–*ca*. 675) was confirmed as 'Governor of Kangju' between 650 and 655 by Emperor Gaozong.[103] In 658 Emperor Gaozong sent an envoy to Samarkand.[104] Varkhuman hoped that by submitting himself to Chinese suzerainty he would gain military support if needed; he probably feared the Western Turks. But he was wrong in several respects, since over the next decades not the Turks but the Arabs were the attackers, and the Chinese protectorate remained merely nominal; China did not provide any military support to his beleaguered vassal state, but the Turks did. When, for example, the Samarkand King Ghurak (r. *ca*. 710–37/38) revolted against the Arab occupiers and asked China for military help, China refused,[105] and the Arab commander Qutayba ibn Muslim conquered and plundered the city in 712, putting an end to the short period of Samarkand's de facto independence.[106]

With the recognition of formal suzerainty of China, Samarkand, the nearby city of Panjikant and the cities of the Bukhara Oasis also hoped to be better connected to the Chinese luxury goods market. Sogdian cities, especially Samarkand and Panjikant, documented their new economic and political orientation by issuing their own Chinese holed coins which were destined for local use. As in China, these bronze coins with a high copper content were not minted but cast, and they adopted the typical shape of a round coin, which in China symbolises the sky, with a square hole symbolising the earth. Contrary to the western currency system, to which, for example, Sassanid silver coins belonged, and which was normally based on the intrinsic value of the coin – in other words, on the value of the precious metal that was used, such as gold or silver – the Chinese currency system was based on a kind of credit money. Chinese bronze coins were of a very low intrinsic value and required the trust of society as means of payment, and their value was fixed by the state. Older Chinese coinage, such as spade- or knife-shaped 'coins' or cowry shells constituted credit money. This is why the circulation of Chinese coins was restricted to China's sphere of political power and was useless for international trade. Since Chinese society was already accustomed to credit money, it is less surprising that the dynasty of the Northern Song issued paper money, which had no material value, as early as the eleventh century.[107] Imitating the most important coinage of the Tang Dynasty, the first series of these Sogdian coins bore the inscription 'Kai yuan tong bao' in Chinese characters. The characters 'Kai yuan' mean 'new beginning', while 'tong bao' means 'circulating treasure', or coin. On the next series of coins from Samarkand and Panjikant a tamga sign was depicted on one side, and the name of the king of the city on the other. Although the name of the ruler was written in Sogdian script, the Sogdian title for king, 'Ilkshid', was rendered by the Aramaic heterogram 'MLK'.[108] A total of ten Ilkshids have been identified on Samarkand holed coins, beginning with Varkhuman's predecessor Shishpir (r. 642–47/48).[109]

A vivid snapshot of the political situation of Samarkand in the mid-seventh century, when King Varkhuman had to position his precarious de facto independence in a tricky balancing act between the still dangerous Western Turks and the great power China, which was expanding its territory, is provided by the murals which were discovered by chance in 1965 in a great hall of the royal palace of Afrasiab, the pre-Mongol Samarkand.[110] The paintings, created between *ca*. 648 and 651, show on the western wall different embassies, including some from the neighbouring kingdom of Chaganian, from Čač, China, Korea, Tibet, southeast Asia and Persia. It is likely that these embassies are paying homage to King Varkhuman and Western Turkic Khagan Shekui, who, like Varkhuman, was also nominally a vassal of China. The presence of numerous Turkic officers and courtiers seems to allude to the superior position of the khagan. Highly remarkable is one sumptuously clad member of the Persian delegation, whom Markus Mode identifies as the Sassanid Great King Yazdegerd III (r. 632–51), who is fleeing from the Arabs.[111] After Yazdegerd had lost the battles of Qadisiya (*ca*. 637) and Nihawand (642), he fled to Khorasan and was, as most historians assume,[112] murdered in 651 in Merv, like the Achaemenid king Darius III some thousand years earlier.[113] The historian al-Tabari, however, reports an alternative version according to which Yazdegerd did not wait passively in Merv after his defeat near Nihawand but sent envoys to the Turkic khagan, to the 'King of Sogdiana' (Samarkand) and to the Chinese emperor, asking them for military support. Then Yazdegerd is said to have gone to the 'King of the Sogdians' himself as a supplicant, and he might have met the khagan. After a further defeat near Balkh, Yazdegerd was killed in Merv.[114] At any rate it is conceivable that Yazdegerd went to see King Shishpir or Varkhuman to ask them for help.

The northern wall is dedicated to the nominal overlord, China; as well as Emperor Taizong on a hunt, it shows a Chinese princess or the empress on a journey to see Shekui Khagan, a journey which never took place. The eastern wall is too badly damaged for the murals to be clearly reconstructed. On the southern wall, King Varkhuman leads a grand funeral procession including animals that are to be sacrificed, including a horse[115] and four geese, to the supposed mausoleum of his predecessor (and father?) Shishpir. Varkhuman's palace was destroyed by the Arab general Said bin Uthman between 675 and 677, when according to al-Narshakhi there was no king of Samarkand.[116]



202. Wall painting in the ceremonial hall of the Palace of Afrasiab near Samarkand, Uzbekistan, made between *ca*. 648 and 651. The scene on the south wall is a detail from the funeral procession led by King Varkhuman in honour of his predecessor Shishpir. In the picture two bearded men, each carrying a ceremonial staff, are riding camels at the front of a group consisting of a priest with *padam* (right), who leads a saddled and riderless horse (not visible) as well as four white birds and another priest (not visible in this picture). The saddled, riderless horse symbolises the deceased king Shishpir.[27] Afrasiab Museum, Samarkand.

203. **The entrance gate of the citadel of Bukhara, Uzbekistan. The current structure of the citadel, which is called Ark, dates from the 18th and early 19th c., but since the 6th c. the fortress of the local princes of Bukhara had stood here.**

4. The Arab Conquest of Sogdiana

While the paintings in Varkhuman's great hall were being created, the Arabs appeared 500 kilometres south-west of Samarkand and in 652 occupied Merv,[117] which they chose as capital of the bordering province of Khorasan. To strengthen the Arab power base in Merv, governor Ziyad ibn Abi Sufyan (in office 670–73) resettled in the city 50,000 families from Basra and Kufa (in today's Iraq). Merv now possessed a reliable Arab core which also supplied the troops for future conquests.[118] From here the Arabs first undertook raids and then, from 705, strategic campaigns of conquest in Central Asia. In the first four decades of these raids, the aim was neither conversion of the local populations nor integration into the Umayyad caliphate, but rather plunder and the extortion of 'protection money'. The forces were recruited from Arab tribes which, in the more or less pacified caliphate, no longer had any outlet for their warrior arts, for Islamic law divided the world into the *Dar al-Islam*, the '(house) land of Islam', where peace shall reign, and the *Dar al-Harb*, the 'house (land) of war' which is inhabited by stubborn

infidels. An intermediate position between faithful Muslims and infidels was occupied by the two other 'peoples of the book', called *Ahl al-Kitab*: Christians, Jews and – in Iran – Zoroastrians. The followers of these three religions were tolerated as *dhimmis*, who were protected by the Muslims but had to pay a high capitation tax called *djizya*. Depending on where they lived and when, they were often victims of intense discrimination. Plundering and pillaging within the *Dar al-Islam* was forbidden whereas in the *Dar al-Kufr*, the 'house (land) of the infidels', it was not only allowed but seen as pleasing to God.[119]

All of this created a serious dilemma for the Arab conquerors: if, according to the instructions of the Prophet, they converted the people that they had subjected to their rule, they lost the income of the *djizya* and the permitted plundering targets moved further and further away. Already the second Caliph Umar (r. 634–44) is said to have tried to restrict conversion to the Arabs.[120] In the same context the governor of Iraq, al-Hajjaj ibn Yusuf (in office 694–714) later intermittently banned conversion to Islam in his sovereign territory for financial reasons.[121] In Sogdiana, however, in the first half of the eighth century, the conquerors chose a dishonest solution: they allowed Sogdians to convert but forced these non-Arab converts, called *mawali*, to continue paying the capitation tax and refused them access to higher military and government offices. As Richard Frye argues, 'any desire to convert non-Arabs to Islam [. . .] was almost non-existent in Central Asia at the beginning. On the contrary, conversion to Islam was discouraged, if not actually forbidden, in order to preserve the revenues coming to the state. The Umayyad caliphate was not a brotherhood of faithful but almost a business enterprise.'[122] As a consequence of this strategy, Sogdian society was de facto divided into four classes: Arab Muslims, non-Arab Muslims, tolerated non-Muslims, and slaves. The discrimination against the Central Asian *mawali* contributed significantly to the overthrow of the Umayyad dynasty by the Abbasids in 750. The appointment of the general Qutayba ibn Muslim as governor of Khorasan by al-Hajjaj in 705 marked the transition from the previous raiding campaigns to a concerted war of conquest in Sogdiana, with the economic aim of finding new sources of tax in this rich territory. But in Central Asia true power lay not with the Umayyad administration but remained with the Arab tribes that had migrated there, until the Abbasid reorganisation of the caliphate after 750. As in their original homeland of Arabia, the tribes waged war against each other in Khorasan, and it was only the promise of booty which managed to unite them.

The first Arab attack on Transoxania, which the Arabs called Mawarannahr,[123] began in 654, and then in the winter of 53/54 AH (673/74 CE)[124] the governor of Khorasan, Ubayd Allah ibn Ziyad (in office 673–80), attacked the Bukhara Oasis, where Khutak Khatun, widow of Bukhar Khudah *Bidun* (r. ?–*ca*. 673) and mother of the then minor Tughshada ibn Bidun, ruled as regent (*ca*. 673–89). As Narshakhi reports, she paid a high price for Ziyad's withdrawal.[125] Two years later, Ziyad's successor Said bin Uthman bin Affan crossed the Oxus and plundered the trading town of Termez,[126] and then defeated a smaller army from Bukhara, Samarkand and Čač and extorted ransom as well as hostages from Bukhara and Samarkand. In 680/81 another campaign ended with the same result; the divided Sogdian rulers preferred to buy the withdrawal

of the invaders rather than fight them in decisive unity. It was only when Khunuk Vardan Khudah (r. before 689–709), the ruler of the nearby city of Vardana, won power over Bukhara around 689 that the Arabs faced a decisive adversary, and until his death in 709 he led the resistance to the Arab invaders.[127] Based on an analysis of local coins with a broad-footed cross, Aleksandr Naymark has suggested 'that Vardana had been ruled by a Christian dynasty and that Vardan Khudah [. . .] had been a Christian'.[128]

In 705 al-Hajjaj, who was also responsible for Khorasan, appointed the general Qutayba ibn Muslim (in office 705–15) as governor of Khorasan, with the brief to conquer Mawarannahr and integrate it into the caliphate. For this reason Qutayba did not limit himself to extorting payments but demanded the submission of the conquered cities, where he appointed Arab governors and established garrisons. At first he followed the appeal of the northern Bactrian ruler of Chaganian to punish his rivals in Akharun and Shuman on his behalf, and subjected all three small principalities to his rule. He then won Nezak, the Hephthalite prince of Badghis in north-west Afghanistan, as his ally, and in 706 they joined forces to attack the Bukhara Oasis, where they plundered the rich city of Paykend and razed it to the ground. He sent a silver statue of a god, which he had captured, to al-Hajjaj. But Qutayba's and Nezak's attempts to conquer the city of Bukhara in 707 and 708 met with fierce resistance by Khunuk Vardan Khudah and failed. Only when the latter died in 709 did Qutayba succeed in taking possession of Bukhara. A year later he placed on the throne Tughshada ibn Bidun (r. 710–738/39), who had been driven away by Khunuk, and began to convert the population of the city to Islam by force while at the same time burdening them with high taxes. To make sure that the inhabitants of Bukhara did not continue to worship Mazdaist divinities, he installed Arabs in every house to monitor them. Since Islam did not enjoy much popularity among the population, Qutayba began to entice them with money and issued the following proclamation: 'Whosoever is present at the Friday prayer, I will

give him two dirhams.'[129] As soon as Bukhara had been subdued, Qutayba marched towards Samarkand in 709. King Tarkhun surrendered, offered hostages and promised tribute. But when he paid the tribute the following year, the population of Samarkand rebelled, deposed Tarkhun and elevated Ghurak (r. *ca*. 710–37/38) to the throne.[130]

Before Qutayba could react to the rebellion in Samarkand, he defeated the rebelling Nezak, and then, in 712, laid waste to Chorasmia, massacring the elite and anybody who could read or write.[131] Then he led his army to Samarkand where he besieged King Ghurak. An army, possibly led by the Eastern Turkic commander Tonyukuk or Kül Tegin, with additional troops from Čač and Fergana, hurried to Samarkand's aid but was defeated by Qutayba before it reached the city. Qutayba forced Ghurak to capitulate, plundered the city and destroyed its temples.[132] After this punitive action, Qutayba sent an embassy to the Chinese court in 713, probably to secure the continuation of good trade relations.[133] During the next two years Qutayba led a campaign against Čač and Fergana, and according to al-Tabari he forced Kashgar to pay a symbolic tribute. When Qutayba's envoy allegedly warned the ruler of Kashgar that Qutayba had sworn war if he was not allowed to ride on Kashgar soil, the king of Kashgar presented him with a golden box filled with earth, whereupon Qutayba returned to Merv.[134] When Sulayman ibn Abd al-Malik (r. 715–17) became caliph in 715, Qutayba, a bitter enemy of Sulayman, rebelled. But his officers deserted him and he was killed.[135] His death gave the Sogdian cities the chance to cast off the Arab yoke again, and offered Western Turkic Türgesh the possibility of reconquering the territory which had once belonged to the khaganate.

The trigger for the revolt was a decree by the governor of Khorasan, al-Jarrah ibn Abdallah al-Hakami (in office 717–19), stipulating that only circumcised *mawali* (non-Arab Muslims), who had also successfully studied the Koran, could be dispensed from the capitation tax, the *djizya*. In the hope of receiving Chinese military aid, a joint embassy from Bukhara, Samarkand and Chaganian went to see Emperor Xuanzong in 718. Apart from words, the emperor offered his nominal vassals nothing at all.[136] Despite this, the population of Samarkand rose up in 720 with Western Turkic help, destroyed the Arab garrison and expelled the Arabs from the city. Although in 721 Khorasan's governor Said ibn Abd al-Aziz (in office 720–21) succeeded in driving back a Western Turkic army which had been sent by Suluk Türgesh Khagan (r. 716/17–738), he suffered heavy losses. and the rebellious Samarkand population kept the upper hand. Governor Said ibn Abd al-Aziz was replaced by Said ibn Amr al-Harashi (in office 721–23) who was notorious for his brutality. When King Ghurak, rather than leading the Sogdian rebellion, called upon the population to capitulate, numerous dissatisfied Sogdians fled into the mountain regions east of Sogdiana. The majority went to Fergana where the king led them into a trap and in summer 722 had them massacred near Khujand by al-Harashi.[137] The second group of Sogdian rebels sought refuge in the territory of the ruler of Panjikant and Ustrushana, Dewashtich (r. *ca*. 706 or 708–722), who since the summer of 721 had also been calling himself 'King of Sogdiana' and 'Ruler of Samarkand', a direct challenge to King Ghurak. It seems that the Arabs initially recognised his comprehensive claims.[138] But since Dewashtich's rival Ghurak had surrendered to the Arabs and Dewashtich had accommodated Sogdian rebels, he now became an enemy of the Arabs. Al-Harashi marched southwards from Khujand in 722 and surprised Dewashtich in his mountain fortress Kala-i Mugh. In 1933 a shepherd discovered Dewashtich's archive here, which consisted of more than 80 documents of which 74 were written in Sogdian, mostly on parchment.[139] Dewashtich had to capitulate and was crucified by al-Harashi.

After his victory over Dewashtich, al Harashi destroyed the palace in Dewashtich's capital Panjikant and burnt down the fire temple. The city, which had been founded in the fifth century[140] and whose name means 'five' (panj) 'cities' (kant), stood on a trade route which linked Fergana with Samarkand and was the easternmost city of Sogdia. Even today the classical plan of an early medieval city is easily recognisable. The city centre, *sharistan*, had a strong rampart wall; the citadel with the prince's palace, the *ark,* was not situated within the *sharistan* but, as in Bukhara, outside it and possessed its own defence system (fig. 208). East of the *sharistan* were the suburbs, *rabat*, and south of there a necropolis which consisted of small mudbrick buildings in which people placed the ossuaries of their deceased family members.[141] The city and its suburbs were surrounded by agricultural settlements called *rustak*. The city possessed two temples which were near each other; one was dedicated to the city goddess Nana, the other served as a fire temple in the late fifth and early sixth century and was decorated with murals of Mithra and Druvasp, the tutelary goddess of horses.[142] Soon after the destruction of Samarkand in 712, a lot of

207. The two-storey Sogdian fortress of Kum stood 4.5 km south-west of the castle of Kala-i Mugh at an altitude of 1718 m. In 722 the Arab governor al-Harashi, after a rapid advance, surprised a Sogdian army in the mountains above Kum, destroyed the castle and then swiftly conquered Kala-i Mugh.

208. The citadel of Panjikant, which was burnt down in 722 by al-Harashi, was situated west of the city and separated from it by a small ravine.

new construction work began in Panjikant because wealthy inhabitants of Samarkand were fleeing there.

Besides Dewashtich, only two other rulers of Panjikant are known, thanks to imitations of Chinese bronze holed coins. They are two 'lords of Panj', one called Gamaukyan (or Amogyan, r. ?–691/93), and his successor Bidyan or Chekin Chur Bilge (r. *ca*. 691/93–706/08), whose second name sounds Turkic, as well as a 'lady of Panj', called Nana. Since these last were minted at the time of Dewashtich, the name either designates the city goddess Nana or the wife of Dewashtich, who as alleged daughter of Bidyan legitimated his rule.[143] The reconstruction of the city which had been deserted in 722 began in 741, when the governor of Khorasan, Nasr ibn Sayyar (in office 738–48) offered an amnesty to those Sogdians who had fled into exile. But soon after this, once the Umayyads had been overthrown in the winter of 749–50, the ruler of Khorasan and Mawarannahr, Abu Muslim (d. 755) brutally crushed a revolt of the Shiite Shari bin Shaykh, who had joined some princes who strove for independence. The revolt started

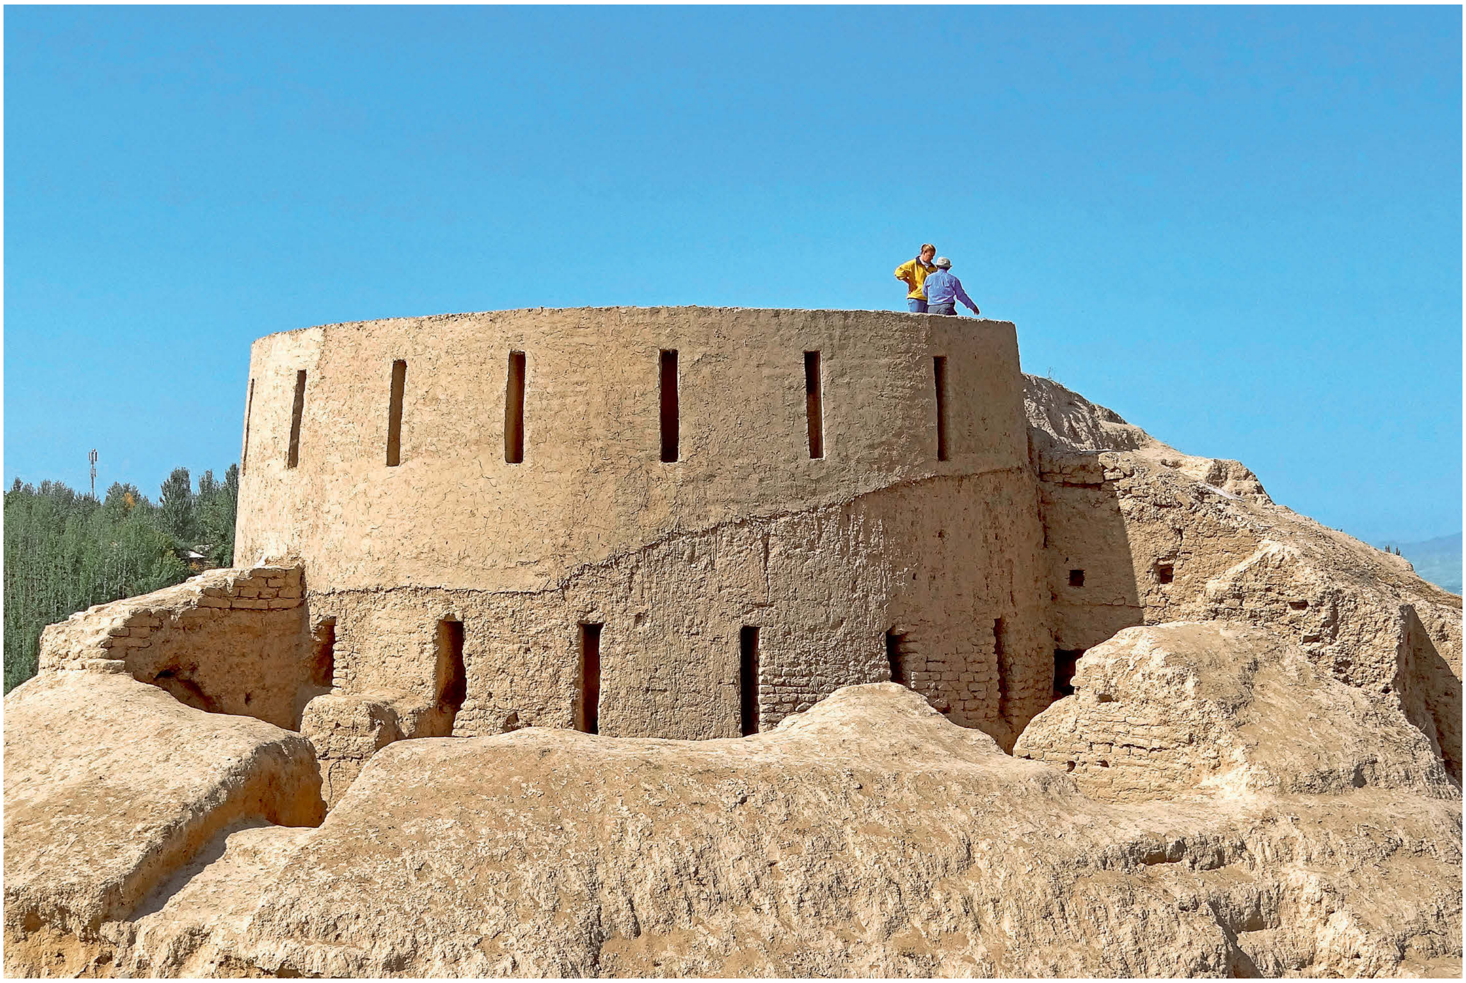
The higly schematized reverse shows a fire altar with flames flanked by a priest on both sides.[28]**

from Bukhara in 750, but, as Narshakhi reports, Bukhar Khudah Qutayba ibn Tughshada (r. 738/39–51), together with his army, took the side of Abu Muslim and his general Ziyad bin Salih. The latter razed Bukhara and had the resisting population hanged.[144] But the decisive military help that the Bukhari ruler Qutayba ibn Tughshada gave the Arabs did not save him from the henchmen of the first Abbasid governor Abu Muslim, who had him killed. Also around 750, the fire altars and temples of Panjikant and elsewhere were destroyed and the murals were vandalised by scratching out the faces. Panjikant remained partially inhabited until the 770s. Then the population was resettled into the valley below the city.[145]

A similar fate overtook the small city[146] of Sanjar Shah, 12 kilometres east of Panjikant, whose Sogdian name is unknown. It was perhaps one of the 'five cities' of Panjikant. But unlike the citadel of Panjikant, the citadel of Sanjar Shah in the shape of a two-storeyed circular tower with a diameter of 27.5 m, which has been undergoing excavation since 2008 by the Society for the Exploration of EurAsia, remained untouched and is the best-preserved example of Sogdian military architecture in the whole of Sogdiana (fig. 211).[147] Ceramic finds indicate a construction of the citadel in the late fifth or early sixth century and its circular groundplan is comparable to those of Sangyr Tepe in the oasis of Shahrisabz and of Hodzha-Adzhvandi Tepe in the oasis of Bukhara.[148] Coins found on the site suggest that Sanjar Shah, which is situated on a high plateau, was abandoned after 785[149] when there was no longer any need for fortified cities, and the inhabitants settled in the fertile valley of the river Zerfshan below the city. The principality of Ustrushana, on the other hand, whose rulers of Iranian origin bore the title *Afshin*, managed to preserve its political and religious independence for a considerable time. It was only in 820 that Afshin Kavus had to convert to Islam, after which his son Afshin Haydar (d. 841, executed) served as a general in the Abbasid army. In 893 Ustrushana lost its remaining autonomy and was integrated into the Samanid Empire. With the overthrow of the Samanids towards the end of the millennium, Ustrushana fell to the Karakhanids, initiating the turkification of the region.[150]

Dewashtich's death still brought no respite to Sogdiana and Fergana, and in 724 Suluk Türgesh Khagan inflicted a humiliating defeat on governor Muslim Ibn Sa'id al-Kilabi (in office 722–24) in Fergana on the 'day of thirst', *Yawm al-'Atash*, as the battle is known in Arabic. Although the Arabs found themselves on the defensive until Suluk's death in 738, the Türgesh Turks did not succeed in expelling them, not least because the Sogdian towns could not agree on a common resistance strategy. King Ghurak of Samarkand, for example, changed sides again in the critical year 728, when governor Ashras ibn Abdallah (in office 728–29) forcefully demanded that *djizya* be paid by all non-circumcised Muslims, and this triggered another revolt among Sogdian *mawali*.[151] Ghurak's joining the Arabs allowed them to gain a foothold in Samarkand and reconquer Bukhara from there two years later. Although Suluk Khagan beat a strong Arab army near Kesh (Shahrisabz) in 731, he failed to prevent the surviving Arab



211. **The excavated citadel tower in the north-west of Sanjar Shah, Tajikistan, 5th/6th to 8th c. The tower, which was restored in 2010/11, is the best-preserved military building of the Sogdians. In Sanjar Shah, the citadel tower in the west of the site and a possibly religious complex including a kiln in the east were excavated and researched until 2013. Particularly remarkable are the finds of a terracotta figurine which could represent the goddess Anahita, and of a movable ceramic fire altar. But, 'so far, Sanjar Shah has revealed no traces of an early medieval town proper, i.e. living quarters, streets, residential houses, etc. This suggests that it was the residence of a feudal lord (*dihqan*) along with the nobility and priests.'**[29]

contingents retreating into the safety of Samarkand.[152] Since the Türgesh army consisted mostly of light cavalry, it was powerless in front of fortified cities such as Samarkand. Here lies the main reason why the Türgesh could not drive the Arabs out of Sogdiana. Unlike the later Mongols of Genghis Khan, who very quickly learnt from their adversaries that it was necessary not only to produce and use siege machines, but that foot soldiers had to be recruited from subjugated peoples to storm the fortifications, the armies of the Türgesh consisted solely of equestrian nomads. At the same time the Türgesh troops were clearly outnumbered by the Arabs; they owed their success to Suluk Khagan's tactical skills. Despite this, Ghurak restored Samarkand's independence for a short time after 733 before he died in 737 or 738.

A turning point in the war, in favour of the Arabs, came in in 737, when Suluk Khagan, after a first defeat near Beiting (Besh Baliq) was surprised and defeated again at the Battle of Kharistan by governor Asad bin Abdallah (in office 735–38) during an initially successful but later incautious raiding action near Balkh. When the unsuccessful khan returned to his residence in the Chu valley, he was murdered by his relative Bagha Tarkhan.[153] With Suluk's murder the danger coming from the Türgesh was largely removed, and the Sogdians, who had been resisting for more than a generation, lost their last ally. China, which had intermittently supported the Türgesh, had never answered the appeals for help from Sogdian princes, and the strategic ambitions of the second great power in east Asia, Tibet, did not focus on Central Asia but on containing China while expanding to the east and north. For these reasons governor Nasr ibn Sayyar found the war-weary Sogdians receptive when he proclaimed a tax reform and amnesty in 741.[154] To secure and further trade with China, ibn Sayyar sent large embassies composed of Arab diplomats and representatives of the Sogdian cities to Emperor Xuanzong in 744, 745 and 747.[155]

Despite all this, there was still no peace in Sogdiana, for it now became the stage for intra-Arab political and intra-Muslim religious conflicts. One of these conflicts was a putsch by the Abbasids, who harnessed popular discontent throughout the caliphate and legitimised their action by invoking Mohammed's uncle, Abbas. Since in Khorasan and Mawarannahr resentment of the Umayyads was especially strong because of continuous discrimination against non-Arab Muslims, in 745 the conspirators charged the *mawali* Abu Muslim, who was probably a freed Persian slave, with the mobilisation of all the local anti-Umayyad forces in support of the Abbasid revolt. Abu Muslim succeeded in mobilising Muslim Sogdians and Khorasanis, angry at being regarded as second-class citizens, as well as groups of frustrated southern Arab tribes and Shiite sympathisers. He called for a rebellion against the last Umayyad governor of Khorasan, Nasr ibn Sayyar (in office 738–48), who had tried to win over the *mawali* for the Umayyad regime with a tax reform. Abu Muslim expelled the governor from Merv in early 748 and sent his army in the direction of Damascus; the Abbasids succeeded the Umayyads as caliphs in the winter of 749–50.[156] The takeover of the Abbasids fundamentally changed the nature of the Muslim empire and even of Islam itself. As highlighted by Richard N. Frye, the Umayyad caliphate was not an egalitarian community based on

Islam, but a conquered land which was dominated by certain Arab tribes who refused to compromise on the earnings from the *djizya*.[157] For the Umayyads Islam was basically the religion of the Arabs; for the Abbasids, however, it represented the fundament of the state in which the Arab and non-Arab faithful were equal.

When China ineptly intervened in a conflict between two nominal vassals, Čač and Fergana, and General Gao Xianzhi had the city of Čač plundered and its ruler deported to Chang'an, the latter's son, who had fled to Samarkand, asked General Ziyad bin Salih for help. The general seized the opportunity to bring the city state of Čač, which until then had served the Western Turks as a bridgehead to Mawarannahr, into the Arab zone of influence. In July 751 he inflicted a crushing defeat on the Chinese army of Gao Xianzhi in the valley of the river Talas (Taraz, Chinese. Daluosi) because Gao's Karluk mercenaries defected to the Arabs during the battle and then attacked the Chinese from the rear.[158] Gao escaped to Xiyu and made preparations for a counter-offensive. At that moment the revolt led by An Lushan broke out, and Gao and his troops were ordered to central China. The defeat near Talas and An Lushan's rebellion ended China's advance into Central Asia for a whole millennium. The Battle of Talas, which took place near Artlakh, finally ended the dreams cherished by a section of the Sogdian elite of a non-Muslim independence, all the more so since Sogdian merchants had long recognised the huge potential of Umayyad and later Abbasid markets. The commercial reorientation away from China in the east towards the caliphate in the west was followed by a shift in the cultural focus of Sogdiana towards the Abbasid centres of Merv, Nishapur and Baghdad. The vision of an independent state of Iranian culture within the Muslim faith community was realised in the glorious dynasty of the Samanids (875–999), with Bukhara as its capital.[159] During this period the west Iranian language Persian replaced the east Iranian Sogdian, a language which was now only spoken in rural areas. Today a language which is very close to Sogdian, Yagnobi, is still used in a remote valley in Tajikistan but, with only 3,000 people still speaking it, is under grave threat of extinction.[160]

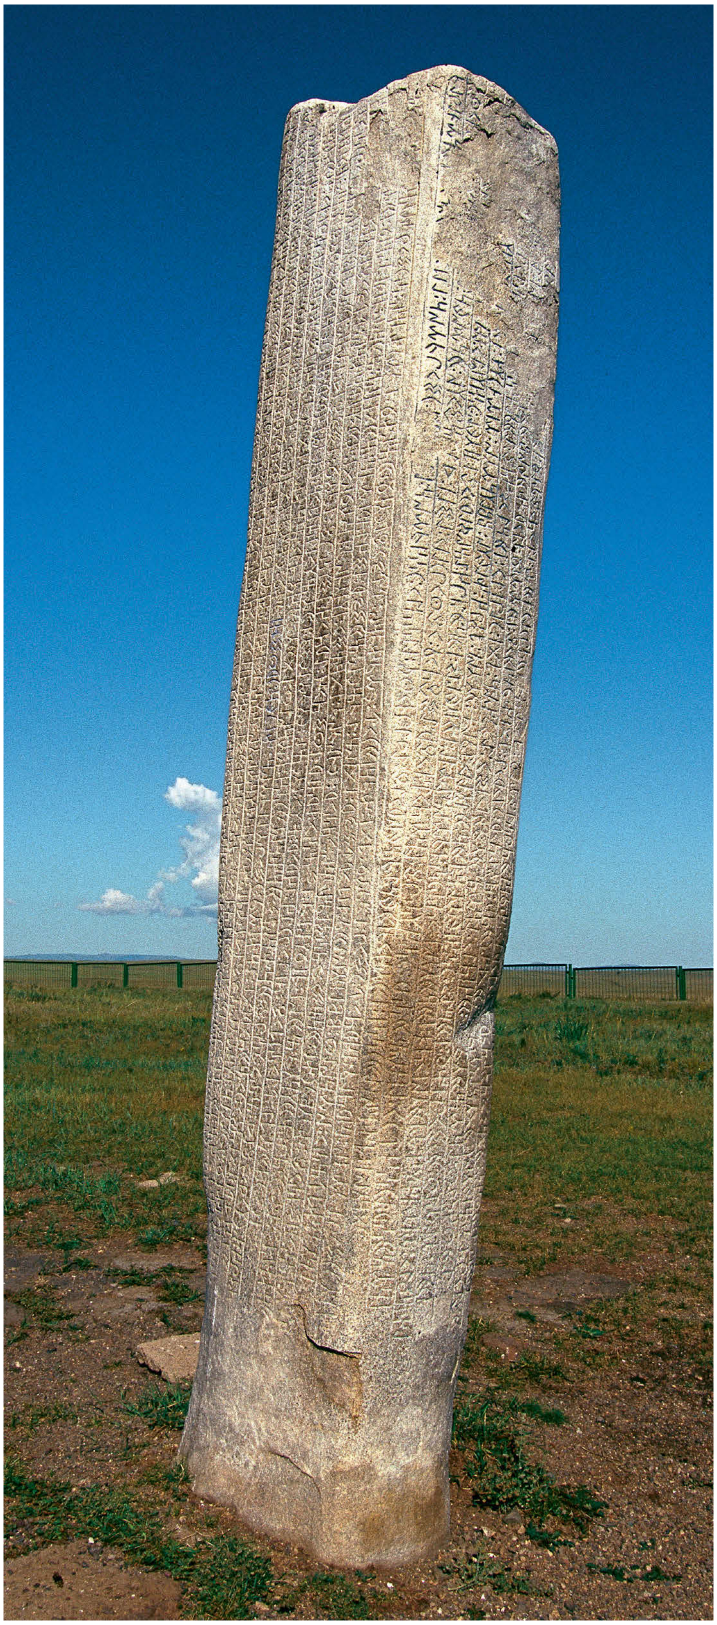
VIII

The Second Turkic Khaganate and the Türgesh

The words of Chinese people, who give us gold, silver, alcohol and treasures in abundance, have always been sweet and silks have always been soft. Deceiving by their sweet words and soft silks, they attract people to come from remote places. After people have settled close to them, they make people to be addicted to them even more. [. . .] If you go towards those places, oh Turkish people, you will die! If you stay in the land of Ötükän [the Orkhon Valley in central Mongolia], and send caravans from there, you will have no trouble. If you stay at the Ötükän Mountains, you will live forever dominating the countries!

Political testament of **KÜL TEGIN** (D. 731), Turkic General and Brother of Bilge Khagan.[1]



214. **The memorial stele for the Göktürk general and adviser Tonyukuk (*ca.* 646–*ca.* 725), who was instrumental in the establishment and success of the Second Turkic Khaganate. The memorial inscription in Old Turkic runes was written by Tonyukuk. The memorial complex, which was built after 725, stands 60 km south-east of the Mongolian capital, Ulaan Baatar.**

1. The Unification of the Turkic Tribes

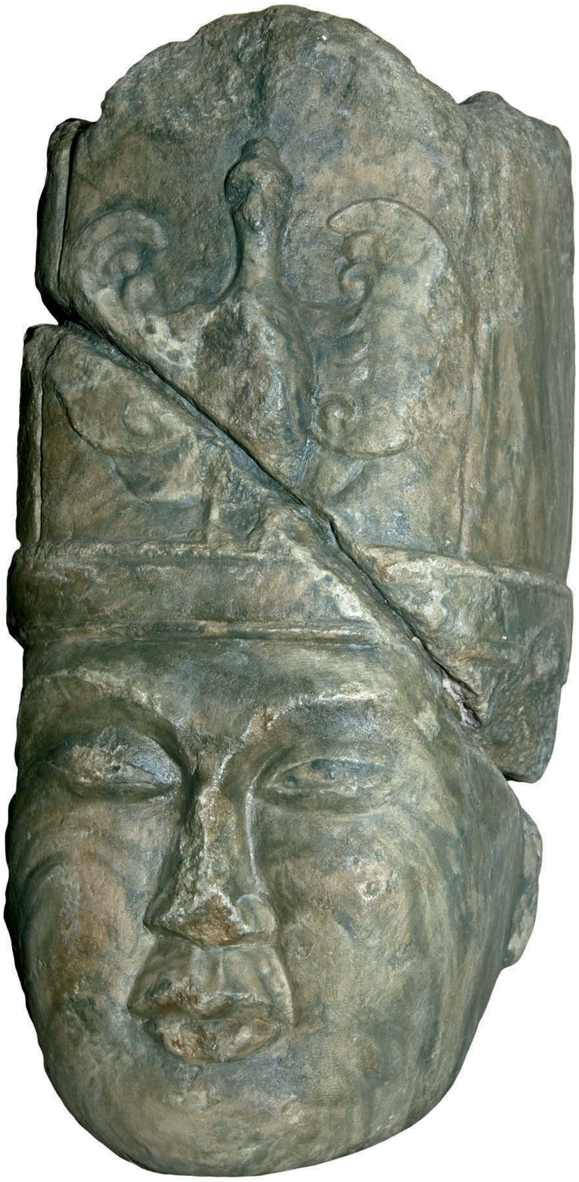
Kül Tegin's admonitory words to the Turkic people reflect the strategy of the Chinese emperors towards their dangerous northern neighbours, which remained valid until the twentieth century. Emperor Taizong summarised it as follows in 642: 'Against the [Turkic] Xueyantuo we only have two options: If we cannot exterminate them by force of arms, we have no choice but to placate them through intermarriage policy [and lavish gifts].'[2] This doctrine was based on understanding that it was extremely difficult for Chinese armies to achieve any decisive victory in an offensive war against a horse nomad people who could easily retreat into the almost infinite vastness of the Mongolian steppes in the case of a defeat. This is why, from an economic point of view, it was better and less hazardous to placate the horse nomads with rich gifts such as Chinese princesses and luxury goods and thus sap their strength in the long term. Later the Chinese Qing dynasty (1644–1911) would become masters at promoting Buddhism among their northern neighbours as an ideology which undermined the Mongols' warrior traditions.

After Emperor Taizong's victory over Xieli Khagan, China used this strategy successfully for 50 years. In alliance with the Uyghurs, the Chinese destroyed the short-lived empire of the Xueyantuo and captured the rebel Eastern Turkic Chebi Khagan (r. 646–50). The puppet khagans of the Eastern Turks either bowed to Chinese sovereignty or were toppled by Emperor Gaozong (r. 649–83).[3] The systematic sinicisation of the Eastern Turkic elite, whose members nominally occupied Chinese offices and military posts and were paid handsomely for this, plunged the wider population into poverty. For the leaders, who had been bought by China, no longer raided Chinese territory and kept the Chinese gifts for themselves instead of distributing them, as was the tradition. As deplored by Kül Tegin, a painful alienation of the rulers from the population and its traditional values had set in: 'The unity of Turkic people had broken. [. . .] The Chinese made slaves of your noble sons, and slaves of your beautiful daughters. Turkic Beks [tribal leaders] refused their titles and admitted Chinese titles. So they served Chinese Khagans. They [Khagans and Beks] served fifty years. [. . .] The common people said then: 'I had a state, where is it now? Which country do I serve?''[4]

In the years 682 to 687 the *Idat Shad* called **Ashina Qutlugh**[5] (r. 682–91) and his military commander and adviser Tonyukuk (*ca.* 646–*ca.* 725) succeeded in achieving something which Nishufu

Khagan (r. 679–80) and Funian Khagan (r. 680–81) had both failed to do: they made themselves leaders of discontented Turkic tribes and threw off the Chinese yoke. The time was fortuitous for a Turkic revolt, for China had been defeated several times by Tibet since 670 and had lost control over the Tarim Basin in 677. On top of this, there was discord within the Chinese leadership. Emperor Gaozong had been weakened by a second stroke that he had suffered in 675 (or perhaps by being poisoned by his wife Wu Zetian) so that power shifted towards this scheming empress (r. de facto from 675, at the latest by 684–705).[6] Qutlugh and Tonyukuk gathered Funian Khagan's dispersed troops and subjugated the confederation of the *Toquz Oghuz*, the Nine Tribes, one of which was the Uyghurs. The Second Khaganate of the Göktürks also comprised the tribal confederations of the Sir, who were loyal to the Ashina clan, as well as the often rebellious Basmils and Karluks.[7] Ashina Qutlugh then appointed himself **Ilterish Khagan** – the honorary name *Ilterish* means 'unifier [or refounder] of the empire' – and not only defeated the Chinese armies that had been sent out against him but also undertook raids into Chinese territory. Ilterish and Tonyukuk chose the mythical Ötükän in the Orkhon Valley as the centre of the resurrected Turkic khaganate. The driving force for the renewal of the khaganate was Tonyukuk, who had been trained in China and therefore knew the strategies and weaknesses of the Chinese adversary. His role was decisive not only for the regained independence but also in the wars of the brothers Bilge Khagan and Kül Tegin. Proud of his achievements, before his death he wrote the inscription on his own tomb in front of which stood a row of 289 *balbals*: 'I was the one who rose [installed] the Khagan, I, the wise Tonyukuk Boyla Bagha Tarkhan. In alliance with Ilterish Khagan, [I] killed a lot of Tabgachs [Chinese] in the south, in the east a lot of Khitans, in the north Oguzes. [. . .] If Ilterish Khagan did not rule the country, and I myself did not rule, there would be neither country nor people! [. . .] In Bilge Khagan's country I ordered to write [this]. I am – the wise Tonyukuk.'[8]

While China could not prevent the defection of the Eastern Turks, in 685 it succeeded, with Western Turkic help, in crushing a local rebellion of impoverished Oghuz Turks and Uyghurs north of the Etzin Gol and in resettling these rebels affected by a famine into the Etzin Gol (fig. 216). A year later an army inspector, who was staying in the fortress of Datong Cheng (Aduna Khure) in the Etzin Gol, reported that thanks to artificial irrigation, the inhabitants of this desert area were successfully growing crops and keeping livestock. But he warned that the region could be a dangerous gateway to Central China for the Turkic horse nomads and denounced the incompetent war preparations at the time of Empress Wu Zetian: 'The chief generals are not chosen [carefully] and the officers and soldiers are not drilled; only the city dwellers are driven on to the battlefield so that it happened again and again that [the army] collapsed of its own accord and dissolved.'[9] Some of the Uyghurs who lived in the Etzin Gol and in northern Gansu took part in the rebellion against the Eastern Turkic Khaganate in 742; others remained there and formed the core of the Uyghur kingdom of Gansu, which was founded at the end of the ninth century.[10]



215. Head of a statue made from green marble, attributed to General Kül Tegin (*ca.* 685–731) and excavated near the memorial complex of Khöshöö Tsaidam, Arkhangai Aimag. On the crown a bird of prey with outspread wings is depicted, very similar to the bird on the gold diadem of Bilge Khagan (*ca.* 683–734), Kül Tegin's brother. The bird of prey was probably a totem of the highest princely family. National Museum of Mongolia, Ulaan Baatar.

2. A Short-Lived Great Power

Ilterish Khagan, who died in 691, was succeeded by his brother **Kapagan Khagan** (Chinese: Mochuo, r. 691–716) as leader of the khaganate. Under Kapagan Khagan the Eastern Turkic Empire rose to the height of its power. In the East he subdued the Khitan, and he also led devastating raids to the south into China, against which Empress Wu was powerless. She had to pay high tribute each time to make Kapagan withdraw. In 698 the khagan demanded and obtained from China 3,000 agricultural tools, some tonnes of iron and '100,000 hu seed millet'[11] (*ca.* 10,000 hectolitres); it seems that in the Eastern Turkic Khaganate there was also agriculture, probably carried out by prisoners of war, slaves and abducted Chinese farmers. At the same time Kapagan Khagan forced Empress Wu to bring back her son Li Xian, the later Emperor Gaozong (r. 684, 705–10), from exile and make him crown prince.[12] When Empress Wu tried to form an alliance with Western Turkic tribes against Kapagan Khagan, the latter attacked and defeated the Western Turks in 699, thus seemingly re-establishing the former unity of the First Turkic Khaganate.[13] In the years 709–10 the commanders Kül Tegin and Tunyukuk subdued Tuva, as well as the Kyrgyz who lived north of the khaganate, and defeated and killed Türgesh Khagan Saqal (Chinese: Suoge, r. 708–10/11). As the memorial stele in honour of Kül Tegin records, the Eastern Turks found allies in the tribal confederation of the Kängäräs, who lived between the Aral and Balkhash lakes in what is today central and southern Kazakhstan.[14] The Kängäräs were identical with the Kangars mentioned by Constantine Porphyrogenitus, whose three tribes formed the elite of the Pechenegs towards the end of the ninth century.[15] But when the Eastern Turks advanced again south-westward, they suffered a heavy defeat in 712 near Samarkand at the hands of Qutayba, and two years later their siege of Besh Baliq (Beiting) also failed, and a son of the khagan was killed in battle. With this defeat and the withdrawal from Sogdiana and Semirechie, Kapagan's attempt to resurrect the First Khaganate in its original size came to an end.[16] As was often

216. At the time of the Tang dynasty (618–907), the Chinese fort of Dzun Kure in the delta of the Etzin Gol was part of a wider defence system built to prevent the Göktürks and other northern equestrian groups from invading China. Inner Mongolia, China.

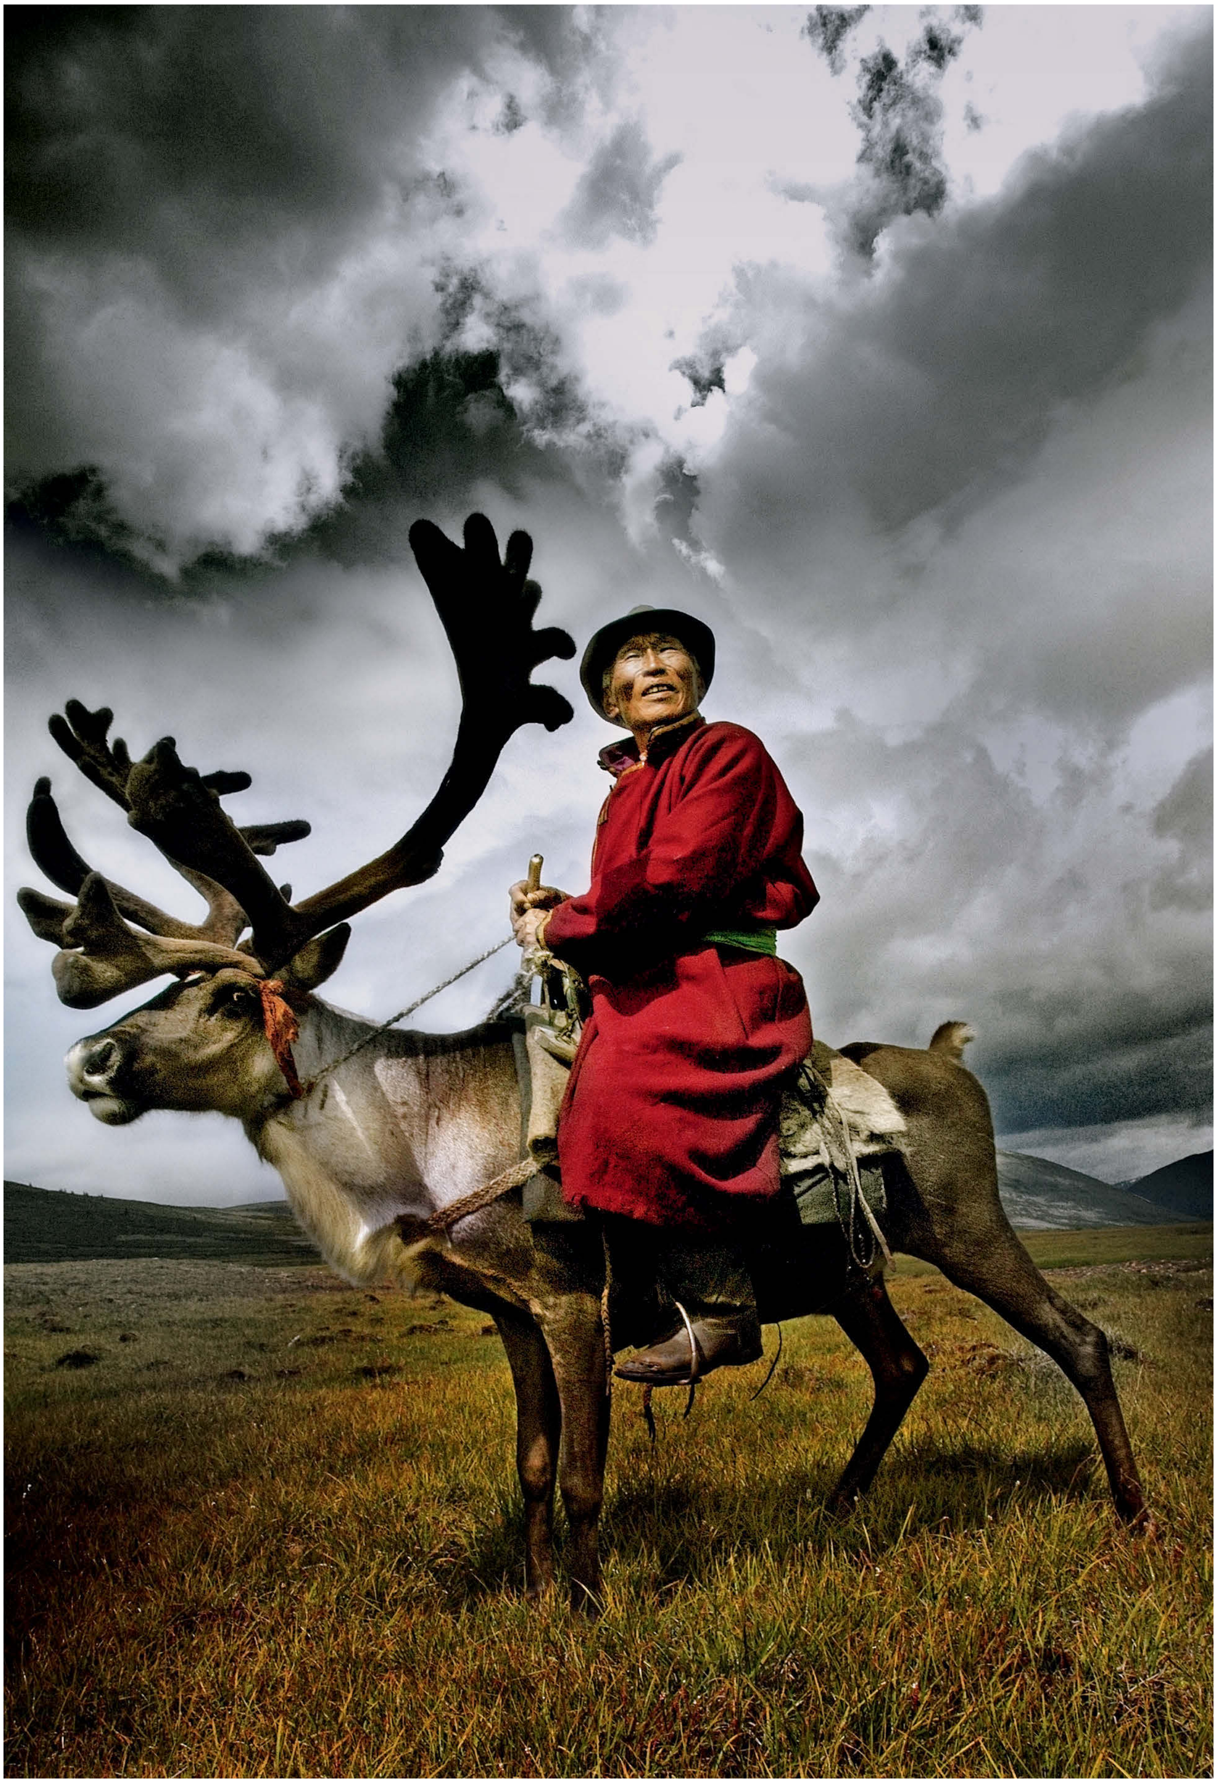
the case in horse nomad empires, defeats gave the signal for secessions. Although Kapagan Khagan succeeded in defeating the rebellious Toquz Oghuzes between 715 and 716, he was careless as he returned to his main camp, and was killed in an ambush.

Ilterish Khagan's son Kül Tegin, who was held in high esteem by the military, took advantage of the short power vacuum after Kapagan's death to stage a putsch. He killed his cousin, Kapagan's son and successor **Inel Khagan** (r. 716) as well as his brothers and close relatives, and liquidated the former advisers of his uncle Kapagan. The only adviser he spared was Tonyukuk, now in his early seventies, whose daughter was married to his elder brother **Bilge Khagan** (r. 716–34) whom he installed on the throne.[17] Now a triumvirate directed the destiny of the khaganate: Khagan Bilge, whose name meant 'wise', his brother Kül Tegin, and Tonyukuk. In the following three years, Tonyukuk managed to bring the rebellious Uyghurs, Toquz Oghuz, Tatabi and Khitan back under Eastern Turkic control; only the Türgesh under Suluk Khagan succeeded in defending their newly gained independence. When in the winter of 719/20 Bilge Khagan followed Tonyukuk's advice and offered to negotiate peace with the Chinese emperor Xuanzong (r. 712–55, retired 755–62), Xuanzong declined the offer, underestimating his adversary and overestimating himself. He hoped that he would be able to crush the weakened khaganate, just as Taizong had once done. The Chinese army, whose offensive strength depended on the cavalry of the Turkic Basmils, advanced towards the Orkhon Valley in 720 but the Eastern Turks were prepared. Tonyukuk defeated the Basmils and, after pursuing them and seizing the fortress of Besh Baliq, reached Gansu, while the khagan crushed the rebellious Khitan and Tatabi. In 721 Xuanzong decided to buy peace via 'gifts'; that is, tribute payments. The economic consequences of the peace were so advantageous for the khaganate that in 727 Bilge Khagan refused to enter an offensive alliance with Tibet against China.[18] Even the grand councillor of the palace chancellery in Chang'an, Zhang Yue, was impressed by the Turkic leadership and warned Emperor Xuanzong against provocations: 'The little *Shad* [Bilge Khagan] is merciful and loves his people. [. . .] Kül Tegin is



218. Reindeer herdsman from the Tsaatan people, north-east of Lake Khövsgöl, Khövsgöl Aimag, Mongolia. The Tsaatan are of Tuvan origin and lived as semi-nomadic reindeer herders in the mountain taiga on the border between Mongolia and Russia. But today only 44 families still do so: the majority of the Tsaatan have moved to the cities.

brave and an expert in the art of war, and no adversary is a match for him. Tonyukuk is very much in control and full of plans and intrigues. [. . .] These three barbarians live in harmony with each other. When they undertake something, it is precisely planned.'[19]

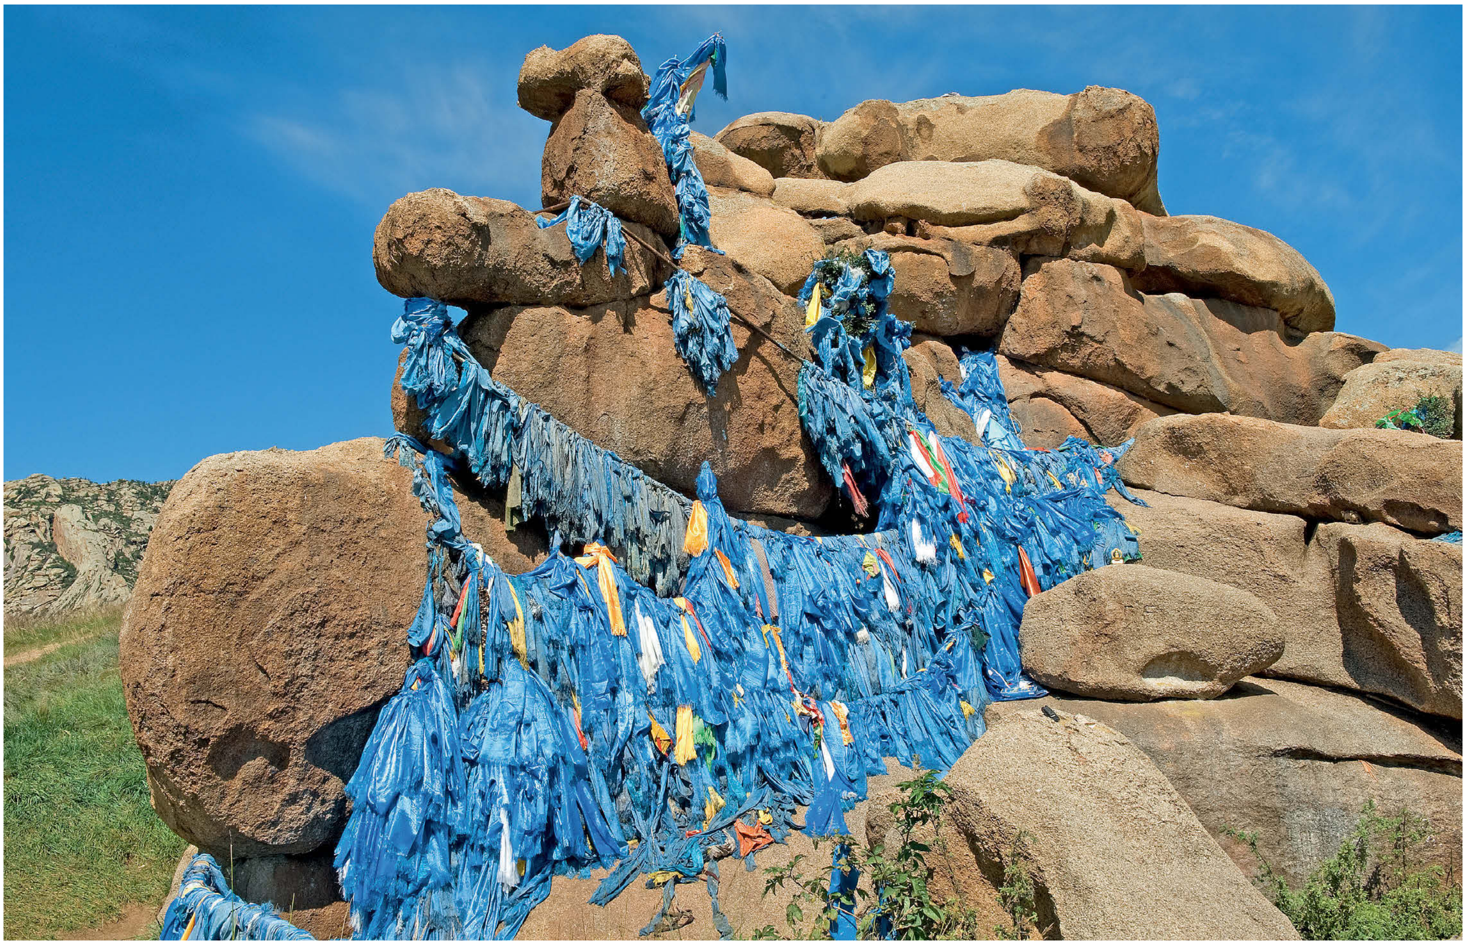
Tonyukuk was not only a brilliant commander but also a perspicacious adviser who understood the weaknesses and strengths of his people. When shortly before 720 Bilge Khagan wanted to adopt important elements of Chinese culture and build fortified cities as well as Buddhist and Daoist temples, Tonyukuk strongly disagreed: 'This must not be! The number of the T'u-küe [Türken] is very small and equals not even a hundredth of the population of the Tang. That we [nevertheless] are always able to resist we owe to the fact that we roam around, seeking water and grass, that we do not have a permanent home and live off the hunt! All our people are trained in the art of war. If we are strong, we let our soldiers go out on raids; if we become weak, though, we flee into the mountains and forests and hide. [. . .] But if we build fortresses to live in them, and change our old habits, then one day we will be beaten and we will be annexed by the Tang with certainty! Besides, the teachings in the Buddhist and Daoist temples only make people gentle and submissive. This is not the way to conduct wars and acquire power. This is why we must not build temples!'[20] The khagan followed Tonyukuk's advice, for his words got to the heart of the unbridgeable dichotomy between nomadic and sedentary forms of life and mentality. At a time when there were no firearms, nomadic pastoralism offered an ideal and permanent training for war: people were physically and mentally highly adaptable, and apart from their herds they had nothing immobile to defend: no walled city or fortress in which the enemy could besiege them or crush them with their superior numbers. For Tonyukuk, walled cities, which would confine the comparatively small numbers of Turkic soldiers to a few places, were potential traps from which the Turks would not be able to escape. What made Tonyukuk object to Buddhism was not only its pacifist ideology, which was diametrically opposed to a warrior mentality, but also to the monastic ideal which took young men out of productive life.[21]

The Göktürks had two different belief systems at that time: a religion of the people and a quasi-religious imperial ideology. In cases of illness, infertility, animal epidemics and evil spirits, and before the hunt, the people turned to shamans, who made contact with the spirits involved in each case and performed whichever placatory measure was appropriate. The shamans worked as mediators between humans and animals of the visible world, and the invisible spirits. Shamanism functioned as a religion for ordinary people which took care of their everyday concerns. The imperial religion, on the other hand, concentrated on the myths of origin of the rulers and the ancestor cult of their heroic forebears. The khagan and the supreme elite of the Ashina clan and the related Ashide clan focused their thoughts and hopes on Tengri, the Sky-Father, from whom the khagan derived the legitimisation of his rule. Like Chinese emperors, the khagans of the Second Khaganate and of the Uyghur Empire called themselves *tängridä*, 'son of the sky'. Every year at the time of the summer solstice, the ruling elite gathered at the holy Ötükän Mountain for grand sacrificial ceremonies in honour of Tengri. Shamans, along with women and children were excluded from these rituals.[22] Other divinities venerated by the imperial elite included the divinity Iduk Yer-sub, 'Sacred Earth and Water'; the fertility goddess Umay and the god of the underworld Erklig Khan.[23] Since the khagan claimed to possess a mandate from the almighty Tengri, thanks to his divine charisma, *qut*, he stood in direct competition to the

219. Silver statuette from the 730s with gold painting of a stag, excavated in 2001 at the memorial for Bilge Khagan. Khöshöö Tsaidam, Arkhangai Aimag, Mongolia. The statuette is probably a Sogdian work. National Museum of Mongolia, Ulaan Baatar.

shamans. This latent conflict between shamanism and state cult which Turko-Mongolic peoples were facing, escalated at the time of Genghis Khan (r. 1189–1227), when the supreme shaman Kokuchu Teb Tengri directly challenged Genghis Khan around 1210; the latter resolved the power struggle by having Teb Tengri killed.

As observed by Grand Councillor Zhang Yue, the strength of the khaganate was dependent on the leading triumvirate. Tonyukuk died around 725, and Kül Tegin in 731, depriving the khagan of his two strongest supporters. Despite Tonyukuk's warning not to adopt Chinese customs, Bilge Khagan allowed Emperor Xuanzong to participate in the building of a memorial site for his deceased brother where he had a small temple built and decorated with murals. In 734 Bilge Khagan was poisoned by a confidant. But because the poison was slow-acting, the dying khagan still had sufficient time to kill the murderer and his followers. The memorial complexes for the brothers Kül Tegin and Bilge Khagan and steles, which were erected in 732 and 735, stand next to each other at Khöshöö Tsaidam, not far from the Orkhon River. When the French explorer Henri de Bouillane de Lacoste (1867–1937) visited them in 1909, he recorded: 'Here and there we discover, stretched out in the grass like the dead after the battle, several large stone figures. There are seven of them who sleep like this on the desert heath, all seven decapitated.'[24] Such memorials were always erected one year after the burial of the deceased, which took place at another, secret place. At the entrance stood two marble ram figures opposing each other, and at the side of each one was a standing stone figure. This was followed by a stone stele which stood on the back of a tortoise.[25] The stele was inscribed with small Turkic runes on its front and two narrow sides, and with Chinese signs on the back. The Chinese text recorded the letter of condolence from Emperor Xuanzong, the Turkish texts the deeds of the deceased and his proclamation to the people. Above the text on the front is the carving of an ibex, the tamga (emblem) of the ruling clan, the Ashina. At

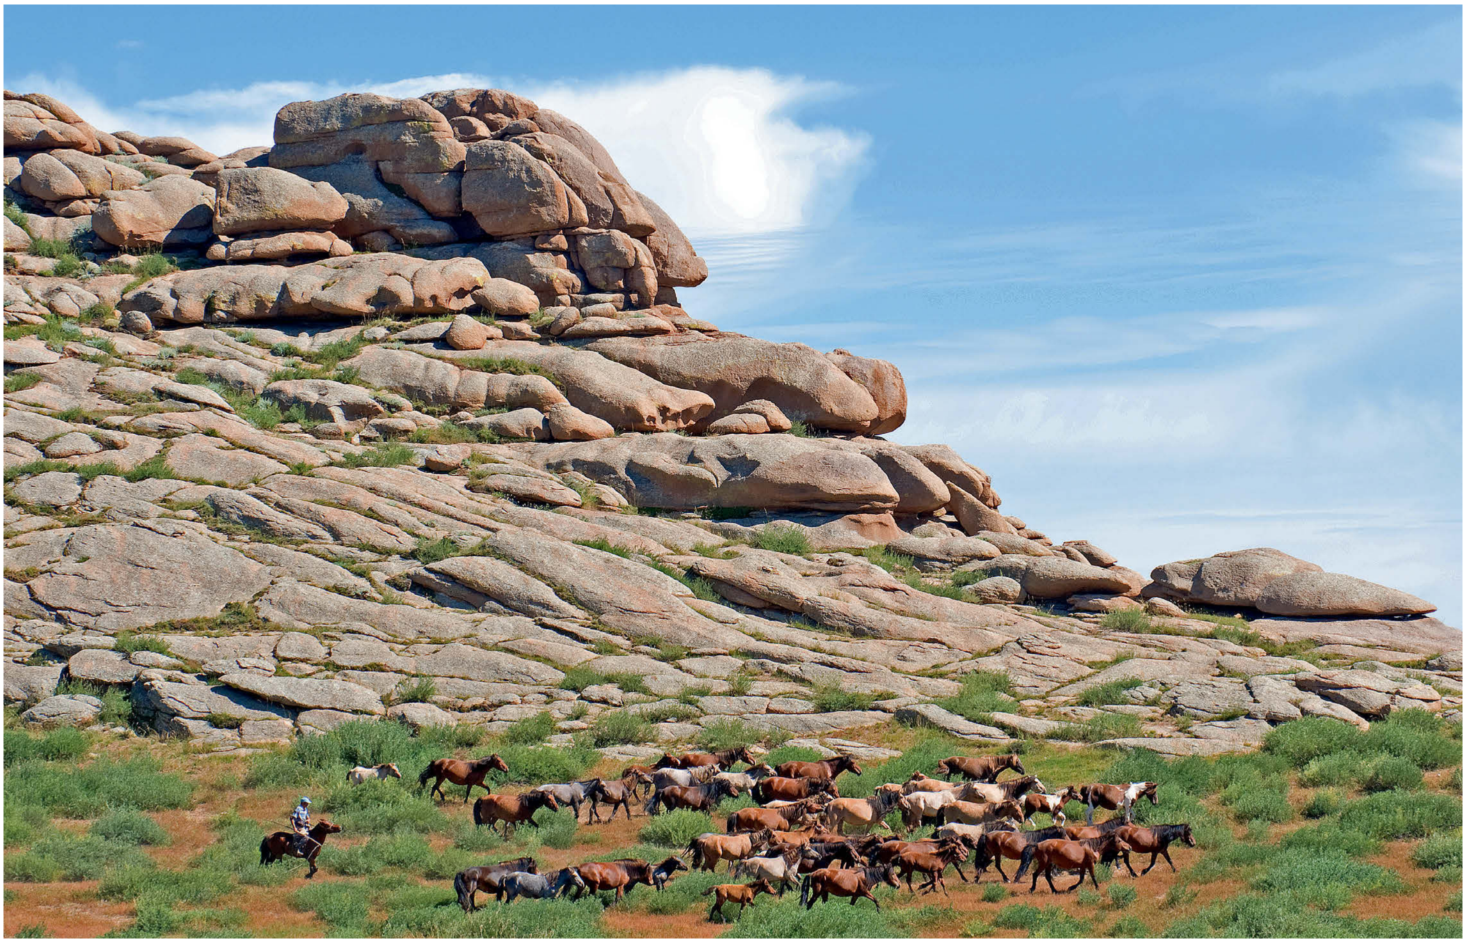


220. Many of the rocks near the Shamano-Buddhist temple of Khadagt Khoshu in the Högnö Khan mountains have long ropes stretched across them, to which blue *kathas* are attached. The *katha*, a ceremonial scarf offered as a mark of respect, gratitude or greeting in Tibetan Buddhism, is blue in Mongolia, symbolising the eternal sky, Tengri. Although some small, wind-driven, Buddhist prayer wheels and Buddha figurines can also be found here, people mostly venerate Tengri and the spirits and bring them offerings like sweets and vodka. At the holy temple neither his name nor that of the mountain must be spoken. Bulgan Aimag, Mongolia.

221. A Mongolian shaman invokes the spirits at the *obo* on the top of a mountain. *Obos* are sacred piles of stones laid out by people at special places such as mountain passes or peaks. Branches or wooden crutches are added to the stones, and they are decorated with *kathas*. People come to them primarily to call up the mountain spirits or to ask for their blessings. The figures painted on the shaman's drum are very similar to Mongolian petroglyphs.

the memorial complex for Bilge Khagan, next on the processional street, after the stele, were six pairs of marble figures and finally a Chinese-style chapel with the granite cenotaph (fig. 222). In both memorials long rows of *balbals*, which indicate the numbers of the enemies killed by the deceased, conclude the complex; Kül Tegin's row was 2.3 kilometres long, Bilge Khagan's three kilometres.[26]

After Bilge Khagan's death, the empire was plunged into internal strife, for the organisation of the Eastern Turkic tribal confederation, which in comparison with the Xiongnu was loose and decentralised, only functioned when it was led by the three leaders who had ruled since 716. Whereas the Xiongnu had had a small but meritocratically organised government and military elite which superimposed itself on the tribal structures, the Eastern Turks lacked this except for Sogdian advisers. Among the Göktürk rulers, only Ishtemi Khagan had tried to divide the tribes, which he ruled according to the decimal system, into the *On Oq Bodun*, the 'ten arrow nation' but, as Sören Stark remarks, 'the original military organization gradually turned into tribal groups'.[27] Although Bilge Khagan's son **Yiran Khagan** (r. 734–?) quickly ascended the throne, neither he nor his successor, his brother **Tengri Khagan** (r. ?–741)



223. A herd of horses with their herdsman in the Högnö Khan Mountains, Bulgan Aimag, Mongolia.

managed to gain control over the rebellious Turkic tribal leaders.[28] The main reason for the dissatisfaction of the leading Turkic aristocrats was the fact that Tonyukuk's daughter, the mother of Tengri Khagan, who was still a minor, had usurped power and shared it with her lover, a lower-rank tarkhan. During the ensuing power struggles Tengri Khagan was murdered, and by 742 three more khagans had lost their lives. The last of these three, **Qutlugh Yabghu** (r. 741–42) was killed by a great alliance of Basmils, Karluks and Uyghurs.

In a successful rebellion, the Basmils, who lived in the south-west of today's Mongolia and in Dzungaria, and who had now advanced as far as Ötükän, held the leading role so that their leader, who belonged to a branch of the Ashina tribe, proclaimed himself **Ilterish Khagan** (r. 742–44) of a new **Empire of the Basmils**. In this constellation, the leaders of the Uyghurs and Karluks declared themselves the left (eastern) and right (western) *yabghus* (vice-kings). These proclamations, which were also directed towards China, show how much importance the new rulers attached to imperial recognition. In 744 Basmil Ilterish Khagan killed the penultimate Eastern Turkic **Khagan Ozmysh** (r. 742–44), who had been struggling for recognition, and sent his head to Xuantong in Chang'an. Soon after this he in turn was killed by the attacking Uyghurs and Karluks, and his head was also sent to Chang'an. But the new division of power, between an Uyghur khagan, who resided in the sacred Orkhon Valley, and a Karluk yabghu was also short-lived. The first ruler of the Uyghurs, Qutlugh Bilge Kül

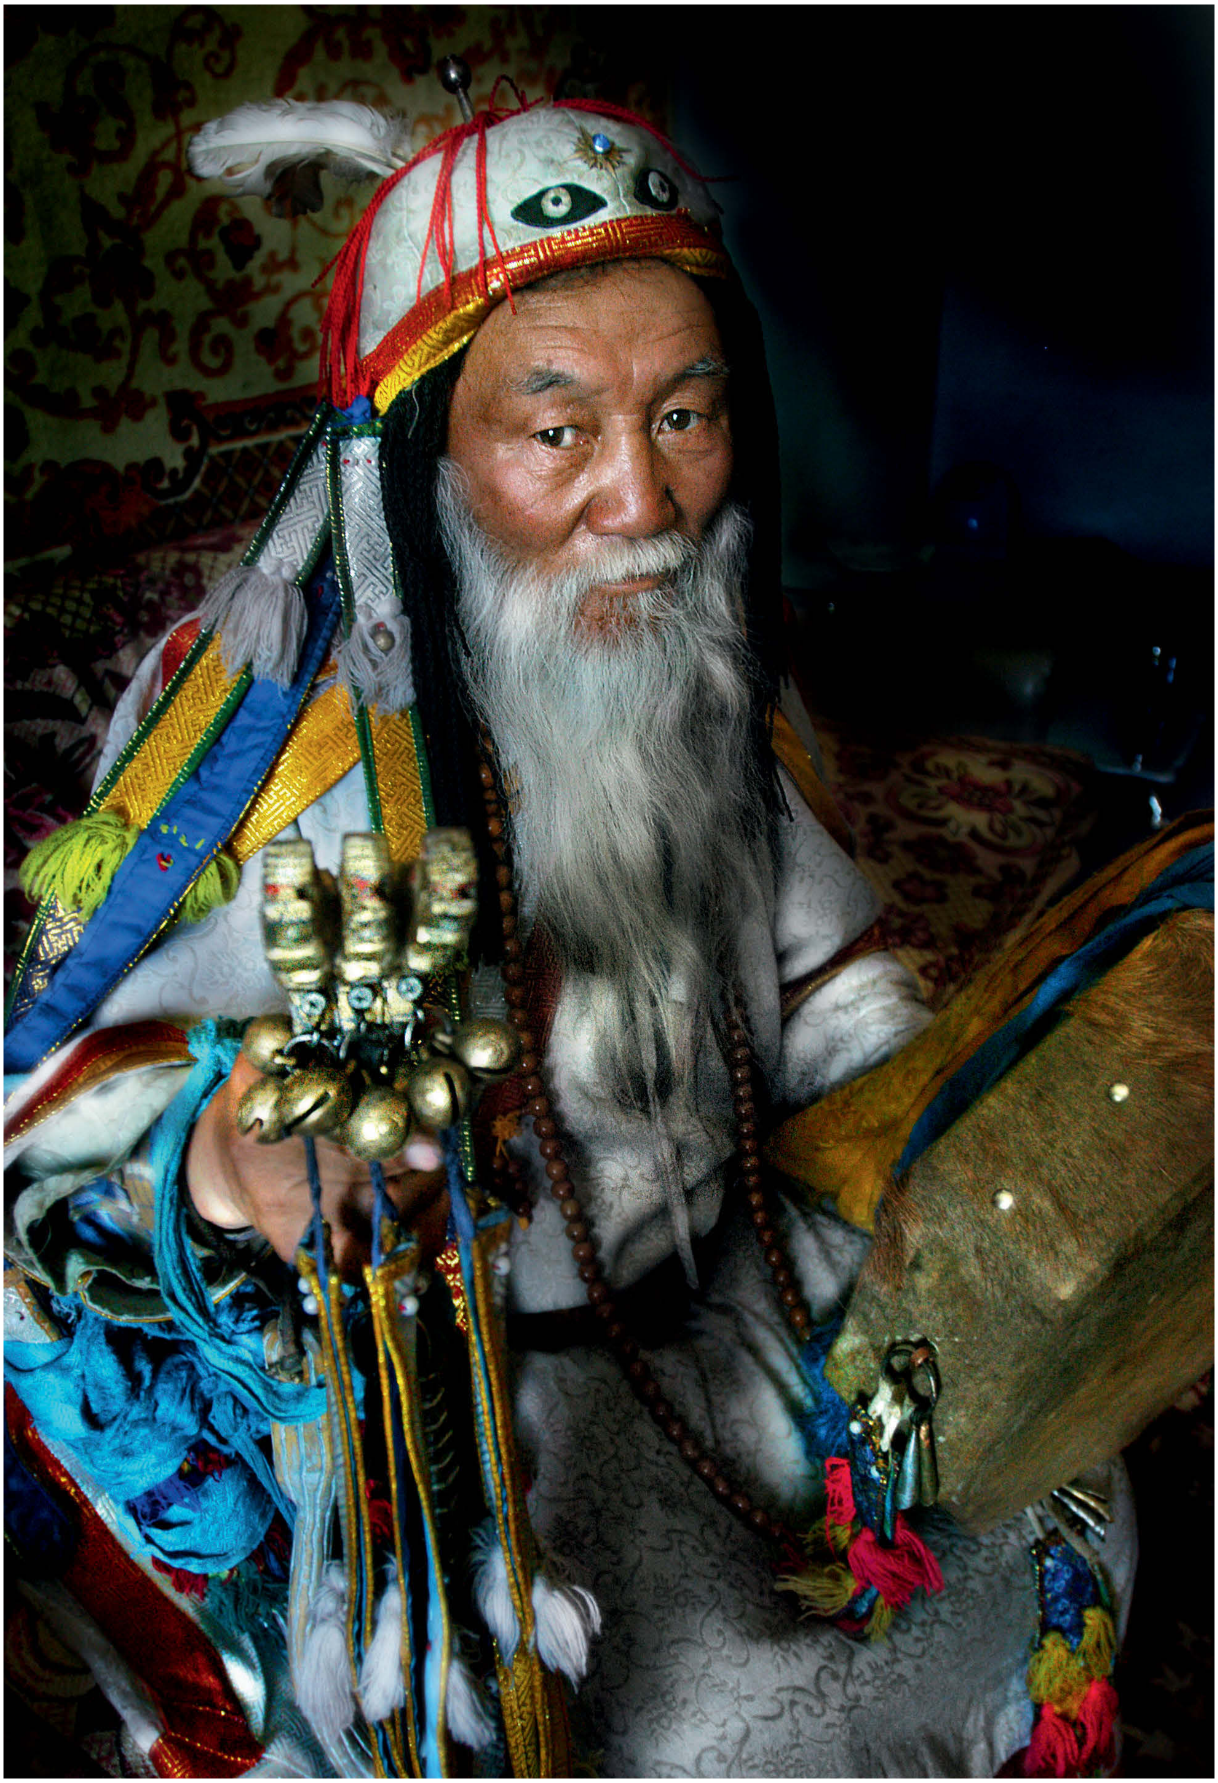
◀**222.** Illustration of the memorial for Bilge Khagan (r. 716–734) near Khöshöö Tsaidam, based on historical sources and archaeological finds, Arkhangai Aimag, Mongolia. The illustration shows one of the most important rituals to commemorate the dead ruler. While armoured horsemen mount a guard of honour at the entrance to the mausoleum, a horse is sacrificed on the stone altar inside the surrounding wall, and riders gallop clockwise around the inner complex with its chapel and granite sarcophagus. The banners held by the guards bear the totem animal of the Ashina, the ibex, which is also engraved in the upper part of the stele. At the entrance to the complex stands an inscribed stone stele mounted on the back of a stone tortoise, celebrating Bilge Khagan's achievements and his fellow warriors and ancestors, and proclaiming his views on the world. Between the stele and the chapel, six pairs of stone figures stand, sit or kneel in homage. In front of the complex, at the entrance to the sacred enclosure, begins a three-kilometre-long row of stone *balbals*, which symbolise the enemies killed by Bilge Khagan.

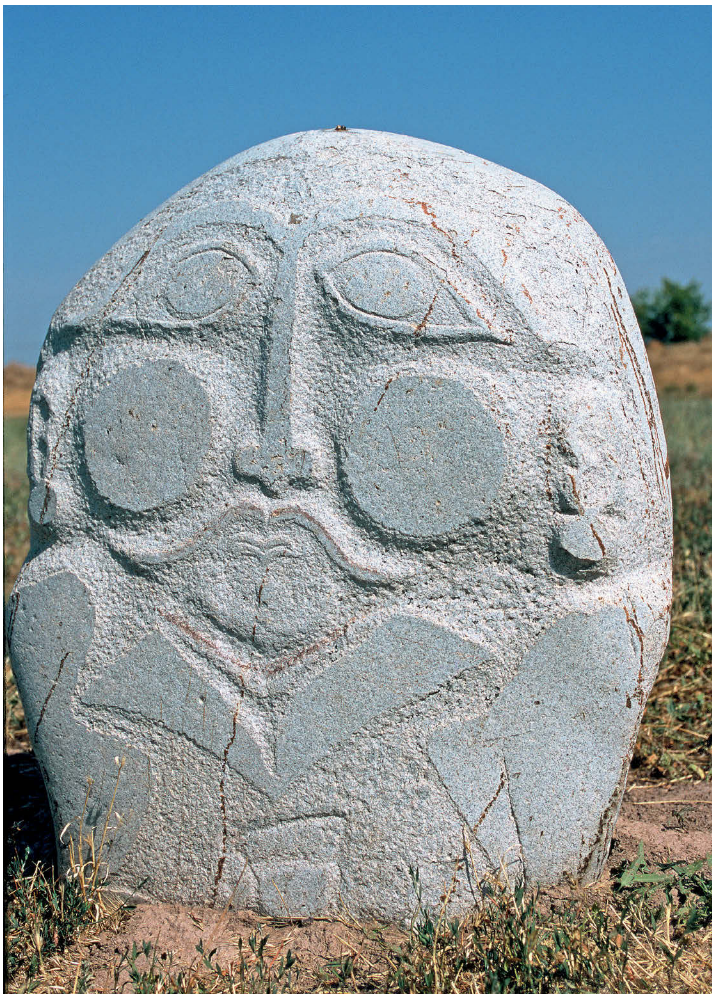


224. Elderly Mongolian shaman with drum and bells used for the invocation of the spirits.

Khagan (Chinese: Guli Peiluo, r. 744–47) from the Yaghlaqar clan, displaced the Karluks to the west into the area between Tian Shan and Lake Balkhash, from where the Karluks took Semirechie from the Türgesh in 766. The Karluks who had remained and the subjugated Basmils were then integrated into the Uyghur confederation. Qutlugh Bilge Kül Khagan consolidated his rule in 745 by killing **Bomei Khagan** (r. 744–45), the last khagan of the Eastern Turks, whose head he sent to Chang'an as proof of his victory.[29] Thus ended the Second Khaganate of the Göktürks, and the Ashina clan, which had controlled the eastern steppes of Central Asia for almost two centuries, lost its supremacy. Although Emperor Xuanzong, like Emperor Taizong before him, could be proud of that fact that with skilled diplomacy he had contributed to the destruction of the Turkic khaganate, and that with the Uyghurs he had won a new neighbour who had traditionally been an ally of China, the Tang dynasty suffered a precipitous decline during the following decade which degraded it to a quasi-vassal of the Uyghurs.

3. The Western Turkic Türgesh

Soon after China had defeated the Western Turkic Khaganate in 659 and divided up the administration of their new zones of influence, various powers challenged the Chinese claim to leadership within Central Asia. From the winter of 673/74 the Arabs attacked the oasis settlements of Bukhara and Samarkand, and even earlier, in 659, a Western Turkic tribe had formed an alliance with Kashgar and occupied Khotan. After a successful Chinese counter-attack, an alliance of Köngül Turks and Tibetans advanced in 660, conquered Kashgar and two years later forced an exhausted Chinese army to withdraw without a fight. At the same time Tibet, which was ruled by the Gar clan, grew into the main adversary of the Tang and forced China to abandon the Four Garrisons of the Tarim Basin in 670; only Turfan and Beiting remained in Chinese hands.[30] Within the Western Turkic heartland, China also failed to pacify in the long term the two wings of the Duolu and Nushibi by appointing puppet khagans; there were repeated rebellions. But in 679 the Chinese general Pei Xingjian managed to capture in a surprise attack Ashina Tuze (Chinese: Ashina Fuyan Duzhi), an ally of the Tibetans, and the ten tribal leaders of the On Oq,[31] after which China, in 692, regained control over the Four Garrisons and two years later defeated the Western Turkic Khagan Ashina Tuizi, who had been appointed by the Tibetans.[32]



225. Post-Göktürk stone figure in honour of a dead warrior in the open-air museum of Burana, east of Bishkek, Kyrgyzstan. The deceased probably belonged to the Turkic people of the Karluks, who dominated the region between the western Tian Shan and Lake Balkhash in Kyrgyzstan and eastern Kazakhstan. 8th–11th c.

Around the year 699/700, the Türgesh, who belonged to the Western Turkic Duolu, rose up in rebellion, led by **Ocirliq** (Chinese: Wuzhile, r. *ca.* 699/700–708), and forced Khagan Ashina Khusrau (also known as *Puli Shad*), from the Nushibi, who had been appointed by the Chinese, to flee into Dzungaria. In 703 Ocirliq conquered the Chinese fortress of Suyab and organised the territory over which he now ruled into 20 military districts. Each of these was run by a commander appointed by him who led 7,000 warriors. As Ishtemi had once done, Ocirliq tried to replace the old tribal structures by a military administration which would be loyal to him.[33] To further legitimise his rule, Ocirliq issued copper coins of the Chinese holed type bearing the Sogdian inscription 'god-like Türgesh Khagan'.[34] On Ocirliq's death his sons **Saqal Khagan** (r. 708–10/11) and Zhenu seized power and found themselves confronted with an enemy alliance consisting of a

227. The Karluk memorial of Zhaysan 14 stands 100 km south-west of Merke in southern Kazakhstan. Of the more than two dozen memorials of Zhaysan, with a total of 38 extant stone figures, the Zhaysan complex 14 is the best preserved; it probably dates from the 8th or 9th c.

rebelling Türgesh general, China and Tibet. When a spy of Saqal Khagan, who had been posted in Chang'an, found out about a secret plan of attack, the brothers launched a surprise assault in the Tarim Basin in the winter of 708/09, destroying a Chinese army near Kashgar and conquering Kucha. During the ensuing negotiations China recognised Saqal's rule, and Saqal withdrew. Soon after this the khagan's younger brother, Zhenu, rebelled and fled to the Eastern Turkic Khagan Kapagan. Kapagan sent out Kül Tegin and Tonyukuk who defeated the Türgesh and occupied their land. But Kapagan Khagan had the two feuding Türgesh brothers executed.[35]

Now that the Western Turkic empire of the Türgesh seemed firmly in the hands of the Second Göktürk Khaganate, the fortunes of war suddenly deserted the Eastern Turks. In swift succession they suffered two devastating defeats, in 712 near Samarkand and 714 outside Beiting, after which China reconquered the Western Turkic 'capital' Suyab, and the Eastern Turks retreated. This withdrawal offered the opportunity to a former general of Saqal to re-establish the rule of the Türgesh over the On Oq and to rule as **Suluk Khagan** (r. 716/17–738). The 20-year-long ascendancy of the Türgesh was made possible by two factors: the deaths of Qutayba, whose army was stronger, and of Kapagan Khagan. After the failed siege of Aksu by a Türgesh-Tibetan army in the Tarim Basin, Suluk occupied Suyab in 719. During the following decade, Suluk achieved spectacular victories over the Arabs in Sogdiana, such as in 724 in Fergana and 731 in southern Uzbekistan, but without being able to completely drive them off. After a failed siege of Kucha in 727 in a new alliance between Türgesh and Tibetans, Suluk succeeded in marrying into the family of the Tibetan king Tride Tsugtsen (Meagtsom, r. 712–54) and the Western Turkic line of the Ashina, who lived in exile in Chang'an. Two defeats sealed the fate of the ageing Khagan Suluk: in 736 before the strategically vital fortress Besh Baliq (Beiting) and in 737 near Balkh. When he returned to the heartland of the Türgesh, he was murdered by his relative Bagha Tarkhan.[36] On his death the unity of the Türgesh broke up and the two wings of the Yellow and Black Türgesh fought each other until in 748 China brought Suyab under its control again.[37] The Karluks, who had immigrated in 744, seized power from the feuding Türgesh in 766.

IX

China, Tibet and the Arabs: The Struggle for Supremacy in Central Asia

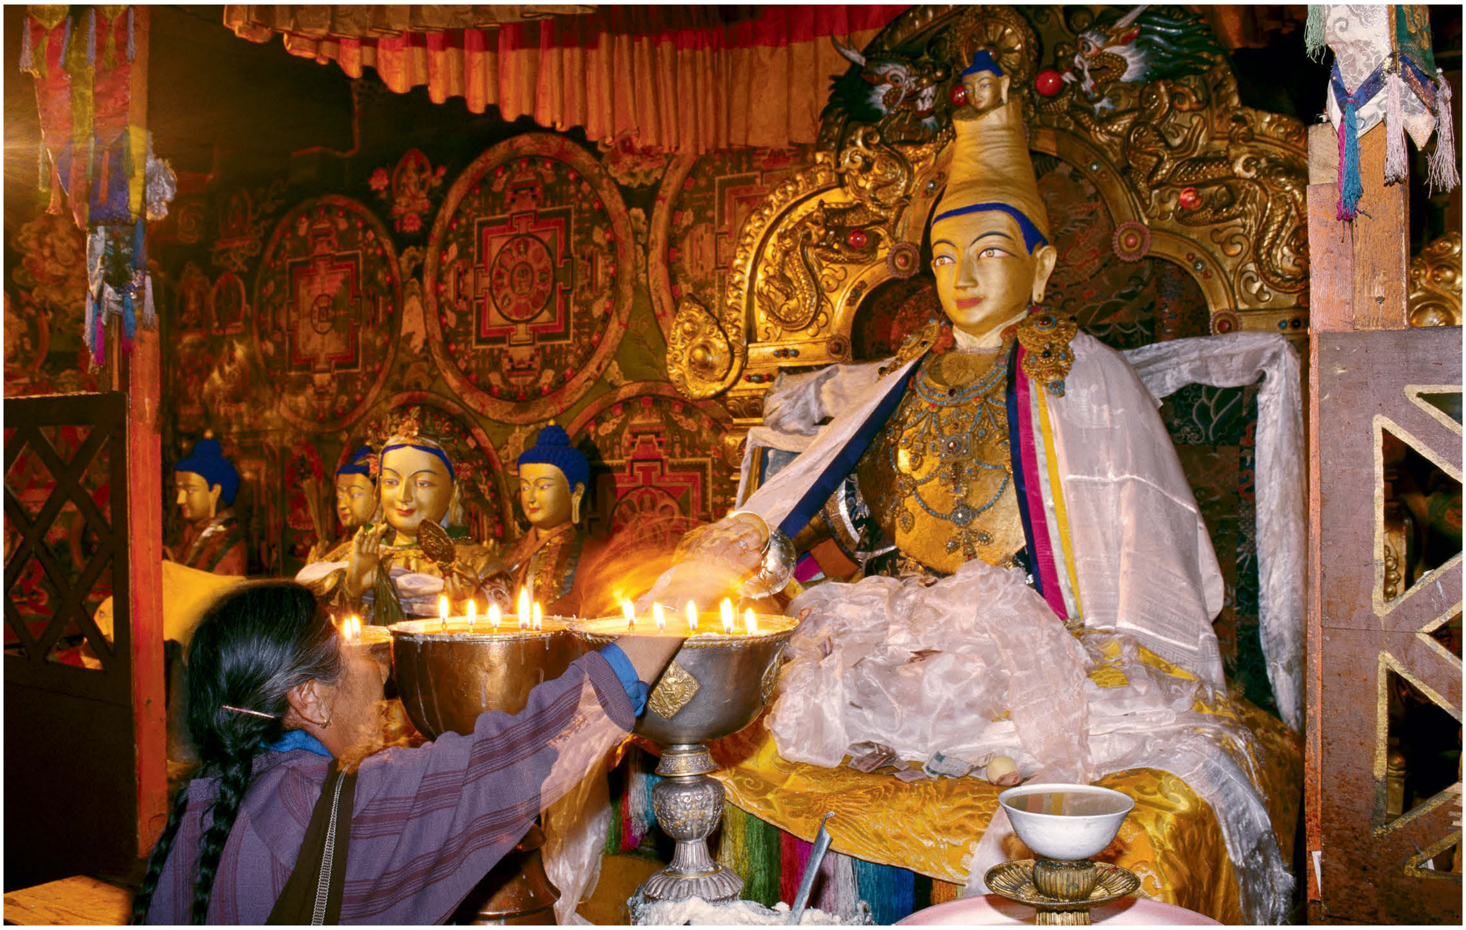
Their [the Tibetans'] territory bordered on the [prefectures of] Song, Mao and Suei [in Sichuan] in the east; in the south it reached [the land of] the brahmins [India]; in the west they had conquered the Four Garrisons; in the north they abutted on the T'ou-kiue [Turks]. [Their territory] extended over more than 10,000 li; it was [there a territory] like the western barbarians under the Han and the Wei had not had.

The *XIN TANG SHU* or *NEW BOOK OF TANG* on the extent of the Tibetan territories in 680.[1]

The second half of the seventh century saw the almost simultaneous emergence of three great powers, with the foundation of both China's Tang dynasty and Tibet's Pugyel dynasty in 618 and the establishment of the Muslim Caliphate in 632. As all three pursued an expansionary foreign policy, maintaining powerful armies and seeking control of important trade routes, it was inevitable that they would clash in Central Asia. In fact, three distinct zones of conflict quickly revealed themselves: the first outside Central Asia, on the border between eastern Tibet and central China in today's province of Qinghai, the second in the Tarim Basin, and the third in the Pamir Mountains. This three-way conflict would come to a conclusion in the mid-eighth century with the Battle of Talas and the An Lushan Rebellion that forced China to withdraw its troops from the Western Regions. The Arabs of the Caliphate brought Sogdiana and Bactria under their long-term control, while Tibet occupied the Tarim Basin, the Turfan Oasis and Dunhuang. The mid-ninth century then saw two upheavals with far-reaching consequences. In 840, the Kyrgyz defeated the Uyghur Empire, forcing many tribes to take refuge in Gansu and Xinjiang, while two years later the assassination of Tibet's king Langdarma plunged that country into civil war, bringing about the collapse of the empire and the loss of all territories north of the Kun Lun Mountains.

1. The Emergence of Tibet as a Major Central Asian Power

The political unification of Tibet and its rapid development into a major power were the work of Emperor Songtsen Gampo (r. *ca*. 618–49/50, with possibly a temporary abdication 641–46).[2] A conflict with China that would continue, with interruptions, from 637/38 to 821/22, began when in 634–35 Emperor Taizong conquered the Tuyuhun kingdom of ʻAzha (in today's Qinghai), thus eliminating what had been a buffer state between China

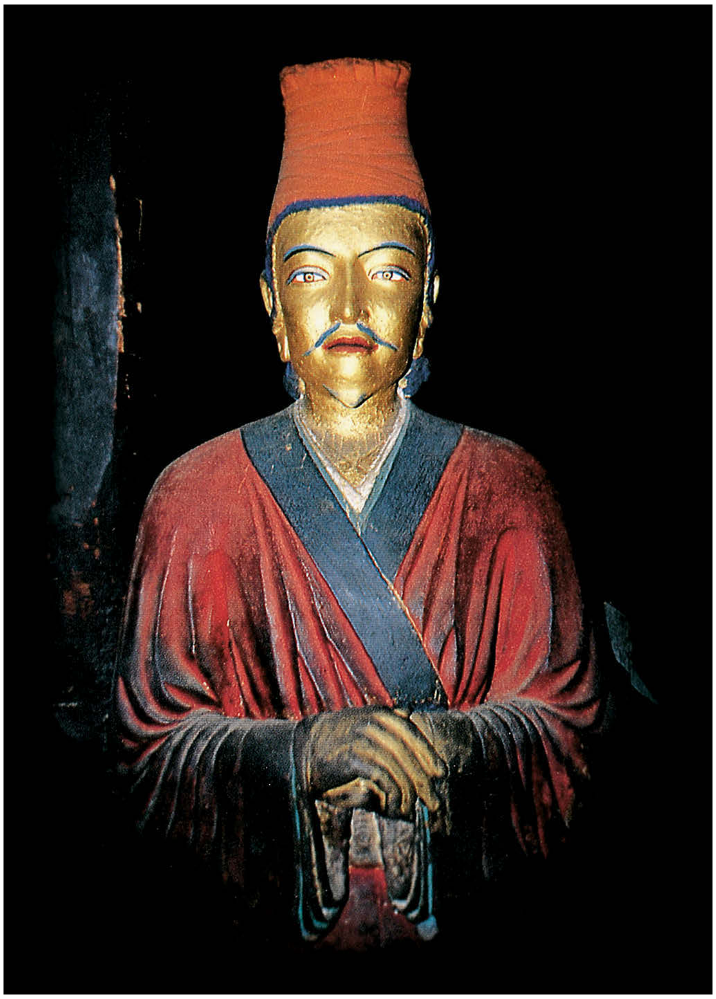


228. Statue of the Tibetan king Songtsen Gampo (r. *ca*. 618–49/50) in the Chögyal Songtsen Lhakhang (King Songtsen Shrine) on the second floor of the Jokhang Temple, Lhasa. In the picture, a woman devotee is adding more butter to a burning butter lamp. Since Songtsen Gampo had been venerated since the 11th c. as an incarnation of Bodhisattva Avalokiteshvara, who is considered to be an emanation of Buddha Amitabha, his headdress is crowned by a small Amitabha figure.

and Tibet.[3] When a little later Taizong snubbed Songtsen Gampo, refusing him a Chinese princess for a wife, the latter took ʿAzha and Sumpa and pressed on into Chinese territory proper, issuing an ultimatum to the Chinese emperor: either Songtsen Gampo would get his Chinese princess, or the attack would go on.[4] In the winter of 640/41 Taizong yielded, and Tibet began to consolidate its rule over ʿAzha.[5] The Tibetan ruler then intervened in the Nepalese war of succession in 641, making the kingdom of Licchavi in the Kathmandu Valley his vassal. In 644 he subjugated the west Tibetan kingdom of Zhang Zhung, which in the east extended far over the Changtang plateau of northern Tibet, almost as far as Sumpa.[6] The two Zhang Zhung rebellions of 647–49 and 677–78 both failed, and Zhang Zhung – believed to be the heartland of the pre-Buddhist Bön religion – remained part of the Tibetan Empire.[7]

The complete absorption of ʿAzha in 663, followed by that of Zhang Zhung, allowed Tibet to open a new trade route – and military road – westward from the Koko Nor Lake in today's Qinghai province, via Dulan[8] and Golmod to Draknak, north of Nakchu, where it divided. One branch continued via Lhasa and Sakya into the Kathmandu Valley and India beyond, the other followed the Changtang Corridor to reach Rutok.[9] From there, armies and caravans followed the shore of Lake Pangong, through Ladakh to Baltistan and Gilgit, where several routes converged: from Yarkand and Kashgar in the north, from the Indus in the south, and from the Wakhan Corridor and Badakhshan in the north-west. As became clear in the first half of the eighth century, Greater Bolor (Gilgit) was of great strategic importance to the Tibetans, as from there they could launch attacks on the Four Garrisons. Finally, in 648, following the death of the north Indian king Harsha, the usurpation of his kingdom and the subsequent mistreatment of the Chinese ambassador Wang Xuance, Tibetan forces advanced southward from their Nepalese base, capturing the usurper Arjuna in Kanauj (in today's Uttar Pradesh) and ensuring that the trans-Himalayan trade route connecting central China to the Kathmandu Valley and on into India remained open.[10]

Although northern and eastern Tibet were home to numerous nomadic tribes, Songtsen Gampo's empire was not a nomad state, nor did it wage war in the manner of the nomadic horsemen. The many Tibetan fortresses mentioned in the Chinese chronicles suggest rather a settled mode of life in which agriculture and semi-nomadic pastoralism played an important role. A sedentary economy and culture is also indicated by the *Jiu Tang Shu*'s account of Songtsen Gampo's requests to China for silkworm eggs, watermills, wine growers, paper and ink.[11] The Tang chronicles also make it clear that the Tibetans fought as heavily armoured foot soldiers, even though they rode horses: ʻThe men and horses all wear chain mail armor. Its workmanship is extremely fine. It envelops them completely, leaving openings only for the eyes. When they do battle, they must dismount and array themselves in ranks. When one dies, another takes his place. To the end, they are not willing to retreat. Their lances are longer and thinner than those in China. Their archery is weak but their armor is strong. The men always use swords.'[12] Like the equestrian peoples of Mongolia, Tibet was militarily handicapped because its population was smaller than China's, which meant it tried to wage war in accordance with the seasons, campaigns ideally being started after the harvest and ending before sowing.



229. **Painted clay sculpture of Gar Tongtsen Yülsung (sTong brtsan),** ***ca.*** **14th c. (?) with restorations. Gar Tongtsen Yülsung was prime minister from 646/47 to 667/68, and became de facto ruler of Tibet on the death of Songsten Gampo around 649/50.**[30]

When Songtsen Gampo died around 649/50, his heir was his underage grandson, Mangsong Mangtsen (r. nominally 650–76), and the country was therefore effectively ruled by prime minister

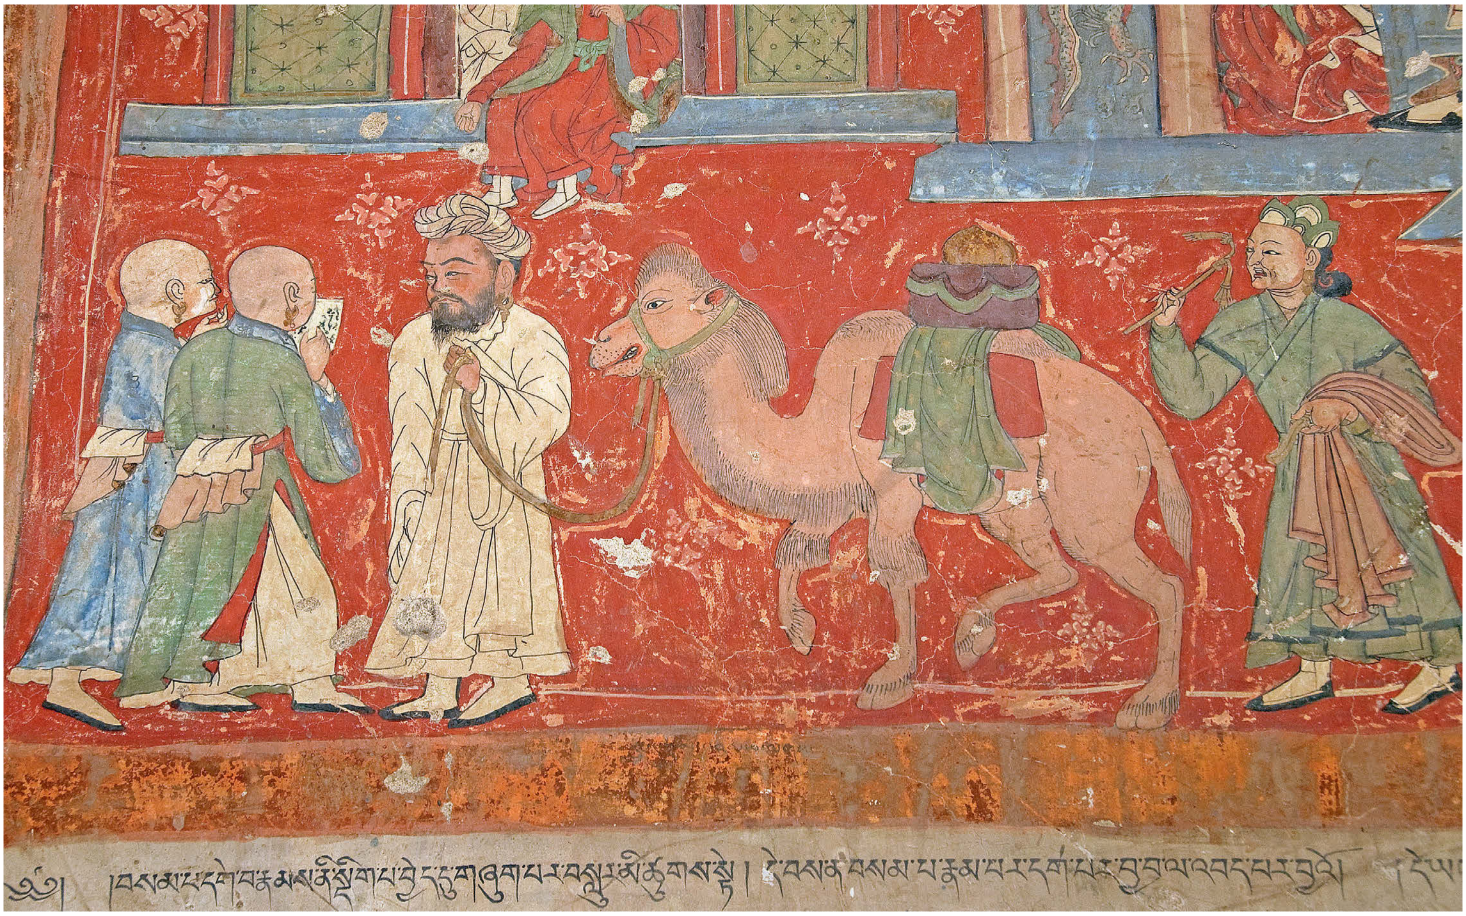
230. In the Tibetan cultural realm, annual horse races such as the week-long Litang Horse Festival, held at an altitude of 3,900 m, keep alive the old tradition of horsemanship. As can be seen from the leading rider on the grey, monks, too, may take part. Litang Horse Festival 2000, Sichuan, China.

Gar Tongtsen Yülsung (appointed 646/47, died 667/68),[13] who had delivered the Tibetan ultimatum to Emperor Taizong in 640 (fig. 229). He would die in office, and his appointment laid the foundations for the Gar family's half-century of hegemony from 650 to 698. As head of government and supreme military commander, Gar Tongtsen continued Songtsen Gampo's strategy, which aimed at two interlinked goals: if Tibet were to become an empire equal to China, it had first to gain control over sections of the transcontinental trade routes, and secondly it had to take possession of the horse-rearing country in today's Qinghai province. In the years 660 to 663, Gar Tongtsen consolidated Tibet's rule over 'Azha and absorbed the once mighty Tuyuhun Empire into the Tibetan one.[14] At the same time, Tibet attacked China's recently acquired possessions in the Tarim Basin, so as to bring under its control the most important of the westward trade routes. In 660 the Tibetans made a surprise appearance in the Chinese rear when, in alliance with the Köngül Turks, they captured Kashgar and then two years later forced a Chinese army into a humiliating retreat.[15]

On the death of Gar Tongtsen Yülsung, the reins of government were taken over by his son Gar Tsennya Dembu (in office 668–685/86), who sent his brother Gar Thriding Tsandrö to 'Azha. In 670 the Tibetans surprised the Chinese when they defeated a Chinese army near the Koko Nor Lake and captured the fortress of Aksu in the Tarim Basin.[16] China then abandoned all the Four Garrisons, moving the Protector General's residence from Kucha to Kocho. With this, the Chinese lost control of most of the westward trade routes, only the northern route to Semirechie via Beiting remaining in their hands. Tibet, however, exercised direct rule only over Kashgar and Khotan, answerable to Governor Gar Tsennyen Gungston (in office 670–74),[17] contenting itself in the other oasis cities with the collection of taxes – an approach that allowed these petty states to reclaim their independence. So to consolidate Tibet's colonial rule in the Tarim Basin, Gar Tsennya Dembu advanced there himself at the head of a military expedition and brought it under direct Tibetan control.[18] Despite another devastating defeat on the Koko Nor in 678, China did not give up in the west. It still had Beiting and Kocho, from where in 679 a fast-moving expeditionary force under General Pei Xingjian struck out for Semirechie, capturing the Western Turkic tribal leadership and establishing the fortress of Suyab, thereby securing for China at least one major transcontinental trade route and a military bridgehead in Central Asia. Despite this minor success, the political situation remained dangerous for China, as is revealed by the quote from the *Xin Tang Shu* at the head of this chapter. Tibet had conquered most of China's western colonies,[19] was forming an alliance with Western Turkic clans, and had extended its sphere of influence as far as the Ganges. In the east, the Tibetans had not only conquered Qinghai but had penetrated deep into Sichuan, capturing north of Chengdu the great fortress of An Jung, which controlled the direct route between Chengdu and Chang'an.[20]

In the early 690s, two factors favoured China's efforts at reconquest. On the one hand, Tibet's limited population hampered the effective colonisation of its newly conquered territories, and it found it impossible to keep large armies in the field for long without risking mutiny. On the other, the young Tibetan emperor Dusong (r. 676–704) began to shake off the tutelage of prime minister Gar Thriding Tsondrö (in office 685/86–698, d. 699), and he had several leading members of the Gar clan killed, thus weakening the military leadership. In 692 the Chinese generals Wang Xiaozhi and Tang Xiujing speedily recaptured the Four Garrisons and moved the Protector-General's residence back to Kucha.[21] Gar Thriding Tsondrö's attempt to regain the Tarim Basin in the winter of 693/94 was a failure, hastening the end of the Gar ascendancy. Emperor Dusong came to recognise that the Gar were acting as independent warlords, threatening the unity of the empire, and although Gar Thriding won another victory against China north of 'Azha in 696, in 698 Dusong put an end to Gar military rule. Taking advantage of the absence of Gar Thriding, he invited all the other leading members of the clan to join him in a hunt, where he had them killed, and within a year of this Gar Thriding took his own life.[22] This marked the end of Tibet's first attempt to win control of transcontinental trade from China.



231. Between the 7th and the 9th century there were close contacts between Tibetan, Central Asian and Chinese merchants. Painted in the early 14th c. and forming part of the depiction of the tenth jataka in Aryasura's *Jatakamala*, this is a scene from the wall paintings of the ground-floor *khorlam* or circumambulatory of the Serkhang Temple, the main temple at the Buddhist monastery of Shalu in Central Tibet. A product of the Aniko school of painting (1244–1306), which worked for the Mongolian imperial dynasty of the Yuan, it shows clear Central Asian influences.[31]

232. The power base of the Gar clan, which dominated Tibetan politics in the second half of the 7th century, lay in the eastern regions of Amdo and Kham. In the picture, Sertha Golok nomads offer *lungta* papers to a sacrificial fire at dawn. New Year Festival, 2000, at the Bönpo monastery of Nangzhig in Aba (Ngawa), Amdo, in today's Sichuan Province, China.

233. After the 660s, the fortress of Tashkurgan in the little kingdom of Sarikol, which commanded the southern approach to the western Tarim Basin, often found itself at the heart of the conflict between Tibet and China. In 747 General Gao Xianzhi used Tashkurgan as the starting point for his lightning attack on the Tibetans in the Pamirs (in today's northern Pakistan). The ruins visible today are remains of the restoration of 1895. Xinjiang, China.

2. Sassanid Princes Seek Chinese Military Assistance

The early Tang dynasty enjoyed such great prestige in Central Asia that it was to China that the descendants of Iran's toppled Sassanids turned for protection and military assistance. The *Xin Tang Shu* reports that not long after Iran's defeat by the Arabs at Qadisiya, in *ca.* 637, Shah Yazdegerd III sent a delegation to Chang'an, presumably seeking military help. After Yazdegerd's death in 651 his son Peroz (d. after 677) fled to Tocharistan and despatched an embassy to Emperor Gaozong, who refused the military support he was asked for, evoking the great distance from China. With the help of a Turkic ruler of Tocharistan, Peroz was nonetheless able to settle for a while at Sistan in south-west Afghanistan, from where he sent further delegations to China between 661 and 663. From Emperor Gaozong, however, he received no more than symbolic recognition, in the form of the title of *Bosi Dudufu* or 'Persian Governor' in 661, and that of *Bosi Wang* or 'King of Persia' in 662.[23] Driven out by the Arabs around 663, Peroz took refuge in Chang'an sometime between 670 and 674; there in 677 he requested permission of the emperor to build a 'Persian temple'.[24] According to Paul Pelliot and Antonio Forte, this would not have been a Zoroastrian temple, but a second Nestorian monastery.[25]

Two years later, Peroz's son Narses,[26] who lived as a hostage in Chang'an, could take new hope when General Pei Xingjian was ordered to march west with a 'Persian army', supposedly to attack Persia and set Narses on his grandfather Yazdegerd's throne. This declared objective, however, was no more than cover for China to send an expeditionary corps to Semirechie without arousing the suspicion of the Western Turkic commander Ashina Tuze (Chinese: Ashina Fuyan Duzhi), who had an alliance with Tibet. The ruse succeeded, for when General Pei, who had simply requested free passage, reached Suyab, he caught Ashina Tuze off guard and took him prisoner. General Pei then deployed another ruse to eliminate the leadership of the Ten Tribes, sending each of the chiefs a message in

Ashina Tuze's name, summoning them to Suyab without delay. One of the khagan's arrows was sent with each as proof of authenticity. General Pei took all of them prisoner, and sent them to Chang'an together with Ashina Tuze. He then turned Suyab into a strong Chinese fortress. As the general had achieved his objective and the 'Persian army' had been stopped in its tracks, Narses had no option but to proceed to Tocharistan with only his Persian supporters. There he remained until 706, fighting a running battle with the Arabs, before returning to Chang'an in 707.[27]

Sassanid efforts to recapture the Persian throne were doomed to failure, for four reasons. Firstly, the Arabs had managed to speedily establish themselves in the Sassanid heartland of Mesopotamia without too fiercely oppressing the adherents of non-Muslim religions, such as Zoroastrianism and Christianity, and so provoking rebellion. Secondly, the population of what had been the Sassanid Empire was weary of the fighting, yearning only for peace after its costly wars against the Byzantines and the Arabs. Thirdly, Zoroastrianism and its clergy, which had served the Sassanid rulers as a state religion, had lost much of their following among the broader population, which meant that Zoroastrianism could not serve as an ideology of liberation from the Muslim Arabs. And fourthly China, already engaged in a protracted war with Tibet, was neither willing nor able to intervene in Iran, let alone Mesopotamia, in favour of an unpopular regime.

3. The Tibetan–Chinese War in the Pamirs

With the Chinese reconquest of the Western Regions the zone of conflict with Tibet shifted south-west. As Tibet had lost the trade routes through the Tarim Basin, it had to secure alternatives through the Pamirs and Tocharistan; in addition, the Chinese garrisons of Kashgar and Khotan could be conveniently attacked from Sarikol, which was most probably accessible to the Tibetans

234. Advancing to Termez in 704, the Tibetan forces may have followed the Panj River. The picture shows the Afghan south bank of the Panj, south of Khorog, Tajikistan.

235. It was over difficult passes like these that the Tibetan and Chinese forces had to travel as they battled for the Wakhan and Great and Little Bolor. Wakhan, Afghanistan.

even after the losses of 692.[28] China for its part had at all costs to prevent Tibet from extending its supremacy to Baltistan and Great Bolor. For this rugged mountain region in northern Pakistan not only represented the southern gateway to the Four Garrisons, but it also controlled the trade routes to Kashmir and the Indus, offering the Tibetans the opportunity to enter an alliance with the Western Turks or the Arabs. It was therefore inevitable that the next Tibetan–Chinese war would be fought in the Pamir Mountains.

The first, albeit indirect military collaboration between Tibetans and Arabs occurred in 704, when the Tibetans and Western Turks together made an unsuccessful attack on the fortress of Termez on the Oxus, then held by the Arab rebel Musa bin Abdallah bin Khazim. It would eventually be taken later that year by the newly appointed Arab governor.[29] The year 715 saw direct cooperation, when Qutayba conquered Fergana with Tibetan assistance, installing Alutar as its new king. The death of Qutayba, however, allowed the Chinese to drive Alutar out and end Tibetan/Arab control. Two years later, an alliance of Türgesh, Tibetans and Arabs tried to besiege Aksu in the western Tarim Basin, but they were driven away by a Chinese army entirely composed of Turkic mercenaries.[30] Conflict also continued in the south of the Basin, for a Chinese graffito of 719 in Endere notes the death of a Chinese cavalry commander.[31]

At the same time, the situation in the Pamirs was approaching a critical point. Tibetan sources report that by 704 Tibet had conquered Ladakh, on its western border, and Baltistan,[32] and by around 719/20 at the latest these two mountain regions formed part of the Tibetan imperium. Between 720 and 722 the Tibetans launched an attack from there on Great Bolor (Gilgit), which they called Bruzha, driving out its king and then also forcing King Mojinmang of Lesser Bolor (Yasin) to take flight. The Tibetans had invaded the Pamirs only in order to capture the Chinese western colonies in the Tarim Basin, as they explained to King Mojinmang, according to the *Xin Tang Shu*: 'We do not covet your kingdom, we are using its roads to attack the Four Garrisons.'[33] Mojinmang, however, turned to the military governor of Beiting, who put a 4,000-strong army at his disposal. This first captured Sarikol from the Tibetans before crossing the Wakhan and driving them out of Yasin. So it was that Greater Bolor fell within the Tibetan sphere of influence, and Lesser Bolor within the Chinese.[34] Five years later, Tibet made another attempt to recapture China's western colonies. In 727, Tibetan troops occupied the city of Guazhou in Gansu and then advanced further westward to besiege Kucha with their ally, the Türgesh khagan Suluk. This siege was unsuccessful, not least because the Eastern Turkic ruler Bilge Khagan refused to join the alliance. But the Tibetans did succeed in taking the Wakhan between 730 and 733, so that they not only threatened Lesser Bolor from the north-west as well as the east, but were in a position to attack the Four Garrisons from the Wakhan.[35] To relieve Tibetan pressure in the Pamirs, China successfully launched an unexpected attack 2,000 kilometres further east, in Eastern Tibet, in 737,[36] which did not prevent Tibetan forces in the Pamirs from conquering Lesser Bolor between 745 and 747. Now the whole area extending from western Tibet, over Baltistan, Gilgit and Yasin to the Wakhan and the Oxus, was in Tibetan hands. To secure their conquests to the north, the Tibetans built the fortress of Sarhad on the southern bank of the Panj river, at the north-western foot of the 3,798-metre-high Baroghil Pass.[37]

China immediately recognised the danger represented by an Arab-Tibetan alliance, should Tibetan and Arab forces ever meet at Sarhad to advance on Kashgar, Aksu and Kucha. In 747, General Gao Xianzhi was appointed Vice-Protector-General and ordered to ensure that the threatened Arab-Tibetan collaboration never happened. Using the accounts in the *Xin Tang Shu*, it was Chavannes who was the first to reconstruct the course of Gao's campaign, which Aurel Stein would then partly follow on foot.[38] General Gao proceeded with 10,000 men from Kucha to Kashgar and Tashkurgan, where for logistical reasons he divided his army into three columns. These then reunited in mid-August before the Tibetan fortress of Sarhad, which they took by storm. In 1906, Aurel Stein identified the ruins at Kansir as the remains of the Tibetan fortress, noting that the Tibetans had copied the characteristic wind-resistant military architecture of the Chinese.[39] Gao Xianzhi then crossed the Baroghil Pass and the difficult, 4,650-metre-high Darkot Pass and invaded Lesser Bolor, whose king capitulated without a fight. Fearing a Tibetan counter-attack from Great Bolor, Gao then destroyed the suspension bridge over the Ghizer river at Gupis.[40] With this lightning campaign that caught the Tibetans unprepared, General Gao had driven a wedge between the Tibetans and the Arabs, for the Wakhan and Yasin were now under Chinese control again. In 749–50 Gao took advantage of the new situation to advance once more into the Pamirs, where he again defeated a Tibetan army to reach Chitral.[41] With this, China reached the zenith of its power in Central Asia. As Beckwith notes, China exercised direct colonial power over the petty states of Dzungaria and the Tarim Basin, maintained garrisons in the vassal states of the Pamirs, and manipulated the mutually opposing fractions of the Türgesh.[42]

What is remarkable in these Chinese and Tibetan military campaigns is not just the physical endurance of the soldiers in this demanding terrain but also the detailed geographical knowledge and the mastery of logistics displayed. These spectacular campaigns, which saw armies traverse a Darkot Pass covered in snow and ice all year round, still haunted the strategists of British India 1,000 years later, who feared that a Russian army might likewise cross the Pamirs to invade India. Such a feat was indeed theoretically possible, but only without heavy artillery. In the late nineteenth century, however, Russia could have developed a much more practicable route for an invasion of India, from Merv via Serakhs, Herat and Kandahar to the Indus Plain.

Although China's forward strategy received a setback in 751, when General Gao Xianzhi was crushingly defeated by the Arabs at the Battle of Talas, the initiative in Central Asia remained in the hands of the Chinese. In 753, General Feng Chang Qing invaded Greater Bolor, driving the Tibetans from their last major outpost in the Pamirs. Not long before, between 748 and 751, Gao Xianzhi and King Yuchi Sheng of Khotan (r. 746/47–756) had captured from the Tibetans two fortresses south of the Lop Nor, in the north-west of the Tsaidam Basin.[43] Everything suggested that China would be able to recover its earlier supremacy over the eastern part of Central Asia. In the north, the Uyghurs, who traditionally often allied with China, had brought down the Göktürk Empire, in the west the petty states of the Tarim Basin were firmly in China's grip, the Türgesh no longer represented any danger, and the Abbasids were preoccupied with consolidating their power in Sogdiana. In the south, the Pamirs had been cleared of Tibetans and the latters' advance on Sichuan was halted. And what was more, the Tibetan emperor Tride Tsugtsen (Meagtsom) was assassinated in 755. Yet on 16 December 755 General An Lushan, the commander of three garrisons in north-eastern China, rose in rebellion, bringing the seemingly all-powerful Tang dynasty to the brink of collapse and allowing Tibet to take not only the Tarim Basin but also Gansu under its control.

236. Bridge on the 3,798-metre-high Baroghil Pass, leading from Badakhshan in Afghanistan to northern Pakistan. In 747 General Gao defeated a Tibetan army at the Baroghil Pass before advancing on Little Bolor (Yasin).

237. **Braving the biting cold, Wakhani women with a camel fetch water from a frozen river in the Wakhan, Afghanistan. To reach the running water beneath the ice, the women must break a hole with an iron rod.**

3.1 The Turkic-Sogdian Insurrection of An Lushan

Although An Lushan's seven-year-long rebellion took place not in Central Asia but central China and so falls outside the scope of this book, a short sketch will be offered here, as many of those involved were Central Asians – whether Sogdians, Turks, Uyghurs or Arab mercenaries. Given this, the early historians of the Tang dynasty classified the insurrection neither as a civil war nor as a military rebellion, but rather as a struggle between 'barbarians' and Chinese over who would rule China.[44] Furthermore, the war also had far-reaching consequences for eastern Central Asia. What is notable about the conflict is that here it was not foreign people such as the Xianbei, for example, attempting to conquer China from without, but rather Central Asians living inside China endeavouring to seize power and establishing a counter-dynasty. The conditions for the rebellion were laid down by Emperor Xuanzong (r. 712–55, 'retired emperor' 755–62) himself when he gave command of the armies stationed in the north-east to Turkic and turkicised Sogdians. These foreign generals built up their own power bases, appointing officers from among their own clans and recruiting mercenary soldiers from among their own people.[45] As these Sogdian and Turkic generals commanded armies that were loyal to them it was easy for them to emerge as independent warlords.

The most powerful of these Turkic-Sogdian generals was An Lushan (703–57), whose mother was a Turkic noblewoman of the Ashide clan, his father a Sogdian from the Hexi Corridor.[46] An Lushan grew up in Mongolia until 716, when with other Sogdians he took refuge in China upon the violent seizure of power by Kül Tegin and Bilge Khagan. In his career as a successful military

238. **Erected in 764 by order of King Trisong Detsen (r. 756–*ca.* 797), the *shöl* stele below the Potala Palace in Lhasa, Central Tibet, honours his minister Nanlam, who was instrumental in the conquest of Chang'an in 763.**

officer, he managed through bribery to gain access to the imperial court, where he won the favour not only of the ageing emperor but also of his concubine Yang Guifei (719–56), who even adopted him as her son. This gave An Lushan unimpeded access to his adoptive mother, who exercised an ever-growing influence on government business, and wielded it to protect her new 'son'.[47] Thanks to her intercession, in 751 An Lushan was awarded the overall command of the three border armies in north-eastern China, based at Hedong (Taiyuan in Shanxi), Fanyang (Beijing) and Pinglu (Chaoyang in Liaoning). This put An Lushan at the head of 184,000 men, 150,000 of them 'barbarians' personally loyal to him, representing nearly 40 per cent of China's entire military forces.[48] He then set about making systematic preparations, accumulating substantial reserves of weapons, horses and grain.

On 16 December 755, An Lushan rallied his 150,000 barbarian troops and set out to conquer China. He defeated the imperial generals Gao Xianzhi and Feng Chang Qing, who had been sent against him, crossed the frozen Yellow River, and on 18 January 756 he captured the Eastern capital Luoyang, where he declared himself emperor of the new Great Yan dynasty. After a series of battles with heavy casualties on both sides, on 18 July the rebels took the western capital Chang'an, from where the emperor had taken flight for Sichuan a week earlier – his bodyguard forcing him en route to have his hated concubine killed. With the two capitals and the best troops in China under his control, it seemed as if the Sogdian-Turkic An Lushan with his non-Chinese army would have no problem in establishing his power over the whole country, or at the very least over its northern parts. This rebellion by An Lushan's Turkic-Sogdian professional army recalls the seizures of power by Turkic and Caucasian soldier-slaves (mamelukes) in northern India (13th c.) and Egypt (13th and 18th c). The crown prince, however, took refuge in the north-western province of Gansu, compelled his father's abdication, and declared himself Emperor Suzong (r. 756–62). He immediately pulled back the Chinese troops stationed in the Western Regions and the Pamirs in order to launch a counter-attack. Lacking battle-hardened forces, especially cavalry, he internationalised the war. He requested military assistance from the Uyghur khagan Bayanchur (r. 747–59), who sent him a cavalry formation under the command of the Uyghur crown prince Yehu, that soon swung the military balance in favour of the Tang. In addition, the Abbasids sent a mercenary army and the king of Khotan contributed a strong cavalry unit.[49] Now Central Asian peoples were engaged on both sides of the battle in China with Turks and Sogdians making up the army of the Great Yan dynasty, while Uyghurs, Khotanese and Arabs supported the Tang. And while this was going on, the Tibetans took advantage of the Chinese withdrawal from the Western Regions to regain the territorial power they had lost.

At the head of the rebel camp, a process of self-destruction started to set in. In January 757, An Lushan's second-eldest son An Qingxu killed his father, who had been showing increasing signs of paranoia. Towards the end of the same year, An Qingxu lost both capitals to Emperor Suzong and his allies, and in February 759 he was himself killed by one of his Turco-Sogdian generals, Shi Siming, who declared himself the third emperor of the Yan dynasty, choosing both a Chinese and a Sogdian regnal name,[50] laying a claim to be emperor not only of China but also of the Sogdians.[51] Though Shi Siming succeeded in retaking Luoyang, in 761 he was strangled by his son Shi Chaoyi, who in turn declared himself emperor but was not recognised by many Yan generals. He would take his own life in spring 763, after Luoyang was lost once again.[52] For in 762 Emperor Daizong (r. 762–79) embarked on the recapture of the eastern capital Luoyang, having asked Muyu Khagan of the Uyghurs (r. 759–79) for military assistance again. Towards the end of 762 the Uyghurs captured that unfortunate city for the second time and cruelly put it to the sack, prompting the collapse of the Great Yan dynasty in the spring of 763. In Luoyang, some 10,000 people fled before the 'liberators' to the monastery of Beima Si. The Uyghurs then put the monastery to the torch, burning them alive. So great was the ensuing poverty, it is said, that in the winter people had to dress in scrolls sewn together.[53] There was also a systematic persecution of the Sogdians, which forced them to adopt Chinese names or to go into hiding. The conclusion of the war, however, is to be understood less as the Tang dynasty's victory over a rebel army than as the triumph of the Uyghur equestrian warriors over an enfeebled China and its rebellious Turco-Sogdian mercenary army.

The Tang dynasty paid a very high price for its political survival. It remained dependent on Uyghur military assistance and was increasingly indebted to Uyghur lenders. In addition, the dynasty lost not only its colonies in the Tarim Basin but also control over the transcontinental trade routes. It also lost control over the north-east of the country. The wealthy, silk-producing provinces of Shandong and Hebei were ruled by local dynasties and autonomous warlords who no longer paid taxes to the central government. The 'Three Garrisons of Heshuo' in Hebei, in particular, which were ruled by former generals under An Lushan and Shi Siming and had become a refuge for many former rebels, would remain independent and hostile to central authority into the ninth century.[54] There thus emerged within China enclaves governed by turkicised Sogdians, more than 4,000 kilometres from Sogdiana itself. No more than an insignificant episode, however, was the Tibetan occupation of the capital Chang'an in 763, which installed a new, pro-Tibetan puppet-emperor. As the *Old Tibetan Annals* for Trisong Detsen (r. 756–*ca*. 797) record: 'At that time [763] China did not wish to pay the Tibetan tribute and give lands . . .' so Tibetan generals 'led an army against Kengshi [Chang'an]. The Chinese King [Daizong] fled and the Tibetans appointed a new Chinese king [Li Chenghong, r. 18–30 November 763], and then the Tibetan troops returned to Tibet.'[55] Only two weeks later, General Guo Ziyi (697–781) drove the Tibetans out of the capital, and in 765 he repelled another Tibetan invasion with the help of Uyghur forces.[56] More successful were Tibet's advances towards Sichuan in 756 and 779 after making an alliance with the kingdom of Nanzhao (today's province of Yunnan in southern China).[57]

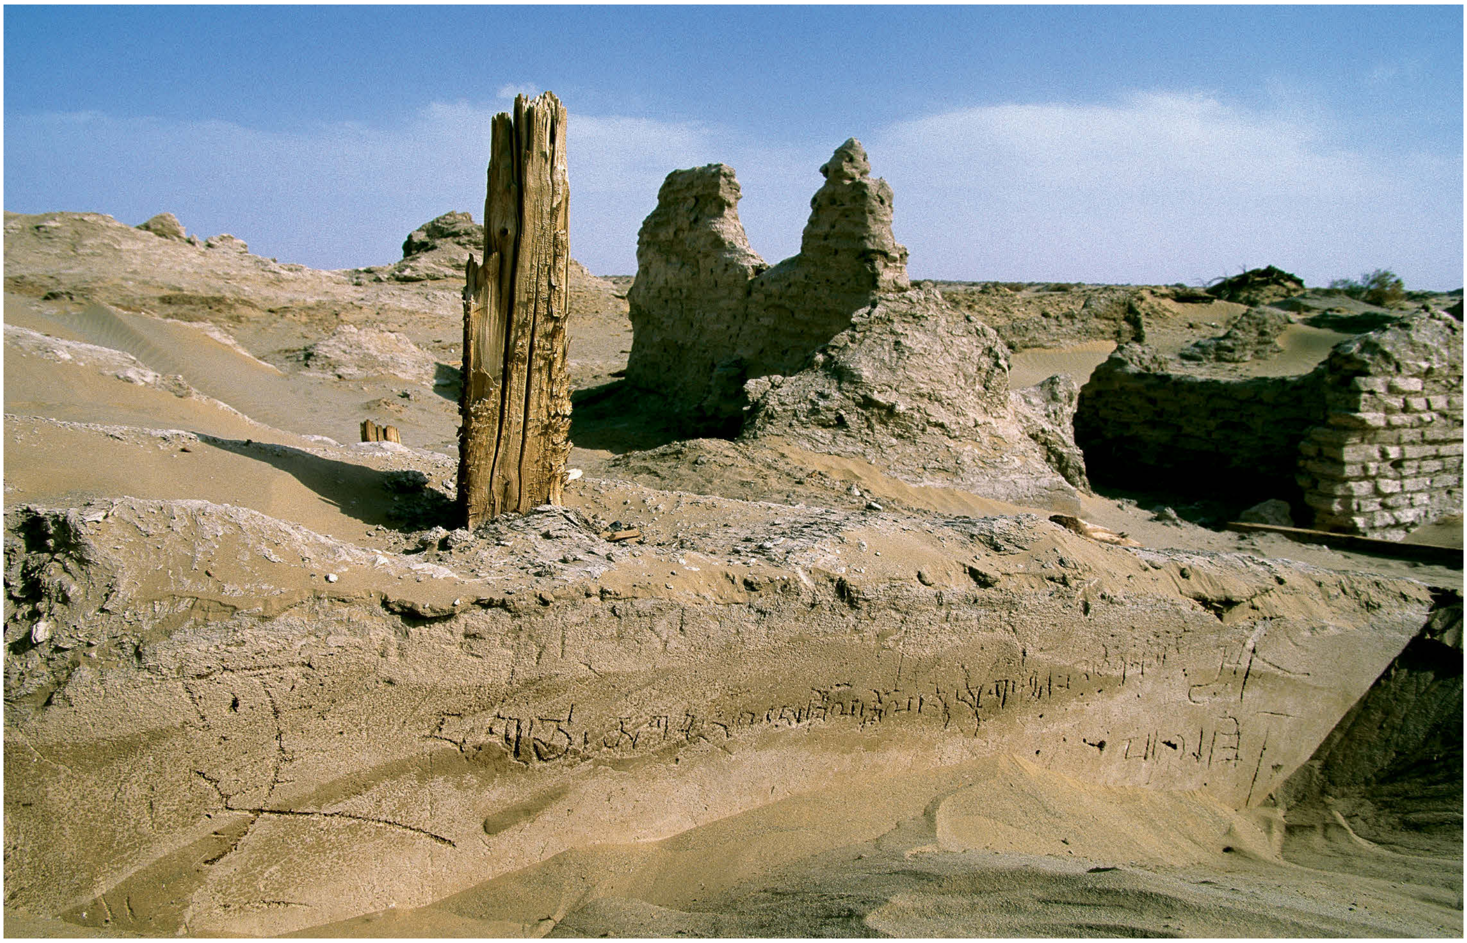
240. The fortress of Mazar Tagh, captured by the Tibetans not long after 795 and much extended, with the bed of the Khotan River in the background. Xinjiang, China.

4. East Turkestan and the Pamirs under Tibetan Suzerainty

4.1 The Tibetan Reconquest

Tibet quickly re-established its influence in the Pamirs, and more particularly in the Wakhan, a Tibetan vassal from 758 to around 815/16, while Gilgit, Yasin and Shughnan (southern Tajikistan) also recognised Tibet's suzerainty at one time or another.[58] This provided Tibet with an excellent starting point for attacks on the now defenceless Four Garrisons, and at the same time served as a bulwark against the Muslim Abbasids. The start of the ninth century saw the beginning of a long war against the latter, which culminated in 808–09 in Tibetan military support for Rafi bin Layth's rebellion in Samarkand.[59] The Tibetans were joined in their struggle by the ruler of Kabul and by the Karluks. The situation was so threatening to the Abbasids that Caliph Harun ar-Rashid (r. 786–809) himself set out for Khorasan and Sogdiana, though he died on the way. In accordance with his wishes, his son al-Amin (r. 809–13) succeeded to the Caliphate while the new caliph's elder brother al-Mamun (r. 813–33) became viceroy in the east, with his seat at Merv. Al-Mamun crushed the rebellion, defeated and succeeded his brother, who had made war on him, and around 813/14 or 814/15 ordered his vizier al-Fadl ibn Sahl (d. 818) to undertake a punitive expedition against the former allies of the rebel Rafi bin Layth. Al-Fadl first conquered Kabul, whose king sent to the caliph, as a sign of his subjection to him, the golden statue of a man, probably a statue of Buddha Shakyamuni or Maitreya.[60] Al-Fadl then advanced to Kashmir, and drove the Tibetans out of the Wakhan, sending the captured Tibetan commander to Baghdad as trophy. According to Tibetan chronicles, however, the Tibetans were back in Gilgit by around 820, remaining there until the break-up of their empire after 842.[61] In combination with the reconquest of the Four Garrisons and Gansu, this westward extension of the Tibetan sphere of influence from the late 750s onward meant



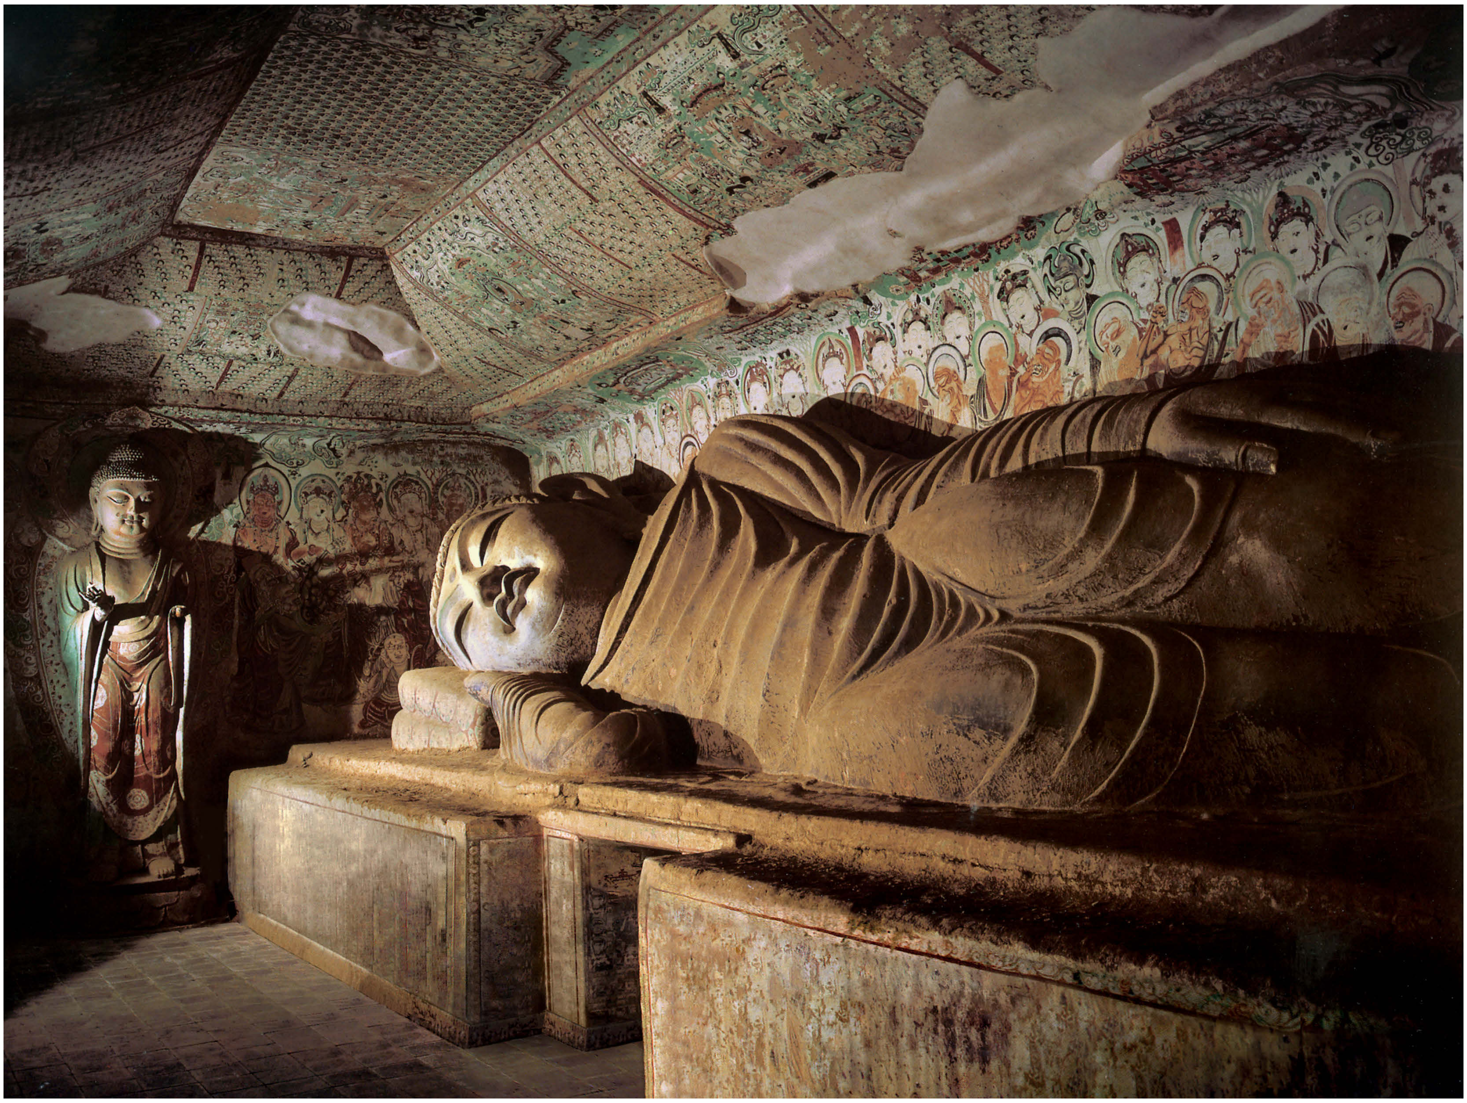
241. This Tibetan grafitto at the commandant's palace inside the fortress of Endere celebrates a Tibetan victory sometime after 756: 'At Phygpag, province of Upper Jomlom, this [Chinese] army was outwitted, and a tiger's meal was obtained [i.e. many were killed]. Eat until you are fat.'[32] Xinjiang, China.

that Tibet controlled the established trade routes between China and northern India and the Abbasid Empire. Only the Uyghurs were in a position to challenge the quasi-monopoly position enjoyed by the Tibetans.

In Gansu and the Tarim Basin, the Tibetans gradually drove the Chinese out of their colonies. Around 756/57 they forced the Tuyuhun elite, which was exiled in Gansu, to flee to the Ordos[62] and conquered Liangzhou (Wuwei) in 764, Ganzhou (Zhangye) and Suzhou (Jiuquan) in 766, Guazhou (Anxi) in 776, Qumul (Hami) before 781, Souchang (60 kilometres south of Dunhuang) in 781 and finally, around 786/87 Shazhou (Dunhuang), which would remain in Tibetan hands until 848.[63] With these conquests Tibet interrupted direct communications between China and the few isolated Chinese garrisons remaining in the Tarim Basin; the only way of reaching them now was through Uyghur territory from Beiting. From the desert steppe of Tsaidam the Tibetans also advanced to the Southern Silk Road, building a strong fortress and a military settlement at Miran around 756,[64] before capturing the fortress of Endere further to the west.[65] The winter of 783/84 saw a brief reorganisation of alliances between China, Tibet and the Uyghurs. When the Chinese general Zhu Ci rose in rebellion towards the end of 783, taking the capital Chang'an and declaring himself first emperor of the new Qin dynasty, the Uyghurs took the side of the rebels against the Tang. In his adversity, Emperor Dezong (r. 779– 805) asked Tibet for military assistance, undertaking in exchange to cede to the Tibetans the two Western Region garrisons of Kucha and Beiting. Yet after a Tibetan army under Chinese command had defeated Zhu Ci's forces in early summer 784, China refused to hand over Kucha and Beiting as promised.[66]

242. The central Buddha statue in the Kachu temple was created in the late 730s under the direction of Khotanese monks, after they had been invited to Tibet by Kim Sheng, queen of the Tibetan king Tride Tsugtsen.

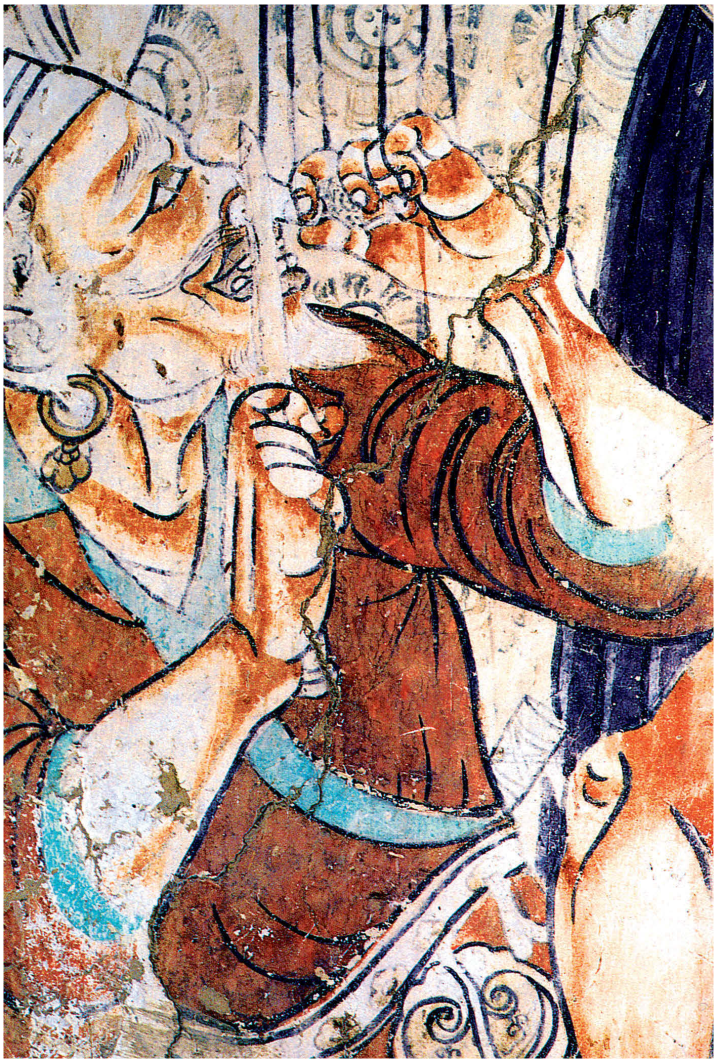
Tibet's reaction to this breach of agreement was fast. In 786 Tibetan forces advanced into today's Ningxia province and the Ordos, where they briefly occupied the city of Xiazhou. China was now threatened by encirclement on the landward side by Tibet, which had platforms from which to launch attacks in the south, west and north, and it was in response to this danger that the Chinese minister Li Mi developed the strategy of a 'Grand Alliance': 'I would like His Majesty [Emperor Dezong] to make peace with the Uyghurs in the north, come to terms with Nanzhao in the south, and unite with the Arabs and Hindustan in the west. In this way the Tibetans would themselves be in trouble, and horses would be easy [for us] to obtain.'[67] This strategy proved successful, embroiling Tibet and the Uyghurs in a long-lasting war of attrition that eventually led to the Sino-Tibetan peace of 821/22. The Tibetans began in 789 with a siege of Beiting, which still housed the headquarters of a Chinese protector-general. The following year they took the fortified city, having defeated two Uyghur armies sent to its relief; in 791 they captured Gaochang; and in 795, most probably, the now completely isolated garrison of Kucha. In late 791 or in 792, however, Uyghur forces inflicted a defeat on the Tibetans at Beiting, and there began a war of attrition lasting several years between Uyghurs and Tibetans in the region between Beiting and Gaochang.[68] The Uyghurs certainly held Gaochang in 803.[69] From Kucha, the Tibetans followed the Khotan Darya upstream, captured the little fortress of Mazar Tagh,[70] which they strengthened substantially, and then conquered Khotan around 798 or 802.[71]



243. **The 15.6-metre-long clay figure of the sleeping Buddha Shakyamuni in Cave 158 at Mogao, Gansu, China, Tibetan Period (786/87–848). On the left, standing by Shakyamuni's head, is Prabhutaratna, one of the Buddhas of the past, while at his feet sits the Buddha of the future, Maitreya (not shown); together they represent the 'Buddhas of the Three Ages' (Chinese: *sanshi fo*). Among the mourners is the Tibetan emperor Tritsu Detsen (Ralpachen, r. 815–38).**[33]

It was at this time that the last inhabitants left the city of Dandan Oilik, which the Tibetans had been raiding since at least 768.[72] Kashgar may also have fallen into Tibetan hands by then.[73]

The renewed alliance between the Uyghurs and the Tang dynasty was of great advantage to the latter, for the Uyghurs maintained the pressure on Tibet. In 808 they penetrated into the region of Etzin Gol and briefly occupied the strategically important city of Liangzhou (Wuwei). But the Tibetans continued their encirclement of China and built a bridge over the Yellow River north-east of Lanzhou, making it possible for them to threaten Chang'an from the north as well. In 816 Tibetan forces carried the battle deep into Uyghur territory; they negotiated the Gobi Desert and got to within two days' march of the Uyghur capital of Ordu Baliq (Karabalgasun) in the heart of Mongolia. As the Tibetan commander-in-chief Shang Qixiner (in Chinese transcription) later reported, he was planning the destruction of the city when he heard of the death of Tibetan emperor Tride Songtsen (Sanalek, r. 799– 815) and so turned back. Tibet was at the height of its power, with the capitals of both its enemies within striking distance of its forces.[74] Tibet's capital, on the other hand, was quite beyond the reach of those enemies, since it was very far from either the Sino-Tibetan or the Uyghur-Tibetan border. Yet the Uyghurs were capable of striking back, and in 821 an Uyghur army even turned up in Ustrushana (in the north of today's Tajikistan). However, when that same year the Uyghurs' northern neighbours, the Kyrgyz, stepped up their military



244. A man cuts the tip of his nose as a sign of grief in accordance with Uyghur and Göktürk funerary custom. Detail from Cave 158 at Mogao, Gansu, China, Tibetan Period (786/87–848).

operations against them, and war-weariness came to prevail in Tibet, the time for peace negotiations had come. Tibet and China concluded a comprehensive peace, ratified in Chang'an in 821 and in Lhasa in 822. The bilingual stone stele that stands in front of the Jokhang Temple in Lhasa declares that 'Both Tibet and China shall keep the country and frontiers of which they are now in possession. The whole region to the east of that being the country of Great China and the whole region to the west being assuredly the country of Great Tibet.'[75] The treaty recognised both states as equals and set the seal on the status quo; that is, Tibet's possession of its conquests in the Tarim Basin, Gansu, Qinghai and Sichuan. The peace lasted 20 years, until the collapse of Tibet. In 822, Tibet also made peace with the Uyghurs and the kingdom of Nanzhao.[76]

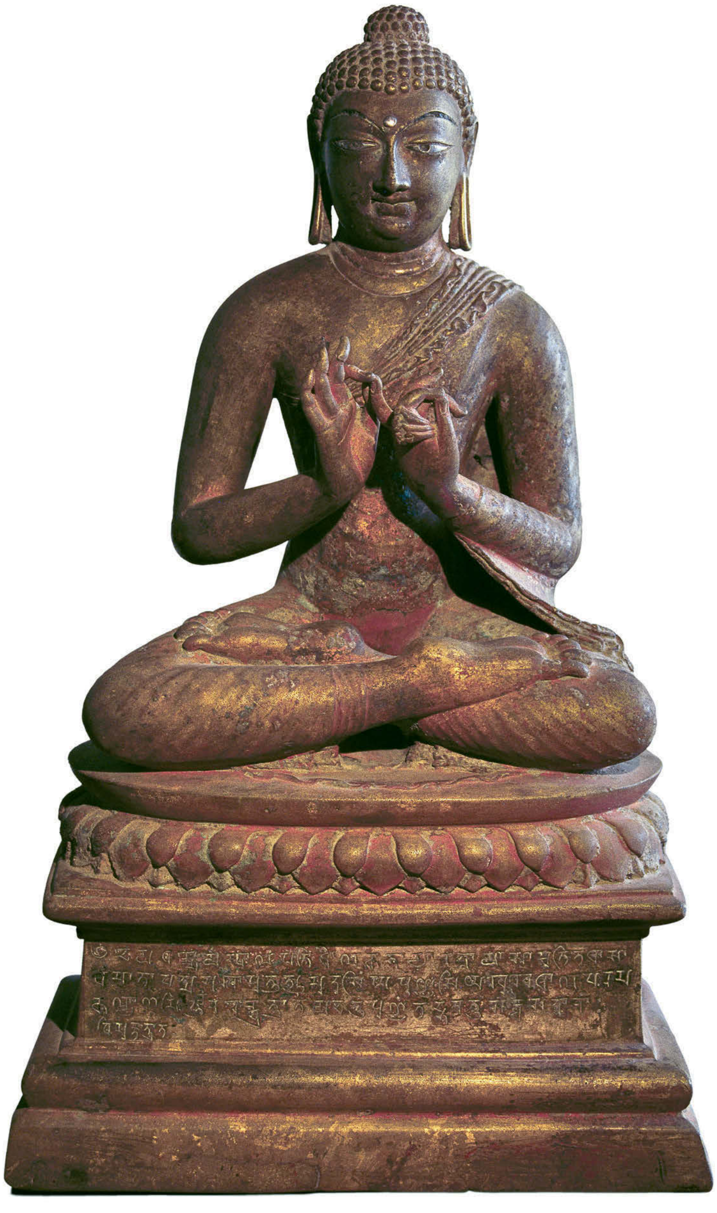
4.2 Central Asian Influence on Tibetan Culture

As Tibet in the first half of the seventh century was part of the transcontinental trade network, it is no surprise that valuable art objects should have been introduced there from Central Asia, and from Sogdiana in particular. Among these, for example, are silver and gold wine cups and the great silver jug in the Jokhang Temple,[77] as well as polychrome court garments with post-Sassanid medallions enclosing dual animals facing each other. Some of the 'post-Sassanid' silk dating from the seventh to ninth centuries excavated at the east Tibetan necropolis of Dulan and its environs was manufactured for the Tibetan market in Sogdiana, probably in Bukhara, some in the Tarim Basin, where the two great silk-producing centres of Khotan and Kucha were situated, and some at an imperial workshop in Sichuan.[78]

Somewhat more long-lasting was the Central Asian influence in terms of Buddhism and its art. It was in the time of Songtsen Gampo, and perhaps even a century earlier, that Tibet came into contact with the Buddha's teaching, when Buddhist missionaries came from China and Nepal, countries actively engaged by Songtsen Gampo's foreign policy.[79] A further impulse was given to Buddhism in Tibet when upon his accession the Khotanese king Vijaya Sihya (r. *ca*. 737–746/47) expelled the Buddhist monks from his kingdom, and they sought refuge at the court of the Tibetan emperor Tride Tsugtsen (Meagtsom, r. 712–55). It was Meagtsom's Chinese wife Kim Sheng Congjo, a devout Buddhist herself who had already invited Buddhist monks from China to the Land of Snows, who took in the Buddhist monks from Khotan and built the temple of Kachu (fig. 242) in central Tibet for them around 737 to 739.[80] These events were decisive for the dissemination of Buddhism in Tibet, says the Tibetologist Roberto Vitali: 'The possibility that the Khotanese monks were instrumental to the presence of Buddhism in Tibet and to the founding of temples finds final and decisive confirmation in the most reliable source available to us.'[81] This public promotion of Buddhism by the Chinese princess Kim Sheng, who also had further temples constructed, angered the country's army leadership and powerful families, followers of Tibet's native religion, Bön. They and the Bön clergy were irked by the spread of this foreign religion, which enjoyed the support of pro-Chinese circles. In 739 Kim Sheng died, probably poisoned, and Meagtsom was forced to expel the Khotanese monks, who fled to the Buddhist-friendly ruler of Kabul.

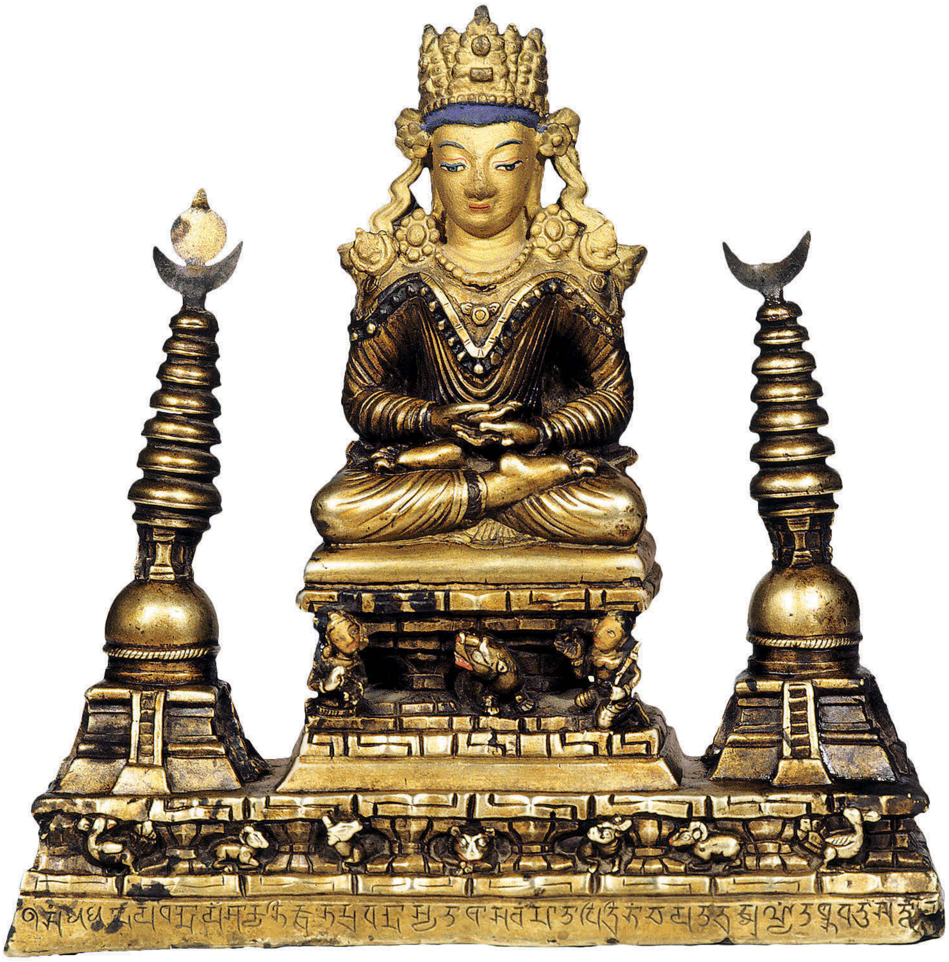
The temple of Kachu and its sculpture still exist, despite the anti-Buddhist edicts of 755 and 840 and the Chinese Cultural Revolution of 1966–76. The central six-metre-high statue of Buddha Shakyamuni in particular shows strong Khotanese influence: 'The Kachu Buddha is an example of the balance between Indian and

Chinese modes of expression achieved by the Khotanese idiom. [. . .] The art of post-Gupta India and that of Tang China found in Khotan a fresh and innovative meeting point. The Kachu Buddha combines post-Gupta spiritual aesthetics with the solemnity of certain Tang models.'[82] Although the facial features are somewhat degraded by a thick layer of applied gold, this is not only one of the oldest Buddhist clay statues to have been produced in central Tibet but also the only surviving monumental sculpture in the eighth-century Khotanese style. The two muscular guardian divinities in the temple show evident affinities with the sculpture of Dunhuang, while the eight somewhat stiff and solemn bodhisattvas that flank the Buddha Shakyamuni show parallels with temple banners from Dunhuang in the period of Tibetan occupation (787–848), the style having its roots in Indo-Nepali art.[83] Another important Central Asian contribution to the culture of Tibet may perhaps be found in the Tibetan script. While it is undisputed that this derives from the Indic Brahmi script, its precise geographical origin is uncertain. Though Tibetan tradition ascribes its introduction to Songtsen Gampo's minister Thonmi Sambhota, who is said to have spent time in Kashmir, it now seems more likely to have come from the Tarim Basin.[84]



245. Bronze figure of Buddha Shakyamuni with traces of gilt, late 7th to 8th c. The Sanskrit inscription in proto-Sharada script on the front of the pedestal indicates that the statue was donated by the wife and relatives of a General Dholaka, who bore the Iranian title of *spalapati*.[34] The statue was discovered around 1990 in Damagou, east of Khotan, Xinjiang, but its unambiguously Kashmiri character, together with the inscription, places it among the so-called Gilgit bronzes of the local Palola Shahi Dynasty (late 6th–mid-8th c.). Photo from 1994, Regional Museum, Khotan, Xinjiang, China.

Outside the Tibetan heartland, the period during which Dunhuang formed part of Greater Tibet saw masterpieces of Buddhist wall-painting created in the Mogao Caves. Although these were produced by artists from the local school of painting, they display specific characteristics which can be clearly traced back to the Tibetans who commissioned them. One such feature is the emphasis on the narrative character of the sutras represented: key episodes were depicted in separate panels that divided up the wall surface, giving the story contained in the sutra a stage-by-stage visual representation. A second innovation is the emphasis given to the figures of the donors, the Tibetan emperor in particular. In Cave 159 for example, painted not long after 824, the east wall shows the famous scene in which the wise layman Vimalakirti debates doctrine with Manjushri, bodhisattva of wisdom. Bodhisattvas, heavenly kings, monks and laymen, the Chinese emperor among the latter, all listen in, but the place of honour among the auditors is taken by Tibetan emperor Tritsu Detsen (Ralpachen, r. 815–38), who stands in front of all the rest, alone on a platform.[85] In Cave 158, too, with its 15.6-metre-long clay statue of the sleeping Buddha Shakyamuni, the Tibetan emperor is given a prominent place among the grieving laity (figs. 243f). A remarkable feature in the representation of the mourners is the depiction of the Göktürk and Uyghur funerary custom of self-laceration, and even of a suicide.[86] Donors continued to be accorded prominence at Mogao even after the expulsion of the Tibetans, as can be seen in the depiction of the triumphal parade of General Zhang Yichao in Cave 156 (fig. 247). That the emperor of Tibet should figure as a donor in Dunhuang is not so surprising considering that Emperor Trisong Detsen had done everything he could to promote Buddhism in the face of the resistance of the Bön clergy and nobility. In 791 he formally committed



246. Crowned seated Buddha between the stupas of Prabhutaratna and Shakyamuni (?), Palola (Patola) Shahi of the Gilgit Valley, northern Pakistan, dated 'year 55' = 679/80 CE. Cast brass figure with face and crown painted in cold gold. 'On the same rock-shaped stand are two Stupa reliquaries with square pedestals and stair cases on all four sides. The domes (*anda*) are surmounted by seven umbrellas (*chattra*) topped by "sun in the crescent moon" emblems. The sun emblem of the stupa on the proper left is broken off. The shape of the two Stupas appears to follow an architectural type based on the Kanishka-Stupa built by the Kusana ruler Kanishka I in Purusapura (modern Shah-ji-ki Dheri near Peshawar). Around the lower edge of the pedestal is a single-line dedicatory Sanskrit inscription in *Proto-Śarada* script: "In the year 55. This is the pious gift of the Sakya monk Bhadradharma together with his parents. Whatever merit is [created] should be for beings to reach the highest knowledge"'.[35]

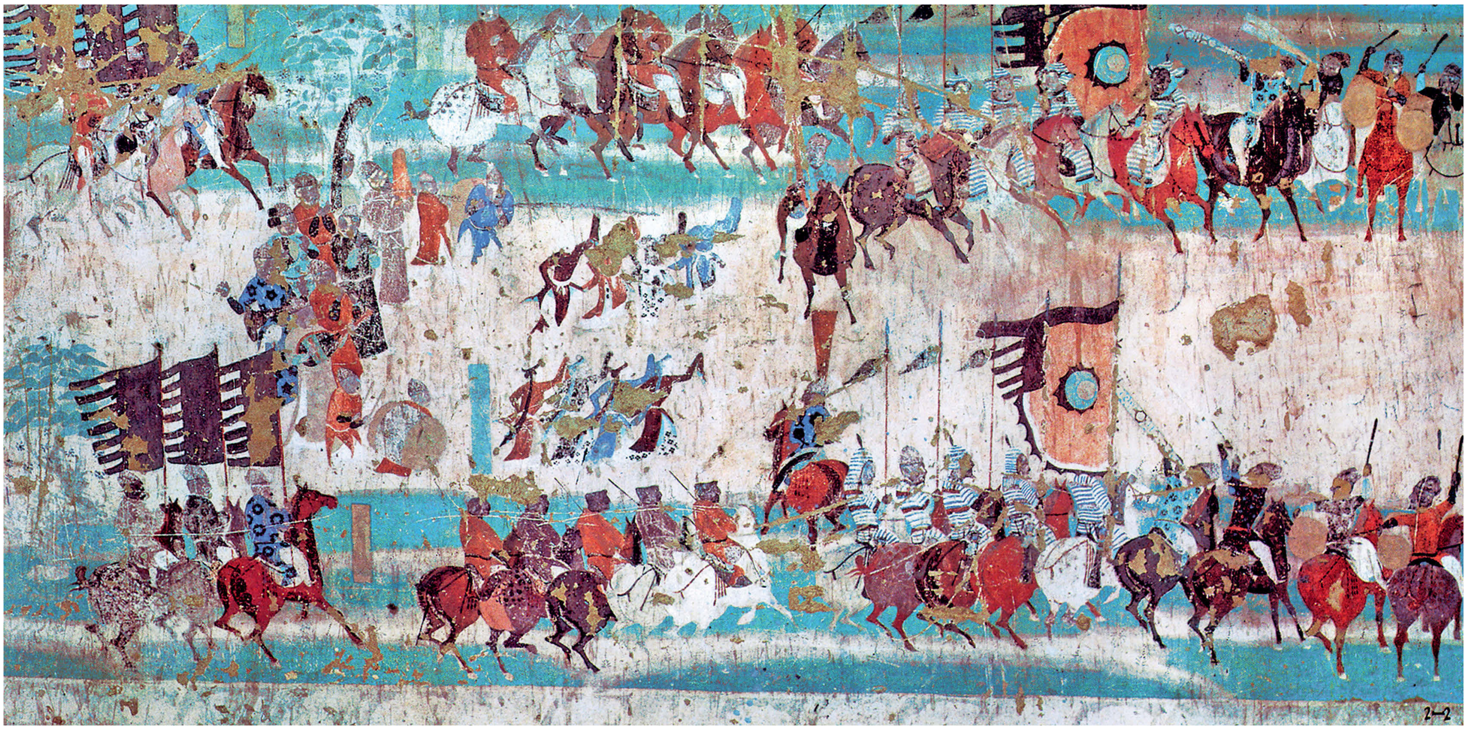
himself and his successors to support the Buddhist religion and had his oath inscribed on a stone stele that still stands today at the entrance to the Samye monastery, founded in 779: 'May the shrines of the Three Jewels established in the temples of Ra-sa [Lhasa] and Brag-mar [Kachu] and this practice of the religion of the Buddha never be abandoned or destroyed. [. . .] From now onwards each generation of the *btsan-po* [emperor], fathers and sons, shall make a vow in this way. And [. . .] the supramundane gods, the gods of the world, and the spirits are all invoked as witnesses.'[87] Noteworthy here is that the non-Buddhist gods and spirits of Bön are called to witness the edict in favour of Buddhism. In the years 792–94, it is said, a disputation was arranged between an exponent of Indian Buddhism by the name of Kamalasila and a representative of Chinese Chan (Zen) Buddhism called Heshang Moheyan, from Dunhuang, at whose conclusion the king declared for the Indians.[88]

More difficult is the question of the origins and authorship of those Buddhist metal sculptures which are preserved in Tibet, for the often gilded, early Buddhist works of this kind could either have been brought into the country as booty[89] or as devotional objects, or produced in Tibet itself, whether by domestic or foreign artists. Possible Central Asian sources for bronze figures of the sixth/seventh to ninth centuries in Tibet could be the region of Gilgit and the kingdom of Khotan, which itself imported such sculptures from Gilgit, Gandhara and Swat. A special case are the more than 20 Buddhist bronze figures from the Gilgit region, most of which bear dedicatory inscriptions. With the help of the Buddhist birch-bark manuscripts accidentally discovered at Gilgit in 1931, most of these bronzes can be assigned to rulers of the local Palola[90] Shahi dynasty, which ruled from the late sixth to the mid-eighth centuries. Given that these rulers appear as donors of sutras, stone inscriptions and metal sculptures, they may be said to have presented themselves as true protectors of the Buddhist legacy and its teachings.[91] These bronzes, all of exceptionally high quality, seem to represent 'a bridge between the art of Gandhara, of which only a few bronzes survive, and the gradually emerging bronze-casting of Tibet'.[92] The Tibetologist Ulrich von Schröder assumes that Tibetan artists were themselves producing Buddhist metal sculpture in brass, bronze, copper and silver from the seventh and eighth centuries onwards, 20 examples of which he has identified in Tibet. Of those, eight are attributed to Central Tibet and 12 to Zhang Zhung in present western Tibet.[93] In terms of style, metal sculptures produced in Tibet find their models in Nepal, North India, Kashmir, Swat and Gilgit, while iconographically they represent idiosyncratic hybrids between domestic deities and Buddhist conceptions.

4.3 Tibetan Withdrawal from Central Asia

The forcible promotion of Buddhism and its monks by emperors Trisong Detsen and Ralpachen at the expense of old noble families and native adherents of Bön provoked a split in the Tibetan ruling elite that led to the collapse of the empire. The discontent of the anti-Buddhist factions was prompted not only by the preferential treatment of Buddhism and the marginalisation of Bön, but also by the creeping takeover of power by the Buddhist monastic elite, from whom prime ministers under Ralpachen were sometimes drawn. The noble-dominated state seemed to be slowly turning into a theocracy. This led to the murder of Ralpachen in 838 and his replacement by his brother Langdarma (r. 838–841/42). Two years later, the collapse of the Uyghur Empire destabilised Tibet's northern border, as tens of thousands of Uyghurs fleeing the victorious Kyrgyz crossed into the northern regions of the empire. According to Buddhist tradition, Langdarma pursued an anti-Buddhist policy, which supposedly led to his being shot with bow and arrow by a Buddhist monk in 841 or 842. Immediately after Langdarma's death, civil war broke out between two clans struggling for power and the central government collapsed. In today's provinces of Gansu and Xinjiang two of Langdarma's former generals fought each other: Shang Kongruo, who had declared himself as the new king of Tibet, and Shang Beibei, who supported one of the two clans.[94] While the defeated Shang Beibei withdrew around 849, Shang Kongruo pushed forward into the eastern Tian Shan mountains, driving out the recently arrived Uyghurs from some areas; he captured and plundered Hami and Gaochang, among other places. In 866 he was taken prisoner by Shang Beibei's former deputy, the Tibetan Tuopa Huai Guang, who had had him executed and sent his head to Chang'an.[95]

After the Tibetan self-destruction in the north, it was easy for local potentates, Uyghur confederations and the Tang to drive out the remaining Tibetans for good. The kingdom of Khotan, which had retained its administrative structure under the Tibetans, regained its independence around 851[96] and by 920 at the latest had entered the first of many alliances by marriage with the rulers of



247. Triumphal parade of General Zhang Yichao with heavy cavalry, light horsemen and mounted standard-bearers, musicians on foot and on horseback, and dancers. Wall painting in Cave 156 at Mogao, in honour of General Zhang Yichao, who drove the Tibetans out of Dunhuang in 848. The cave was donated in 865 by the general's nephew Zhang Huaishen.[36] Gansu, China.

Dunhuang.[97] The abandonment of Miran around 860 ended the Tibetan presence on the Southern Silk Road. While Kashgar had earlier fallen into the Karluk sphere of influence, Uyghurs expelled the Tibetans from Kucha around 856.[98] In Dunhuang, the Han Chinese Zhang Yichao drove the Tibetans out in 848, appointing himself acting prefect, and in 851 he was able to inform the Chinese emperor Xuanzong (r. 846–59) that he had gained control not only of Dunhuang but of Gaochang, Hami and the Hexi Corridor. To legitimate his rule, he asked to be recognised as a Chinese vassal, and his wish was granted. In 866, the Uyghur leader Pugu Jun captured the city of Gaochang, which would soon after be chosen as the capital of the kingdom of the Turfan Uyghurs.[99]

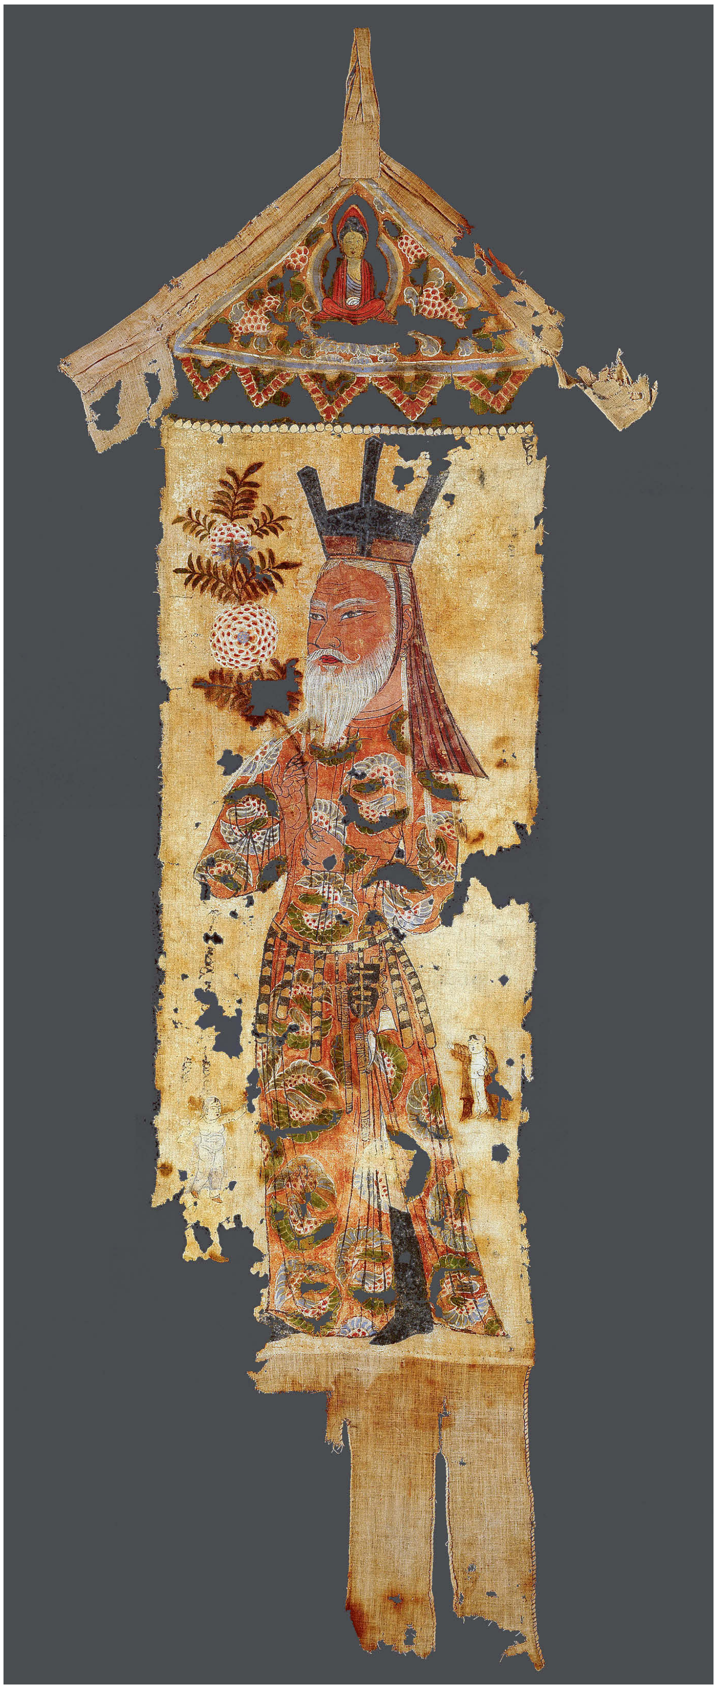
With this, Tibet's part in the history of Central Asia came to an end. It remained no more than an episode, leaving behind it hardly any trace, except in Dunhuang and in the fortresses built in the Tarim Basin. The reason for Tibet's limited influence on east Central Asia was not only its relatively brief presence, but also its small population. The country was in no position to settle large groups of families in the conquered territories, maintaining only garrisons and small military colonies. In this they were unlike the Uyghurs, who after 840 made a new homeland for themselves in east Central Asia, and developed a distinctive culture. And there lies the irony of this more than a century-long three-cornered struggle for control over east Central Asia. The Abbasid caliphate sought only to consolidate its power in Sogdiana and Tocharistan, but was nevertheless unable to prevent political fracture in the East and was forced to recognise the de facto sovereignty of the Samanids as a regional power. The Tibetan Empire collapsed, while China lost all its Western Regions and the Tang dynasty was unable to halt its own decline. The final winners in this conflict, able to take advantage of the resulting power vacuum, were the Samanid dynasty and the Uyghur and Karluk peoples.

X

The Uyghurs

The great king, he who has received from the sky the gift of charisma, the heroic, majestic, glorious, wise Uyghur khagan, the son of Mani.

Self-description of TÄNGRIDÄ KHAGAN (BÖGÜ) after he had converted to Manichaeism in 763.[1]



248. Temple flag with the portrait of an Uyghur prince holding a peony. The Uyghur inscription reads: 'For the soul of my father Qara Totoq'.[37] Painting on ramie, height 144.5 cm, Kocho, Xinjiang, China, 10th c., Museum für Asiatische Kunst, Berlin.

The medieval history of the Turkic-speaking Uyghurs can be divided into three phases. In the initial phase they were allies of China and fought against the Göktürks, who were related to them, while in their second, imperial phase they dominated the north-east of Central Asia and rose to be military protectors of the Chinese Tang dynasty. In the third phase the Uyghurs formed smaller states in Gansu and in the north of the Tarim Basin; the cultural achievements of one of them, the kingdom of Kocho, influenced other Central Asian cultures long after its demise.

1. The Early Period

The ancestors of the Uyghurs, who belonged to the tribal confederation of the Tiele and lived on the banks of the Selenge River, first gained their independence when, under the leadership of **Ay Uzhru** (r. *ca.* 487–508), they left the confederation of the Rouran, and went south-westward.[2] It was in the seventh century that the Uyghurs themselves, who belonged to the Turkic tribal confederation of the *Toquz Oghuz*, the 'Nine Tribes', entered history. They called themselves *On Uyghur*, 'Ten Uyghur Tribes', being divided into ten clans who were led by the Yaghlaqar clan.[3] In terms of power and prestige, the position of the Yaghlaqar, who dominated the Uyghur tribal confederation until 795, was comparable to that of the Ashina within the Göktürks, but the two leading clans, who were not related, were hostile to each other. Around 627/28 the Uyghurs, under their ruler **Pusa** (r. *ca.* 627–before 646),[4] formed an alliance with the Xueyantuo and the Bayegu against the Göktürk Khagan Xieli, whose armies they defeated. In 629 the rebel alliance made a pact with the Khitan and with Emperor Taizong, under whose leadership the First Khaganate of the Göktürks was brought down.[5] In the following decades the Uyghurs acted as loyal brothers in arms of the Tang emperors. In 646 the Uyghur-Chinese alliance destroyed the rising power of the Xueyantuo, after which the Uyghurs, who had returned to the province of Selenge, under **Khagan Qutlugh Tumitu** (r. before 646–648), annexed the tribal territory of the Xueyantuo.[6] Soon after this, the Uyghur-Chinese alliance defeated the Western Turkic Khaganate,[7] but the Uyghurs under **Khagan Borun** (r. 648–*ca.* 661/63) were not yet strong enough to become the leading power in eastern Central Asia. For when they faced the strengthened Göktürks under Ashina Qutlugh and Tonyukuk they could not count on China's help, since the Chinese leadership was weakened by the intrigues of Empress Wu, and they were forced into submission. Their rebellion of 717–19 also failed.[8]

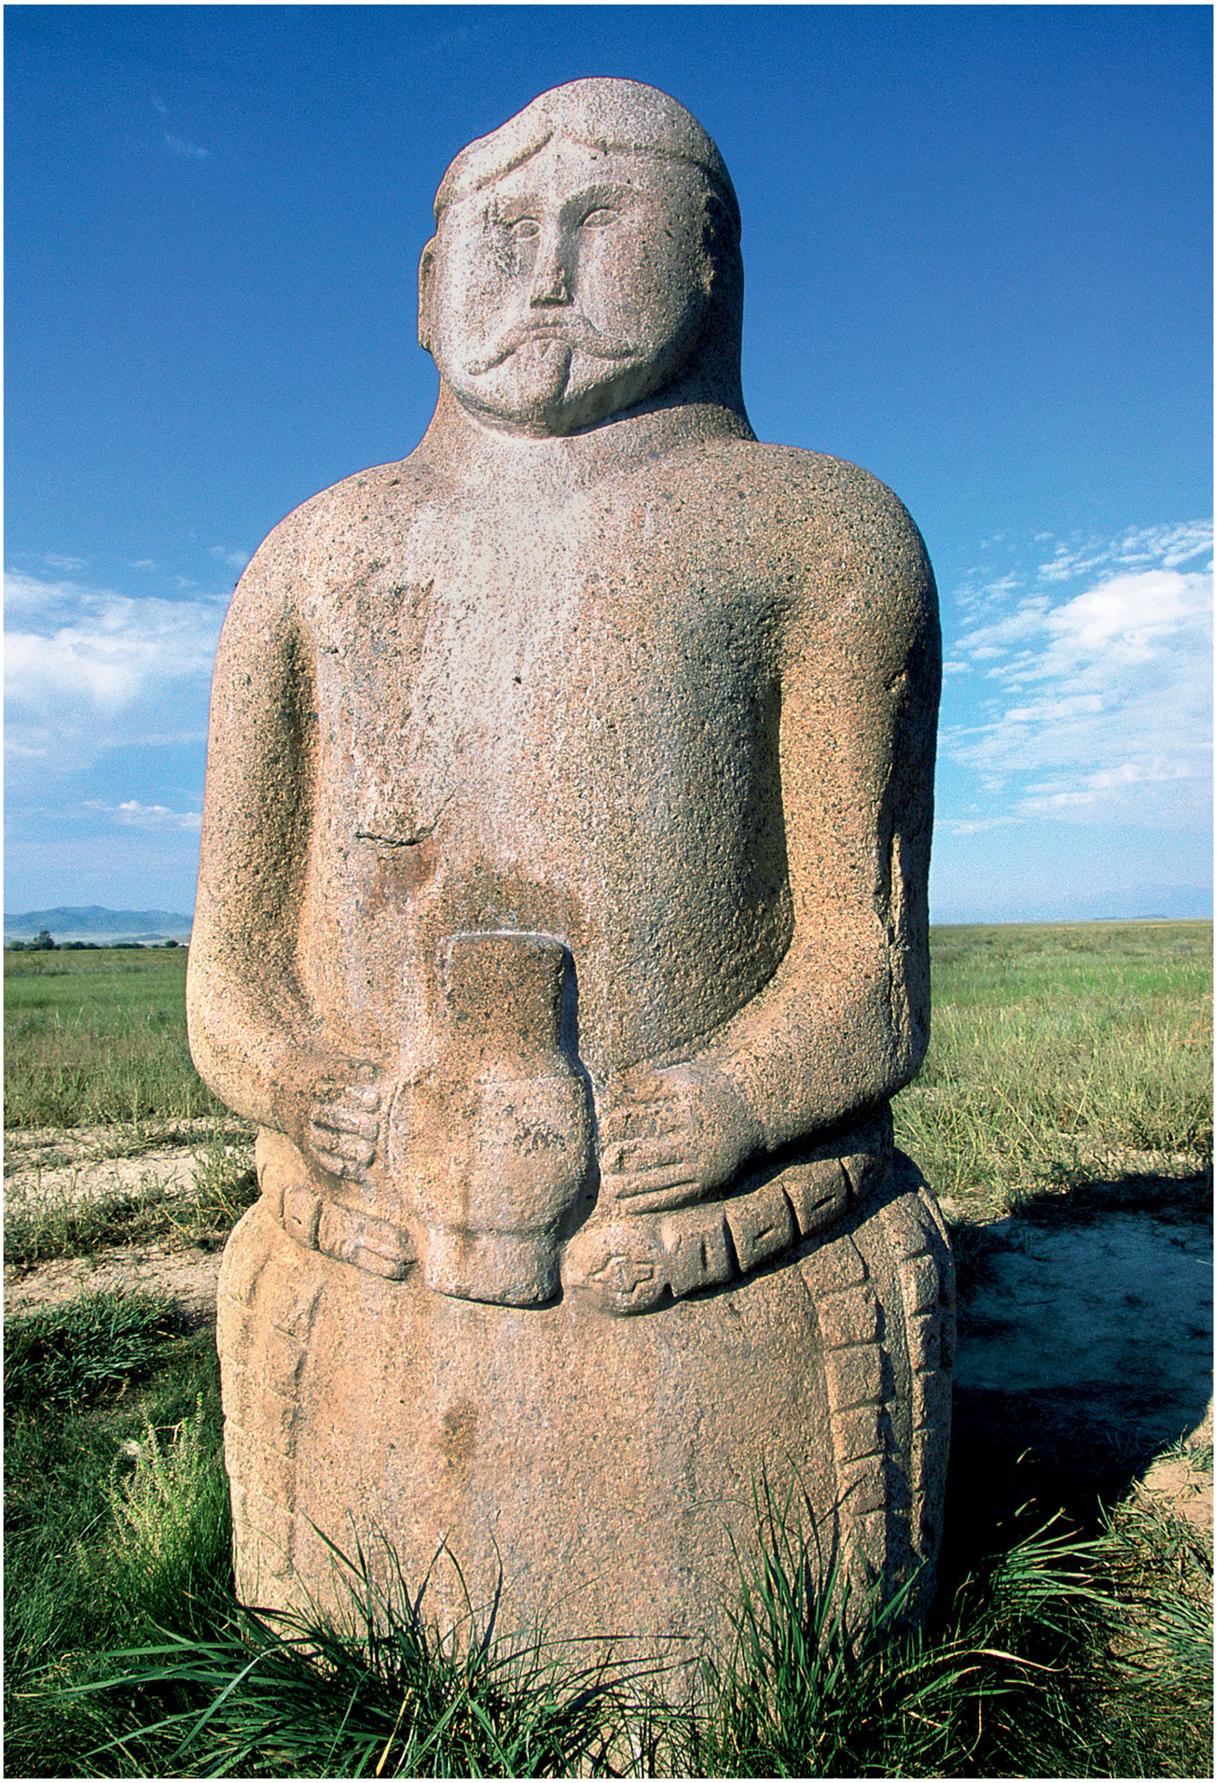
It was only after the death of Bilge Khagan in 734, when the leading elite of the Second Göktürk Khaganate was divided by intrigues and internal power struggles, that an alliance of Uyghurs, Basmils and Karluks succeeded in 742 in toppling the Ashina clan for good. But the empire of the Basmils, which was created as a result, was destroyed two years later by their main subordinates, the Uyghurs and Karluks. Their alliance of convenience was also short-lived, for the founder of the Uyghur Empire, Qutlugh Boyla from the Yaghlaqar clan, who reigned under the name **Qutlugh Bilge Kül Khagan** (r. 744–47), expelled the Karluks westward in 745.[9]

2. The Uyghur Empire

On the face of it, it might seem that the Uyghur Empire (744–840) simply represented the shift in political power from the Ashina clan to the Yaghlaqar clan, and was really nothing other than a 'Third Turkic Empire'.[10] But this is certainly not the case: although the Uyghurs spoke a Turkic dialect and used a runic script, they differed from the Göktürks in a number of important aspects. Instead of extorting tribute from China through raids, they turned China into their protectorate, which they skilfully exploited through trade conducted under their own terms that they forced upon China, as well as through financial credit. In addition to this, they built cities and mighty fortresses, and they adopted Manichaeism as their state religion.

The founder of the empire was succeeded by his son **Bayanchur** (Chinese: Moyanchuo), who adopted the title **Tängridä Bulmish El Etmish Bilge Khagan** ('Wise Khagan, builder of the empire', r. 747–59). Bayanchur and his son and successor **Bögü**, who ruled under the name **Tängridä Qut Bulmish El Tutmish Alp Külügh Bilge Khagan**, also called **Muyu Khagan** (r. 759–79), mapped out the political and cultural development of their empire. They laid the foundations for its economic growth and prosperity by destroying an army of their mortal enemy, the Kyrgyz, in 758,[11] and in 756/57, 762, 763 and 765 by intervening in the Chinese civil war of the An Lushan Rebellion on the side of the Tang dynasty, which they saved from collapse.[12] Since in the following decades China depended on their military support in its fight against Tibet, the Uyghurs succeeded in making China their de facto protectorate. They forced the Chinese to agree to trade contracts which

249. South side of the fortified palace of Ordu Baliq (Karabalgasun), Övörkhangai Aimag, Mongolia. Ordu Baliq was the capital of the Uyghur Empire from *ca.* 760 to 840. At the right is a quite well preserved stupa.



250. Stone figure from the Uyghur period near Kizil Mashalik, Tuva, Russia. The man holds the vessel with both hands, and his belt has several straps hanging down from both sides. 8th/9th c. Since birds use the statue's head as look-out, whitish guano has formed on its face and chest.

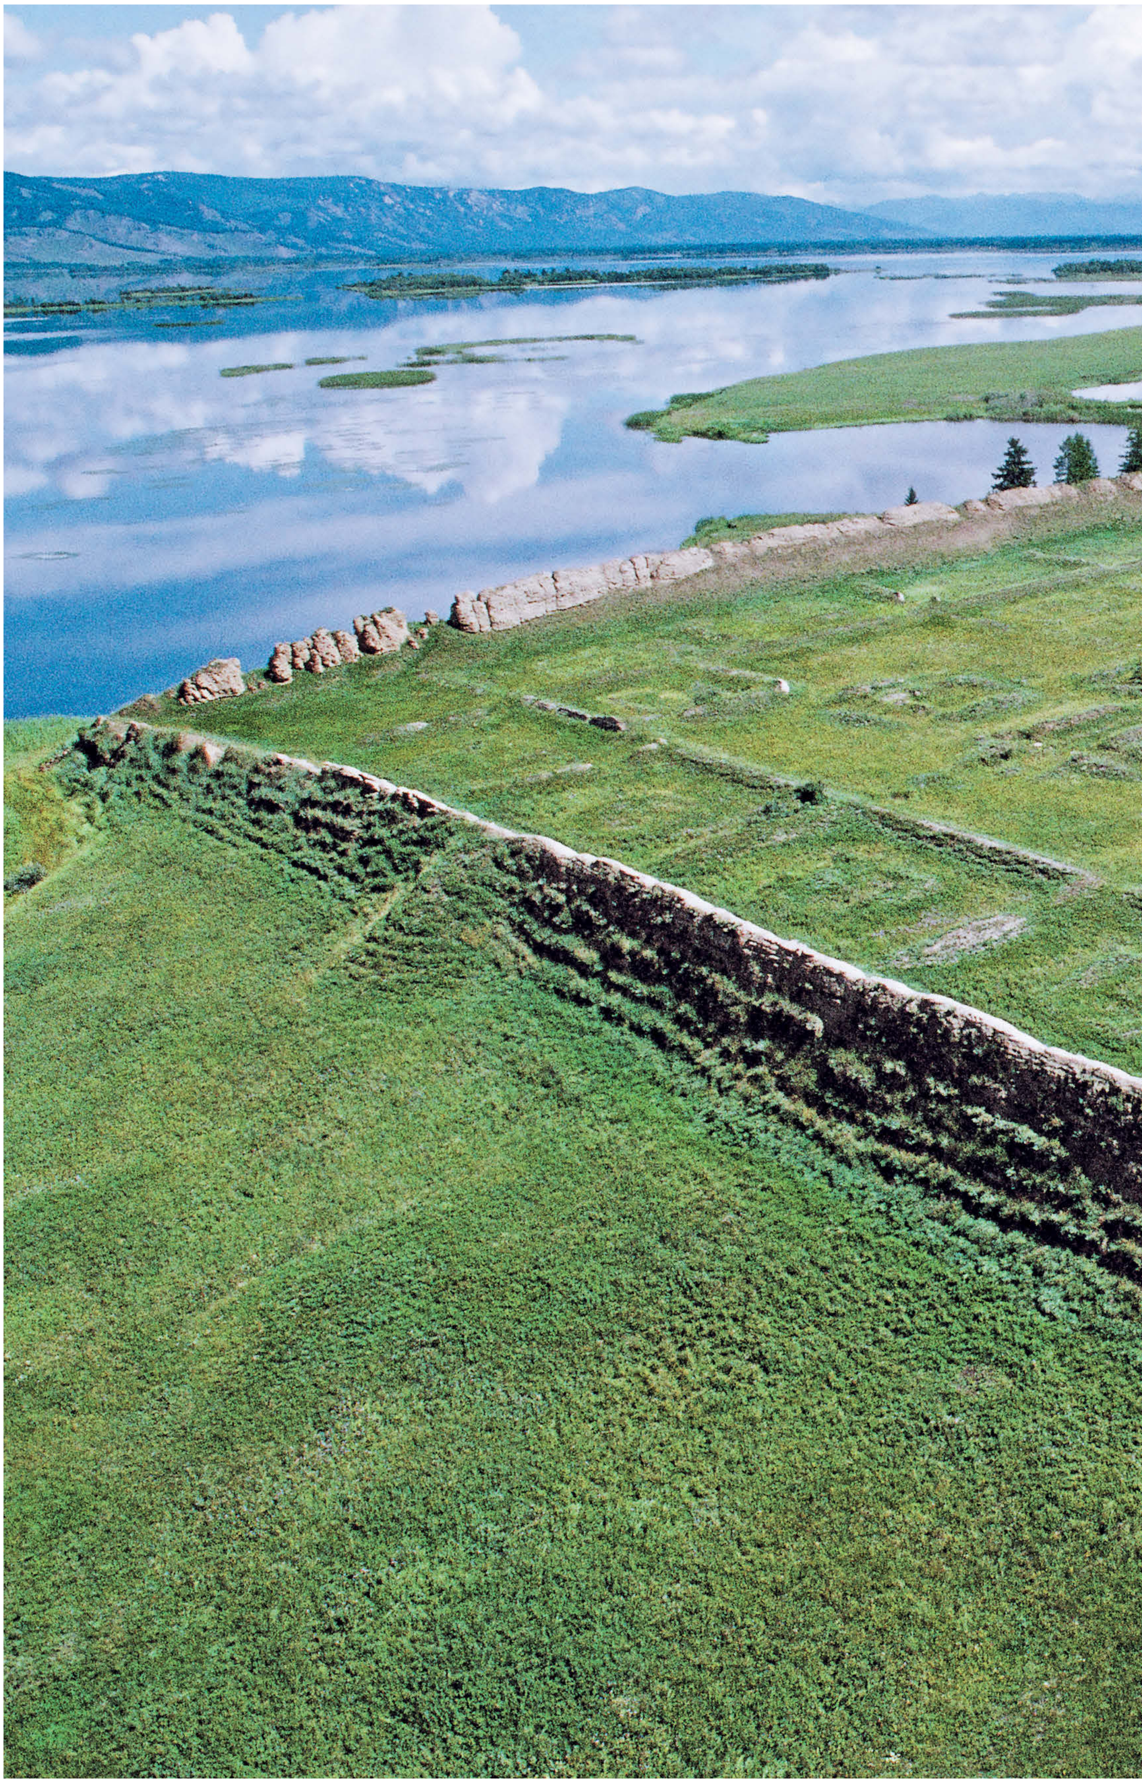
were very advantageous for the Uyghurs: China had to buy tens of thousands of second-rate horses every year at an inflated price, initially 40 bales of silk per horse, and from the early ninth century as much as 50 bales. The *Xin Tang Shu* recorded 'Every year they [the Uyghur officials] sought to sell tens of thousands of horses and the messengers followed one upon the other staying in the [Palace] of Diplomatic Reception. The horses were inferior, weak and unsuitable.'[13] China was also obliged to offer free hospitality and gifts to the Uyghur horse merchants, who acted like official diplomats. Thus China had to receive over 100 embassies, many of which included more than 1,000 members, until the collapse of the Uyghur empire.[14] The silk bales were exported to the west by Sogdian and Uyghur merchants, who purchased other luxury goods with the proceeds. Sogdian lenders acting on behalf of the Uyghurs also succeeded in controlling a part of the flows of Chinese capital, which the Chinese called *Huihu Jian*, 'Uyghur money'. As Moriyasu remarks, 'Sogdian money' would have been the more appropriate term.[15] Finally, Sogdian and Uyghur traders and lenders also enjoyed important trade privileges within China and even legal extraterritorial protection,[16] through which they remained out of the reach of Chinese law, similar to the Western and Japanese concessions within China in the nineteenth and twentieth centuries.

In contrast with the Second Göktürk Khaganate and their influential adviser Tonyukuk, who attached great importance to the preservation of the traditional values of a nomadic equestrian society, the two Uyghur khagans Bayanchur and Bögü supported the construction of at least two walled cities and numerous fortresses. As the inscription of Shine Usu from 759 or 760 records, Sogdian and Chinese architects built two cities in northern central Mongolia, Ordu Baliq and Bay Baliq.[17] Bay Baliq lies on the Selenge River, and Ordu Baliq, the capital of the Uyghur Empire, whose name means 'city (Baliq) of the royal camp (Ordu)', *ca.* 225 kilometres further south on the western bank of the Orkhon River. The two mudbrick settlement complexes are the oldest reliably dated cities from the Turkic-Uyghur period of Mongolia, for the dating of Khukh Ordung, the walled complex which lies south of Ordu Baliq, to the mid-seventh century was made according to a single 14C radiocarbon dating analysis and therefore, with no excavation so far, remains hypothetical.[18] While it is still unclear how far Bay Baliq, which consists of three ruined complexes,[19] fulfilled other functions apart from those of a princely residence and two fortifications, Ordu Baliq, which is today called Karabalgasun, 'black city', is a city of huge dimensions. The surface area of the settlement, 30 kilometres north-west of the Mongolian capital Karakorum, measured *ca.* 32 square kilometres, and the city consisted of several quarters and open spaces which might have served for erecting *ger* (yurts). It was the result of central planning and probably functioned not only as residence for the ruler and seat of government but also as a trade centre and for the storage of tribute and weapons. Traces of irrigation systems point towards extensive agriculture. In the northern sector of the city, which was first thoroughly explored by W. Radloff and D.A. Klementz in the 1890s, stood the walled palace of the khagan. Its mudbrick walls, still seven metres high today, formed a rectangular enclosure of approximately 420 x 340 metres. A moat surrounded the defensive walls, and along each of the two long sides stood eight stupas.[20]

In the south-eastern corner of the palace, the 12-metre-high platform of the citadel rose up, on which stood the golden tent of the khagan, which was described by the traveller Tamim ibn Bahr in 821. 'From [a distance of] five farsakhs [*ca.* 28 km] before he [Tamim] arrived in the town [of the khaqan] he caught sight of a tent belonging to the king, [made] of gold. [It stands] on the flat top of his castle and can hold 100 men.'[21] Within the palace complex stood a 13-metre-high stupa and a Manichaean temple with murals from the late eighth or early ninth century. Some 300 metres south-west of the palace a second Manichaean temple stood in the 'house of the nation' (Uyghur: 'il äbi'), a walled complex which was a temple, palace or central administrative complex. The architecture of its Chinese roof construction was based on Sogdian models.[22] Tamin mentions that the majority of the city's inhabitants were Manichaeans.[23] Near the 'house of the nation' stood the famous trilingual stele of Karabalgasun (fig. 190), which celebrates the military successes of Khagan Ay Tängridä Qut Bulmish Alp Bilge Khagan (r. 808–821) and his predecessors in Old Turkic, Sogdian and Chinese and reports how Khagan Bögü converted to Manichaeism in 763.[24] Ordu Baliq was destroyed in 840 by the Yenisei Kyrgyz. Not far from the city, archaeologists have been excavating several Uyghur tombs since 2005. Their vaulted entrances and the grave dome were constructed with fired bricks.[25]

Another centre of important building activity was in the north-west of the Uyghur Empire where it bordered on the territory of the enemy Yenisei Kyrgyz. In Tuva, in the region of Shagonar, the Uyghurs commissioned architects, who were probably Chinese, to build 17 fortresses with square or rectangular plans, of which 14 have been rediscovered. Unfortunately most of these are today flooded by the Sayano-Shushenskoe Dam.[26] They formed a chain of fortresses against the Kyrgyz, not only offering protection to military garrisons but probably also serving as trade centres. The only one of these little researched complexes which has been explored archaeologically – between 2007 and 2008 – is the

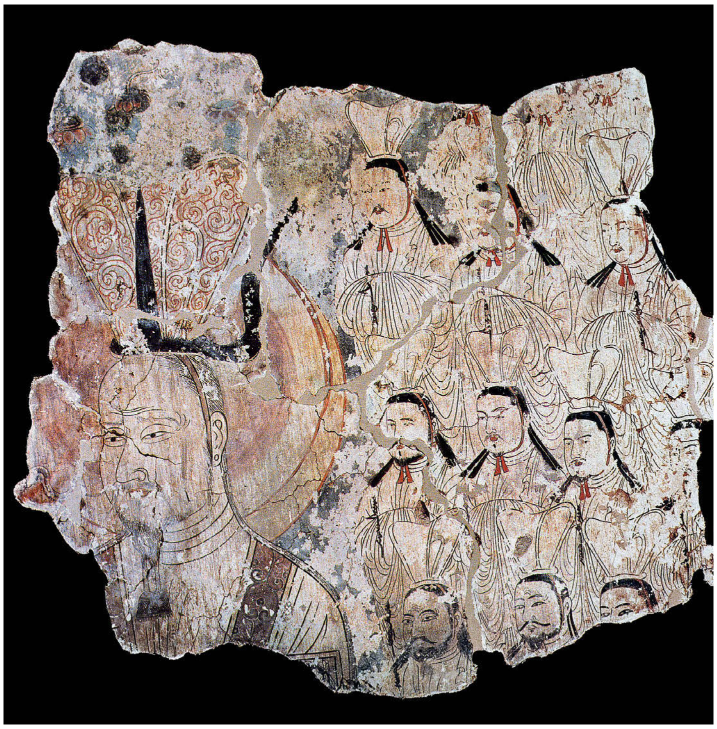
251. Aerial view of the Uyghur fortress of Por-Bajin on the Tere Khol Lake, Tuva, Russia. The fortress, built between 770 and 790, may have served as summer palace; the symmetrical arrangement of the buildings around the central structures can be clearly seen.



spectacular fortress of Por-Bajin (fig. 251), which stands on an island in the Tere-Khol Lake. The rectangular fortress measuring 215 x 162 metres had a 12-metre-high rampart wall, which in some places is still preserved to a height of nine metres. The fortress was built using the typically Chinese *hang-tu* technique, in which thick layers of pounded clay were reinforced with interspersed tree branches and posts rammed vertically into the ground. This gave the compounds good resistance to high winds and earthquakes. Inside the fortress the arrangement of the buildings and courtyards, built along the east–west axis, also followed a typically Chinese symmetrical construction plan.[27] Rather like the Forbidden City in Beijing, which was built much later, the grand entrance gateway led into two interior courtyards, separated from each other by a gated wall. After this a stairway led to the main complex, which consisted of a two-part central structure and two flanking pavilions. This central complex was surrounded on three sides by strictly symmetrical smaller courtyards and buildings. The Chinese character of the complex was completed by Chinese roof constructions and Chinese roof tiles with typical ridge-end tiles decorated with symmetrical patterns or apotropaic masks.

The precise function of the fortress, which was erected between 770 and 790, remains mysterious even after the excavations. The defensive character of the complex is obvious from the strong ramparts, but almost no weapons and few everyday objects, which would have suggested a garrison, were found. Since there was no evidence of traces of a heating system,[28] Por-Bajin might have been a summer palace.[29] The complex was abandoned after only a few years and was heavily damaged by two later earthquakes.

Khagan Bögü (Muyu) made his third important decision when he converted to Manichaeism in 763. In 762 the khagan was staying in the city of Luoyang, which had been ruthlessly plundered by his troops, and there he encountered Manichaean priests. In the following year he invited Manichaean missionaries to Ordu Baliq, became a convert and compelled his followers to adopt the new religion, thus making Manichaeism a state religion for the first and only time, albeit on a limited scale. Manichaeism enjoyed this status from 763 to 779 and from 795 to 840 in the Uyghur Empire, and later in the Uyghur kingdom of Kocho from *ca*. 866 to *ca*. 1008.[30] In this respect the Uyghur Empire on the Orkhon marks an exception in the tradition of Central Asian steppe empires, for neither the Xiongnu nor the Rouran, the two Göktürk khaganates or the Mongolian empire of Genghis Khan knew state religions. To enforce Manichaeism, Bögü, who called himself 'Emanation of Mani' after the founder of the religion, ordered that people should be divided in groups of ten, and each group should appoint a religious leader, who would be responsible for teaching and for the observance of the religious rules.[31] The khagan thus applied the concept of the decimal organisation of the people to a permanent campaign of indoctrination of a kind that was repeatedly employed by totalitarian states in modern times.



252. Part of a fragment of a Manichaean wall painting from the Complex K of Kocho, Xinjiang, China, 9th/10th c. On the left a high-ranking Manichaean 'Elect', maybe Mani himself, is represented, on the right further male and female Elect. Lost in World War II.

At first sight the choice of the distinctly pacifist Manichaeism by the ruler of one of the most bellicose peoples of his time may seem bizarre. For Manichaeism, which saw matter as the source of all evil, demanded that believers forego procreation, abstain from eating meat and drinking wine and do no physical work. Such prescriptions contradicted the way of life of horse nomads, for whom it was vital to keep up the numbers of their rather small population, and who for climatic reasons needed animal proteins. We can only speculate about Bögü's motives: the choice of a universal religion probably did not only serve to legitimise his power over his heterogeneous tribal confederation as a ruler sanctioned by the founder of that religion, but also demonstrated his supremacy in relation to the Sogdians and Chinese, who played an extremely important role in the administration, the finance system and trade of the Uyghur empire. We can also assume that the khagan, similarly to the Jewish elite of the Khazars, did not want to adopt a religion of the enemy, which ruled out Chinese

Buddhism or Islam. What spoke against Christianity was that it had a relatively low rate of acceptance in Sogdiana; Manichaeism, on the other hand, was relatively well established there, and for Manichaean Sogdians the empire of the Uyghurs was an attractive alternative to their islamicised homeland. Perhaps the ascetic, even life-denying spirit of Manichaeism spoke to Bögü's soldier nature, since good warriors are not attached to life and do not fear death. Finally, as 'emanation of Mani', Bögü could position himself far above all other khans of the Uyghur tribal confederation and did not have to content himself with the role of a *primus inter pares* like, for example, the khagans of the Göktürks.

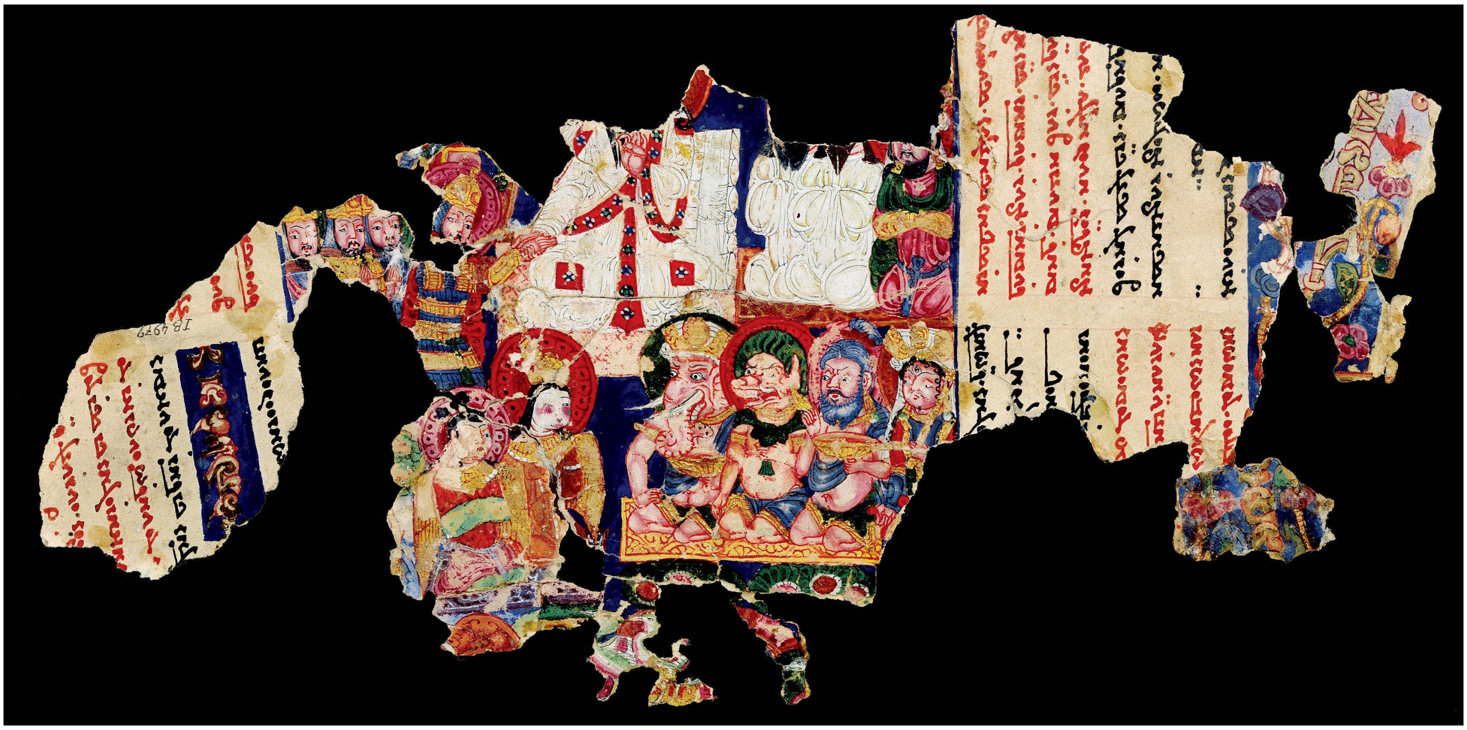
The adoption of Manichaeism by Bögü Khagan had pleasing consequences for Manichaean Sogdians who lived within China. Manichaeism had not gained an official foothold in the Turfan Oasis until 635, with the arrival of a *možak*, a high-ranking Manichaean teacher, who was also the head of the Manichaean clergy east of the Pamirs. In 694, some 60 years later than the Nestorians, the first Manichaean missionaries reached Chang'an, and in 719 the Sogdian king of Chaganiyan sent a *možak* to Chang'an.[32] After Emperor Xuanzong had allowed the teaching of Manichaeism in 731, he revoked his tolerance edict in 732 and forbade the practice of this religion to all but the Sogdians. Manichaeism, he proclaimed, is 'a basically evil doctrine which deceives the people by falsely calling itself Buddhism'.[33] Manichaeism, which understood itself as the synthesis and perfection of the 'true, unadulterated' elements of the teachings of Zoroastrianism, Christianity and Buddhism, tried indeed to fit into the religious context in which it found itself and to adopt its vocabulary. The Byzantine apologist Petrus Siculus came to a similar verdict around 870: The Manichaeans 'are as changeable as a chameleon and as adaptable as a polypus'.[34] But after Bögü's conversion, the Manichaen Sogdians had a powerful advocate, which prompted China to lift the ban on missionaries in 768 and allow the construction of Manichaean churches and monasteries.[35]

Manichaeism

Manichaeism, which died out at the beginning of the seventeenth century in southern China,[36] was practised from North Africa to Syria, Iran, Central Asia and as far as China in the first millennium. Its founder Mani (216–*ca.* 276) came from the Jewish-Christian baptismal sect of the Elcesaites, who lived in Mesopotamia, led a strictly ascetic life and followed numerous purification rituals. It is said that Mani left the Elcesaites at the age of 24 because they regarded the body as needing and being capable of redemption, whereas he condemned the body as a fundamentally corrupted obstacle on the path to redemption, one which had to be shed. Mani understood himself to be the paraclete whom Jesus Christ promises in the Gospel of John, the Holy Ghost, the bringer of help and comfort whose task lies in the teaching of a final world religion. By this time Mani, was familiar with Iranian Zoroastrianism and with some currents in Christian thought[37] such as the *Diatessaron* by Tatian (created *ca.* 170), and the teachings of Bardaisan (154–222) and Marcion (*ca.* 85–160). The latter was particularly close to Mani since he opposed the wrathful creator god of matter of the Old Testament to the loving and forgiving god of the New Testament and his saviour son.[38] Mani began to spread his new doctrine around 241/42, initially in the south-east of the Sassanid empire, in the Indus Valley and in Balochistan, where he encountered Buddhism, and integrated some of its elements into his religion. When Mani returned to Mesopotamia, Shapur allowed him to teach his doctrines, but when the Zoroastrian high priest Kartir rose to be the highest representative of the Zoroastrian clergy around 272/73, he had Mani arrested, and he later died in a dungeon.

Mani regarded himself as the 'Apostle of the Light', and like Mohammed four centuries later, as the 'Seal of the Prophets',[39] but, unlike Mohammed, Mani recognised not only the Semitic faiths but also oriental world religions. Mani regarded these religions not as false but as degenerate. He saw his mission as being to extract all the truths of previous religions, which had been falsified over time, and to eradicate the errors which had accumulated. To guard against any eventual falsification of his message, Mani was the only founder of a world religion to record his teachings in writing. He wrote several books, some illustrated with miniature paintings. Since Mani saw his doctrine as a synthesis of the truths of Jesus, Zoroaster and Buddha, Manichaeism was extremely syncretistic and tended to adapt strongly to its surroundings so that one can speak of Roman-Byzantine, Sassanid, Uyghur and Chinese Manichaeism.

At the core of the Manichaean doctrine were the axioms of the two antagonistic principles of good/light/spirit and evil/darkness/matter and the three cosmic periods: the original separation of light and darkness, their present 'mingling', and their final separation again, when darkness will be defeated. Contrary to Zoroastrianism, in Manichaeism, the opposition of the two principles does not constitute a 'mere' ethical dualism but also a fundamental, ontological and never indissoluble one, for it is the importance attached to matter, to the material, which radically separates Manichaeism from Zoroastrianism. In Zoroastrianism the antagonism between Ahura Mazda, the god of goodness and light, and Ahriman, the 'anti-god' or demon of evil and of darkness, runs right across the spiritual



253. **Paper fragment of a leaf from a Manichaean book, painted on both sides, Ruin ά of Kocho, Xinjiang, China, 8th–9th c. Between two blocks of text in mid-Persian language and Manichaean script, a high-ranking Manichaean Elect, clothed in white, stretches out his right hand towards an armoured warrior kneeling before him. Human and supernatural beings witness this scene, which can be interpreted as an allegory of the granting of salvation to the kneeling noble warrior, perhaps an Uyghur king of Kocho. The painting might also represent Bögü Khagan's conversion to Manichaeism in 763. On the right, below the cleric, four Hindu-like deities observe the scene, two with animal heads. These four deities might correspond to the tutelary divinities of the four cardinal points. Museum für Asiatische Kunst, Berlin.**

and material world. The omnipotence of Ahura Mazda is limited in time, and humanity has the duty to help restore it. For this reason Ahura Mazda created the universe – and it follows that material creation is a work of the god of light – which becomes the battlefield for the titanic struggle between the two principles. Humans, who are endowed with free will, are themselves actors in the cosmic struggle and have to decide which party to side with. Through righteous attitude, truthful language and good deeds humans support Ahura Mazda. This means that both human spirit and human body participate in the redemption process; spirit and soul fight for the good *with* the body, not *against* the body as in Manichaeism and in ascetic, early Christian monasticism.[40] Since creation, with the exception of the works of some demons such as snakes and vermin, comes from Ahura Mazda, it is the duty of humans to preserve life through procreation, agriculture and livestock herding.

Manichaeism on the other hand, identifies the good with the spirit and soul, and the evil with matter. In the beginning, the two principles of good and evil were separated from each other. But in a long struggle, the forces of evil succeeded in capturing parts of the light and binding it to matter. Since creation with its materiality is a work of evil, the cosmic process of redemption consists in the liberation of the light particles which are imprisoned in matter, so that light and darkness can once again be separated. The 'Apostle of Light', Mani, was driven by the mission to explain all these connections to people and to show them how they should contribute to the liberation of the trapped light particles. Since matter is bad on principle, redemption cannot be attained by an active way of life with right thinking, speaking and acting but only through the fundamental negation of the body and the renunciation of sustaining life and preserving the species. This is why Manichaean rules of behaviour banned the killing of animals, the consumption of meat, human procreation, agriculture and the harvesting of vegetables, the consumption of wine and milk, the use of medical care and the taking of medicine as well as the possession of material goods and the performance of any kind of manual work, with the exception of religious calligraphy and painting miniatures.[41] But Manichaean monks were allowed usury, as evidence from the Manichaean monasteries of the Turfan Oasis shows.[42] The cult consisted of purely verbal actions such as preaching as well as communal lectures and the singing of hymns.

Since the devotees who followed such ideals were unable to survive independently, and the overwhelming majority of believers neither wanted nor were able to adhere to them, Mani divided his community into the Elect and the catechumens, the Hearers.[43] The Elect were to free their light-soul, and the Hearers were to serve them, in the hope that after several rebirths they themselves would be reborn as Elect. But those who did not strive would face eternal damnation at the last judgement since not all light that is caught in matter will be freed. The Manichaean community was divided into five hierarchies. At its head stood Mani's representative, the *yamag* (Parthian), called *archegos* in Greek. Subordinate to him were 12 apostles and teachers, *možak* (Middle Persian), 72 bishops, *ispasag* (Middle Persian), and 360 presbyters, *mahistag* (Middle Persian). The fourth level of the hierarchy comprised the male and female Elect, *ardawan* (Middle Persian) and the fifth, lowest, of the Hearers, *niyoshagan* (Middle Persian).[44]

According to Manichaean sources, the spread of the religion to Central Asia can be attributed to Mani's companion and disciple Mar Ammo, who preached in Nishapur and Merv, perhaps also in Balkh and Sogdiana.[45] At any rate, the conspicuous adoption of Buddhist content and terms started with Mar Ammo and was evident, for example in hymns addressing Mani as 'Buddha Shakyamuni', 'Maitreya', 'Buddha Maitreya' or even as 'Jesus, Virgin of Light (!) Mar Mani'.[46] It also seems that the Manichaean communities of the East expected Mani to return as Maitreya on the Last Day.[47] Given such a 'buddhisisation of Manichaeism'[48] it is not surprising that in 732 the religious examining authorities in China issued an edict condemning the doctrine as a deceptive plagiarism of Buddhism. Because of the intermittent anti-Manichaean persecutions in the Sassanid Empire, many Manichaeans fled from Mesopotamia to Khorasan and Sogdiana so that the Manichaean community in Central Asia expanded rapidly. At the end of the sixth century, a schism occurred there when a leading cleric named Ormazd founded the Eastern church of the *denawars*, 'the pure ones', and broke away from the *yamag* in Seleucia-Ctesiphon. Although the schism was overcome at the beginning of the eighth century and the *yamag* reconciled with the *denawars*, the Central Asian community, whose *možak* resided in Kocho, kept its autonomy and pursued a more conservative and stricter interpretation of the Manichaean laws than the Mesopotamian sister community.[49] The latter enjoyed milder minority legislation under the Umayyads, but under the Abbasids persecutions restarted so that the head of the Manichaean Church transferred his seat from Baghdad to Samarkand in the tenth century.[50]

Just as Göktürk Khagan Xieli's dependence on Sogdian advisers and administrators had led to his downfall, so Khagan Bögü was toppled in 779 when the Sogdians intervened too obviously in the foreign politics of the empire. When Emperor Daizong (r. 762–79) died, Khagan Bögü's Sogdian adviser proposed taking advantage of the official mourning period to launch a surprise attack on China. Bögü's chief minister and cousin, Tun Bagha Tarkhan, argued against this audacious plan but the khagan took the side of the Sogdian war party. As the *Jiu Tang Shu* reports, Tun Bagha then profited from widespread anti-Sogdian resentment and 'attacked and killed him [Bögü Khagan], and at the same time killed his relations and confidants and those of the Sogdians who had tried to entice him into invading China, in total 2,000 people'.[51] This massacre and Tun Bagha's measures to stem Manichaeism[52] immediately unleashed anti-Sogdian pogroms in China. But after the murder of his predecessor, Tun Bagha ascended the throne under the name **Alp Qutlugh Bilge Khagan** (r. 779–89) and initiated pro-Chinese policies. In 787 these led to a relationship by marriage with the Chinese imperial family but, more importantly, to the 'Grand Alliance' against Tibet, which had been Minister Li's aim, resulting in a protracted struggle with Tibet for possession of Beiting and Turfan.[53] Qutlugh Bilge Khagan was succeeded by his son **Tängridä Bulmish Külügh Bilge Khagan** (Chinese: Duoluosi, r. 789–90), who, after a mere year in power, was murdered by his younger brother, whose name is unknown. But the usurper was swiftly executed[54] and his son Achuo (Chinese), still a minor, put on the throne under the name **Qutlugh Bilge Khagan** (r. 790–95). Power, however, lay in the hands of the chief minister and commander from the Ädiz clan, who after the death of the childless Achuo had himself proclaimed new khagan, under the grandiose name **Tängridä Ülüg Bulmish Alp Qutlugh Ulug Bilge Khagan** (Chinese: Guduolu, r. 795–805/08). This name meant 'consecrated by heaven, brave, blessed, great, wise khagan'.[55] With this khagan, power shifted from the Yaghlaqar to the Ädiz clan. The new khagan supported Manichaeism and appointed Sogdian administrators while continuing rather pro-Chinese policies. At the same time Tängridä Ülüg Bulmish Khagan succeeded in bringing the Turfan Oasis, which he visited in 803, under Uyghur control. In Kocho he met the Manichaean *možak*.[56]

Under the next ruler, **Ay Tängridä Qut Bulmish Alp Bilge Khagan** (r. 808–21), in whose honour the trilingual stele of Karabalgasun was erected, the Uyghur empire flourished one last time, although the Tibetan advance of 816 on Ordu Baliq demonstrated dramatically how vulnerable that empire had become. Under the rule of **Kün Tängridä Ulugh Bulmish (Alp) Küchlügh Bilge Khagan** (r. 821–24) the decline first became obvious when the ruler of the Yenisei Kyrgyz declared war and proclaimed that he would seize the golden tent of Ordu Baliq, the symbolic power centre of the Uyghur empire.[57] Then, in 822, the Chinese emperor Muzong (r. 820–24) turned down the military help offered by the

Uyghurs for crushing insubordinate provincial governors, and as a result China left Uyghur suzerainty once and for all.[58] The decline accelerated when a violent power struggle broke out within the ruling clan to which two khagans fell victim: **Ay Tängridä Qut Bulmish Alp Bilge Khagan** (Hesa Tegin, r. 824–32) was murdered, and his successor **Ay Tängridä Qut Bulmish Alp Külügh Bilge Khagan** (r. 832–39) was driven to suicide by the rebellious minister Kürebir.[59] It was probably this same rebellious minister who ascended the throne as Prince **Esa Tegin** (no regnal name, r. 839–40).[60] The winter of 839–40 was as devastating for the Uyghurs as those of 626–29, two centuries earlier, had been for the First Göktürk Khaganate: extremely heavy snowfall was followed by famine and epidemics. In this crisis another Uyghur general rebelled, defected to the Kyrgyz and encouraged them to attack the weakened khagan. The Kyrgyz stormed the Uyghur fortifications in 840, killed Esa Tegin and set fire to Ordu Baliq, thus putting an end to the Uyghur Empire and its culture in what is now Mongolia.[61] Tonyukuk's warning, from a century earlier, that fortified cities would become deadly traps for mobile horse nomads, was proved prophetic.[62] The Uyghur tribes dispersed in four directions, to China, to Gansu, into the Tarim Basin and to the lands of the Karluks.

The Kyrgyz, who lived on the Yenisei River, differed from the Uyghurs in a number of ways. Although they, too, spoke a Turkic

dialect, their language also contained non-Altaic, Uralic elements. They were not so much nomadic steppe warriors as hunters, who lived in the forests, and also herded cattle and horses. Their funeral rites were unlike those of the Göktürks and Uyghurs, and they did not lacerate their faces during burial ceremonies.[63] Whether a small minority of the Kyrgyz were Buddhists, as finds of small bronze plates from the ninth and tenth centuries suggest, is not certain – the plates could also have served as amulets.[64] Since the Kyrgyz were not numerous and kept their traditional residences in Tuva as their centre of power instead of transferring them into the Orkhon Valley, they soon came to possess only limited sovereignty over the territory of what is today Mongolia, and this was restricted to collecting tribute. By the ninth century, some individual groups of Khitan began to infiltrate Mongolia from Manchuria, and around 924 they seized power definitively.[65] Thus supremacy in this region passed from the Turkic tribes to the Mongolian peoples. But the Kyrgyz only left their homeland on the Yenisei in the fifteenth and seventeenth centuries for today's Kyrgyzstan and the north-eastern Pamirs.

China's political unity had been increasingly fragile for more than three decades before it disintegrated completely with the fall of the Tang dynasty in 907. That same year saw the emergence in northern Manchuria of the empire of the Khitan, founders of the Liao dynasty (907–1125). Within China, the Tang were succeeded by the turbulent period of the 'Five Dynasties and Ten Kingdoms' (907–960/79) during which five dynasties in the north quickly succeeded one another while, mostly in the south, ten smaller kingdoms were founded. In northern China, the Turkic people of the Shatuo, whose centre of power was then situated in what is today's province of Shanxi and who, in alliance with the Tibetans, had fought against the Uyghurs near Besh Baliq, tried to seize control. Three of the five short-lived dynasties were led by the Shatuo: the Later Tang (923–36), the Later Jin (936–947) and the Later Han (947–950), which were succeeded by the rump state of the Northern Han (951–979), who were dependent on Liao.[66] With the downfall of the Later Han and the Northern Han, the final attempt by a Turkic tribe to found its own dynasty in China failed, just as similar attempts by the Xiongnu had done in the fourth century.

3. The Flight of the Uyghur Tribes

3.1 Refugees at China's Northern Border

The enmity between the Kyrgyz and the Uyghurs was profound, and after the fall of Karabalgasun many Uyghur tribes left their homeland, fearing massacres and enslavement. Almost half of the tribes sought refuge in China. In the autumn of 840, a 30,000-strong group led by the aristocrat Ormizt (Chinese: Womosi) appeared at the northern shore of the Ordos Loop of the Yellow River, some 300 kilometres west of Hohhot, and asked for asylum. Emperor Wuzong (r. 840–46) ordered the borders to be closed and employed a delaying tactic towards the asylum seekers. In January 843 an even larger group of about 100,000, led by the heir to the throne **Ögä Khagan** (Chin. Wujie, r. 841–46) reached the Chinese border. Unlike his rival, Ormizt, Ögä did not ask for refuge but demanded to be given a city as a residence, guarantees for the protection of Manichaeans living in China, and food. The first two demands were unacceptable to Emperor Wuzong, so he decided to play off the two Uyghur leaders against each other. He granted Ormizt asylum and integrated his army into the Chinese border troops with which he crushingly defeated Ögä in early 843. Then Wuzong ordered that the army of Ormizt that was in the service of the Chinese army be broken up and its officers and troops dispersed to several different Chinese units. When Ormizt refused to obey, General Liu Mian had the troops massacred. China's problem with two potentially dangerous groups of Uyghurs seeking refuge was now almost solved. In 846 Ögä Khagan, who was staying in the border area, fell victim to a conspiracy, and his younger brother **Enie** was appointed as the new khagan (r. 846–48). But the end of this Uyghur confederation on the Chinese borders was fast approaching, and in 847 Enie Khagan was decisively defeated by a Chinese army, after which the Kyrgyz completed the destruction in 848, and transported the surviving Uyghurs to the north as prisoners of war.[67]

The collapse of the Uyghur Empire had far-reaching consequences for the Manichaeans who lived in China. Emperor Wuzong now saw his chance to get rid of the Manichaean temples in several Chinese cities, which his predecessors had built under pressure from the Uyghurs and which for China symbolised their dependence on their hated overlords. In the years 842–43 Wuzong ordered the closure of the temples and the confiscation of their estates, and further commanded that the clergy either be executed or deported to the Western Regions.[68] The Japanese Buddhist monk Ennin, who stayed in China between 838 and 845, reported: 'In the

255. A restored stupa in the south-eastern sector of Kocho, Xinjiang, China. In the background stand the remains of the city wall.

fourth moon of 843 an Imperial edict was issued [ordering] the Manichaean priests of the empire to be killed. [. . .] The Manichaean priests are highly respected by the Uighurs.'[69] According to Ennin, in the previous year hundreds of Uyghurs had already been executed in Chang'an. Two years later, Emperor Wuzong extended the edict to Nestorianism, Zoroastrianism and especially Buddhism. Whereas the edicts directed at the three 'Persian religions' had a political dimension, aiming to eradicate foreign influences, the anti-Buddhist edicts, which led to the destruction of 4,600 monasteries, the liberation of 150,000 slaves and to changing the status of 265,000 monks and nuns into tax-paying laymen, were based on social, political and economic considerations.[70] For many of the Buddhist monasteries, which were exempt from tax, were immeasurably rich and possessed large estates; at the same time they offered wealthy families tax loopholes and served as refuges for criminals and men trying to avoid military service. A chronic metal shortage in the treasury was also alleviated in the short term by melting down Buddhist bronze bells and figures.[71]

3.2 Western Uyghur Kingdoms

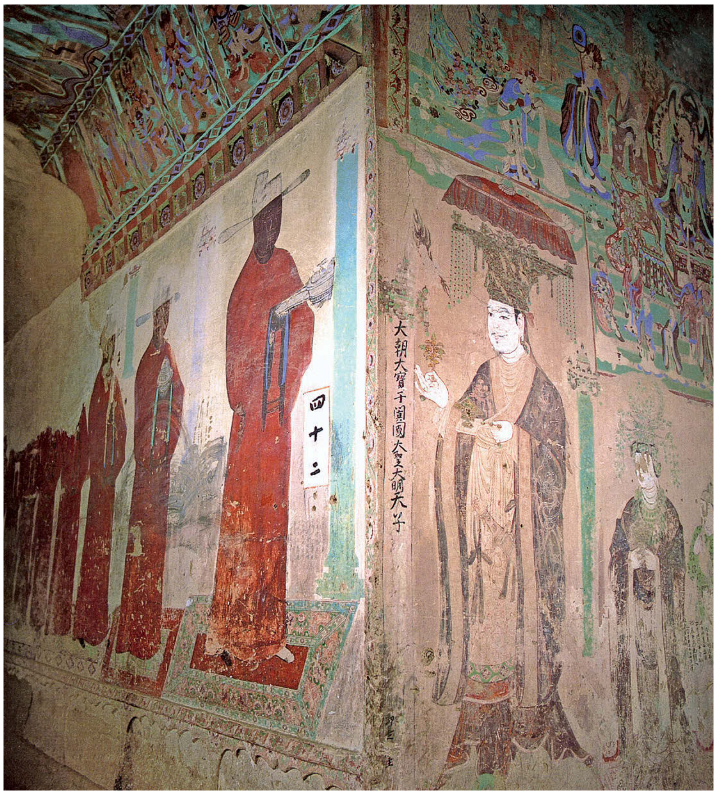
While 13 tribes sought their salvation in vain at the northern Chinese border, other tribes turned westward. A small minority fled to the Karluks; a larger one, consisting of 15 tribes, led by **Mänglig Tegin** (r. *ca*. 845–*ca*. 857),[72] who might have been a nephew of Esa Tegin, marched south-westward.[73] During their flight the tribes separated. Half of them, led by Pugu Jun, Mänglig Tegin's half-brother, turned south and began to infiltrate northern Gansu, where Uyghurs resettled by China had been living since 685.[74] The other group under Mänglig Tegin continued its south-westward march and advanced into the region of Besh Baliq (Beiting), to the Turfan Oasis and the northern Tarim Basin. Besh Baliq and Turfan were already homes to larger Uyghur communities, which facilitated the occupation of land by Mänglig's tribes. Both Uyghur groups benefited from a favourable political situation, for Tibetan central power had collapsed in 842, and China was too weak to take advantage of the power vacuum which developed in the Western Regions.

3.2.1 The Kingdom in Gansu

When Uyghur tribes immigrated into the west of the province, the political situation was shaped by the war between the two Tibetan generals Shang Kongruo and Shang Beibei, which only came to an end in 866 with the death of Shang Kongruo, who was notorious for his cruelty. But before the Uyghurs could found their own state in Gansu, they had to subjugate smaller groups such as the Tuyühun, Xueyantuo and Tibetans. Among the latter were the Wenmo, also called Wumo, who lived in southern Gansu and formed a socio-political unit of former Tibetan serfs. At the time of the Tibetan Empire, landowners had been obliged to provide a certain number of soldiers, whom they recruited from their own serfs. Rather like the Chinese *tuntian* garrisons, these conscripted soldiers were settled in newly conquered areas at the end of a campaign, where – according to climate and soil conditions – they could earn their living as farmers or horse breeders.[75] After the collapse of the Tibetan Empire the soldiers, who had been settled there by force, and their descendants stayed in Gansu, where they began to organise themselves. Even in the years 907 to 912 the Wenmo still formed a strong enough political group to send two or three embassies to the court of the Later Liang (907–23) in Luoyang.[76] It was the Wenmo who in 874 drove the Uyghurs out of the city of Zhangye, which the latter had conquered two years earlier. But after two more decades of fierce fighting the Uyghurs regained control of Zhangye and made the city the centre of their kingdom. At the beginning of the tenth century at the latest, their power was so well established that in 902 they were able to offer military aid to the beleaguered Tang emperor Zhaozong (r. 888–904).[77]

In 911 the Uyghur kingdom of Zhangye consolidated its dominance in Gansu still further, when it shattered the hegemonic claims of the ruling clan of the Zhang of Shazhou (Dunhuang). Zhang Chengfeng had conquered the Turfan Uyghur cities of Hami and Gaochang in 904, and a year later he had proclaimed the *Jinshan* state of the 'Western Han of the Golden Mountains'. By adopting the title 'white-robed son of heaven', Zhang Chengfeng courted the sympathies of the Manichaean Uyghurs of Kocho and Zhangye, whose Elect wore white robes.[78] But Zhang Chengfeng's attempt to also subjugate the Uyghurs of Zhangye ended in a crushing defeat. The Uyghurs conquered Dunhuang, and the dynasty of the *Jinshan* collapsed, after which the family of the Cao (r. *ca.* 914–1036) seized power in Shazhou, and Hami and Gaochang regained their sovereignty.[79] From now on the Uyghur kingdom of Zhangye blossomed, expanding its power to Wuwei and very probably also to the Etzin Gol. When in 924 the Khitan, who had just brought Mongolia under their control, offered to let the Gansu Uyghurs return to their former homeland on the Orkhon, their offer was declined.

In the last quarter of the tenth century, the Gansu Uyghurs also extended their power into Shazhou, which was still ruled by the Cao family, and thus gained control of an important section of the Silk Road.[80] Nevertheless the political situation of the Uyghurs in Gansu remained precarious since they bordered on two powerful neighbours: the Khitan of the northern Chinese Liao dynasty (907–1125) in the north, and in the east the kingdom and then empire of the Tanguts, also known as *Minyak* (982–1227).[81] The language of the Tangut, now extinct, belonged to the (eastern Tibetan) Qiangic family, a sub-group of the Tibeto-Burman languages. Even before they declared their independence, the Tanguts, who controlled the eastern part of Gansu and today's province of Ningxia, had regularly ambushed and robbed Uyghur trade caravans and embassies travelling to central China.[82] The wars against the Tanguts began in 996 and were successful for the Uyghurs until their sudden collapse



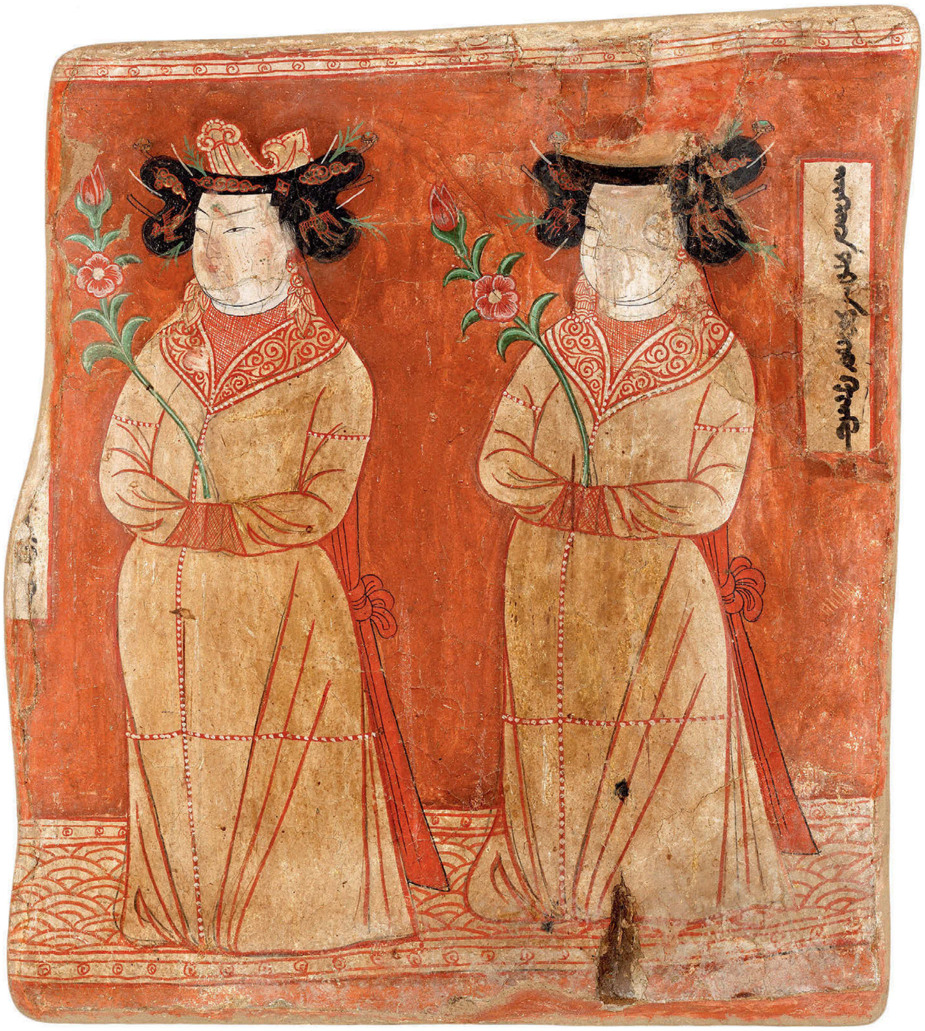
256. This wall painting from cave 98 of Mogao, Gansu, was created between 920 and 921. It illustrates the political and marital alliances between the kingdoms of Dunhuang and Khotan. On the left stands the over-life-size ruler of Dunhuang, Cao Yijin (d. 936), followed by seven sons, on the right the king of Khotan, Visha Sambhava (Chin. Li Shengtian, r. 912–*ca.* 966), whose queen was a daughter of Cao Yijin.[38]

257. Ruins of the large Buddhist monastery within Kocho, Xinjiang, China.

in 1028. To adapt to the political situation, at the end of the tenth century the Gansu Uyghurs exchanged Manichaeism for Buddhism as their state religion and, like the Tangut, they started sending pilgrimages to the Buddhist Mount Wutai in Shanxi – pilgrimages whose real purpose was to spy on the Liao.[83] A first crisis came in 1006, when the Khitan brought Shazhou under their control and two years later destroyed Suzhou (Jiuquan); the Uyghurs thus lost their north-western territories.[84] Thanks to the help of the Tibetan Zongko tribes, who lived east of the Koko Nor lake, the Uyghurs were able to shrug off further Tangut attacks. But in 1026 the Khitan attacked again, and in the wake of this the Tanguts conquered Zhangye in 1028. By 1036 they had also gained control of Suzhou and Shazhou.[85] With the destruction of the Uyghur Empire of Gansu, the Tangut leader now felt strong enough to proclaim himself Emperor Jingzong of Minyak (Chinese. Xi Xia) in 1038. The present-day descendants of the Buddhist Uyghurs in Gansu form the small Buddhist ethnic group of the *Säriq Uighur*, the 'Yellow Uyghurs'.[86]

3.2.2 The Kingdom of Kocho

The region of Besh Baliq, north of the eastern Tian Shan mountains, and the Turfan Depression, which is situated south of them, had both been fiercely contested by the Tibetans and the Uyghurs since the end of the eighth century. By the time the Uyghur tribes led by **Mänglig Tegin** (r. *ca*. 845–*ca*. 857) migrated there, the region was already strongly turkicised.[87] It is impossible to reconstruct the exact process by which the Kocho Uyghurs established their state.[88] But it seems that Mänglig Tegin's tribes conquered Besh Baliq in 848 at the latest, and drove out the Tibetans from Qiuzi (Kucha) and Kocho eight years later, for in December 856 China recognised the Uyghur state, whose first capital was Yanqi (Karashahr).[89] Between 856 and 866, the Uyghurs lost the city of Kocho to the Tibetan commander Shang Kongruo, and it seems that Mänglig Tegin called upon his half-brother Pugu Jun of Gansu to come to his aid in Besh Baliq. At some point between 857 and 866 **Pugu Jun** (r. *ca*. 857 or 864/66–*ca*. 874) staged a putsch against his half-brother and killed him.[90]



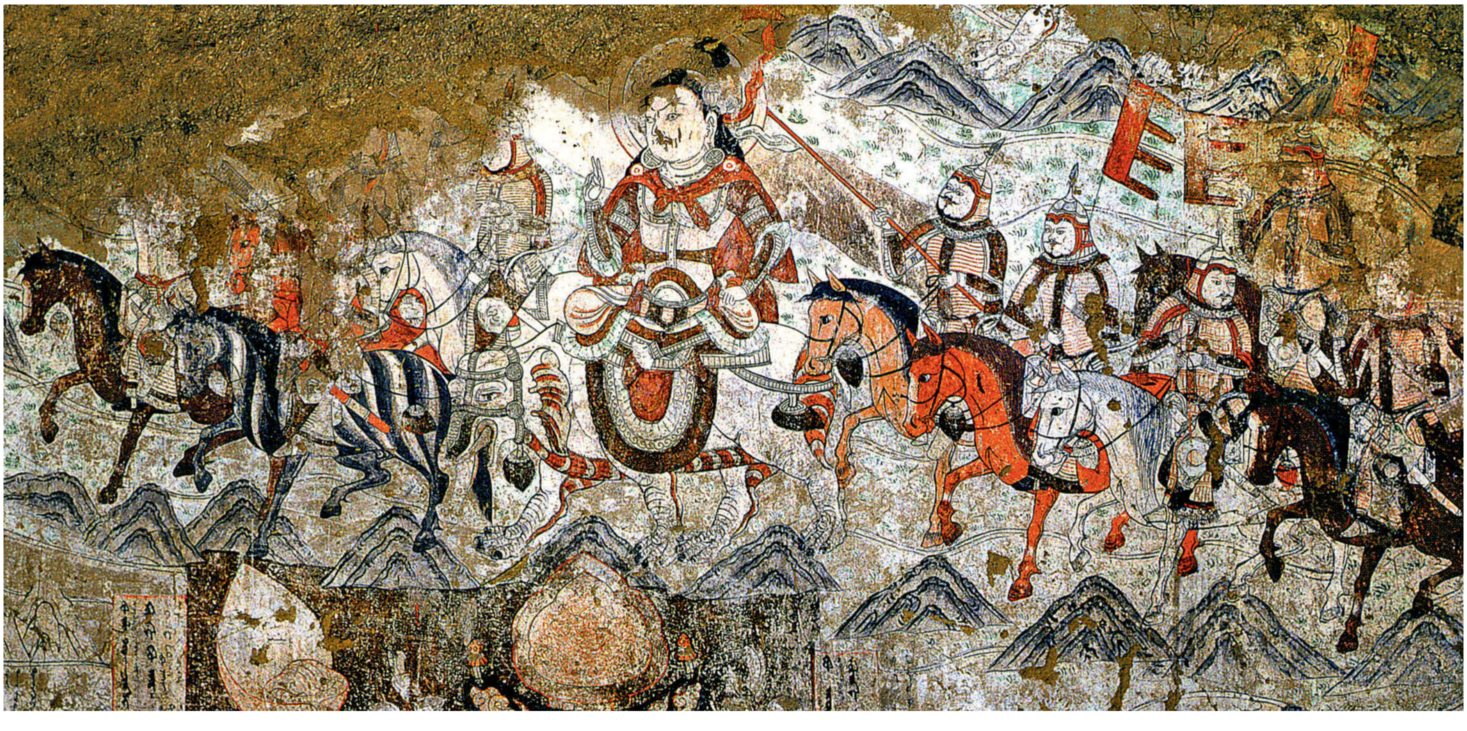
258. Fragment of a painting with two Uyghur princesses as religious donors, from Bezeklik, Xinjiang, China, 9th/10th c. Each princess holds a peony; the cartouche on the right side reads: 'This is the portrait of Her Highness, the Princess Joy'.[39] Museum für Asiatische Kunst, Berlin.

In 866 he reconquered Kocho definitively, which is why this year is also regarded as the date of foundation of the Uyghur kingdom of Kocho. The Uyghur rulers adopted the old Basmil title *Idiqut,* which means 'the one endowed with charisma'. In that same year the former commander of Kocho, Shang Kongruo, was defeated by the Tibetan Tuopa Huai Guang, captured and executed.[91] From 866 the Uyghurs made Kocho, which they called Idiqutshari, the capital of their kingdom which also included the important city of Qiuzi (Kucha);[92] Besh Baliq, which had a cooler summer climate than the Turfan Oasis, became their summer residence.[93] In 880, Kocho tried in vain to gain control over Dunhuang, and in 904 it had to endure a brief occupation by Dunhuang's ruler Zhang Chengfeng.

Around the end of the tenth and beginning of the eleventh centuries, the Uyghur's hegemony in the west shrank considerably, when the Muslim Karakhanids, from Kashgar, conquered Tumshuk and Aksu. According to Chinese sources, Kucha remained an autonomous state until 1096 when it fell to the Eastern Karakhanids.[94] Despite these setbacks Kocho remained a bulwark against forced islamisation and practised a culture of religious tolerance. The recognition of the suzerainty of the Buddhist Karakitay, successors of the Liao-Khitan as rulers of western Turkestan, changed little for the cultural and economic development of Kocho. About 80 years later, in 1209, the Idiqut Barchuq Art Tegin shrugged off the suzerainty of the Karakitay by having their representative in Kocho killed, and voluntarily offered his submission to Genghis Khan, whose inexorable rise to power in Eurasia was then at an early stage, thus sparing his kingdom from devastation.[95] The end of Kocho as a Mongol vassal state came with the rebellion of the Mongol prince Kaidu (1236–1301) against Kublai Khan, founder of the Yuan Dynasty, since Kaidu attempted from about 1266 to found his own Central Asian empire. A decade after a failed siege of Besh Baliq in 1268, Kaidu seized the summer residence of the Uyghur *idiqut* and in 1285 or 1286 forced him to leave Kocho and flee to Hami. The former Uyghur kingdom of Kocho was now integrated into the sphere of power of Kaidu and his ally, the Chagatai khan Duwa (r. 1282–1307).[96] The islamisation of Kocho began in 1395, that of Hami in 1451 and that of Dunhuang around 1500.[97]

A spirit of religious tolerance reigned in the Uyghur kingdom of Kocho, and Buddhism, Manichaeism and the Church of the East coexisted there relatively peacefully. In Kocho itself Buddhist, Manichaean and Nestorian places of worship stood side by side, and archaeological excavations and textual analyses of old manuscripts show that in other cities and oases, too, there were numerous monasteries and temples of all three religions.[98] The Uyghur ruling family remained loyal to Manichaeism at the latest until the early eleventh century; although from the 960s it also supported Buddhism. The commitment of the Uyghur rulers to Manichaeism, even in foreign affairs, is indicated by a message sent by the Idiqut around 920 to the Samanid Emir Nasr ibn Ahmad (r. 914–943). When Caliph al-Muqtadir (r. 908–932) began to persecute the Manichaeans in what is now Iraq, many fled to Khorasan, among other places to Samarkand which belonged to the Samanid Empire. But when the Idiqut of Kocho heard that Nasr ibn Ahmad planned to massacre the Manichaean refugees he threatened to 'take reprisals against the [numerous] Muslims living in his country'.[99] The emir gave in and left the refugees unmolested.

According to Chinese chronicles, Manichaean monks accompanied Uyghur embassies to China between 934 and 951, while between 965 and 1022 the accompanying monks were Buddhist.[100] This suggests that from around 866 to the mid-tenth century Manichaeism had the status of a state religion, and after this was increasingly replaced by Buddhism. The definitive shift from Manichaeism to Buddhism had happened by 1008, when the residence of the *možak* in Kocho, which corresponds to Le Coq's Complex ά, was transformed into a Buddhist monastery.[101] Probably at the same time the Complex K, the largest Manichaean temple in Kocho, which also possessed an important manuscript collection, was turned into a Buddhist place of worship. Manichaean murals have been preserved by virtue of the fact that they were simply concealed behind a wall raised in front of them.[102] This respectful manner of reconstruction was also used for the double-walled caves 17 and 25 of Bezeklik (according to Grünwedel's numbering).[103] Why the rulers of Kocho withdrew their favour from Manichaeism is not known; perhaps the luxurious way of life of the Manichaean clergy contributed to their decline. A decree discovered in the



259. Wall paintings in the subterranean room 105 of the Buddhist complex of Besh Baliq (Beiting), Xinjiang, China, 9th–11th c. Bodhisattva Samtabhadra rides his white elephant, accompanied by seven Uyghur armoured horsemen. Below the schematically sketched mountain range stands a princely couple, each holding a peony (not visible), similar to the 'donor' painting from Bezeklik. The complex, which is situated 700 m west of the walled city, resembles a three-dimensional, tiered mandala: it consists of three storeys, the lower two each possessing eight niches with Buddhist clay figures, and the upper one seven. In addition there was the subterranean complex. The whole complex with its above-ground stupa and subterranean chapels might have been built in honour of a Uyghur princely couple.[40]

Turfan Oasis reveals that Manichaean clerics lived in great comfort, possessed estates with serfs and even slaves, enjoyed fine food and wore expensive garments – behaviour which was diametrically opposed to the strict moral code of Shad Ormazd.[104]

One of the most important cultural achievements of the Uyghurs of Kocho was the development of the Uyghur script, mostly written from right to left, as an adaptation of the Sogdian script to the Turko-Uyghur language. The later vertical writing of Uyghur was probably the result of the influence of the Syriac-Nestorian script. From the thirteenth century, the Uyghur script spread considerably, when the Mongolian script derived from it was used throughout the Mongol Empire. At the same time the Kocho Uyghurs shaped the administration of the Mongol Empire and provided some of its greatest civil servants. Four centuries later, at the beginning of the seventeenth century, the Manchurian script was derived from the Mongol script.[105] As Peter Ziemes puts it: 'The history of Central Asia saw a special period of peaceful development [in Qočo], which was disturbed neither by the advance of Islam from the Karakhanid Empire nor by the striving for power of the eastern empires including Song China.'[106] From a socio-economic perspective, too, the kingdom of Kocho was unique. Turkic-speaking, semi-nomadic horse warriors mingled with sedentary farmers, who originally spoke Tocharian, as well as with local Sogdian and Chinese merchants. The fertile soils, which were irrigated with the underground *karez* irrigation system, enabled a rich agriculture, which produced wheat, millet, melons, grapes and cotton, and the lush pastures north of the Tian Shan were ideal for livestock. But the migration of the Uyghurs into today's Xinjiang province, together with that of the Karluks, was the starting point for a profound turkicisation of Central Asia.

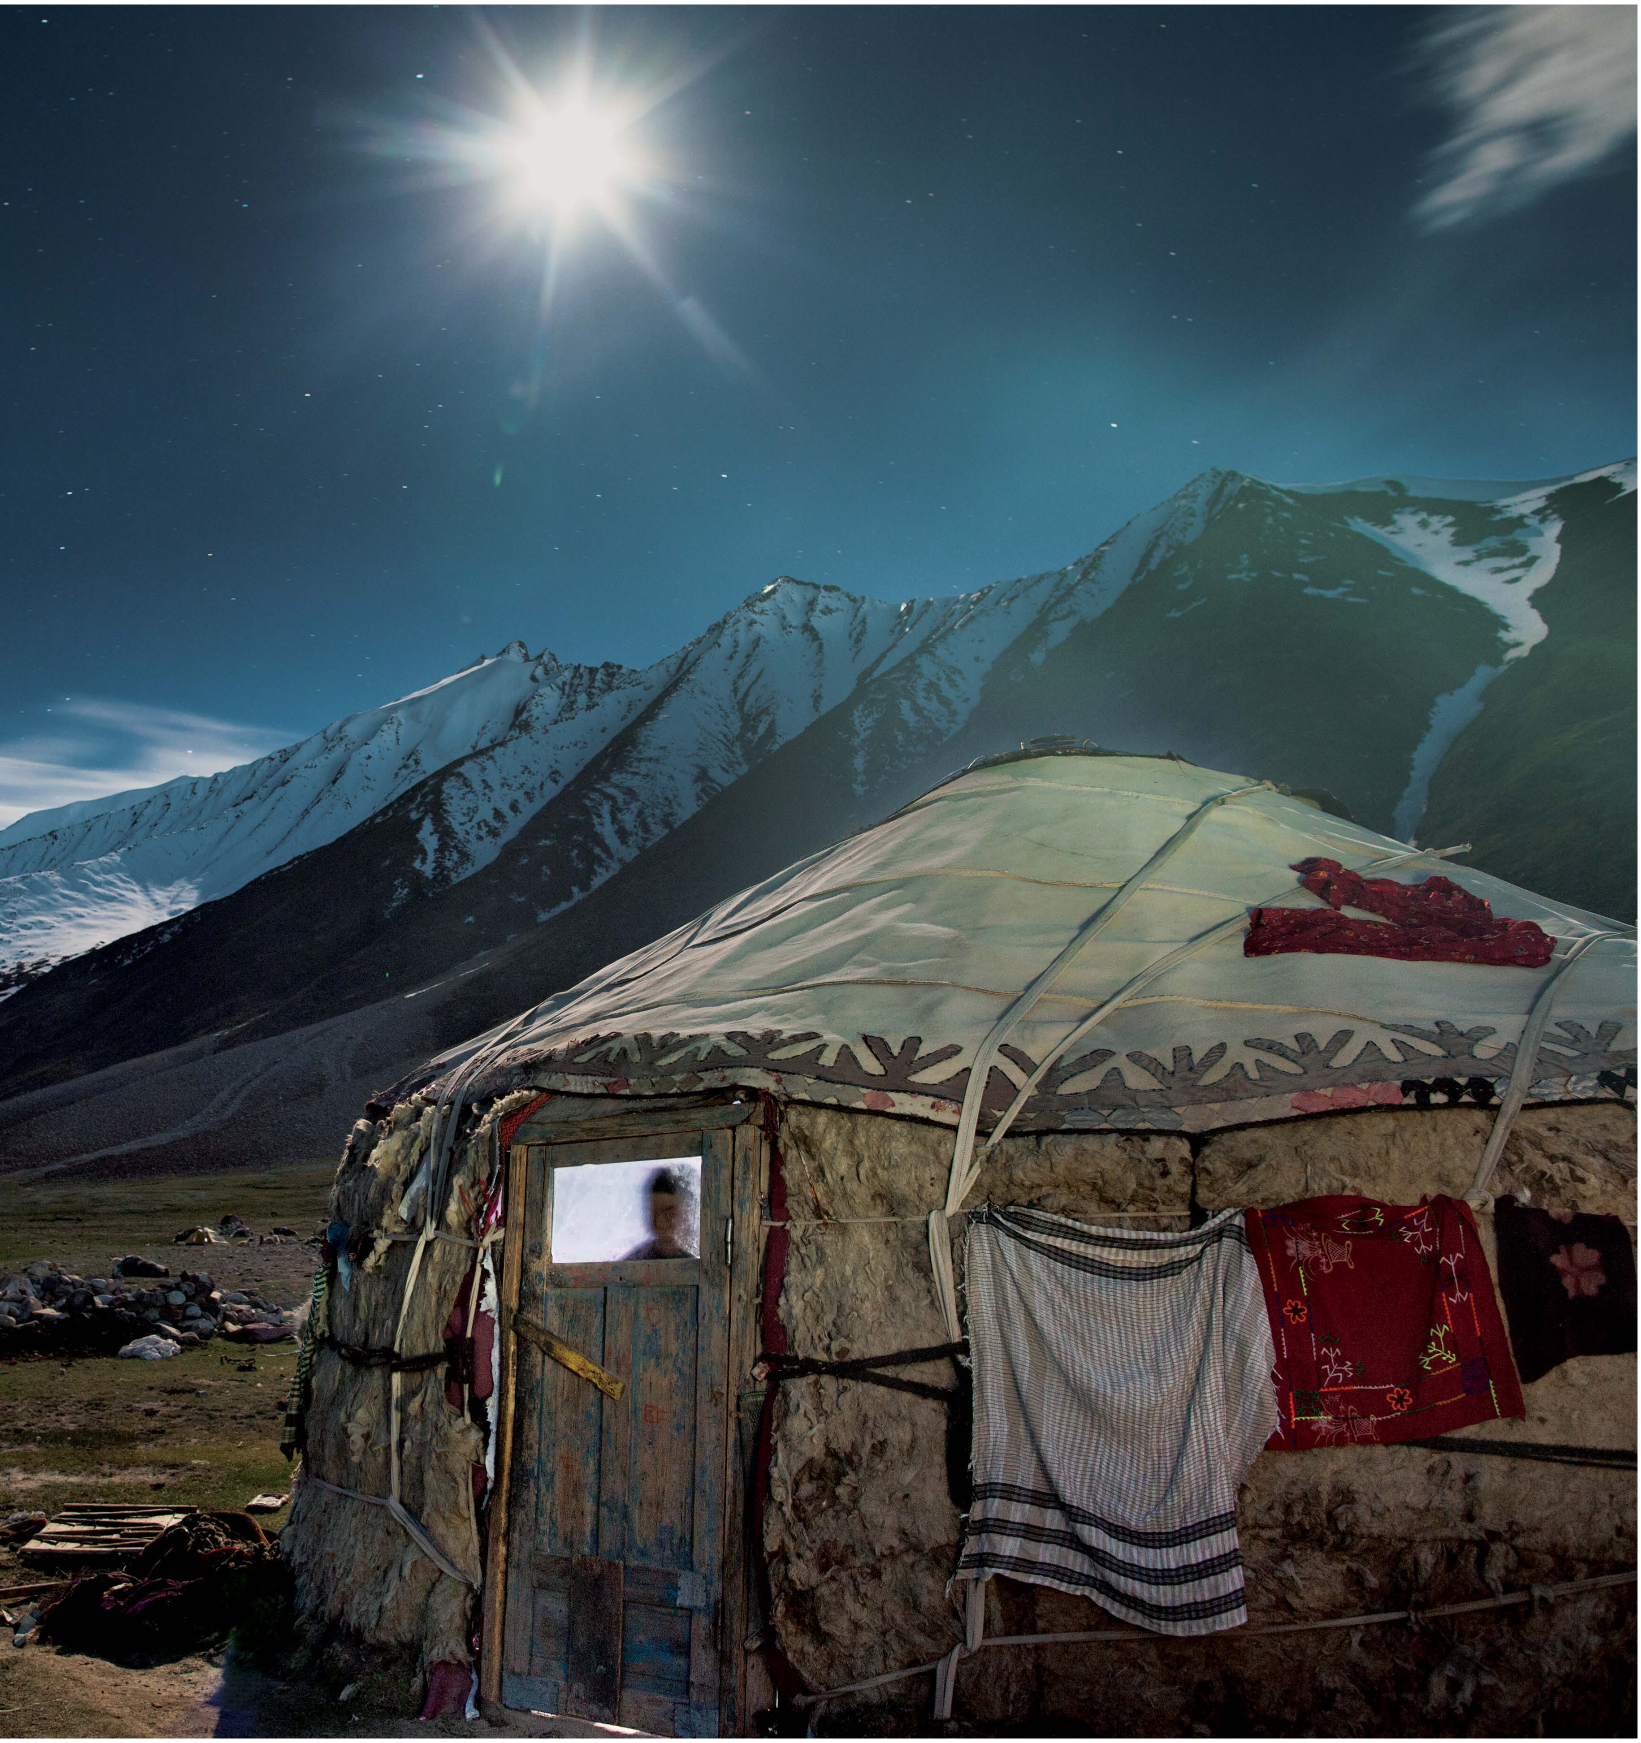
XI

Outlook

This second volume of the four-volume *History of Central Asia* has dealt with the formation of powerful steppe empires in this region. While earlier the Scythians and Saka had created no durable state form, the Xiongnu, the Parthians and the Kushans succeeded in establishing relatively stable empires. The Xiongnu developed a particularly strong government, thanks to a decimal-based organisation of army, people and territorial administration, which was superimposed on traditional tribal structures. All three empires maintained close commercial contacts with neighbouring agrarian states, thus laying the foundations for the great transcontinental trade routes. Because of their geographical location, the Kushans – a people originating in north-east Central Asia – were able to engage in extensive maritime trade with the Roman Empire. From this encounter between two worlds – that of the Indian Kushans of Central Asian stock and Roman Hellenism – emerged the Gandhara School of Buddhist art, whose influence extended over Central Asia to eventually reach China, Korea and Japan, defining the canon of Buddhist sculpture.

The fourth century witnessed the beginning of a long-term historical trend that would change the face not only of Central Asia but of the whole southern half of Eurasia: the expansion of the Turkic-speaking peoples, which by the sixth century led to lively diplomatic exchanges between the Western Turkic Khaganate, with its centre of government in the Tian Shan Mountains, and the Byzantine Empire. The numerous political connections between the Turkic khaganates, Byzantium, China, Tibet and the Sassanid (and later Muslim-Iranian) cultural sphere were turned to good account by the Sogdians, who constructed a highly ramified trade network stretching from the Chinese capitals of Chang'an and Luoyang over the Mongolian steppes and the whole of Central Asia, as far as the Crimea and northern India. The control of the trade routes and flows of goods was so lucrative that it provoked military conflicts between the five major powers of the time – the Turkic and Uyghur khaganates, China, Tibet and the Abbasid Caliphate – conflicts that led to the collapse of the first four of these. This resulted in the political fragmentation of eastern Central Asia, the shift of transcontinental trade from land to sea, and the division of Central Asia into Muslim and non-Muslim domains.

Subtitled *The Age of Islam and the Mongols*, the third volume of *The History of Central Asia* will cover the period from the ninth to the early sixteenth century. In the eastern territories of the Abbasid Caliphate, this period began with the establishment of the independent empire of the Samanids, in which Islam and its philosophy merged with the Iranian-Sogdian heritage to create a distinctive new culture. This led to an unparalleled flourishing



260. Nomad's camp in the Wakhan.

of philosophy, mathematics, medicine, astronomy and literature, in which the Muslim scholars of Central Asia absorbed the rediscovered intellectual legacy of Ancient Greece and new ideas from Indian science and philosophy.

From the second half of the tenth century, some of the Turkic peoples converted to Islam and founded independent states such as those of the Karakhanids, the Ghaznavids, the Ghorids and the Seljuks. The Seljuks not only came to control a considerable part of Central Asia, but also took over the reins of power in the Abbasid Caliphate, where they acted as champions of Sunni orthodoxy. Seljuk expansion to the west and south-west after Sultan Alp Arslan's triumph over the Byzantine emperor Romanos IV Diogenes at Manzikert in 1071 led to the turkicisation of formerly Byzantine Anatolia; the Seljuks' conquest of Jerusalem was the final spark that launched the Crusades. At the same time, Turkic tribal confederations such as those of the Pechenegs and the Cumans were advancing westward through the northern steppes, where they appeared sometimes as allies, sometimes as enemies of Byzantium and of the Kievan Rus'.

Around 1200, the Mongols under Genghis Khan gave a new turn to the history of Central Asia. Within only a few decades, their conquests extended from the Yellow Sea in the east to Western Europe, where their cavalry reached Liegnitz in Silesia and Wiener Neustadt south of Vienna. They left not only human, economic and cultural devastation in their wake but also created a unique realm of religious tolerance and free trade. The control of the trade routes, a sophisticated postal relay and intelligence system, together with the rudiments of international law, enabled the efficient administration of what was the most geographically extensive land empire of all time. The thirteenth century was also an age of exceptional exchange between Western Europe and the Mongol centres of government in today's Mongolia and China. The Franciscan monks John of Plano Carpini and William of Rubruck visited the Great Khan of the Mongols in Karakorum, and the Polo brothers, two Venetian merchants, reached Shangdu north of Beijing. In the other direction, the Uyghur-born Nestorian monk Rabban Bar Sauma travelled from Khan Baliq (Beijing) to Baghdad, and from there in 1287–88 to Rome, Paris and Bordeaux, on a diplomatic mission on behalf of the Mongol Ilkhan Arghun, who hoped to enter an alliance against the Mamluks with the leading Western European powers. For almost a century, Central Asia served as the political, military and trade hub of the Eurasian land mass. Traces of the contacts between the Mongol Empire and the Italian states can even be found in medieval Italian art, in the works of such painters as Cimabue, Giotto and Daddi.

After the Mongol Empire broke up into four independent and mutually contending states, Timur Lenkh (Tamerlane) made a second and final attempt from Samarkand to re-conquer Central Asia, although he was less interested in building an empire with firm structures and stable administration than in ruthlessly plundering the conquered states outside of his homeland Sogdiana. While Timur's political legacy barely survived his death, the buildings he and his successors, the Timurids, left in today's Uzbekistan and Kazakhstan are among the great architectural monuments of the time. It was a late descendant of Timur's named Sultan Babur who founded the great Mughal Empire in the early sixteenth century in northern India. The Mughal Empire flourished until the Indian Rebellion of 1857 and brought magnificent achievements in the fields of architecture and miniature painting, the fruits of a synthesis between Central Asian and Indian art. From today's perspective, it is clear that the period between the tenth and fifteenth centuries represented a political and cultural high point in the history of Central Asia, never afterwards equalled, gradually brought to an end not by external influences but by internal centrifugal forces and disintegration. But it was also the beginning of Turkic domination of southern Eurasia, with the exception of Iran, which lasted for nearly a millennium. Turkic peoples, who had originally come from the heart of Central Asia, adopted Islam and the achievements of Muslim cultures, and put their military prowess in the service of their new faith, either as conquerors or as military slaves. This alliance between Sunni Islam and Turkic peoples would leave its mark on the history of large parts of Eurasia.

Appendix: The Most Important Dynasties and Rulers of Central Asia

Chanyu of the Xiongnu

I. Anonymous chanyu (defeated by General Li Mu in 244 BCE)
II. Anonymous chanyu (d. before 215 BCE)
Touman Chanyu (r. before 215–209 BCE)
Modu Chanyu (r. 209–174 BCE)
Laoshang Chanyu (r. 174–161 BCE)
Junchen Chanyu (161–126 BCE)
Yizhye Chanyu (126–114 BCE)
Wuwei Chanyu (114–105 BCE)
Wushilu'er Chanyu (105–102 BCE)
Xulihu Chanyu (102–101 BCE)
Quedihou Chanyu (r. 101–96 BCE)
Hulugu Chanyu (r. 96–85 BCE)
Huyandi Chanyu (r. 85–68 BCE)
Xuluquanqu Chanyu (r. 68–60 BCE)
Woyanqudi Chanyu (r. 60–58 BCE)
Huhanye Chanyu (r. 58–31 BCE)
  Tuqi Chanyu (pretendant 58–56 BCE)
  Hujie Chanyu (pretendant 57 BCE)
  Cheli Chanyu (pretendant 57–56 BCE)
  Wujie Chanyu (pretendant 57 BCE)
  Runzhen Chanyu (pretendant 56–54 BCE)
Zizhi Guduhou Chanyu (r. 56–36 BCE)
Fuzhuleiruodi Chanyu (r. 31–20 BCE)
Souxieruodi Chanyu (r. 20–12 BCE)
Cheyaruodi Chanyu (r. 12–8 BCE)
Wuzhuliuruodi Chanyu (r. 8 BCE–13CE)
Wuleiruodi Chanyu (r. 13–18 CE)
Huduershidaogaoruodi Chanyu (r. 18–46 CE)
Wudalihou Chanyu (r. 46 CE)

Division into Northern and Southern Xiongnu

Northern Xiongnu

Punu Chanyu (r. 47–?)
Youliu Chanyu (r. ?–87)
Bei Chanyu (r. 88–?)
Yuchujian Chanyu (r. 91–93)

Southern Xiongnu

Bi Chanyu (r. 48–56)

The Sixteen Kingdoms of the Five Barbarians

Dynasties of Xiongnu origin

* **Han Zhao** 304–329
* **Later Zhao*** 319–351
* **Northern Liang** 397–439, until 460 in Gaochang
* **Da Xia** 407–431

Dynasties of Xianbei origin

* **Former Yan** 337–370
* **Later Yan** 383–409
* **Southern Yan** 398–410
* **Northern Yan** 409–436
* **Southern Liang** 397–414
* **Western Qin** 385–431
* **Northern Wei**** 386–534

Dynasties of Di origin***

* **Former Qin** 351–394
***Later Liang** 386–403
Cheng Han*** 304–347

Dynasty of proto-Tibetan Qiang origin

***Later Qin** 384–417

Dynasty of Han Chinese origin

***Former Liang** 320–376

***Western Liang** 400–421

*The Later Zhao were founded by a Jie-tribe belonging to the Xiongnu, but they are often counted as an independent tribe.

**The Northern Wei are usually not counted as one of the Sixteen Kingdoms.

***The Di lived in Gansu, Qinghai and Sichuan.

****The Cheng Han were founded by a family of Ba ethnicity settled in Gansu.

The First Turkic Khaganate

The United Khaganate

Illig Khagan (Bumin, d. 552)
Issik Khagan (r. 552–553)
Muqan Khagan (r. 553–572)
Taspar Khagan (r. 572–581, last universally recognised Khagan)
Anluo (title unknown, r. 581, start of civil war)
Ishbara Kaghan (r. 581–587)
Baghan Khagan (r. 587–588)
Dulan Khagan (r. 588–599)
Tardush Khagan (r. 599–603?)

The Eastern Khaganate

Yami Khagan (r. 603–609)
Shibi Khagan (r. 609–619)
Chuluo Khagan (r. 619–620)
Illig Khagan (Chinese, Xieli, r. 620–630)
Qilibi Khagan (r. 639–643)
Chebi Khagan (r. 646–650)
Nishufu Khagan (679–680)
Funian Khagan (680–681)

The Western Khaganate

Ishtemi Yabghu (r. 552/53–575)
Tardush Yabghu (r. with interruption 575–*ca*. 603)
Apa Khagan (r. ? d. 587)
Niri Khagan (r. 587–*ca*. 602/03)
Heshana Khagan (r. 602/03–611, d. 619)
Shikui Khagan (r. 610–617)
Tong Yabghu Khagan (r. *ca*. 617–630)
Baghatur Khagan (r. 630)
Si Yabghu Khagan (r. 630–632)
Tughluq Khagan (r. 632–634)
Illig Beg Tughluq Khagan (r. 638–642, d. 653)
Illig Beg Ishbara Yabghu Khagan (r. 639–641)
Illig Beg Shekui Khagan (r. 642–651)
Ishbara Khagan (r. 651–658)

Pre-Christian Kingdom of the Danube Bulgars

Asparukh Khan (r. 680–*ca*. 695/700)
Tervel Khan (r. 695/700–721)
Kormesiy Khan (r. *ca*. 721–738)
Sevar (r. *ca*. 738–753)
About 7 Khans with short reigns (r. 753–768)
Telerig Khan (r. 768–77)
Kardam Khan (r. 777–before 803)
Krum Khan (r. 803–814)
Omurtag Khan (r. 814–831)
Malamir Khan (r. 831–836)

Presian Khan (r. 836–852)
Boris Khan (r. 852–889)

Sources: Uwe Fiedler, *Bulgars in the Lower Danube Region: A Survey of the Archaeological Evidence and of the State of Current Research*, in Florin Curta, ed., *The Other Europe in the Middle Ages: Avars, Bulgars, Khazars and Cumans* (Leiden, 2008), pp. 151–236. Iaroslav Lebedynsky, Les Nomades (Paris, 2007), pp. 208–14.

The reconstructions of the Avar and Khazar rulers are only fragmentary.

The Second Turkic Khaganate

Ashina Qutlugh Ilterish Khagan (r. 682–91)
Kapagan Khagan (r. 691–716)
Inel Khagan (r. 716)
Bilge Khagan (r. 716–734)
Yiran Khagan (r. 734–?)
Tengri Khagan (r. ?–741)
A son of Bilge Khagan (r. 741)
Another son of Bilge Khagan (r. 741)
Qutlugh Yabghu (r. 741–742)
Khagan Ozmysh (r. 742–744)
Bomei Khagan (r. 744–745)

Source: Liu Mau-Tsai, *Die chinesischen Nachrichten zur Geschichte der Ost-Türken* (T'u-Küe) (Wiesbaden, 1958), pp. 158–180, 212–231.

The Uyghur Empire

Yaghlaqar Dynasty

Qutlugh Bilge Kül Khagan, named Qutlugh Boyla (r. 744–747)
Tängridä Bulmish El Etmish Bilge Khagan, named Bayanchur (r. 747–759)
Tängridä Qut Bulmish El Tutmish Alp Külügh Bilge Khagan, named Muyu (Bögü) Khagan (r. 759–779)
Alp Qutlugh Bilge Khagan, named Tun Bagha (r. 779–789)
Tängridä Bulmish Külügh Bilge Khagan (r. 789–790)
Anonymous ruler (r. 790)
Qutlugh Bilge Khagan (r. 790–95)

Ädiz Dynasty

Tängridä Ülüg Bulmish Alp Qutlugh Ulug Bilge Khagan (r. 795–805/08)
Ay Tängridä Qut Bulmish Alp Bilge Khagan (r. 808–821)
Kün Tängridä Ulugh Bulmish (Alp) Küchlügh Bilge Khagan (r. 821–824)
Ay Tängridä Qut Bulmish Alp Bilge Khagan, named Hesa Tegin (r. 824–832)
Ay Tängridä Qut Bulmish Alp Külügh Bilge Khagan (r. 832–839)
Esa Tegin (r. 839–840)
Ögä Khagan* (r. 841–846)
Enie Kaghan* (r. 846–848)

* Leader of the 13 tribes that fled to the Chinese border

Sources: Michael R. Drompp, 'The Uighur-Chinese Conflict of 840–848', in Nicola Di Cosmo (ed.), *Warfare in Inner Asian History (500–1800)* (Leiden, 2002) pp. 73–103, here pp. 76–95. Knowledge about the rulers of the western Uyghur empires of Gansu and Kocho is very fragmentary. See: James Russell Hamilton, *Les Ouïghours à l'époque des Cinq Dynasties* (Paris, 1955), pp. 143f. Moriyasu Takao, *Four Lectures at the Collège de France in May 2003* (Osaka, 2003), p. 38, *Die Geschichte des uigurischen Manichäismus an der Seidenstraße* (Wiesbaden, 2004), pp. 221–25. Elisabeth Pinks, *Die Uighuren von Kan-chou in der frühen Sung-Zeit (960–1028)*, (Wiesbaden, 1968), p. 102.

Notes

Introduction

1. George N. Curzon, *Russia in Central Asia in 1889 and the Anglo–Russian Question* (London, 1889), p. 189.
2. Carl Philipp Gottlieb von Clausewitz, *On War*, trans. J.J. Graham (London, 1908), vol. I, 1.24.

I. Early Empires and Kingdoms in East Central Asia

1. Cited in Sima Qian, *Shiji*, here Chapter 110, trans. as *Records of the Grand Historian of China: Translated from the Shih chi of Ssu-ma Ch'ien by Burton Watson* (New York, 1971), vol. II, p. 168; in these notes, later references simply to *Shiji* will be to this translation. Most historians date Modu's letter to Emperor Han Wendi to 176 BCE, while Yap gives 174 BCE: Joseph P. Yap, *Wars with the Xiongnu: A Translation from Zizhi tongjian* (Bloomington, 2009), p. 107.
2. *Xiong* then meant 'human wickedness' and *nu* 'slave'. There is a very great phonetic similarity between the names of the Hunyu and the Hunxie in the *Shiji*, Attila's Huns, the Chounoi of Ptolemy and the Chunni of the Byzantine historian Theophylact Simocatta. See John E. Hill, *Through the Jade Gate to Rome: A Study of the Silk Routes During the Later Han Dynasty, 1st to 2nd Centuries CE: An Annotated Translation of the Chronicle on the 'Western Regions' in the Hou Hanshu* (Charleston, SC, 2009), pp. 73ff; on the relationship between the Xiongnu and the Huns, see p. 82 of the present work. Ptolemy, *Claudii Ptolemaei Geographia*, (ed.) C.F.A. Nobbe (Leipzig, 1843), III.5.25, p. 172; Theophylact Simocatta, *The* History *of Theophylact Simocatta: An English Translation with Introduction and Notes*, (ed.) and trans. Michael and Mary Whitby (Oxford, 1986), VII.14–VIII.16, pp. 89ff; Sima Qian, *Shiji*, 110: vol. II, pp. 155ff.
3. Nicola Di Cosmo, *Ancient China and Its Enemies: The Rise of Nomadic Power in East Asian History* (Cambridge, 2002), pp. 2 and 141.
4. Ban Gu, *Han Shu*, translated in part as A.F.P Hulsewé, *China in Central Asia, The Early Stage: 125 B.C.–A.D. 23. An Annotated Translation of Chapters 61 and 96 of the History of the Former Han Dynasty*, with an introduction by M.A.N. Loewe (Leiden, 1979), here pp. 9ff; the *Han Shu* has also been translated as *The History of the Former Han Dynasty, by Pan Ku: A Critical Translation with Annotations by Homer H. Dubs* (Baltimore, 1938), here pp. 1–25; later references will be to Ban Gu, *Han Shu*: Hulsewé, and Ban Gu, *Han Shu*: Dubs, respectively. Particularly relevant to our theme is chapter 96, which describes the foreign peoples surrounding China, and chapter 61, which contains the biographies of imperial ambassador and explorer Zhang Qian and his contemporary the general Li Guangli.
5. Depending on the edition, these chapters may be designated as 47 and 88 or 77 and 118: Hill, *Through the Jade Gate*, p. xv.
6. Generals Ban Chao and Ban Yong, on whose reports chapters 47 and 88 are based, and also General Leang Kin: Edouard Chavannes, *Trois Généraux chinois de la dynastie des Han Orientaux. Pan Tch'ao (32–102 p.C.); – son fils Pan Yong; – Leang K'in (112 p.C.). Chapitre LXXVII du 'Heou Han chou' traduit par Edouard Chavannes* (Leiden, 1906).
7. Hill, *Through the Jade Gate*, pp. xv, 13 and 458.
8. Sima Guang, *Zizhi tongjian*, translated in part as Yap, *Wars with the Xiongnu*. Yap's selection concentrates on China's wars with the Xiongnu and their predecessors from 403 BCE to 23 CE. It will be referred to simply as Sima Guang, *Zizhi tongjian*.
9. According to the Zizhi tongjian the Xiongnu attacks started around 259 BCE and general Li Mu followed first a very defensive strategy. Chapter 52 of the *Han Shu* – but not the *Shiji* – mentions the Xiongnu already in connection with the small Dai kingdom defeated by Zhao in 475 BCE. Sima Guang, *Zizhi tongjian*, pp. 23ff.
10. Sima Qian, *Shiji*, 110: vol. II, p. 155.
11. Emma Bunker et al., *Ancient Bronzes of the Eastern Eurasian Steppes from the Arthur M. Sackler Collections* (New York, 1997), p. 14.
12. Sima Qian, *Shiji*, 110: vol. II, p. 157.
13. The Linhu lived in the Ordos, the Lufan on its eastern margin. Both tribes would later belong to the Xiongnu federation. Sima Qian, *Shiji*, 110: vol. II, p. 159.
14. The Donghu inhabited today's Manchuria: Juliana Holotova-Szinek, *Les Xiongnu de Mongolie* (Saarbrücken, 2011), p. 164.
15. Holotova-Szinek, *Les Xiongnu de Mongolie*, p. 165.
16. Sima Guang, *Zizhi tongjian*, pp. 23–26; Sima Qian, *Shiji*, 110: vol. II, p. 160.
17. From around the seventh century CE, Tibet grew into a considerable supplier of horses to China, firstly in exchange for silk, and from the tenth century, for tea brick.
18. See Baumer, *The History of Central Asia*, vol. I, *The Age of the Steppe Warriors*, pp. 186–192.
19. The name means 'first (*Shi*) ruler (*Huang*) equal to the gods (*Di*) of Qin'.
20. Sima Qian, *Shiji*, 110: vol. II, p. 160; Aurel Stein, *Serindia: Detailed Report of Archaeological Explorations in Central Asia and Westernmost China* (Oxford, 1921), vol. II, pp. 722ff.
21. The soldiers of the *tuntian* had to secure the trade routes, supply expeditionary forces, and cultivate crops. The name means 'to store' and 'to farm'. Liu Mau-Tsai, *Kutscha und seine Beziehungen zu China vom 2. Jh. bis zum 6. Jh. n.Chr.* (Wiesbaden, 1969), vol. I, pp. 74f.
22. On the role of the first Great Wall see Di Cosmo, *Ancient China and its Enemies*, pp. 8, 143 and 149ff, and the same author's *The Origins of the Great Wall* (Saratoga, 2006), pp. 14–19.
23. Sima Qian, *Shiji*, 110: vol. II, p. 161.
24. At that time, a Chinese *li* was around 416 metres.
25. Sima Qian, *Shiji*, 110: vol. II, p. 162.
26. The Qilian Mountains lie between central Gansu and Qinghai; the more than 2,000-km-long Tian Shan range runs from north of the Turfan Oasis in the east, across southern Kyrgyzstan, to Fergana, where it joins the Pamir Mountains. The Yuezhi's second homeland stretched from somewhere around Jiuquan in eastern Gansu to the Turfan Oasis in central Xinjiang. On the vexed question of the Yuezhi's first homeland and the information given in the *Shiji*, see Thierry François, 'Yuezhi et Kouchans: Pièges et dangers des sources chinoises', in Bopearachchi and Boussac, eds, *Afghanistan: Ancien carrefour entre l'est et l'ouest* (Turnhout, 2005), pp. 448–450.
27. Sima Qian, *Shiji*, 110: vol. II, p. 164.
28. In the decimal organisation of their army the Xiongnu were preceded only by the Achaemenids: Nicola Di Cosmo, 'Ethnogenesis, Coevolution and Political Morphology of the Earliest Steppe Empire: The Xiongnu Question Revisited', in Ursula Brosseder and Bryan K. Miller, eds, *Xiongnu Archaeology: Multidisciplinary Perspectives on the First Steppe Empire in Inner Asia* (Bonn, 2011), p. 47.
29. Sima Qian, *Shiji*, 110: vol. II, p. 163. Barfield identifies the two 'Kutu marquises' as part of

the central government: Thomas J. Barfield, *The Perilous Frontier: Nomadic Empires and China, 221 BC to AD 1757* (Cambridge, 1992), p. 37.

30. Di Cosmo, 'Ethnogenesis', pp. 44ff.
31. That the Xiongnu knew the stirrup, as Ishjamts has claimed, remains very doubtful: N. Ishjamts, 'Nomads in Central Asia', in János Harmatta, (ed.), *History of Civilizations of Central Asia*, vol. II, *The Development of Sedentary and Nomadic Civilizations: 700 B.C. to A.D. 250* (Paris, 1994), p. 163.
32. See Baumer, *The History of Central Asia*, vol. I, pp. 86f, 168f.
33. Sima Qian, *Shiji*, 110: vol. II, p. 171.
34. For this discussion see Jan Bemmann, 'Was the Center of the Xiongnu Empire in the Orkhon Valley?', in Brosseder and Miller, eds, *Xiongnu Archaeology*, pp. 441–461. While many Chinese authors identify the capital as Lungchen, which means 'dragon city', the name seems to have been given to a number of different places.
35. Only 2.3% of Xiongnu-occupied Mongolia was then suitable for agricultural use: see Nikolay N. Kradin, 'Stateless Empire: The Structure of the Xiongnu Nomadic Super-Complex Chiefdom', in Brosseder and Miller, eds, *Xiongnu Archaeology*, p. 84.
36. Bemmann, 'Was the Center of the Xiongnu Empire in the Orkhon Valley?', p. 459.
37. Sergei V. Danilov, 'Typology of ancient settlement complexes of the Xiongnu', in Brosseder and Miller, eds, *Xiongnu Archaeology*, pp. 129f, 135f. Sergei V. Danilov, Natali'ia V.Tsydenova, 'Ceramic roof tiles from Terelzhiin Dörvölzhin', in ibid, pp. 341–47. Another, but not fortified settlement was Boroo Gol near the necropolis of Noin Ula in northern Mongolia. Here the people grew barley and millet and probably also prospected for gold. This small village consisted of *ca.* 20 houses and was inhabited the whole year, since a clever heating system, similar to the Chinese 'kang bed stove', made the single room houses liveable in winter. A system of tubes conducted hot air from the oven to a chimney, located on the opposite side of the room, alongside the walls lined with long clay benches. Boroo Gol was occupied from the third century BCE to the the second or third century CE. Denis Ramseyer et al., *The Xiongnu settlement of Boroo Gol* (Bonn, 2011), p. 239. *L'habitat Xiongnu de Boroo Gol. Recherches archéologiques en Mongolie (2003–2008),* (Gollion, 2013), pp. 92, 214–221.
38. Denis Ramseyer et al., *L'habitat Xiongnu de Boroo Gol. Recherches archéologiques en Mongolie (2003–2008)*, (Gollion, 2013), p. 228, see also pp. 39, 43f, 215, 226.
39. Denis Ramseyer et al., *L'habitat Xiongnu de Boroo Gol* (Gollion, 2013), pp. 47–49.
40. Sima Qian, *Shiji*, 110: vol. II, pp. 165ff; Ban Gu, *Han Shu*, pp. 116ff.
41. Kradin, 'Stateless Empire', p. 77.
42. Sima Qian, *Shiji*, 110: vol. II, pp. 172ff.
43. Sima Qian, *Shiji*, 110: vol. II, p. 168.
44. Ban Gu, *Han Shu*, 96A: Hulsewé, p. 73.
45. Sima Qian, *Shiji*, 100: vol. II, p. 174.
46. Sima Qian, *Shiji*, 100: vol. II, p. 155.
47. Sima Qian, *Shiji*, 100: vol. II, p. 165.
48. Sima Qian, *Shiji*, 112: vol. II, p. 228.
49. Sima Guang, *Zizhi tongjian*, pp. 182, 401.
50. Di Cosmo, *Ancient China and its Enemies*, pp. 202ff; Holotova-Szinek, *Les Xiongnu de Mongolie*, pp. 168ff.
51. The Chinese title 'Laoshang' meaning 'old elevated' is presumably a translation of the Xiongnu title.
52. Ban Gu, *Han Shu*, 61: Hulsewé, pp. 214ff. Sima Qian here differs significantly from the *Han Shu* in identifying the Xiongnu as the victorious attackers – Sima Qian, *Shiji*, 123: vol. II, p. 271. Authorities disagree as to whether the *Shiji* or Chapter 61 of the *Han Shu* is more reliable in this respect. I follow Hulsewé, who believes the *Han Shu*'s version to be the more plausible account.
53. Sima Qian, *Shiji*, 123: vol. II, p. 264. On the dating of this war see Craig Benjamin, 'The Yuezhi: Origin, Migration and the Conquest of Northern Bactria', in Bopearachchi and Boussac, eds, *Afghanistan*, pp. 72ff.
54. See pp. 45f.
55. Sima Qian, *Shiji*, 108: vol. II, pp. 136ff, 176ff and 195.
56. Di Cosmo, *Ancient China and its Enemies*, pp. 232ff.
57. As Wei Qing went '1000 *li*' (a little more than 400 km) 'north of the border' and met the waiting chanyu on 'the northern edge of the desert', the latter's new residence may have been located between 45 and 46 degrees of latitude in the Central Mongolian provinces of Dundgov or Ovorkhangai: Sima Qian, *Shiji*, 110 and 111: vol. II, pp. 180, 206.
58. Sima Qian, *Shiji*, 123: vol. II, pp. 180, 206.
59. Sima Qian, *Shiji*, p. 264. According to the *Han Shu*, it was the widow of the dead king who then ruled the Yuezhi: Ban Gu, *Han Shu*, 61: Hulsewé, pp. 208ff.
60. Sima Qian, *Shiji*, 123: vol. II, p. 269.
61. Sima Qian, *Shiji*, p. 266. It is possible that the horses Zhang saw were infected with a parasite: Hill, *Through the Jade Gate*, p. 584.
62. Ban Gu, *Han Shu*, 61: Hulsewé p. 212; Sima Qian, *Shiji*, 123: vol. II, p. 270.
63. Sima Qian, *Shiji*, 123: vol. II, p. 271. In the Chinese army, failure to arrive punctually at an appointed place in time of war was a serious military offence, for which the guilty commander had often to pay with his life.
64. Ban Gu, *Han Shu*, 61: Hulsewé, p. 215.
65. Marcus Iunianus Iustinus, *Epitome of the Philippic History of Pompeius Trogus*, trans. Rev. John Selby Watson (London, 1853) Book I.4, available at http://www.forumromanum.org/literature/justin/english/trans1.html (last retrieved 22.11.13). The Roman writer Justin (2nd–3rd c. CE) composed an abridgement of the *Historiae Philippicae* of Pompeius Trogus, an author of the time of Augustus.

78. Chang Chun-shu, *The Rise of the Chinese Empire*, vol. 2, p. 176; Ban Gu, *Han Shu*, 96B: Hulsewé, p. 201.
79. Sima Guang, *Zizhi tongjian*, pp. 248–257.
80. Chang Chun-shu, *The Rise of the Chinese Empire*, vol. 2, pp. 23ff; Sima Qian, *Shiji*, 111: vol. II, p. 215.
81. Stein, *Serindia*, vol. II, pp. 724ff. Slightly later dates are given in Albert E. Dien, 'Encounters with Nomads', in Juliano Annette, Lerner Judith (eds). *Monks and Merchants. Silk Road treasures from Northwest China* (New York, 2001), pp. 55–66, here p. 58: Jiuquan in 108 BCE, Zhangye in 102 BCE, Dunhuang in 88 BCE, Jincheng in 81 BCE and Wuwei in 68 BCE.
82. Dunhuang was known to Ptolemy under the name of Throana: Ptolemy, *Claudii Ptolemaei Geographia*, VI.16.6.
83. As Aurel Stein points out, the Jade Gate originally stood east of Dunhuang, and was moved westward to Stein's site T. XIV in around 96–94 BCE: Stein, *Serindia*, vol. II, pp. 620–624, 726–728.
84. Ban Gu, *Han Shu*, 96A: Hulsewé, pp. 85ff.
85. Ptolemy, *Claudii Ptolemaei Geographia*, VI.15.3.
86. The ruins in the Lop Nor desert are identified by Aurel Stein's system, which runs from L.A. to L.T. Stein lettered his ruins in chronological order of discovery, so that the series corresponds neither to the historical nor to the geographical relationships between the sites. For a discussion of the exact location of Loulan's capital city, as between Stein's ruins L.A., L.E., L.K. or Miran, see Enoki Kazuo, *The Location of the Capital of Lou-Lan and the Date of the* Kharoṣṭhī *Inscriptions* (Tokyo, 1963), pp. 127–171; Ban Gu, *Han Shu*, 96A: Hulsewé, pp. 81ff, n. 77; Lin Meicun, *Loulan kuo shih tu kao* (Beijing, 2005), vol. 6, pp. 79–85; Marylin M. Rhie, *Early Buddhist Art of China & Central Asia* (Leiden, 1999), vol. I, pp. 327–330.

87. Sven Hedin, *Scientific Results of a Journey in Central Asia, 1899–1902* (Stockholm, 1905), p. 620.
88. The geographers sent by Emperor Wudi to discover the source of the Yellow River believed they had found it in the source of the Tarim in the Kun Lun Mountains. As the Tarim in those days flowed into the closed Lop Nor Lake, they postulated the existence of a subterranean channel that drained it to the east: Ban Gu, *Han Shu*, 96A: Hulsewé, p. 72; Sima Qian, *Shiji*, 123: vol. II, pp. 266ff, 278.

Azodi (Bangkok, 2001), pp. 126–128; Christoph Baumer, *Southern Silk Road: In the Footsteps of Sir Aurel Stein and Sven Hedin* (Bangkok, 2003), p. 116; Hansen, Wieczorek and Tellenbach, eds, *Alexander der Große und die Öffnung der Welt*, p. 408; Isao Kurita, *Gandharan Art: A Revised and Enlarged Edition* (Tokyo, 2003), vol. 2, pp. 219–224; Rosenfield, *The Dynastic Arts of the Kushans*, p. 262; Tissot, *Les arts anciens du Pakistan et de l'Afghanistan*, pp. 80ff, 88ff.
289. Joe Cribb, 'Das Pantheon der Kushana-Könige', in Christian Luczanits, (ed.), *Gandhara – Das Buddhistische Erbe Pakistans: Legenden, Klöster und Paradiese* (Mainz, 2008), pp. 123, 153; Christian Luczanits, 'Der Bodhisattva und künftige Buddha Maitreya', in Luczanits, (ed.), *Gandhara*, p. 249.
290. Although Maitreya is called Buddha, iconographically he is represented as a prince, and so as a bodhisattva.
291. Al'baum's dating of the wall paintings of Fayaz Tepe to the reign of Kanishka is too early. As analysed by Lo Muzio, they were created during the reconstruction of the monastery in the later fourth century after the Sassanid destructions. Lo Muzio Ciro, 'Remarks on the Paintings from the Buddhist Monastery of Fayaz Tepe (Southern Uzbekistan)', in *Bulletin of the Asia Institute*, vol. 22/2008, pp. 189–208, here pp. 192, 196, 201.
292. The discovery of a Kushan coin of Kanishka I in Kara Tepe's Complex B, where the murals are located, allows Mkrtychev to date these to the first half of the second century: Tigran Mkrtychev, *Monumental Sculpture of Kara-Tepe* (Kamakura, 1997/98), p. 194. A copper coin found under the coating of the first floor of the western cave of complex E has been tentatively identified as 'a yet unknown denomination of Soter Megas'; that is, Vima Takto (r. *ca.* 80–102). This would push back the construction of this complex to the end of the first century CE. Boris Staviskij, Tigran Mkrtychev, 'Qara-Tepe in Old Termez: On the History of the Monument', *Bulletin of the Asia Institute*. vol. 10/1996, Bloomfield Hills, pp. 219–232, here p. 220. See also Martin Rhie, *Early Buddhist Art of China & Central Asia*, vol. I, p. 184, and Boris Staviskij, *Mittelasien. Kunst der Kuschan*, p. 151, figs. 108–111.
293. Staviskij, *La Bactriane sous les Kushans*, p. 247. Staviskij, *La Bactriane sous les Kushans*, p. 247; 'Le problème des liens entre le bouddhisme bactrien, le zoroastrisme et les cultes mazdéens locaux à la lumière des fouilles de Kara-tepe', in Frantz Grenet, (ed.) *Cultes et monuments religieux dans l'Asie Centrale préislamique* (Paris, 1987), pp. 47–52, here p. 49. See also Bopearachchi, Landes and Sachs, eds, *De l'Indus à l'Oxus*, p. 295.
294. Martin Rhie, *Early Buddhist Art of China & Central Asia*, vol. I, p. 189.
295. In the older literature, such as Bivar, Emperor Vasishika is said to have ruled in the years 151–155; today, he is placed a century later: see Bivar, *The History of Eastern Iran*, p. 219, and Cribb, 'Die Chronologie Gandharas', pp. 67ff.
296. Janos Harmatta, 'Languages and literature in the Kushan Empire', in *History of Civilizations of Central Asia*, vol. II, p. 435; Litvinskij, *La civilisation de l'Asie centrale antique*, pp. 175–202; Staviskij, *Mittelasien. Kunst der Kuschan*, p. 66, and Staviskij, *La Bactriane sous les Kushans* (Paris, 1986), p. 42.

37. But the Indian surveyor Kishen Singh had already purchased a small Buddha figure on behalf of Douglas Forsyth in 1874, as well as one of the Indian god Hanuman. Both figures probably came from Uzun Tati, five days' march north-east of Khotan. So there was already evidence for a pre-Islamic layer of culture before the discovery of the Bower manuscript. Forsyth Douglas, 'On the Buried Cities in the Shifting Sands of the Great Desert of Gobi', in *Journal of the Royal Geographical Society*, vol. XLVII, May 1878, pp. 1–17, here pp. 11f Derek Waller, *The Pundits. British Exploration of Tibet & Central Asia* (Lexington, 1990) pp. 161f.

41. Georgina Herrmann, *Monuments of Merv* (London, 1999), p. 120; Staviskij, *Mittelasien*, fig. 91. The etymological derivation of the toponym Bukhara from the Sanskrit 'Vihara', meaning a Buddhist monastery, is disputed and cannot be adduced as evidence for the existence of a Buddhist monastery in that city. The name Bukhara more likely comes from the Sogdian 'buxarak', meaning 'fortunate place'. See Matteo Compareti, 'Buddhist activity in pre-Islamic Persia according to literary sources and archaeology', in *Transoxiana: Journal Libre de Estudios Orientales* 12 (August 2007), p. 5.
42. Christoph Baumer, *The Church of the East: An Illustrated History of Assyrian Christianity* (London, 2006), pp. 60ff.
43. Real Buddhist pantheons first emerged in Vajrayana Buddhism, especially in Tibet and Mongolia.

51. Faxian (Fa-hsien), *The Travels of Fa-hsien (399–414 A.D.), or Record of the Buddhistic Kingdoms*, (re) trans. H.A. Giles (Cambridge, 1923), pp. 30–31. See also: Max Deeg, *Das Gaoseng-Faxian-Zhuan als religionsgeschichtliche Quelle* (Wiesbaden, 2005), p. 537.
52. H.H. Wilson, *Ariana Antiqua: A Descriptive Account of the Antiquities and Coins of Afghanistan; with a Memoir on the Building called Topes, by C. Masson Esq.* [1841] (New Delhi, 1998) pp. 70ff.
53. The other arguments against a dating in the reign of Azes II are not very persuasive. It is unlikely, for example, that coins of a dead king of a defunct dynasty would have been dedicated to so costly a reliquary, or that these coins should represent a later restriking. Furthermore, the gold reliquary shows signs of use and may be significantly older than the steatite casket. The British Museum, which holds the reliquary, gives a date of 50 CE. See Carter, 'A Reappraisal of the Bimaran Reliquary', pp. 71–93.
54. Christoph Baumer, *The History of Central Asia*, vol. I, *The Age of the Steppe Warriors*, p. 293.
55. Behrendt, *The Art of Gandhara*, pp. 48ff.
56. The serrated halo also appears in Sassanid representations of Mithra, e.g. in the relief depicting the investiture of Ardeshir II (r. 379–383) at Taq-e Bostan, Kermanshah, Iran (see Baumer, *The History of Central Asia*, vol. I, p. 94), in a few rare Gandharan Buddha images in grey schist, and one small bronze figure from China. Martin Rhie dates these Buddha figures to the fourth to fifth centuries: Martin Rhie, *Early Buddhist Art*, vol. II (Leiden, 2002), pp. 356ff, and figs. 2.51–2.52e. In the ninth and tenth centuries the serrated halo would be much favoured for the depiction of Vairocana and Avalokiteshvara in the scroll-paintings of Dunhuang: Lokesh Chandra and Nirmala Sharma, eds, *Buddhist Paintings of Tun-Huang in the National Museum, New Delhi*, *Niyogi Nooks* (New Delhi, 2012), figs. 38, 39, 44, 45a, 46.
57. Figural representations of the Buddha did not displace the aniconic symbols, which have remained popular until today.
58. Behrendt, *The Art of Gandhara*, pp. 47ff.
59. In contrapposto the weight rests mainly on one leg, the other being relaxed and slightly bent, this giving a dynamic twist to the torso.

Les Bouddhas colorés des monastères', in *Archéologia* 473 (2010), pp. 52–58.
78. A Franco-Afghan archaeological team is conducting a rescue excavation at this heavily guarded site whose mining rights have been acquired by the China Metallurgical Group. Susanne Annen et al., *Mes Aynak – Recent Discoveries along the Silk Road* (Kabul, 2011), pp. 4f, 10, 54.
79. Annen et al., *Mes Aynak – Recent Discoveries along the Silk Road*. p. 16. Dani A.H., *Eastern Kushans and Kidarites in Gandhara and Kashmir* (Paris, 1996),

p. 171. Rehman Abdur, *The last two dynasties of The Sahis. Analysis of their History, Archaeology, Coinage and Palaeography* (Delhi, 1988), p. 61. Kabul fell to the Samanids around 900, and the Hindu Shahi retreated to the northern Punjab. See p. 202f.

80. Susanne Annen et al., *Mes Aynak – Recent Discoveries along the Silk Road* (Kabul, 2011), pp. 8, 14.
81. Annen et al., *Mes Aynak*, pp. 18, 20, 42. Éléonore Fournié, 'Mes Aynak, joyau bouddhique de l'Afghanistan', in *Religions et histoire* 37 (2011), pp. 10–15; Khair Mohammed Khairzada, 'Mes Aynak', in *Archéologia*, no. 508, 2013, pp. 62–71. Andrew Lawler, 'Mining Afghanistan's Past', in *Archaeology*, vol. 64, no. 1 (2011), pp. 18–23; Zafar Paiman, 'Kaboul. Les Bouddhas colorés', pp. 53, 58–65.
82. The corresponding niches are 55 m and 38 m high. As Gilles Béguin has noted, Bactria had a long tradition of monumental figures, as is suggested by the gigantic statue of Zeus at Aï Khanum: Béguin, *Buddhist Art*, p. 220. See also Baumer, *The History of Central Asia*, vol. I, p. 299.
83. It may be that both Buddhas had a kind of mask of copper sheet, as Xuanzang surmised: Xuanzang, *Si-yu-ki*, vol. I, pp. 50ff; Marylin Martin Rhie, 'Aspects of the two colossal Buddhas at Bamiyan', in Chandra and Banerjee, eds, *Xuanzang and the Silk Route*, pp. 27ff.
84. We follow the radiocarbon dating results published by ICOMOS in 2005. The age of the buddhas was determined by examining organic objects of structural components of the buddhas such as the wooden pegs which fixed the plaster of the draped monk's robe to the roughly shaped statue. D. Klimburg-Salter, 'Buddhist paintings in the Hindu Kush *ca*. VIIth to Xth centuries', in Étienne de la Vaissière. *Islamisation de l'Asie centrale. Processus locaux d'acculturation du VIIème au Xième siècle*, (Paris, 2008), pp. 131–159, here p. 140. See also: D. Klimburg-Salter, *The Kingdom of Bamiyan. Buddhist Art and Culture of the Hindu Kush* (Naples, Rome, 1989), pp. 10, 28, 78. The dating is controversial. Warwick Ball, *The Monuments of Afghanistan: History, Archaeology and Architecture* (London, 2008), p. 167; Zemaryalai Tarzi, 'Bamiyan 2006: The fifth excavation campaign of Prof. Tarzi's mission', in *The Silk Road*, vol. 4, no. 2 (winter 2006–07), p. 20. Martin Rhie argues that both figures were more than a century older: Martin Rhie, *Early Buddhist Art*, vol. I, pp. 225, 229; 'Aspects of the two colossal Buddhas at Bamiyan', p. 8.
85. Xuanzang, *Si-yu-ki*, vol. I, pp. 50ff. Today, well-preserved 'sleeping Buddhas' can be seen at the National Museum in Dushanbe, Tajikistan (a copy of the original from Ajina Tepe) and in cave monasteries in northern China, such as those of Kizil, Dunhuang, Yungang, etc. While working in Bamiyan, Tarzi discovered in 2008 the fragments of a 19-metre-long 'Nirvana Buddha': Hannah Bloch, 'Searching for Afghanistan's third giant Buddha', in *National Geographic* Magazine (June, 2009). In 2010, another 7.5-metre-long 'sleeping Buddha' was discovered at Mes Aynak: Lawler, 'Mining Afghanistan's past', p. 21.
86. Klimburg-Salter, *The Kingdom of Bamiyan*, map. 1, pp. 22, 74.
87. William Moorcroft and George Trebeck, *Travels in the Indian Himalayan Provinces of Hindustan and the Punjab, in Ladakh and Kashmir, in Peshawar, Kabul, Kunduz and Bokhara, from 1819 to 1825* [1841] (New Delhi, 1989), pp. 386–392. Klimburg-Salter identifies the Great Buddha as Dipamkara and the small one as Shakyamuni. Klimburg-Salter, 'Buddhist paintings in the Hindu Kush *ca*. VIIth to Xth centuries', p. 140.
88. Mountstuart Elphinstone, *An Account of the Kingdom of Caubul, and its Dependencies in Persia, Tartary and India: Comprising a View of the Afghaun Nation, and a History of the Dooraunee Monarchy*, vol. I (2nd edn, London, 1819), p. 245.

99. The monks of Bamiyan belonged to the Lokottaravāda school, a part of the Mahāsāmghika school, whose teaching attributed a transcendental nature to Buddha Shakyamuni.
100. Hackin, *Les Antiquités Bouddhiques de Bamiyan*, plate Xvii*; Nouvelles Recherches*, plate XXV.
101. It would appear that the painted clay statues from Fondukistan in the National Museum, Kabul, were not destroyed: Susanne Novotny, 'The Buddhist monastery of Fondukistan, Afghanistan – a reconstruction', in *Journal of Inner Asian Art and Archaeology* 2 (2007), p. 34, n. 13.
102. J. Hackin, J. Carl and J. Meunié, *Diverses recherches archéologiques en Afghanistan (1933–1940)* (Paris, 1959), pp. 49–58, figs. 149–201; Rowland, *The Art of Central Asia*, English p. 108 (German edition, p. 116).
103. Hackin, Carl and Meunié, *Diverses recherches*, pp. 57ff; Marianne Yaldiz, *Magische Götterwelten* (Berlin, 2000), p. 226. Grünwedel and Le Coq call this cave the 'Cave of the Sixteen Swordbearers': Albert Le Coq, *Die buddhistische Spätantike in Mittelasien*, vol. IV (Graz, 1973), plates IV–V.
104. The Persian Rahnama-ye Bamiyan mentioned that in 977 a ruler of Bamiyan was forced to convert to Islam, which suggests that some individual princes may have been Buddhists even after the eighth century. See Klimburg-Salter, *The Kingdom of Bamiyan*, p. 41.
105. Godard and Hackin, *Les Antiquités Bouddhiques de Bamiyan*, pp. 86, 88; Upasak, *History of Buddhism in Afghanistan*, pp. 165ff.

III. The Migration of Hunnic Peoples in Northern China, Central Asia and Eastern Europe

1. Nicholas Sims-Williams, 'The Sogdian Ancient Letter II', in M.G. Schmidt and Walter Bisang (eds), *Philologica et linguistica: historia, pluralitas, universitas: Festschrift für Helmut Humbach zum 80. Geburtstag am 4. Dezember 2001* (Trier, 13 *ca.* 2001), pp. 267–280, cited in Étienne de la Vaissière, *Sogdian Traders: A History* (Leiden, 2005), p. 44.
2. Sir Marc Aurel Stein, *Serindia: Detailed Report of Archaeological Explorations in Central Asia and Westernmost China* (Oxford, 1921), pp. 671–677.
3. The oldest Sogdian document was found in Kultobe, Kazakhstan, and is dated from the second or early third centuries CE. Aleksander Naymark, Les villes sogdiennes après les Grecs (Quétigny, 2010), p. 45
4. See in the Appendix an overview of 'The Most Important Dynasties of Central Asia'.
5. Zhu Fahu (Dharmaraksa), a renowned Buddhist missionary and translator into Chinese, also identifies the Xiongnu as 'Huna' in two texts of 280 and 308. See Étienne de la Vaissière, 'The rise of Sogdian merchants and the role of the Huns: the historical importance of the Sogdian Ancient Letters', in Susan Whitfield (ed.), *The Silk Road: Trade, Travel, War and Faith* (London, 2004), p. 22,

and 'Huns et Xiongnu', *Central Asiatic Journal* 49.1 (2005), pp. 3–26, here pp. 11–14.

6. Iaroslav Lebedynsky, *Les Nomades* (Paris, 2007), p. 150. For a notable exposition of the arguments against a connection between the Xiongnu and the Huns of Attila see Otto Maenchen-Helfen, *The World of the Huns* (Berkeley, 1973), pp. 449–455.
7. Ptolemy, *Claudii Ptolemaei Geographia*, (ed.) C.F.A. Nobbe (Leipzig, 1843), III.5.25, p. 172; Theophylact Simocatta, *The* History *of Theophylact Simocatta: An English Translation with Introduction and Notes*, (ed.) and trans. Michael and Mary Whitby (Oxford, 1986), VII.14–VIII.16, pp. 89ff; Sima Qian, *Shiji*, 110, in *Records of the Grand Historian of China: Translated from the Shih chi of Ssu-ma Ch'ien by Burton Watson* (New York, 1971), vol. II, pp. 155ff.
8. As these confrontations between China and the Xiongnu were played out almost exclusively on Chinese territory; that is, outside Central Asia, and as the Xiongnu had by the fourth century become highly sinified, I limit myself here to a brief sketch of events.
9. Albert E. Dien, 'Encounters with Nomads', in Annette Juliano and Judith Lerner (eds), *Monks and Merchants*. (New York, 2001), pp. 55–66, here p. 59.
10. Only under the Sui dynasty (581–618) would China again find itself united under Han Chinese rule.
11. See in the Appendix the overview of 'The Most Important Dynasties of Central Asia'.
12. Liu Yuan named his rudimentary state Han, and Liu Yao (r. 318–329), fifth ruler of the line, changed the name to Zhao.

Angela Howard, 'Liang patronage of Buddhist art in the Gansu Corridor during the fourth century and the transformation of a Central Asian style', in Wu Hung (ed.), *Between Hang and Tang: Religious Art and Archaeology in a Transformative Period* (Beijing, 2000), pp. 235–272; Angela Howard, 'From the Han to the Southern Song' (New Haven, 2006) pp. 219–222.
31. Roderick Whitfield, *Dunhuang: Caves of the Singing Sands: Buddhist Art from the Silk Road* (London, 1995), vol. II, pp. 270f.
32. See above, p. 56.
33. Since 1988, a further 248 caves have been discovered sited to the north of those already known.
34. Angela Howard, 'From the Han to the Southern Song'(New Haven 2006), pp. 216–219; Whitfield, *Dunhuang*, vol. I, plates 10–16; vol. II, pp. 272–276.
35. Elements of the Gandhara style are to be found at the Mogao caves also under the early Northern Wei, e.g. in Cave 254. Chen Bingying, 'Gandhara in Gansu', in Annette Juliano and Judith Lerner (eds), *Monks and Merchant* (New York 2001), pp. 211–217; Martin Rhie, *Early Buddhist Art*, vol. III. (Leiden, 2010), pp. 53, 275. The most recent of the Mogao caves date from the Mongolian Yuan Dynasty (1271–1368).
36. Baumer, *China's Holy Mountain*, pp. 77ff; Albert E. Dien, 'Encounters with Nomads' (New York, 2001), pp. 55–66, here p. 62. Annette Juliano, 'Buddhist Art in Northwest China' (New York, 2001), pp. 119–143, here p. 133. Whitfield, *Dunhuang*, vol. II, p. 340.
37. Rafe de Crespigny, *The Military Culture of Later Ha* (Cambridge, 2009) p. 107.
38. Thomas J. Barfield, *The Perilous Frontier*, pp. 85–114. The Murong, Shiwei and Khitan fall outside the scope of this book.
39. In 534 the Northern Wei dynasty split into Western (535–557) and Eastern Wei (534–550). The Xianbei general Yuwen Tai held power in Western Wei until his death in 556, when his son Yuwen Jue founded the Sino-Xianbei Northern Zhou dynasty (557–581). Eastern Wei on the other hand fell under the control of the Han Chinese general Gao Huan, whose son Gao Yang founded the Northern Qi dynasty (550–577).
40. Peter B. Golden, 'Zentralasien im 6.–11. Jahrhundert.', in Jan Bemman (ed.), *Steppenkrieger. Reiternomaden des 7.–14. Jahrhunderts aus der Mongolei* (Darmstadt, 2012), p. 27.
41. Barfield, *The Perilous Frontier*, pp. 116–120; Martin Rhie, *Early Buddhist Art*, vol. 2, pp. 285–298.
42. Because of the political chaos after the overthrow of the Northern Wei, the direct contacts between central China and Byzantium were stopped, and Byzantium now sent its delegations to the Göktürks. Byzantine delegations reached China again in the years 643, 667, 701, 711, 719 and 742. François Thierry, Cécile Morrisson, 'Sur les monnaies byzantines trouvées en Chine', in *Revue numismatique*, 6^{e} série, Tome 36, 1994, pp. 109–145, here pp. 138–40.

62. Zhang Guangda, 'The city-states of the Tarim basin', in *History of Civilizations of Central Asia*, vol. III, p. 289.
63. Other authors are of the opinion that the Qu were of Han Chinese extraction: Edouard Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux* [1903] (Paris, 1941; repr. Taipei, 1969), p. 102, n. 2.
64. Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, pp. 104–109; Claude Fagne (ed.), *La Route de la Soie* (Brussels, 2009), p. 157; Xavier Tremblay, *Pour une histoire de la Sérinde* (Vienna, 2001), p. 37; Whitfield with Sims-Williams (eds), *The Silk Road*, p. 309; Zhang Guang-da, 'Kocho (Kao-Ch'ang)', in *History of Civilizations of Central Asia*, vol. III, (Paris, 1996), pp. 306f.
65. The Tiele were probably descendants of the Dingling: Peter B. Golden, 'Some thoughts on the origins of the Turks and the shaping of the Turkic peoples', in Victor H. Mair (ed.), *Contact and Exchange in the Ancient World* (Honolulu, 2006), pp. 137–140.
66. Kradin, 'From tribal confederation to empire', pp. 156–159; Colin Mackerras, *The Uighur Empire According to the T'ang Dynastic Histories* (Canberra, 1972), p. 1, n. 1.
67. Kradin, 'From tribal confederation to empire', p. 157.
68. In the literature, the first khagan of the Tujue is also sometimes called Touman.
69. Liu Mau-Tsai, *Die chinesischen Nachrichten*, pp. 6ff, 490, n. 21.
70. Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, p. 222.
71. Theophylact Simocatta, *The* History *of Theophylact Simocatta*, book vii, 7.10.
72. Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, p. 222; Kradin, 'From tribal confederation to empire', p. 166.
73. R.C. Blockley, *The* History *of Menander the Guardsman* (Liverpool, 1985), pp. 49, 252ff. See also Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, pp. 231–233; Theophylact Simocatta, *The* History *of Theophylact Simocatta*, Book VII, 7.13–8.19.
74. See below, pp. 175f.
75. Alram and La Vaissière assume a single migration, older sources such as Zeimal several waves. Michael Alram, 'Alkhan and Hephthalite Coinage', in Michael Alram, and Deborah E. Klimburg-Salter, (eds), *Coins, Art and Chronology. Essays on the pre-Islamic History of the Indo-Iranian Borderlands*, (Vienna, 2010), vol. II, pp. 13–38, here p. 13. Étienne de la Vaissière, 'Is There a "Nationality of the Hephthalites"?', in *Bulletin of the Asia Institute*, vol. 17/2003, pp. 119–132, here, p. 122. E.V. Zeimal, *The Kidarite Kingdom in Central Asia* (Paris, 1996), p. 124. Another problem is the fact that written sources of Byzantine and Chinese authors do not always correspond with the interpretation of numismatic research of undated coins.
76. Marcellinus Ammianus, *The Later Roman Empire (AD 354–378)*, trans. Walter Hamilton (London, 2004), Book 16.9, p. 99. Since no coins can be attributed to the Chionites with certainty, their independence as a political entity is controversial. Some authors, such as Zeimal, suggest that they are identical with the Kidarites, E.V. Zeimal, *The Kidarite Kingdom in Central Asia* (Paris, 1996), pp. 119f.
77. A.D.H. Bivar, *The History of Eastern Iran* (Cambridge, 1983), p. 211; Ciro Lo Muzio, 'An archaeological outline of the Bukhara oasis', in *Journal of Inner Asian Art and Archaeology* 4 (2009), p. 72.
78. Although the *Wei Shu* explicitly states that these nomads originated from the Altai, it associates them with the Yuezhi or the Gaoche: La Vaissière, *Sogdian Traders*, pp. 97ff; Markus Mode, 'Hunnen, Sogder und das Erbe Alexanders des Großen in Mittelasien', in Heike Externbrink (ed.), *Hunnen zwischen Asien und Europa. Aktuelle Forschungen zur Archäologie und Kultur der Hunnen* (Langenweißbach, 2008), pp. 102ff.
79. Marcellinus Ammianus, *The Later Roman Empire (AD 354–378)*, Book 19.1 (London, 2004), pp. 163ff.
80. La Vaissière, *Sogdian Traders*, pp. 98ff.
81. Numismatists such as Alram and Cribb regard the Kidarites as the conquerors of Balkh. Michael Alram, *Das Antlitz des Fremden. Die Münzen der Hunnen und Westtürken in Zentralasien und Indien* (Vienna, 2013), 'Die Kidariten in Baktrien', http://pro.geo.univie.ac.at/projects/khm/impressum 'The Kidarites: the Numismatic Evidence. With an Analytical Appendix by A. Oddy', in Alram and Klimburg-Salter (eds), *Coins, Art and Chronology* (Vienna, 2010) vol. II, pp. 91–146, here pp. 92, 116.
82. La Vaissière, *Sogdian Traders*, pp. 98ff.
83. That Samarkand was then in Hunnic hands is shown by the *Wei Shu*, which mentions for the years 437 or 457 a Hunnic king of Samarkand, the third of his dynasty. La Vaissière, *Sogdian Traders*, p. 107.
84. La Vaissière, *Sogdian Traders*, pp. 101–106, 109; Silvia Pozzi, *New sealstones from the Bukhara Oasis (Uzbekistan)*, (Udine, 2013, not yet published), p. 2ff.
85. Robert Göbl, *Dokumente zur Geschichte der iranischen Hunnen in Baktrien und Indien*, vol. II (Wiesbaden, 1967), pp. 47, 53ff. Whether this Kidara is the king of the same name who in the late 420s conquered Bactria and Gandhara is still disputed: see La Vaissière, *Sogdian Traders: A History*, pp. 108.
86. Frye is of the view that the attackers were early Hephthalites: Richard Frye, *The Heritage of Central Asia* (Princeton, 1996), p. 176.
87. La Vaissière, *Sogdian Traders*, p. 108; Étienne de la Vaissière, 'Is There a "Nationality of the Hephthalites"?', *Bulletin of the Asia Institute*, vol. 17/2003, pp. 119–132, here pp. 124, 128. See also Atreyi Biswas, *The political history of the Hunnas in India* (New Delhi, 1973), pp. 45–47. Frantz Grenet, *Regional interaction in Central Asia and Northwest India in the Kidarite and Hephthalite periods* (Oxford, 2002), pp. 207f. Alram and Cribb date these events half a century earlier. Michael Alram, *Das Antlitz des Fremden. Einführung* (Vienna, 2013) *Die Kidariten in Baktrien; Die Kidariten in Taxila.*

141. As many of these 'towns' show no trace of streets or buildings within the walls, the question arises whether they were actually inhabited, or whether they were instead refuges for a rural population and its livestock in time of war. Only Kazakly and Toprak Kala were beyond doubt properly urban settlements. See Michelle Negus Cleary, 'Walls in the desert: the phenomenon of Central Asian urbanism in ancient Chorasmia', in Ken Parry (ed.), *Art, Architecture and Religion along the Silk Roads*, vol. XII of *Silk Road Studies* (Turnhout, 2008), pp. 51, 55, 66ff, 70.

107. Stein, *Innermost Asia*, vol. II, pp. 915ff; Baumer, *Southern Silk Road*, p. 58.
108. Stein, *Innermost Asia*, vol. II, p. 917. Unfortunately these paintings, unique in Iran, have for the most part been lost. Some were removed by Stein and are kept in the India National Museum in New Delhi, others the German archaeologist Ernst Herzfeld (1879–1948) removed in 1929, and, rather than handing them all over to an Iranian museum as promised, had them sent to Berlin while selling some of them to New York's Metropolitan Museum of Art. To justify his untenable dating of the paintings to the Parthian period (247 BCE–224 CE), Herzfeld did not shrink from colouring and retouching his photographs so that Sassanid stylistic elements disappeared and Parthian ones emerged: Elspeth R.M. Dusinberre, 'Ernst Herzfeld, Kuh-e Khwaja, and the Study of Parthian Art', in A.C. Gunter and S.R. Hauser (eds), *Ernst Herzfeld and the Development of Near Eastern Studies, 1900–1950* (Leiden, 2005), pp. 181–194.

V. The First Turkic Khaganate

1. Daniel A. Graff, 'Strategy and contingency in the Tang defeat of the Eastern Turks, 629–630', in Nicola di Cosmo (ed.), *Warfare in Inner Asian History (500–1800)* (Leiden, 2002), pp. 62ff.
2. A khaganate is the realm of a khagan, a great khan, a ruler of imperial rank. Among the Göktürks the title *khagan* was given to the supreme ruler of the empire, and *yabghu* was originally that of the second highest-ranking member of the Ashina, the autonomous ruler of the western part. His political importance was comparable to that of a viceroy.
3. Peter Golden, *Nomads and their Neighbours in the Russian Steppe: Turks, Khazars and Qipchaqs* (Aldershot, 2003), vol. I, p. 40.
4. Michael Weiers, Sprache und Schrift der Mongolen, in Claudius Müller, Jacob Wenzel (eds), *Dschingis Khan und seine Erben. Das Weltreich der Mongolen* (Mainz, 2005), p. 106.
5. Peter Golden, *Turks and Khazars: Origins, Institutions and Interactions in Pre-Mongol Eurasia* (Aldershot, 2010), vol. I, p. 12; S.G. Kljaštornyj, 'Les points litigieux dans l'histoire des Turcs anciens', in Hans Robert Roemer, Wolfgang-Ekkehard Scharlipp (eds), *History of the Turkic Peoples in the Pre-Islamic Period* (Berlin, 2000), pp. 149ff.
6. *Orkhon Inscriptions: The Bilge kagan's Memorial Complex: texts*, on the *Türk Bitig* website of the Language Committee of the Ministry of Culture of the Republic of Kazakhstan, available at http://irq.kaznpu.kz/?mod=1&tid=1&oid=16&lang=e
7. Liu Mau-Tsai, *Die chinesischen Nachrichten zur Geschichte der Ost-Türken (T'u-Küe)* (Wiesbaden, 1958), pp. 5ff, 40: Liu Mau-Tsai's translated collection of Chinese reports from the sixth to the eleventh centuries is the most important source of information on the two Göktürk khaganates.
8. Edouard Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux* [1903] (Paris, 1941; repr. Taipei, 1969), pp. 15, 220. The often repeated claim, initiated by Kljaštornyj and V.A. Livšic, that the upper part of the famous Bugut Stele, erected in or after 582, depicted a she-wolf suckling a boy, i.e. the origin myth of the Ashina, is false. The badly damaged relief has a dragon typical of a Chinese stele. P.S.G. Kljaštornyj and V.A. Livšic, 'The Sogdian inscription of Bugut revised,' *Acta Orientalia Academiae Scientiarium Hungaricae* XXVI/1 (1972), pp. 69–102, here p. 71.
9. According to the *Sui Shu*, some 500 families of the Ashina clan left Gansu for the Altai in 439, fleeing the Xianbei: Golden, *Turks and Khazars*, vol. I, p. 13.
10. See above, p. 94.
11. Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, p. 237; Liu Mau-Tsai, *Die chinesischen Nachrichten*, pp. 7ff; Denis Sinor and S. G. Klyashtorny, 'The Türk Empire' in Litvinsky et al., eds, *History of Civilizations of Central Asia*, vol. III (Paris, 1996), p. 332; Sören Stark, *Die Alttürkenzeit in Mittel- und Zentralasien* (Wiesbaden, 2008), p. 192, n. 1086.
12. The Turco-Sassanid war against the Hephthalites is variously dated, the earliest date being Sören Stark's 555 and the latest Chavannes' 567. The decisive battle against Abruhi, the last paramount Hephthalite king, probably took place around 560: see p. 98. Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, pp. 236, 229; B.A. Litvinsky and M.H. Zamir Safi, 'The later Hephthalites in Central Asia', in Litvinsky et al. (eds), *History of Civilizations of Central Asia*, vol. III, p. 176; Stark, *Die Alttürkenzeit*, p. 210; Étienne de La Vaissière, *Sogdian Traders: A History* (Leiden, 2005), p. 200.
13. See p. 99.
14. The name 'Chunni' may refer to descendants of the Huns.
15. R.C. Blockley, *The History of Menander the Guardsman* (Liverpool, 1985), pp. 49–51, 252ff; Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, pp. 231–233; Peter Golden, *Nomads and their Neighbours in the Russian Steppe: Turks, Khazars and Qipchaqs* (Aldershot, 2003), vol. I, p. 57; Walter Pohl, *Die Awaren. Ein Steppenvolk in Europa 567–822 n.Chr.* (Munich, 2002), pp. 18, 28, 36ff; Theophylact Simocatta, *The* History *of Theophylact Simocatta*, trans. Michael and Mary Whitby (Oxford, 1986), Book VII, 7.13–8.19, pp. 188ff, n. 35, 38, 39.

25. Concerning the localisation of the meeting place called 'Ektag' which means in Turkic languages 'White Mountain', Ak-tagh", see: Blockley, *The History of Menander the Guardsman*, p. 264, n. 129; Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, pp. 235–237.
26. Blockley, *The History of Menander the Guardsman*, p. 119.
27. Blockley, *The History of Menander the Guardsman*, p. 119.
28. Blockley, *The History of Menander the Guardsman*, pp. 125–127, 171, 267.
29. Blockley, *The History of Menander the Guardsman*, pp. 155–157.
30. Turxanth was not a personal name but a title, *Turk shad*. A *shad* was a governor appointed by the khagan, a member of the ruling clan and often one of the khagan's brothers or sons.
31. Blockley, *The History of Menander the Guardsman*, pp. 177–179. Unlike Valentinus, the Chinese ambassador Wang King steadfastly refused to follow the barbarous custom when he was present at the funeral of Muqan Khagan in 572: Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, p. 240.
32. Blockley, *The History of Menander the Guardsman*, pp. 179, 225, 277ff.
33. Theophylact Simocatta, *The History*, Book V, 10.13f, p. 146.
34. Stark, *Die Alttürkenzeit*, p. 243.
35. The Byzantine historian Theophanes the Confessor identifies the Turkic commander as Ziebel. Whether Ziebel was in fact Tong Yabghu, as Kljastornyj and Sultanov believe, or a Khazar military leader, as Chavannes suggests, is still a matter of debate. In any event, the mostly Turkic Khazars were vassals of the Göktürks until the mid-seventh century. Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, pp. 252–255; S.G. Kljastornyj and T.I. Sultanov, *Staaten und Völker in den Steppen Eurasiens. Altertum und Mittelalter* (Berlin, 2006), p. 115; Jutta Leskovar and Maria-Christina Zingerle (eds), *Goldener Horizont. 4000 Jahre Nomaden der Ukraine* (Weitra, 2010), p. 154; Theophanes the Confessor, *The Chronicle of Theophanes. Anni mundi 6095–6305 (A.D. 602–813)*, (ed.) and trans. Harry Turtledove (Philadelphia 1982), p. 22.
36. David Christian, *A History of Russia, Central Asia and Mongolia*, vol. I, *Inner Eurasia from Prehistory to the Mongol Empire* (Oxford, 1998), pp. 260, 283f; Theophanes the Confessor, *The Chronicle*, pp. 23–29.
37. Donald Rayfield, *Edge of Empires. A History of Georgia* (London, 2012), pp. 50, 53.
38. Liu Mau-Tsai, *Die chinesischen Nachrichten*, pp. 11ff, 29, 18; Gabriella Molè, *The T'u-yü-hun from the Northern Wei to the Time of the Five Dynasties* (Rome, 1970), pp. xvi, 21.
39. Liu Mau-Tsai, *Die chinesischen Nachrichten*, p. 43.
40. Liu Mau-Tsai, *Die chinesischen Nachrichten*, pp. 38, 460, 518. The building of this temple, however, is no proof that Muqan was a Buddhist; he may simply have wished to win the favour of a Buddha widely venerated in northern China.
41. P.S.G. Kljaštornyj and V.A. Livšic, 'The Sogdian inscription of Bugut revised', in *Acta Orientalia Academiae Scientiarium Hungaricae* XXVI/1 (1972), pp. 69–102, here p. 86. The memorial complex of Bugut, which consisted of the stele placed on

the back of a stone tortoise, a kurgan and a row of more than 270 *balbals*, was possibly dedicated to a prince named Mahan Tegin. Kljaštornyj and Livšic, 'The Sogdian inscription of Bugut revised', pp. 69, 75.

42. Liu Mau-Tsai. *Die chinesischen Nachrichten*, pp. 36ff; Jinagupta remained ten years at the Göktürk court, leaving only in 584.

131. The Church of the East was an autocephalous church with its patriarchate at Seleucia-Ctesiphon, and later Baghdad, representatives of which officially settled in the Chinese capital Chang’an in 635. See pp. 238–41 and Christoph Baumer, *The Church of the East* (London, 2006).
132. Grigori Semenov, *Suyab. Ak-Beshim* (Saint Petersburg, 2002).
133. The Society for the Exploration of EurAsia has been conducting excavations at Novopokrovka II since 2004. To date, architectural remains dating from the sixth to the twelfth centuries have been found, but as yet not the monastery presumed to exist: Philipp Rott and Kolchenko Valery, ‘Novopokrovka II, Kyrgyzstan: Archaeological excavation of a presumed Buddhist site and of a Sogdian and Karakhanid citadel’ (2005–14) available at the Society’s website http://www.exploration-eurasia.com/EurAsia/inhalt_english/projekt_1.htm, last retrieved 25/11/2013.
134. The Church of the East flourished in Semirechie during two distinct periods, the first from the seventh to the eleventh centuries, the second from the early thirteenth to the mid-fourteenth. Reference is made here only to remains belonging to the first period.
135. In addition there are at Ak-Beshim one Christian and one Zoroastrian cemetery. Large Christian cemeteries such as those of Karajigak and Burana, where hundreds of inscribed stones have been found, date from the eleventh to fourteenth centuries. On Buddhist and Christian finds at Semirechie in the Chu Valley see Michail Baskhanov et al., *Arts from the Land of Timur: An Exhibition from a Scottish Private Collection* (Paisley, 2012), pp. 105–109. Baumer, *The Church of the East*, pp. 173ff, 210ff; V.D. Gorjacheva, ‘New findings of the Indo-Buddhist culture in Kyrgyzstan’, in *India and Central Asia (Pre-Islamic Period)* (Tashkent, 2000), pp. 99–106, 283–288, and by the same author, V. VI. Turkic Kingdoms of Eastern Europe

1. R.C. Blockley, *The History of Menander the Guardsman* (Liverpool, 1985), p. 141.
2. See p. 175.
3. Bodo Anke, Laszlo Révész, Tivadar Vida, *Reitervölker im Frühmittelalter. Hunnen – Awaren*

– *Ungarn* (Stuttgart, 2008), p. 55. Walter Pohl, *Die Awaren. Ein Steppenvolk in Europa 567–822 n. Chr.* (Munich, 2002), pp. 99f, 111–115.

4. The Anastasian Wall was a 56-km-long fortification erected by Emperor Anastasios I (r. 491–518) which extended from *ca*. 60 km west of Byzantium from the Black Sea to the Sea of Marmara.
5. Theophanes names the year 619. Theophanes the Confessor, *The Chronicle of Theophanes. Anni mundi 6095–6305 (A.D. 602–813)* (Philadelphia, 1982), p. 12. For the dating to the year 623 see: Pohl, *Die Awaren*, pp. 246f.
6. Pohl, *Die Awaren*, pp. 249–255. Theophanes the Confessor, *The Chronicle of Theophanes*, pp. 22f.
7. Anke, Révész, Vida, *Reitervölker im Frühmittelalter*, p. 56. Thérèse Olajos, 'La chronologie de la dynastie avare de *Baïan*', in *Revue des études byzantines*, tome 34 (Paris, 1976), pp. 153f, 158.
8. Pohl, *Die Awaren*, pp. 286, 289.
9. Pohl, *Die Awaren*, p. 273.
10. Pohl argues rightly that Kubrat originally was a Göktürk and not an Avar vassal, since there is no evidence that the north-eastern Black Sea region was controlled by the Avars at that time. Pohl, *Die Awaren*, p. 273. Theophanes the Confessor, *The Chronicle of Theophanes* (Philadelphia, 1982), p. 55. The term 'Bulgaria Magna' did not qualify the extension of the kingdom but specified that it lay outside the borders of the Byzantine empire. Uwe Fiedler, 'Bulgars in the Lower Danube region. A survey of the archaeological evidence and of the state of current research', in Florin Curta (ed.), *The Other Europe in the Middle Ages. Avars, Bulgars, Khazars and Cumans* (Brill, Leiden, 2008), p. 152, n. 4.
11. Fiedler, 'Bulgars in the Lower Danube region', p. 191. Kljaštornyj considers the Great Bulgarian runic script far older than the Old Turkic one and suggests a common ancestor, which was developed from the Sogdian script in the fourth or fifth century. He does not see any similarities with the Sakan inscriptions at Issyk. S.G. Kljaštornyj, 'Les Points Litigieux dans l'Histoire des Turcs Anciens', in Hans Robert Roemer, Wolfgang-Ekkehard Scharlipp (eds), *History of the Turkic Peoples in the Pre-Islamic Period* (Berlin, 2000), pp. 161f. See Baumer, *The History of Central Asia*, vol. I, p. 206.
12. The date of Kubrat's death is controversial but the year 642, which is sometimes given, must be considered too early since Theophanes states that he died at the time of Emperor Constantine IV. (Co-Emperor 654–68, r. 668–85). Pohl, *Die Awaren*, p. 502. Theophanes the Confessor, *The Chronicle of Theophanes*, p. 55.
13. Theophanes the Confessor, *The Chronicle of Theophanes*, pp. 55f. Batbayan's horde were also called 'Black Bulgars'. Jacques Piatigorsky, Jacques Sapir, *L'Empire khazar, VIIe – XIe siècle* (Paris, 2005), p. 152.

14. Silk was not only easier to transport than the Chinese copper and bronze coins which had a low purchasing power, but the Chinese central governments were notoriously short of copper and couldn’t produce enough coins. For example, during the early Tang dynasty, ‘“minted coins” constituted only 10% of total money supply’. Chang Xu, ‘Managing a Multicurrency System in Tang China: The View of the Centre’, *Journal of the Royal Asiatic Society*, April 2013, p. 223, see also pp. 239f..

18. Albert E. Dien, ‘Caravans and Caravan Leaders in Palmyra’, in La Vaissière and Trombert, eds, *Les Sogdiens en Chine*, p. 195. This information refutes Valerie Hansen’s unfounded claim that the trading caravans were insignificantly small and economically of no importance. Valerie Hansen, *The Silk Road. A New History* (Oxford, 2012), pp. 3, 235. The relatively small finds of Sassanid and especially Byzantine coins within China also do not provide any evidence for a lack of trade since the trade was conducted on a barter basis and the gold coins, which were of no monetary value in China, were melted down. François Thierry, Cécile Morrisson, ‘Sur les monnaies byzantines trouvées en Chine’, in *Revue numismatique*, 6e série 36 (1994), pp. 109, 119f, 131.

50. Mackerras, *The Uighur Empire*, p. 9.
51. Mackerras, *The Uighur Empire*, p. 13.
52. The duration of the Samanid dynasty may be dated differently: while four Samanid brothers were already appointed in 819 as governors of four Central Asian cities and their regions, the Samanid state received Caliphal recognition only in 875. The Karakhanids effectively broke up the Samanid Dynasty in 999, but a brother of the last Samanid ruler waged war against the new occupants until his death in 1005. See Baumer, *The History of Central Asia*, vol. III, *The Age of Islam and of the Mongols*, 2016.
53. Only Buddhism did not truly manage to establish itself in Sogdiana.
54. For Sogdian fire temples see: Galina A. Pugachenkova 'Un temple du feu dans le «Grand Sogd»' in Frantz Grenet, (ed.), *Cultes et monuments religieux dans l'Asie Centrale préislamique* (Paris, 1987), pp. 57–60.
55. Unlike in Sogdiana with its multitude of divinities, in Sassanid Iran only about five divinities are represented. Frantz Grenet, 'Iranian Gods in Hindu Garb. The Zoroastrian Pantheon of the Bactrians and Sogdians, Second–Eighth Centuries', *Bulletin of the Asia Institute*, vol. 20, 2006, pp. 89, 96, n. 3.

58. Several of the episodes from the life of the hero Rustam illustrated in Panjikant are also found in the *Shah-name*, the epic by Firdausi (*ca.* 940–1020).
59. Franz Grenet, 'Le zoroastrisme a-t-il été l'une des religions de l'Asie Centrale?', *Religions & Histoire*, nr. 44, 2012, p. 48.
60. Compareti, *The Indian Iconography of the Sogdian Divinities*, p. 177–197. Grenet, 'Iranian Gods in Hindu Garb', p. 92. Marshak and Negmatov, 'Sogdiana', p. 253. Markus Mode, 'Die Religion der Sogder im Spiegel ihrer Kunst', in K. Jettmar and E. Kattner, eds, *Die vorislamischen Religionen Mittelasiens* (Stuttgart, 2003), pp. 146–177.
61. The nimbus was not necessarily a divine attribute for the Sogdians but emphasised supernatural power. Frantz Grent, Guangda Zhang, 'The Last Refuge of the Sogdian Religion: Dunhuang in the Ninth and Tenth Centuries', *Bulletin of the Asia Institute*, vol. 10/1996, p. 179. The same is true for the bronze belt buckles of the Yenisei Kyrgyz from the ninth to the tenth century. Represented on them are equestrian warriors with nimbus but these are hardly Buddhist or Manichaean holy men but rather warriors with supernatural power. A.Y. Borisenko, Y.S. Hudiakov, 'Representations of warriors on early medieval Turkic bronze plaques from Eastern Central Asia', *Archaeology, Ethnology and Anthropology of Eurasia*, vol. 36, no. 4, December 2008, pp. 47, 51.
62. See above in this volume, pp. 246f.
63. Mode, 'Die Religion der Sogder im Spiegel ihrer Kunst', pp. 172f.
64. Compareti, *The Indian Iconography of the Sogdian Divinities*, pp. 190–192.

66. Mode, 'Die Religion der Sogder im Spiegel ihrer Kunst', p. 172. This explanation seems to be confirmed by Marshak's interpretation of the winged camel as hypostasis of Verethraghna and/or Vashagn. Boris Marshak, *Silberschätze des Orients. Metallkunst des 3.–13. Jahrhunderts und ihre Kontinuität* (Leipzig, 1986), p. 299.
67. Frantz Grenet, *Vaishravana in Sogdiana. About the Origins of Bishamon-ten* (Kamakura, 1995/96), p. 279.
68. Mode, 'Die Religion der Sogder im Spiegel ihrer Kunst', p. 155
69. See Baumer, vol. I (2012), pp. 108, 112. Guitty Azarpay, *Sogdian Painting: The Pictorial Epic in Oriental Art* (Berkeley, 1981), p. 135.
70. Frantz Grenet, 'Mary Boyce's Legacy for the Archaeologists', *Bulletin of the Asia Institute*, vol. 22, 2008 (Bloomfield Hills), p. 33, fig. 5.
71. The relationship of the Sogdian Nana to the Iranian goddess Anahita remains unclear. Richard Frye stated: 'Anahita in Sogdiana was distinguished from another female deity Nane or Nanaia, but the relation of these two deities to each other and to the old belief in a mother goddess are both unknown.' Richard Frye, *The History of Ancient Iran* (Munich, 1983), p. 231. See also: Marshak, *Silberschätze des Orients*, p. 242, n.5.
72. See Baumer, *The History of Central Asia*, vol. I (2012), p. 293.
73. Madhuvanti Ghose, 'Nana, the "Original" Goddess on the Lion', *Journal of Inner Asian Art and Archaeology*, vol. 1, p. 102. See also: Mode, 'Die Religion der Sogder im Spiegel ihrer Kunst', p. 154.
74. For illustrations see Boris Marshak, *Legends, Tales and Fables in the Art of Sogdiana* (New York, 2002). The earliest monumental mural of Panjikant, a princely hunting scene, was in a palace at the northern foot of the citadel. In the Iranian cultural sphere such royal and princely hunting scenes did not have a profane but a ritual meaning. They illustrated that the ruler who hunted successfully possessed the divine charisma, *farn*. Boris Marshak, Valentina Raspopova, 'A Hunting Scene from Panjikent', *Bulletin of the Asia Institute*, vol. 4, 1990, pp. 77, 80.
75. See Baumer, *The History of Central Asia*, vol. I (2012) p. 248.
76. The popularity of the legend of the Capitoline Wolf suckling the two boys can also be seen from the finds of a gold bracteate (single-side coin or medal) of local origin in Panjikant and a gold medallion in Ahangaran, Čač, which contain the same motif. Valentina Raspopova, 'Gold coins and bracteates from Pendjikent', in Michael Alram, Deborah E. Klimburg-Salter, eds, *Coins, Art and Chronology*, vol. I, pp. 454–457, figs. 8, 12.
77. Marshak, 'The Tiger, Raised from the Dead', pp. 210f. It seems that in the two fragments from the same house the fourth brahmin with common sense is either missing or lost.
78. Aleksandr Naymark, *Returning to Varakhsha*. (Saratoga, 2003), pp. 15f.
79. Vladimir Sokolovsky, *Monumentalnaia zhivopis VIII-natchala IX veka dvortsovogo kompleksa Bundzhikata, stolitsi srednevekogo gosudarstva ustrushni* (St Petersburg, 2009). 87. Mark Dickens, 'Patriarch Timothy I and the Metropolitan of the Turks' (London, 2010), p. 119.
88. Mark Dickens, 'Patriarch Timothy I', p. 119. It is not known whether the patriarch really put his intentions to nominate a metropolitan for Tibet into practice. This archdiocese would have probably been situated in Dunhuang, which at that time belonged to Tibet and where Nestorian written documents were kept. Baumer, *The Church of the East*, p. 174
89. Richard Frye, *Al-Narshakhi's The History of Bukhara*. Translated from the Persian Abridgement of the Arabic Original by Narshakhi (Princeton, 2007), p. 111. Moqaddisi Muhammed ibn Ahmed al-. *Kitab ahsan at-taqasim fi ma'arifat al aqalim* (985). In: De Goeje M.J. (ed.) Bibliotheca geographorum arabicorum, vol. 3: Descriptio imperii moslemici

(Leiden, 1906), p. 275. Al-Narshakhi gives the spring 893 as date for the conversion of the church of Taraz; al-Moqaddisi has for the conversion of the church of Merke no date, but it must have happened around the same time.

90. Mark Dickens, 'Patriarch Timothy I', pp. 130f.
91. The excavations were carried out by the *Society for the Exploration of EurAsia*. Alexei Savchenko, *Urgut, Uzbekistan. Excavation of a Christian monastery* (Hergiswil, 2005–09). http://www.exploration-eurasia.com/EurAsia/inhalt_english/frameset_projekt_2.html
92. Ibn Hawqal, *La Configuration de la Terre* (Paris, 2001), intr. and trans. J.H. Kramers and G. Wiet, vol. II, p. 478. Because of an error, probably made by a copyist, this translation has 'Wazkarda' instead of 'Warkudah'. Alexei Savchenko, Mark Dickens, 'Prester John's Realm. New Light on Christianity between Merv and Turfan' in Erica Hunter, (ed.), *The Christian Heritage of Iraq* (Piscataway, 2009), pp. 127f.
93. Ibn Hawqal, *La Configuration de la Terre* (Paris, 2001), vol. II, p. 485. Instead of 'Winkard' it should be 'Weshgird'.
94. It is still unclear whether the allegedly Christian settlement of Qarshovul (modern name) is identical with Weshgird. Alexei Savchenko, *Qarshovul. Archaeological investigation of a medieval city in the Oasis of Chach (Tashkent)* (Hergiswil, 2011–14). http://www.exploration-eurasia.com/EurAsia/inhalt_english/frameset_projekt_7.html
95. Baumer, *The Church of the East*, p. 172.
96. The name 'Melkite' derives from the Syriac 'malkā' which means 'king'. The Melkite Church consisted of the three near-eastern Byzantine-Orthodox patriarchates of Antioch, Jerusalem and Alexandria which shared the Chalcedonian Creed and were in union with the Byzantine-Orthodox Patriarchate of Constantinople.
97. The Catholicosate of Romagyris depended from the Byzantine-Orthodox Patriarchate of Antioch. It came into existence following the mass-deportation of Melkite Christians by Caliph al-Mansur when he decided in 762 to clear the area of Baghdad of Christians for the construction of his new capital. The Melkite Christians and their catholicos were deported to Čač. Baumer, *The Church of the East*, pp. 99f, 177f. Wassilios Klein, 'Das orthodoxe Katholikat von Romagyris in Zentralasien', *Parole de l'Orient*, vol. 24, 1999, pp. 235–265, here pp. 240, 242, 252, 259. 108. A heterogram expresses a word (here Ilkhshid) by writing it (MLK) in an older script (Aramaic) and not in the current target language (Sogdian).
109. E.V. Zeimal, 'The Circulation of Coins in Central Asia during the Early Medieval Period (Fifth–Eighth Centuries A.D.)', *Bulletin of the Asia Institute*, vol. 8, 1994, pp. 245–267, here pp. 247–253. See also: François Thierry, *Monétarisation de la société Türke*, in La Vaissière and Trombert, eds, *Les Sogdiens en Chine*, pp. 406–410.
110. The following discussion is based largely on Markus Mode's research: *Sogdier und die Herrscher der Welt* (Frankfurt am Main, 1993). *Court art of the Sogdian Samarkand in the 7th century AD* (Halle, 2002). http://www.orientarch.uni-halle.de/ca/afras/index.htm
111. A Sogdian inscription on the back of the man's neck calls him Varkhuman, but because of the low rank of the depicted legation it can be ruled out that Varkhuman asked to be represented as a supplicant in a subordinate position in his own palace. The inscription was probably made later, after Varkhuman's death. Markus Mode, *Sogdier und die Herrscher der Welt*, pp. 58f, 70. *Court art of the Sogdian Samarkand in the 7th century AD/Who is the figure no. 4 of the western wall?* (Halle, 2002). http://www.orientarch.uni-halle.de/ca/afras/text/w4amyst.htm
112. Richard Frye, *The Golden Age of Persia* (London, 1993), pp. 66f.
113. See Baumer, *The History of Central Asia*, vol. 1, p. 276.
114. Abu Ja'far Muhammad ibn Jarir al-Tabari, *Chronique*, vol. III (Paris, 1871), pp. 506–511. The dating of these events which is handed down by al-Tabari, around 644, before Caliph Omar's death, is erroneous. See also Markus Mode, *Sogdier und die Herrscher der Welt*, pp. 54–57.
115. It is possible that the relatively frequent depictions of sacrificial horses in an early medieval Zoroastrian context in Central Asia goes back to Turkic influence. Amruddin Berdimuradov, Genadii Bogomolov et al., 'A New Discovery of Stamped Ossuaries near Shahr-I Sabz (Uzbekistan)', in *Bulletin of the Asia Institute*. vol. 22/2008 (Bloomfield Hills), p. 139.

120. Frye, *The Golden Age of Persia*, p. 62.
121. Frye, *The Golden Age of Persia*, p. 70.
122. Frye, *The Golden Age of Persia*, p. 75.
123. *Mawarannahr* literally means 'what' (ma) lies 'beyond' (wara'a) 'the river' (an-nahr). The river which is alluded to in the name Mawarannahr is the Oxus which the Arabs called Jayhun, probably derived from the biblical Gihon, one of the four rivers of the Garden of Eden. Genesis 2.13.
124. The Islamic calendar begins with the *hijrah,* Mohammed's flight from Mecca to Medina, which corresponds to the 16 July 622 of the Gregorian calendar. Since the Islamic year is a moon year, its beginning shifts every year in relation to our sun year. This is why an Islamic year without designation of a month can almost never be matched with a single Gregorian calendar year. The acronym AH stands for Anno Hegirae. The approximate conversion formula is: Gregorian year = AH x 32 / 33 + 622.

20. Liu Mau-Tsai, *Die chinesischen Nachrichten zur Geschichte der Ost-Türken (T'u-Küe)*, p. 172.
21. As long as only aspects of Buddhism appealed to members of the Turkic elite, as for example Taspar Khagan at the end of the sixth century, its influence remained marginal. But as soon as it reached the people, it had the ability to change a whole society, as can be seen clearly in Mongolia between the seventeenth and the early twentieth centuries.
22. Peter Golden, 'Zentralasien im 6.–11. Jh.', in Jan Bemmann, (ed.), *Steppenkrieger. Reiternomaden des 7.–14. Jahrhunderts aus der Mongolei* (Darmstadt, 2012), pp. 27–52, here p. 36. Skaff, *Sui-Tang China and Its Turko-Mongol Neighbors*, p. 114.
23. See above p. 183.

28. The names of Bilge Khagan's successors only exist in Chinese transcriptions, and the information about their years of reign is contradictory. According to the *Jiu Tang Shu*, Yiran Khagan only reigned briefly in 734 and was succeeded by his younger brother Tengri Khagan (r. 734–41). But according to the *Xin Tang Shu* Yiran Khagan ruled until 740 and Tengri Khagan only from 740 to 741. Liu Mau-Tsai suggests the hypothesis that Bilge's widow had Yiran Khagan (who according to the *Jui Tang Shu* died of an illness) poisoned and pushed the minor Tengri Khagan on to the throne in order to become regent herself; at the same time she kept Yiran Khagan's death secret from the Chinese until 740. Liu Mau-Tsai, *Die chinesischen Nachrichten zur Geschichte der Ost-Türken (T'u-Küe)*, pp. 179f, 229f, 621–29, n. 1001.

As Sören Stark surmises, the Sogdians, who provided an elite corps in the heavy cavalry of the Türgesh, left Semirechie during the amnesty proclaimed in 741 by the Arab conquerors of Sogdiana and returned to their homeland. Stark, 'On Oq Bodun', pp. 168f.

IX. China, Tibet and the Arabs: the Struggle for Supremacy in Central Asia

1. *Xin Tang Shu*, Chapter 216A, 4a, in Paul Pelliot, *Histoire ancienne du Tibet* (Paris, 1961), p. 89.
2. Songtsen Gampo's father Namri also has a claim to be considered the founder of the Tibetan Empire, but many of the territories he had conquered were lost to Tibet on his death in 617/18. The date of Songtsen Gampo's accession is disputed, being variously said to be 618, 627 or 629. Likewise uncertain are claims that Songtsen Gampo abdicated in favour of his son Gungsong Gungtsen (r. 641–46?), only to return to the throne on the latter's death. Christopher Beckwith, *The Tibetan Empire in Central Asia* (Princeton, 1987), pp. 19ff, n. 31; Tsepon W.D. Shakabpa, *Tibet, a Political History* (New York, 1984), p. 25; David Snellgrove and Hugh Richardson, *A Cultural History of Tibet* (Boston, 1986), p. 27.
3. As early as 608, a Turkic army had inflicted a heavy defeat on the Tuyuhun, at Chinese urging: Beckwith, *The Tibetan Empire*, p. 18.
4. *Jiu Tang Shu*, Chapter 196A, 2a, in Pelliot, *Histoire ancienne du Tibet*, p. 4; *Xin Tang Shu*, chapter 216A, 2b, in Pelliot, pp. 82f.
5. Beckwith, *The Tibetan Empire* pp. 21–23.
6. Christoph Baumer, *Tibet's Ancient Religion, Bön* (Trumbull, CT, 2002), pp. 106–112; Philip Denwood, 'The Tibetans in the West, Part I', *Journal of Inner Asian Art and Archaeology* 3/3 (2008), pp. 10–21, here pp. 10–12.
7. Baumer, *Tibet's Ancient Religion, Bön*, pp. 53–55, 85ff.
8. Near the great necropolis of Dulan lay the stronghold of the Gar family and 'Azha's seat of government: Christoph Baumer and Therese Weber, *Eastern Tibet: Bridging Tibet and China* (Bangkok, 2005), pp. 60–65; Amy Heller, 'Two Inscribed Fabrics and their Historical Context: Some Observations of Esthetics and the Silk Trade in Tibet, 7th to 9th Centuries', in Karel Otavsky (ed.), *Entlang der Seidenstraße* (Riggisberg, 1998), p. 104.
9. Denwood, 'The Tibetans in the West. Part I', pp. 10–12.
10. *Jiu Tang Shu*, Chapter 196A, 2b in Pelliot, *Histoire ancienne du Tibet*, p. 6; David Snellgrove, *Indo-Tibetan Buddhism: Indian Buddhists and Their Tibetan Successors* (London, 1987), p. 416.
11. *Jiu Tang Shu*, chapter 196 A, 2b, in Pelliot, *Histoire ancienne du Tibet*, p. 6.
12. Beckwith, *The Tibetan Empire*, pp. 109ff.
13. Baumer and Weber, *Eastern Tibet*, p. 31. The Gar clan may have originated among the 'Lesser Yuezhi' who after the Yuezhi's historic defeat in 162 BCE took refuge among the Qiang of Qinghai: Hugh Richardson, *Ministers of the Tibetan Kingdom* (London, 1998), p. 60.
14. Beckwith, *The Tibetan Empire*, pp. 27–31; Edouard Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux* [1903] (Paris, 1941; repr. Taipei, 1969), p. 179, n. 1.
15. As China then held Khotan, Kucha and Aksu, the Tibetan line of approach represents something of a puzzle. The Tibetans must either have first crossed Baltistan, Gilgit and the Wakhan, as Beckwith thinks, then attacked Kashgar from the south; or, as Denwood would have it, advanced from the Koko Nor to Miran, then north to the Tarim river, to follow that upstream to the confluence of the Kashgar Darya, then attacking Kashgar from the east: Beckwith, *The Tibetan Empire*, p. 30; Denwood, 'The Tibetans in the West, Part II', *Journal of Inner Asian Art and Archaeology* 4/4 (2009), p. 151.
16. Beckwith, *The Tibetan Empire*, pp. 34–36; Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, p. 280.
17. John Hill, 'Notes on the dating of Khotanese history', *Indo-Iranian Journal* 31/3 (1988), pp. 179–190, now available (with minor modifications, 2011) at http://www.academia.edu/453864/Notes_on_the_Dating_of_Khotanese_History, pp. 2 and 6 (last retrieved 25/11/2013). Kerihuel dates his period in office to after 676/77: Thomas Kerihuel, 'The early history of mGar: When history becomes legend', *Revue d'Études Tibétaines* 21 (October 2011), p. 109, also available at http://himalaya.socanth.cam.ac.uk/collections/journals/ret/pdf/ret_21_06.pdf (last retrieved 25/11/2013).
18. Beckwith, *The Tibetan Empire*, pp. 40–43, n. 22, 201.
19. The Chinese possessions in Xiyu – the Western Regions – were colonies in the modern sense. They fell unambiguously outside the Chinese Empire proper, travel in either direction between China and Xiyu being subject to permit. In matters of foreign policy especially, the city-states of the Tarim Basin were under the control of the Chinese Protector-General, who could at any time call on the resources of the Chinese *tuntian* military colonies.

87. Zieme, *Das uighurische Königreich von Qočo*, p. 205.
88. To reconstruct the history of the Kocho Uyghurs we have to rely on scarce Chinese sources. The Kocho Uyghurs and the successor states of the Tang dynasty, in which chronicles were written, did not possess a common border so that only the arrival of Uyghur embassies was noted in writing. Muslim sources, for their part, did not have any interest in a non-Muslim state, and during islamisation the Uyghur documents were destroyed. Sinor, Geng, Kychanov, 'The Uighurs, the Kyrgyz and the Tangut (eighth to the thirteenth century)', p. 200.

Acknowledgements

This book is based on dozens of expeditions and journeys undertaken in the last three decades. My research was successful only thanks to hundreds of kind people in China, India, Iran, Iraq, Kazakhstan, Kyrgyzstan, Mongolia, Pakistan, Russia, Tajikistan, Tibet, Turkmenistan, Ukraine and Uzbekistan; to all of them I remain grateful. The book itself was produced with the help of many people. A few preferred to remain anonymous; others are briefly acknowledged here, in alphabetical order:

Prof Dr Michael Alram, Vienna, who gave me valuable references to issues related to the Chionites and Kidarites.

Prof Dr Aiman Docembaeva, Almaty, who shared her photographs and knowledge on Turkic stone figures from Astana and Zhaysan in Kazakhstan.

Prof Dr Peter Golden, Piscataway, who clarified an issue concerning Marwan's advance into Khazaria in 737 CE and who put me in touch with Prof Dan Shapira.

Dr Michael Henss, Zurich, and **Dr Kurt Tropper, Vienna**, who helped me in identifying a mural from the Khorlam of the Serkhang in Shalu, Central Tibet.

Mrs Ursula Käser, Münchenstein, who carefully reviewed the initial German manuscript.

Prof Dr Markus Mode, Halle, who helped identify scenes on the house-sarcophagus of An Jia, dated 579 CE, of a Sogdian mural from Panjikant discovered in 2003 and of the reconstructed murals in the palace of Kala-i Kahkaha I in Bunjikat, Tajikistan.

Dr Silvia Pozzi, Udine, who kindly put her not yet published research on the Sesen- or Gayomard-amulet from Vardana at my disposal and who gave several valuable indications concerning the archaeology of Vardana.

Mr Jürg Rageth, Riehen, for the interesting discussions around the topic of Sogdian and Sassanian patterns on textiles and in paintings.

Dr Regula Schorta, Riggisberg, who gave very valuable indications concerning the origin of medieval textiles found in the region of Dulan, Eastern Tibet.

Prof Dr Dan Shapira, Jerusalem, who translated two funeral inscriptions in Hebrew from Mangup Kale, Crimea.

Prof Dr Sören Stark, New York, who advised me on the correct provenance of the Türgesh and drew my attention at the architectural parallels between the sites of Sanjar Shah, Sangyr Tepe and Hodzha-Adzhvandi Tepe.

Prof Therese Weber, Hergiswil, who joined several journeys and expeditions and helped clarify questions relating to ancient paper and textiles.

Introduction 1

I. Iranian-Muslim Dynasties in South-West Central Asia 3

1. Socio-religious Conflicts under Early Abbasid Rule 5

Excursus: *The Most Important Early Islamic Denominations* 6

The Sunnis 6

The Shi´ites 9

The Kharijites 10

2. The Barmakids and Tahirids 15

3. The Saffarids 23

4. The Samanids 25

II. Central Asian Pioneers of Islamic Philosophy and Sciences 33

1. Early Scientists and Philosophers 34

2. The Golden Age of Science and Philosophy 42

3. On Astronomy and Towards a Theory of Evolution 48

4. An Anti-rationalist Counter-movement 50

III. The Second Turkic Migrations to the West 53

1. The Pechenegs 56

2. The Oghuz 59

3. The Kipchaks 66

Excursus: *Turkic-Kipchak Equestrian Warriors in the Service of the Christian Kingdom of Georgia* 73

IV. Turco-Muslim Dynasties in Southern Central Asia 79

1. The Great Seljuks 80

Excursus: *The Ismailis of Alamut in the Seljuk Empire* 94

2. The Karakhanids 102

2.1 The Unified Khaganate 103

2.2 The Western Khaganate 105

2.3 The Eastern Khaganate 106

3. The Ghaznavids 108

4. The Ghurids 119

5. The Ma'munids, Altuntashids and Anushteginids of Chorasmia 127

V. Buddhist States of the Liao, Qara Khitai and Tanguts 137

1. The Liao Dynasty 138

2. The Qara Khitai, Central Asian Successors of the Liao 144

3. Minyak, the Tangut Empire 151

Excursus: *Pyotr Kozlov Discovers Khara-Khoto* 158

VI. The Rise of the Mongols 163

1. Sources for the History of the Mongols 164

2. Mongol Tribes in the Mid-twelfth Century and the Ancestors of Genghis Khan 169

3. Genghis Khan and the Creation of a Mongol Nation 174

4. Genghis Khan's International Campaigns 178

VII. The United Mongol Empire 193

1. Great Khan Ögödei and the Construction of Karakorum 194

2. The Regency of Töregene and Great Khan Güyük 203

Excursus: *Spies, Diplomats and Missionaries: The Franciscan Monks Giovanni da Pian del Carpine and William of Rubruck* 207

3. Möngke, the Last Great Khan of the United Mongol Empire 212

VIII. The Independent Mongol Khanates 221

1. A Battle of Brothers 222

2. The Chinese Yuan Dynasty 222

2.1 Kublai Khan 222

2.1.1 A Hybrid Model of Government and Cultural Exchange with the West 223

Excursus: *Kublai Khan and the Polos* 227

2.2 Kublai's Successors and the End of the Yuan Dynasty 236

2.3 Withdrawal to Mongolia and Establishment of the Northern Yuan Dynasty 238

3. The Chagatai Khanate 239

3.1 The Chagatai Khanate as Vassal of the Ögödeid Kaidu 240

3.2 The Khanate Regains its Independence 243

3.3 The Division of the Khanate 247

4. The Il-Khanids in Iran 249

4.1 The Non-Muslim Il-Khans 249

Excursus: *Rabban Bar Sauma and Rabban Markos: Nestorian 'Marco Polos' from Asia* 255

4.2 The Muslim Il-Khans 256

4.3 The Cultural Legacy of the Il-Khanids 259

5. The Golden Horde 262

5.1 The Blue Horde of Batu Khan 263

5.2 The White Horde of Orda Khan 270

IX. Timur-e Lang and the Timurids 277

1. Timur-e Lang's Military Campaigns 278

Excursus: *Two European Eyewitnesses: Ruy González de Clavijo and Johannes Schiltberger* 288

2. Timur's Successors: the Timurids 292

3. Timurid Art and Architecture 301

X. Outlook 307

1. The *Miraj Nameh,* the account of the Prophet Muhammad's midnight journey and ascension to Paradise, tells how, on arriving at the First Heaven, he met Adam, father of the human race. According to tradition and inspired from *surahs* 17 and 53 of the Qur'an, Muhammad made his journey in 621 CE, mounted on Buraq, a winged horse with a human face. The Archangel Gabriel guided horse and rider from Mecca to Jerusalem and then on through the Seven Heavens, Paradise and Hell. The description of the Prophet's ascension is written on the inner edge of the picture frame in Chagatai, a widespread Turkic language of Central Asia under the Timurids, in Arabised Uyghur script. Manuscript on paper produced in Herat in 1436/37 by the calligrapher Malik Bakhshi for Shah Rukh (r. 1409–47). Bibliothèque nationale de France, Paris, manuscrit suppl. Turc 190, fol. 9v.[1]

Introduction

Just as God has given the hand several fingers, so he has given mankind several paths.

GREAT KHAN MÖNGKE explains Mongol religious policies to the Franciscan William of Rubruck in 1254.[1]
By 'several paths' he means several religious messages.

Between the ninth and the fifteenth centuries, Central Asia was an important political, economic and cultural hub on the Eurasian continent; in the first half of the thirteenth century it was the pre-eminent centre of power. The most important factors that led to the hegemony of Central Asia were the ideology of Islam and its development through engagement with Iranian culture, the flourishing of the sciences, the spread of Turkic-Muslim peoples and dynasties, the perfection of mobile warfare by the Mongols and their encouragement of trade. The political and military dominance of Central Asia in the thirteenth century was helped by relatively weak adversaries on the outer borders of the Mongols, and by the inability of European states and Russian city-states to combine their forces and adapt to the Mongols' military tactics. The Mongol aggressors formed a freshly unified nation, while Europe remained a hotchpotch of kingdoms and principalities frequently at war with each other.

When the armies of the Arabs, strengthened by warriors from Mesopotamia and Iran, conquered south-western Central Asia, they brought with them Islam, a religion that offered many advantages. Islam was easy to understand and follow and was open to people from all social classes. But even more decisive was the fact that it offered rulers an ideological tool to break down the borders between clans and tribes. Turkic tribal leaders in particular used Islam to commit their heterogeneous followers to a shared system of beliefs and to found and establish new dynasties (such as those of the Seljuks, Karakhanids or Ghaznavids). Another, crucial advantage of Islam lay in the summons to *jihad*, the holy war against unbelievers, which newly converted rulers and their horse warriors reinterpreted as a licence for raids on their non-Muslim neighbours. Although it was Arabs who conquered the south-west of Central Asia, the local dynasty of the Samanids, who were of Iranian origin, soon took over and freed Islam from the straitjacket of Bedouin ideas. At the same time, Central Asian and Iranian dynasties of officials in the Muslim caliphate of the Abbasids, such as the Barmakids and Buyids, usurped power and began to restrict the authority of the caliphs, the representatives of the Prophet, to religious affairs. Between the middle years of the eighth and eleventh centuries, humanities and sciences flourished, especially the exact sciences like mathematics, algebra, geometry, astronomy, geography and medicine, whose advances were quite unparalleled. This was a time when the window for new discoveries in the Muslim-Iranian world[2] was wide open, for Islam as shaped by the open-minded tolerance of the Iranians set few limits on intellectual curiosity or on the translation of works from classical Antiquity, long forgotten in Latin Europe, and from India. This same liberal spirit could be found among the rulers, high dignitaries and rich merchants at the time, who supported scientists and philosophers and created large libraries, similar to today's oligarchs building up extensive art collections or financing sports teams.

In the mid-eleventh century Central Asian hegemony spread across the Muslim world thanks to the Turkic Seljuks. The eastern Iranian book (knowledge and scholarship) and the Turkish sword (Turkic armies) now combined to dominate the Abbasid caliphate. This balance was brought to an abrupt end by Genghis Khan and his successors, when they overran and destroyed the Chorasmian-Abbasid world between 1219 and 1258. The Mongol conquerors and later Timur-e Lang treated captives and civilians with extreme brutality – for them the life of a non-Mongol was worth considerably less than that of a horse. Unlike their Muslim predecessors, the Mongols were not driven by any religious motivation. They were secular rulers who used whatever ideology served their purposes best. This also meant that they lacked any worldview that could sustain the creation of a new state, and their cultural and political footprint remained small – in contrast to the Muslim Arabs whose legacy spread throughout the world. On the other hand, the Mongols granted religious freedom, on condition that religious practices did not violate the laws of Genghis Khan.

Genghis Khan's family regarded the Mongol conquests as a kind of family possession, and even more than a century after the death of the conqueror nobody was allowed to assume the title of khan unless he was related to Genghis. While Genghis Khan's descendants, especially the dynasties of the Yuan in China and the Il-Khanids in Iran, tried to create an orderly system of government within their sphere of influence, Timur-e Lang, a century later, gave no administrative structure to the territories he conquered. As a result, very soon after his death his realm was broken up into warring dynasties led by his various sons and grandsons.

The age of the Mongols saw a great increase in contacts between Central Asia and Western Europe. On a political level, the Mongol forays into Eastern Europe and Syria confronted the Latin princes and Crusaders with the problem of dealing with the 'Tartar' threat. But at the same time the fact that the Mongol elite, and even Genghis Khan's family, included a considerable number of Nestorian[3] Christians, seemed to promise fertile ground for the Roman Catholic Church. And Mongol support of commerce encouraged Latin merchants to trade with Asians. The Italian mercantile republics, with their own warships and merchant fleets, were particularly active. It is remarkable that the Mongol Il-Khanids, when they encountered their first equal adversary in the Near East in the form of the Egyptian Mamluks, radically changed their strategy towards the Latin kings and popes in the 1270s: before they had behaved like arrogant conquerors, demanding unconditional submission – as God willed – from the Latins, but now they became supplicants and tried to enter into military alliances with the Latin powers against the Mamluks. The resulting flurries of diplomatic contacts did not yield any concrete results, but now there was at least a regular exchange between Central Asia and Western Europe, something which had a significant influence on the development of geographical knowledge, art and textiles in the West.

As in the previous two volumes of the present work, Arabic, Turkic, Mongolian and other Asiatic place and personal names are rendered in linguistically correct transcriptions while mostly omitting diacritical signs. For Chinese names, the Pinyin phonetic system for transcription is used.

I

Iranian-Muslim Dynasties in South-West Central Asia

'I am the son of the noble descendants of Jam [the mythological king of Iran, Jamshid], and the inheritance of the kings of Persia has fallen to my lot. [. . .]

I am reviving their glory, which has been lost and effaced by the long passage of time.

So say to all the sons of Hashim [the Abbasids], "Abdicate quickly, before you have reason to feel sorry! [. . .] Return to your country in the Hijaz [the Prophet's homeland in Arabia], to eat lizards and graze sheep."'

YAQUB IBN AL-LAYTH AL-SAFFAR (r. 861–79), founder of the Saffarid dynasty of eastern Iran.[1]

2. **The prayer hall of the mosque in Damghan, Iran, built in 760. It stands on the former Silk Road, which led from Samarkand to Mashhad and onwards to Rayy in the province of Tehran, and is one of Iran's oldest surviving mosques. Photo: 2014.**

The mid-eighth century represented a significant turning point for south-west Central Asia, particularly for the areas of today's Uzbekistan, Turkmenistan, western Afghanistan and Khorasan. It formed the conclusion of a transitional period characterised by wars, which had begun with the expeditions of conquest by the Umayyad general Qutaiba ibn Muslim (in office 705–15) in Transoxania, known to the Arabs as Mawarannahr. After the death, in 709, of Khunuk Vardan Khudah, the ruler of Bukhara and Vardana, the capture of the Sogdian prince Dewashtich of Panjikant in 722, the failed attempts to regain independence by Ghurak, king of Samarkand, who died in 737 or 738, and the murder of Suluk, the khagan of the Türgesh, in 738, no important leaders of Sogdiana or its ally the Türgesh Khaganate emerged to lead the resistance against the Arab invaders.[2]

The resistance of the Sogdian cities was hampered by their own political disunity, which stopped them developing a coordinated defence. An additional complication was that their actual suzerain, the Chinese Empire under the Tang dynasty, which had wrested supreme power over Transoxania from the Western Turkic Khaganate in the 650s, proved to be a 'paper tiger'. The Sogdian delegations made numerous requests for military aid, but received only verbal promises in return, for in the first half of the eighth century China was involved in a costly war with Tibet. After the victorious Pamir campaigns of the Chinese general Gao Xianzhi in 747 and 749–50, it did look as though China might pursue strategic aims in Mawarannahr too. But the crushing victory of Arab forces led by Ziyad bin Salih in the battle of Talas in July 751 put a damper on Chinese expansionist politics, and four years later the An Lushan rebellion forced Emperor Suzong to recall all the troops stationed in Central Asia to the Chinese heartland.[3] With the fall of the Türgesh and the retreat of the Tang, the last chances of alliance for the Sogdian princedoms also disappeared. Subsequent rebellions in Mawarannahr were no longer struggles for independence from the Muslim caliphate but social and religious revolts by heterodox Islamic movements. Later, in the first half of the ninth century, local governors and military commanders within the *Umma al-Islam*, the global community of Islam, mounted successful attempts at political independence. They ruled independently in south-west Central Asia and, while recognising the spiritual authority of the caliphs, paid them only nominal taxes.

1. Socio-religious Conflicts under Early Abbasid Rule

Sogdian resistance was further undermined by two other developments: on the one hand, the introduction of tax reforms and granting of an amnesty for Sogdians who had taken up arms by governor Nasr ibn Sayyar in 741, and on the other the beginning integration of discontented non-Arab local Muslims, the *mawali*, who suffered from discrimination. The uprisings in Samarkand in 720 and 728 had given a boost to the Murjite movement in the 730s and beyond. The Murjites, led by Harith ibn Surayj and inspired by Shi'ite and Kharijite[4] ideas, fought for the emancipation of native and immigrant Arab Muslims, agitated for tolerance for the theologically uneducated *mawali* and demanded exemption from the special tax known as *djizya*.[5] Since the ruling Umayyads – who ran the caliphate more like a business enterprise dominated by Arab tribes for their own profit than as a community of Muslims with equal rights – were bitterly resented in Mawarannahr, the anti-Umayyad, Abbasid propaganda of Abu Muslim found a receptive audience among local *mawali*. The Abbasids invoked Muhammad's uncle al-Abbas and were thus also able to mobilise Shi'ites, who were only prepared to recognise members of the family of Ali, the cousin and son-in-law of the Prophet; the Umayyads on the other hand were considered usurpers by the Shi'ites. Abu Muslim Khorasani (whose last name, ending with 'i', signifies that he came from Khorasan) gathered together the anti-Umayyad forces and from 747 to 748 drove the Umayyad governor Nasr ibn Sayyar out of Central Asia. While securing his power in Khorasan, Abu Muslim sent his general Qahtaba ibn Shabib Ta'i westward, and in the winter of 749–50 the latter overthrew the Umayyads.[6]

The last of the Umayyads, Marwan II, who fled to Egypt, was succeeded as caliph by Abu'l Abbas al-Saffah (r. 749–54), a great-great-grandson of Muhammad's uncle al-Abbas. He founded the Abbasid dynasty, which ruled until it was crushed by the Mongols in 1258. But with the accession of Abu'l Abbas, no descendant of Ali came to power, so that the Shi'ites' hopes were again disappointed and they continued to represent a source of socio-political unrest. For their part, the majority of the Abbasids owed their seizure of power to Abu Muslim and his army; it was not to be the last time that a Central Asian Muslim determined the appointment of a caliph who suited him. At first it was Iranian-speaking politicians who guided the destinies of the caliphate, later Turkic mercenaries and commanders.

The rebellious Abbasids had risen against the Umayyads not only because of their refusal to grant them equality with the Arabs, and in particular with the descendants of the aristocracy of Mecca, but also because they deemed the Umayyads excessively worldly. For the Abbasids, Islam was not only the religion of the ruling Arabs, but also the essential basis of an empire in which all the faithful, that is all Muslims, should enjoy the same status. But this raised a fundamental question – which tendency of Islam should serve as the basis of the state? For only a generation after the death of the Prophet in 632, three mutually hostile Islamic religious denominations had emerged: the Sunnis, the Shi'ites and the Kharijites. When the Abbasids took power, no monolithic Islam had existed for a century. Before seizing power, the Abbasids' propaganda had skilfully left open the question of what was the 'real' Islam.

The Most Important Early Islamic Denominations

The close interweaving of religion and politics which characterised Islam from the start accounts for the fact that conflicting sects came into being so soon after the death of Muhammad. For Muhammad was not only a prophet and founder of the religion, but also a military commander, a lawgiver and the leader of all Muslims. When the Prophet died in Mecca in 632, he left behind neither a doctrine of his own composition nor a clear order of succession. As far as the *surahs* (chapters) of the Qur'an are concerned, in Muhammad's lifetime these were mainly learned by heart by public Qur'an readers and passed on by oral tradition. It was only after Muhammad's death that his secretary Zayd ibn Thabit (d. 655) began their transcription on the orders of the first caliph Abu Bakr (r. 632–34). Zayd completed this first manuscript before Abu Bakr's death, after which it passed into the possession of Muhammad's widow Hafsa bint Umar, the daughter of the second caliph, Umar. But since several versions in various dialects were circulating, the third caliph, Uthman ibn Affan (r. 644–56), gave Zayd the task of codifying the Qur'an. Around 650, Uthman issued the text of the Qur'an that is still authoritative today, written in the dialect of the Quraysh tribe, which ruled Mecca – the dialect out of which standard Arabic later developed – and ordered the destruction of all other versions.[7] The enforcement of Uthman's version of the Qur'an provoked unrest among the supporters of other versions, who felt they suffered discrimination. Uthman's version, however, was not entirely conclusive, so the Umayyad minister al-Hajjaj ibn Yusuf (d. 714) brought out a new text which, unlike Uthman's, was vocalised and furnished with diacritic marks.[8] This version of the Qur'an, produced by Uthman and reworked by al-Hajjaj, is recognised by Sunnis and Shi'ites, but not by the Kharijites, who reject individual *surahs* as apocryphal.

Since Muhammad united in his person the roles of religious, political and military leader of the new community of faith, his successors claimed the same functions for themselves. For this reason the question of the succession in the early days of Islam was an eminently political one, which was also resolved by military means. All three main branches of Islam emerged more as a result of political disputes, especially rivalries between leading families, than because of theological considerations. After Muhammad's death, the majority of the Muslim tribal leaders appointed one of his first followers, Abu Bakr (r. 632–34), as caliph; that is, as the Prophet's successor. Abu Bakr was succeeded by two further early followers of Muhammad, Umar ibn al-Khattab (r. 634–44) and Uthman (r. 644–56), and it was from their entourage that the Sunnis emerged. After Uthman's murder by rebels who objected to his nepotism, Muhammad's son-in-law Ali ibn Abi Talib (r. 656–61), who had married the Prophet's daughter Fatima, was appointed the fourth caliph by the rebels. Several notable figures, however, refused to swear loyalty to Ali; the most important of these were Muawiyya, the governor of Syria, a relative of the murdered caliph, and Aisha bint Abu Bakr, the youngest wife of Muhammad. The coalition led by Aisha was defeated by Ali in 656 in the so-called Battle of the Camel.[9]

As the historian al-Tabari reports, Ali committed a decisive error in the Battle of Siffin against Muawiyya in 657: although his army was on the brink of victory, he allowed himself to be duped by a trick of Muawiyya's and persuaded by the latter's ambassador to submit to a court of arbitration. Fearing a certain defeat, Muawiyya had Qur'ans fixed to his soldiers' lances, hoping his opponents would not fight against the holy book.[10] While the arbitration remained without consequences, a significant number of Ali's supporters perceived his agreement to it as a betrayal of Islam and the heritage of the Prophet and turned away from him. For these disillusioned companions of Ali's, arbitration meant yielding to a merely human, imperfect authority, while a victory in battle would have represented the judgement of God. In handing over control of victory, Ali was committing treason against God's verdict. These rebellious supporters were called Kharijites, which in Arabic means 'those who went out', or 'the rebels'. Four years after the Battle of Siffin, the Kharijites, pursued by Ali, planned a double attack on Muawiyya and Ali. Muawiyya (r. 656–80) survived and founded the Umayyad dynasty, but Ali perished.[11] Thus the Shi'ites lost their first imam. By the Battle of Siffin at the latest, the Islamic community had split into three branches, at first primarily distinguished by their conflicting opinions on the rightful succession to the Prophet; later, theological differences also emerged between them.[12]

The Sunnis

The Sunnis form the majority of Muslims. They call themselves *ahl al-sunnah*, which means in Arabic 'people of the tradition' of Muhammad. This tradition *sunnah* consists of the words, actions, habits, practices and tacit approvals of the Prophet as recounted by his companions in the *hadiths*, the 'reports', at first recounted orally and later transcribed and preserved in collections, of which those known as 'six books' enjoy canonical status. All Muslims distinguish quite clearly between God's words, as the Prophet received them in revelations and passed them on as *surahs* of the Qur'an, and Muhammad's own words.[13] The chosen companions of the Prophet include the first four caliphs, Abu Bakr, Umar, Uthman and Ali, who are called by the Sunnis *al-rashidun*, the 'rightly guided ones'. With the fifth caliph, Muawiyya, the caliphate was transformed into a dynastic political system. The Sunnis recognise the *hadiths* as a normative corpus, so that these, after the Qur'an, form the second pillar of their jurisprudence.

▶ 3. Aerial shot of the shrine in Mashhad, Khorasan, Iran of the eighth Twelver Shi'ite imam Ali ibn Musa al-Ridha, who died in 818. The two wide, concentric circular paths were laid in the 1970s. Photo 1976/78.

While the canonical character of the Qur'an and the *hadiths* became generally recognised, divergent versions soon came into being with regard to their interpretation in the context of Islamic jurisdiction. Four traditional schools of jurisdiction, *madhabs*, emerged from these. Since Islamic law knows no actual separation between religious and civil areas of application, the *madhabs* also took on features of religious sects and political interest groups. Of the four groups named after their founders, the **Hanafi**, founded by Abu Hanifa (699–767), form not only the oldest and largest group, but also the most liberal. Abu Hanifa represented an egalitarian Islam, teaching equality of the *mawali* with Arab Muslims. Furthermore, for Abu Hanifa, the *mawali*, who lived in a polytheistic location and knew little or nothing of the Qur'an and the religious duties laid down in *sharia* law, the Islamic legal system, were equally to be considered as true believers, as long as they led a moral life.[14] He also allowed those *mawali* who knew no Arabic to pray in their own language. Methodologically, the Hanafi allowed wide latitude to analogical reasoning which adapted the commandments or judgements found in the Qur'an and the *sunnah* with the help of the understanding of a new situation, leading to the cultivation of independent schools of thought. While the **Shafi'is**, who followed the teaching of Muhammad ibn Idris al-Shafi'i (767–820), also used analogical reasoning for the deduction of legal rules, al-Shafi'i himself largely rejected independent doctrines and moved the *hadiths* into the foreground. It is not surprising that the Hanafi, who saw Arab Muslims and *mawali* as equal, enjoyed by far the greatest popularity in Central Asia.[15]

The two other schools of law were very conservative, strict, and, in the case of the **Hanbali**, elitist. Ahmad ibn Hanbal (780–855) was convinced of the natural superiority of Muslim Arabs, since it was the Arabs who had produced the Prophet and his early travelling companions.[16] In accordance with his dogmatic understanding of Islam, ibn Hanbal rejected analogical reasoning and independent doctrines, and invoked only the Qur'an, the *sunnah* and the consensus of the first generation of Muslims. As a result of the literal exegesis of the Qur'an in the Hanbali school of law, anthropomorphic notions developed, as can be seen from a striking

4. Shi'ite pilgrims make their way along the 850-kilometre-long road from Tehran to Mashhad, Iran. Pilgrims regard enduring the slow, strenuous journey to their destination as an act of merit. The red flag shows from left to right (above) the names Ali, Allah and Muhammad, (below) al-Husain, al-Hasan and Fatima and in the centre Gamar ibn Hashem, brother of the third imam and his general. Photo: 2014.

formulation of Hanbali doctrine of the eleventh century: 'Our God can be seen, is established on his throne; his speech is eternal, his prophet Arab.'[17] The **Maliki** school, founded by Malik ibn Anas ibn Malik (*ca.* 711–95), was led less by the *hadiths* than by the consensus of the first Muslim generations, the ordinances of Caliph Umar and in particular the lifestyle and norms of the first three generations of Muslims who lived in Medina, where the Prophet had been exiled since 622. For Malik ibn Anas the early community in Medina represented a sort of 'living *sunnah*'.

The disagreements between the schools of law were conducted not only on the level of verbal argument, in the form of sermons, disputations and polemical writings, but also as violent confrontations and actual street battles, for example in the eleventh and twelfth centuries in Baghdad. The extent of intolerance within Islam can be recognised from the reply of a leading Hanbali to Vizier Nizam al-Mulk (1018–92), when the latter asked him to conduct himself in more moderate fashion: 'Those people [supporters of the Ash'ari theological school[18]] claim that we are unbelievers, while we claim that anyone who does not believe what we believe is an unbeliever. So how can there be peace between us?'[19]

The Shi'ites

The term Shi'ites denotes the followers of the 'Shi'at Ali', the family of Ali, the son-in-law of the Prophet. On the death of Muhammad, individual tribes and groups opposed the appointment of Abu Bakr as caliph and came out in favour of Ali ibn Abi Talib; but it was only six months later, after lengthy attempts at mediation by Umar, that Ali swore an oath of loyalty to Abu Bakr to preserve the unity of the Muslim community. After the murder of the fourth caliph, Ali, whom the Shi'ites revere as the first imam, and the triumph of Muawiyya, Ali's eldest son al-Hasan (d. 670), the second imam, retired to Medina, as did his younger brother al-Husain (d. 680). But when Muawiyya introduced a hereditary order of succession and designated his son Yazid I (r. 680–83) as his successor, many Iraqi cities rebelled, including Kufa. Al-Husain allowed himself to be deceived by their promises to actively support his legitimate claim to the caliphate, and left for Kufa with his followers. But at Kerbala, before reaching Kufa, al-Husain encountered a strong army led by Yazid, who killed the small band down to the last man.[20] As Katajun Amirpur puts it, al-Husain's lonely martyr's death at Kerbala forms the 'identifying moment of the Shi'ite faith'[21]: al-Husain was killed by his Sunni enemies and betrayed by his Shi'ite followers for lack of the promised support. It is only by their readiness to do penance and suffer martyrs' deaths as followers of al-Husain that Shi'ites believe they can atone for their collective sin at Kerbala. This readiness to atone and suffer where necessary characterises the history of the Shi'ites, and it inspired the Shi'ite Iranians in the revolution of 1978–79 against Shah Mohammad Reza, the 'modern Yazid', as well as in the extremely costly Iran–Iraq War of 1980–88 against the Iraqi aggressor Saddam Hussein, who had massive support from the West, Russia and China.

In principle the Shi'ites do not recognise a separation between political and religious power, since the Prophet was the leader in both spheres. In addition, he bequeathed to the faithful not only the book of God, the 'silent Qur'an', but also his family, the 'speaking Qur'an', *Koran an-natiq*.[22] For this reason, only a descendant of Muhammad can rightfully be appointed as an imam, as 'leader' or 'model',[23] and by the same token the Sunni caliphs lack legitimacy. In practice, the larger Shi'ite groupings mostly avoided violent resistance and submitted to Sunni state authority.[24] The Ja'faris and Imamites, for example, chose a quietist lifestyle according to the principle of *taqiya*, 'caution', which means that Shi'ites may practise their religion and rituals with caution and, if necessary, in secret, and also that the imam is not required to rise up against unlawful and unjust rulers.[25] But disagreements soon arose within the Shi'ite community about the correct lines of succession and where one of these lines broke off. Thus, for example, the **Zaidis**[26] recognise as the fifth imam not Muhammad al-Baqir and his successors, but his brother Zaid. Similar succession disputes led to the splitting off of the Sixer Shi'ites, known as **Ja'faris**, and the Sevener Shi'ites, the **Ismailis**. In contrast to the quietist Sixer and Twelver Shi'ites, the Ismailis sometimes departed from the *taqiya* principle, rebelled and formed their own mighty dynasties, for example the Fatimids in North Africa (909–1171), or powerful revolutionary organisations such as the **Nizaris**, also called **Assassins** (1094–1256/71), who fought the Abbasids in Syria and Iran with guerrilla tactics and assassinations.[27]

In 816/17 a unique opportunity presented itself to the **Imamites**, the Twelver Shi'ites, to gain power peacefully, when the Abbasid caliph al-Ma'mun (r. 813–33), who resided in Merv, named the eighth Shi'ite imam, Ali ibn Musa al-Ridha, as his successor. Such an order of succession offered a chance of closing the deep gulf within Islam, or at least of bridging it. But individual Abbasid dignitaries in Iraq rebelled in the face of this innovative arrangement and the numerous conversions from the Sunni to the Shi'ite faith, and in 818 the eighth imam died quite suddenly in Tus, presumably poisoned. His grave in the eastern Iranian city of Mashhad is one of the most significant of Shi'ite pilgrimage sites.

After anti-Shi'ite politics had hardened since Caliph al-Mutawwakil (r. 847–61), who had placed the tenth and eleventh imams under house arrest, the Shi'ites performed a U-turn on the death of Imam al-Hasan al-Askari in 873. They proclaimed that al-Askari had brought his son Muhammad to safety, away from the caliph's henchmen, and that Allah had transported this twelfth imam, Muhammad ibn Hasan al-Mahdi, into minor seclusion in 874 and major seclusion in 941. In accordance with the eschatological beliefs of the Imamites, this hidden imam would one day return. They also claimed that during this period of absence all regimes were actually illegal.[28]

The theology of the Imamites diverges from that of the Sunnis in essential respects.[29] Among these are, first, belief in the Mahdi, the

5. Since it was shelled by Russian artillery in the winter of 1911/12, the Imam Reza (Ridha) Shrine complex in Mashhad, Iran, has remained open 24 hours, 365 days a year. The green triple-shell dome[2] in the middle of the photo belongs to the Gauhar Shad Mosque, built by Shah Rukh's wife, Gauhar Shad, in 1416–18. To the left we see the golden dome of the mausoleum. The name Mashhad-e Moqaddas means 'place of martyrdom'. Photo: 3 September 2014, birthday of the eighth Shi'ite Imam.

twelfth imam; second, the veneration of the imams as martyrs, who bore the guilt of the sinful believers, and third, the conviction that the Qur'an, though eternal, was created, which allows far greater scope for its interpretation by learned legal scholars, called *mujtahid*. The Sunnis consider the Qur'an as uncreated, just like Allah himself, and believe that the *surahs* reproduce God's exact words. For the Shi'ites and the suppressed Sunni Mu'tazilites,[30] the Qur'an contains God's words only insofar as its content derives from him, but its form and language are marked by the personality and time of Muhammad. This differentiation allows the distinction between a literal, 'outer' meaning of the Qur'an and a hidden, 'inner' meaning, whose exegesis is the responsibility of the *mujtahid*. In addition, the Shi'ites interpret the ban on pictorial representation of living creatures, in particular of humans, less strictly, so that portraits of Ali, of his wife Fatima, the daughter of Muhammad, and of their two sons al-Husain and al-Hasan, are to be found in important shrines in Iran. In this context, in Shi'ite popular belief Fatima enjoys a veneration equal to that of the cult of the Virgin Mary in the Catholic Church, and which is totally foreign to the Sunnis.

In the veneration of Ali, the **Nusayris** or **Alawites**, who emerged in the late ninth or tenth centuries, went even further than the Imamites. They follow a secret syncretic-gnostic doctrine, in whose centre is the belief in three emanations of the single God, which manifest themselves cyclically. Ali is venerated as one such emanation.[31] Among conservative Sunnis the Alawites are considered infidels.

The Kharijites

In contrast to the quietist Imamites and Ja'faris, the Kharijites, who had broken with the fourth caliph Ali after the Battle of Siffin in 657, formed an egalitarian and militant group which held closely to the Qur'an and *sunnah*. For the Kharijites, the choice of a political and religious leader did not depend on his ancestry, but on his abilities. The caliphate was by no means reserved to the Alids (the descendants of Ali), but any Muslim who was capable and free from sin was electable

as leader of the Islamic community, a black slave as much as an Arab noble or an Alid. Such an egalitarian feature was particularly appealing to the urban *mawali* of Central Asia and Iran. The Kharijites fought the Umayyads and Abbasids because these dynasties improperly monopolised the caliphate, and condemned the Shi'ites for not being strict enough in their observance of the *sunnah*.[32]

After the debacle of Siffin, Ali turned against his disloyal followers and in 658 crushingly defeated them in battle. Three years later, surviving Kharijites murdered Caliph Ali and at the same time rose against Muawiyya and his Umayyad followers. Beaten many times by the Umayyad armies, the Kharijites, dispersed over the whole empire, were divided on the question of how strictly the *sunnah* should be followed. This further weakened their power. Nevertheless, repeated Kharijite uprisings took place in Mesopotamia and Iran,[33] and finally in the 30-year uprising in northern Iraq from 866 to 896. In the east of the Abbasid Empire, where the *mawali* represented a higher proportion of believers than in the west, autonomous areas under Kharijite control persisted for a long time, in particular in the east of Khorasan, in Badghis, around Herat and in Sistan.[34] But tribes of Arab origin, dissatisfied with the ruling dynasties of caliphs, also joined the Kharijites. In Sistan, the reign of **Hamza bin Adharak al-Khariji** (d. 828), from the Helmand province of Afghanistan, which lasted more than 30 years, was particularly notable. In 795 or 796 he raised the banner of revolt and controlled Sistan right up to the time of his natural death in 828, though without being able to hold his own in the capital, Zaranj. Abbasid governors sent against bin Adharak were either killed or had to make extensive compromises with him. Even after his death, Kharijite military leaders controlled rural areas and blocked important routes. It was not until 865 that Yaqub bin al-Layth al-Saffar, founder of the Saffarid dynasty,[35] was able to kill the leading Kharijite, Ammar bin Yaser. He solved the problem of the Kharijite rebellions by integrating rebel units in his own army, and sources after the eleventh century scarcely mention them.[36]

The young Abbasid kingdom was challenged by rebellions, not only in its south-eastern provinces, but also in the north-eastern ones. Here the murder of Abu Muslim in February 755 provoked several uprisings. The first Abbasid caliph, Abu'l Abbas al-Saffah (r. 749–54), who in seizing power destroyed the hopes of his Shi'ite allies that he would pass on the throne to an Alid, soon felt threatened by the growing power and prestige of Abu Muslim, from Merv, who had placed him on the throne. Abu Muslim, who ruled practically independently in Khorasan and Mawarannahr, had not only succeeded in 750 in putting down the Shi'ite uprising of Shari bin Shaykh, but had also won in 751 an outstanding victory over a Chinese army at Talas and extended his sphere of influence to the north.[37] Moreover, Abu Muslim sympathised with heterodox and non-Islamic beliefs such as reincarnation and rebirth,[38] which gained him support among critics of Islam. The Abbasid elite faced the danger that he might use his increased power to topple them and declare himself caliph. Al-Saffah's successor, the Sunni al-Mansur (r. 754–75), lured his rival into a trap and had him murdered at the beginning of 755.[39]

The power vacuum in south-west Central Asia that resulted from Abu Muslim's murder encouraged several socio-religious uprisings.[40] Groups discontented with the Abbasid regime rose up in the name of Abu Muslim, and under the cloak of Islam began spreading pre-Islamic ideologies of Zoroastrian origin. The first to revolt, in 755, was a companion of Abu Muslim called **Sunpad** (or Sinbad, d. 756), who with his army even reached Rayy 15 kilometres south of Tehran, but on the march to Hamadan was put to flight by Abbasid troops and died in 756.[41] The former Abbasid missionary **Ishaq al-Turk** then rebelled around 756/57 with his movement, called Abu Muslimiyya, and preached that Abu Muslim had been

6. Rebuilt in 1481 by the Timurid sultan Husayn Bayqara, the Blue Mosque in Mazar-e-Sharif, Afghanistan, was later restored several times. The name of the city means 'Grave of the Saint', a reference to the fourth caliph Ali ibn Abi Talib (r. 656–61). According to local legend, the Prophet's son-in-law and founder of the Shi'ite faith is said to have been buried here. The burial site is highly revered by both Shi'ites and the Sunni Uzbeks of northern Afghanistan. The powerful symbolism of the Blue Mosque was recently emphasised by the fact that it was from here that the Uzbek warlord Abdul Rashid Dostum chose to launch his rebellion against the Communist regime of President Najibullah on 19 March 1992.[3] Photo: 2010/11.

an apostle of Zoroaster, was now living in secret in the mountains and would one day return as a prophet.[42] This message represented an amalgam of the eschatological beliefs of the Twelver Shi'ites and the Zoroastrians. As Richard Frye explained, 'it should be noted that the Shi'ite belief in a saviour or mahdi, and the Zoroastrian expectation of the return of a messiah, called Vahram-i Varjavand from a mythical "copper city", in the early Abbasid period, at times seemed to coincide'.[43] Soon after this, further south in Badghis, Herat and Sistan, there was a revolt led by **Ustadh Sis** (d. 768), who also propagated eschatological beliefs. Ustadh Sis was taken prisoner and executed in Baghdad.[44] A little later, in 776, **Yusuf bin Ibrahim** (d. 778), also called Yusuf al-Barm, revolted in Badghis. He presented himself as an extreme Kharijite and also promoted Zoroastrian ideas. Like Ustadh Sis, Yusuf was taken prisoner by Abbasid troops and executed.[45]

Hashim ibn Hakim, known as **al-Muqanna** (d. 783), not only claimed to be a prophet, but even believed himself to be an emanation of God and the Mahdi of Islamic eschatology, the Messiah.[46] Hashim was originally an officer of Abu Muslim from Merv or Balkh, later an adviser or vizier of the Abbasid governor of Khorasan Abd al-Ja'far (in office 757/58–59/60), who was accused by the eleventh-century historian Gardizi of having sympathies with the movement of Ishaq al-Turk.[47] When al-Ja'far began to show signs of insubordination, and Hashim began to pose as a prophet, Caliph al-Mansur had the rebellious governor executed and ordered Hashim to be imprisoned in Baghdad, but after a few years he set him free again. Hashim returned to Merv and from about 768/69 proclaimed himself to be both a prophet and the incarnation of the spirit of God: 'I am the one who showed myself to people as Adam, then in the form of Noah, also in the form of Abraham, Moses,

then in the guise of Jesus, Muhammad the Prophet, in the guise of Abu Muslim, and now in this guise which you see.' In a letter to the district authorities of Khorasan he stated more precisely: 'There is no other God but me. He who follows me will go to paradise, but he who does not accept me will rest in hell.'[48] Hashim became known as al-Muqanna, 'the veiled one', because his face was always covered by a green veil. His followers explained this by saying that normal people would be unable to bear the radiance of his face; but his opponents claimed that in fact he was concealing disfigurement caused by a war wound. Like the Mazdakites, his followers wore white clothing, so that the movement was called *al-mubayyidin*, 'those clothed in white', and he preached Mazdakite principles such as the abolition of private property. His entourage consisted of impoverished peasants and mountain dwellers as well as urban craftsmen and small traders.

Around 775/76, when Hashim was again threatened with imprisonment, he crossed the Oxus with his warriors and took possession of some mountain fortresses in the Kesh area, today Shahr-i Sabz in south-eastern Uzbekistan. After a raid against Bukhara he entered an alliance with the Karluks, who ten years earlier had captured Semirechie from the Türgesh,[49] and with the military support of the Karluks he conquered Samarkand and Termez. The historian Abu Bakr al-Narshakhi (*ca.* 899–960), who came from the oasis of Bukhara, reported in his *History of Bukhara*: 'Muqanna invited the Turks and permitted them [to take] the life and possessions of the Muslims. Many troops came from Turkestan in the hope of plunder.'[50] In order to protect the oasis complex of Bukhara from these plundering horse warriors, from the end of 782 or the beginning of 783 the Abbasid governor Abdul Abbas al-Fadl ibn Sulayman al-Tusi had the fortresses from the fifth century CE at the north-eastern end of Greater Bukhara restored, and linked them with a long wall, which Narshakhi calls 'Kanpirak' (fig. 9).[51]

In Samarkand, al-Muqanna had coins minted with the inscription 'Hashim, Abu Muslim's avenger'. Caliph al-Mahdi (r. 775–85) now realised that control of Mawarannahr was threatening to slip from the Abbasids' grasp, but his counter-offensive was not successful until, around 780, he gave the supreme command to the governor of Herat, Said al-Harashi. Now the Karluks abandoned al-Muqanna – they had not entered the alliance with him out of religious convictions, but only to be able to plunder. Al-Harashi first captured the fortress commanded by al-Muqanna's brother, and then began to lay siege to the self-styled emanation of God in his mountain fortress. In or shortly before 783, when his situation became desperate, Hashim poisoned his wives, killed his slaves and threw himself into a burning furnace.[52] After the victory over the Mubayyidites, Abbasid troops crossed the Syr Darya and invaded the Karluk region. Ultimately, all these socio-religious popular uprisings failed; it was only later that Islamic commanders aspiring to independence succeeded, thanks to their loyal armies, in liberating themselves from the Abbasid yoke.

Rebellions by Kharijite and extreme Shi'ite groups were not restricted to the east of the Umayyad and Abbasid kingdom, but also caused turmoil in its western half. These included, for example, the revolutionary movements of the Kaysaniyya and Hashimiyya, which came out of al-Mukhtar's uprising in Kufa of 685. A further development of the Hashimiyya was the revolt of Abdallah ibn Muawiyya, which shook the Iranian province of Fars from 744 to 748. After the death of ibn Muawiyya, another movement, the Harbiyya, emerged, whose beliefs included reincarnation and a cyclical concept of history. A high point of all these heterodox movements was the revolt of Babak al-Khurrami in Azerbaijan of 816–37.[53] It was the general Haydar ibn Kavus Afshin from Ustrushana who captured Babak in 837 after a war lasting three years.[54] Even though some of the many uprisings in east and west were partly inspired by neo-Mazdakite thought, it is evident that in the early days of Islam radical religious or socio-religious groups already existed which rejected an Islamic regime that did not correspond to their own religious beliefs. For them, the regimes of other Muslim denominations, such as those of the Sunni rulers, had no legitimacy, and they held it their duty to conduct a holy war, a *jihad*, against these rulers by military or terrorist means (such as targeted murders).

2. The Barmakids and Tahirids

Of course not all leading figures of Iranian origin in south-west Central Asia were hostile to the Abbasids. Many cooperated with the rulers in distant Baghdad[55] and with their governors. Individual families, such as the Barmakids, formed a powerful dynasty of officials within the kingdom; others, such as the Tahirids, began their careers as officers and later became de facto independent. The forebear of the mighty family of the **Barmakids** (*ca.* 730s–803) was **Barmak**, who, as the historian al-Masudi reports, came from a distinguished Bactrian family, which held the hereditary rank of 'high priest' of the famous Buddhist temple of Balkh, the 'Naubahar'.[56] As Sir Henry Rawlinson presumed as early as 1872, 'Naubahar' corresponds to the Sanskrit *nava vihara*,[57] which means 'new Buddhist monastery', and the family name Barmak is derived from the Sanskrit word *pramukha*, the hereditary title of the monastery administrator.[58] The temple of Navasanghârâma (Naubahar) visited by the Chinese pilgrim monk Xuanzang in 630 and described by him in detail,[59] destroyed in the days of Caliph Muawiyya,[60] must have been a magnificent building. The geographical compendium *Hudud al-Alam*, produced anonymously in 982–83, mentions that wall paintings and splendid artworks were still to be admired in the ruins.[61] As the calligrapher and local historian Mo'in al-Din Mohammad Zamči Isfizari (*ca.* 1446–1510) describes, the ruins of the temple and fragments of the wall paintings still existed even in the late fifteenth century,[62] seven centuries after the first Arab conquest of the city.

The first link between a Barmakid and a Muslim caliph at the time of Hisham ibn Abd al-Malik (r. 723–43) is historically confirmed. At that time Barmak converted to Islam[63] and resided as a physician at the caliph's court in Resafa. However, according to the Korean pilgrim monk Huichao (*ca.* 700–after 780), by the end of the 720s most of the residents of Balkh were still Buddhists, despite the Arab occupation.[64] Barmak's son **Khalid ibn Barmak** (d. 781/82) began his career in Gorgan and Tabaristan (north-east

Iran) as an Abbasid propagandist and officer, and later Caliph Abu'l Abbas al-Saffah gave him control of the army ministry and the government tax department (*diwan al-Kharaj*), which was concerned with taxation and land tenure.[65] Under al-Mansur he occupied various positions as governor and is believed to have designed the plan for the new palace and administration complex of Baghdad for the caliph; the circular ground plan with a diameter of 2,700 metres was modelled on pre-Islamic architecture, such as the Parthian Hatra or the Sassanid palace complexes of Firuzabad (Gur) and Takht-i Sulaiman.[66] Khalid's son **Yahya bin Khalid** (d. 806) served as vizier to Caliph al-Mahdi (r. 775–85) and as tutor to the future Caliph Harun al-Rashid. Under the brief rule of al-Hadi (r. 785–86) Yahya ended up in prison, because in a conflict between the caliph and his brother Harun he had supported the latter. When al-Hadi died suddenly in 786, Harun al-Rashid (r. 786–809) appointed Yahya as his vizier and, a year later, as his seal-bearer, so that he became 'absolute ruler of the government'.[67] Yahya al-Barmaki further consolidated his enormous power by making his sons **Fadhl ibn Yahya** and **Ja'far ibn Yahya** governors in key provinces; two further Barmakids held important posts, **Musa ibn Yahya** as a military commander and **Mohammad ibn Khalid** as a majordomo. In addition, Ja'far presided over the mint and the combined postal and intelligence service, so that the three Barmakids Yahya, Fadhl and Ja'far formed an effective triumvirate, whose power and sphere of influence increased still further through the caliph's relocation to the border city of al-Raqqah on the central Euphrates, 600 kilometres away.

Thanks to their positions, the leading Barmakids became immeasurably wealthy. But not only did they lead a life of luxury, they also distinguished themselves as generous patrons of mathematics, medicine, astronomy and philosophy. As Frederick Starr notes, the Barmakids stood in a tradition of intercultural communication, since the Naubahar monastery contained a centre for the translation and publication of Buddhist texts from India, which then reached China.[68] In Baghdad, the Barmakids, above all Yahya ibn Khalid, had scholarly works from both Greek and Sanskrit translated and published. To disseminate the newly acquired knowledge, in 794/95 Fadhl and Ja'far ibn Yahya opened Baghdad's first paper mill, which also served the city's administrative departments. By replacing parchment, which was vulnerable to forgery, with paper, which was resistant to it, the brothers also reformed the administration of the state.[69] The patronage of Greek and Indian scholarly works by the Barmakids, who were of Central Asian origin, gave a very important impetus to Islamic scholarship, ushering in an era in which Islamic humanities and exact sciences flourished – several centuries before a similar development began in Western Europe.

At the end of the eighth century, the unprecedented power of the Barmakids, their popularity in Islamic Central Asia and their wealth began to make the caliph uneasy, and in 799 he removed Fadhl from all his official positions. Then, in 803, Harun ordered the decapitation of Ja'far, who for several years had been the most powerful of the Barmakids, had his brothers arrested and placed their father, Yahya, under house arrest. At the same time he confiscated all the Barmakids' assets, with the exception of those of Mohammad ibn Khalid.[70] In destroying this dynasty of officials, the caliph was demonstrating that even the most powerful dignitary remained a servant who could be replaced at any time. Various contemporary historians have speculated as to Harun's further motives. Assumptions were made about Harun's rage over the sexual consummation of an originally only nominal marriage between his sister Abbasa and Ja'far ibn Yahya, his envy of the luxurious and profligate lifestyle of the Barmakids, their interest in non-Islamic texts and the fact that Ja'far maintained an army near Baghdad which was loyal to him and only nominally subject to Harun. Harun foresaw that the combination of an army committed to the Barmakids with their inexhaustible financial means, and the birth of a son of Barmakid-Abbasid descent, might become a threat to his authority and that of his descendants.

The overthrow of the Barmakids, who had made a name for themselves in Khorasan as fair and just governors and moderate tax collectors, alienated the local population from the central government in Baghdad. The anger of the Khorasanis was all the greater when Ali ibn Isa ibn Mahan, the new governor whom Harun had appointed in place of Fadhl al-Barmaki, enforced inflated and arbitrary taxes by brutal means. In addition, Ali ibn Mahan failed to extinguish the rebellion of the Kharijite Hamza bin Adharak al-Khariji, although, as reported by Gardizi, he proceeded against the rebels with extreme cruelty: 'Two stout branches of a tree were tied together with strong ropes connecting the two of them, and the two legs of a quietist Kharijite were each tied to one of the two branches. Then the rope was released, and the strength of these two branches thus released would split the man in two.'[71]

In 806, the local resentment led to the revolt of the governor of Samarkand, Rafi bin Layth, a grandson of the last Umayyad governor of Khorasan, Nasr ibn Sayyar. The uprising was widely supported, and Rafi received military aid from the Oghuz, Karluks and Tibetans, so that the caliph, Harun, had to intervene personally. But on his way to Khorasan, at the beginning of 809, Harun became ill and died near Tus, while his son al-Ma'mun was already in Merv.[72] The four grandsons of Saman Khudah, a landowner from Balkh, named Nuh, Ahmad, Yahya and Ilyas, played a significant role in the suppression of the uprising and the capitulation of Rafi bin Layth. In gratitude, Caliph al-Ma'mun ibn Harun bestowed on them the governorship of four important cities and regions.[73] Later, in the last quarter of the ninth century, descendants of these four brothers founded the illustrious Samanid dynasty.[74]

The unfortunate order of succession of Harun al-Rashid had two consequences: first, it brought about civil war and internecine strife in the caliphate, and secondly, the military commitment of the Central Asian provinces to the later victor al-Ma'mun led to the defection of these regions from the central government in Baghdad. The first of these de facto independent dynasties in Muslim Central Asia were the **Tahirids** (821–73). In 802, Caliph Harun had divided his dominion between his three sons: Muhammad, called al-Amin, was to become caliph and rule the western provinces; Abdullah al-Ma'mun, the designated successor to al-Amin, was to be in charge of the regions east of Hamadan; and al-Mutamin was given the province of al-Jazira (Upper Mesopotamia). Soon after taking power, Caliph al-Amin (r. 809–13) removed his brother al-Mutamin and demanded that Ma'mun should hand over the eastern provinces to him. When al-Ma'mun refused, al-Amin deprived his brother of his right of succession and designated his son Musa as his successor. In 811 he sent Ali ibn Isa ibn Mahan to Khorasan with a large army of Arab warriors. Al-Ma'mun secured the support of the general **Tahir ibn Husain** from Herat (in office 808–21, r. 821–22),[75] who had already distinguished himself as an outstanding strategist in the war against Rafi bin Layth. Although Tahir faced overwhelmingly superior forces at Rayy, he destroyed Ali's army as well as a second one sent against him, then took Baghdad in 813 and had al-Amin beheaded.[76] After Abu Muslim, this was the second time that an eastern Iranian general had placed a new caliph on the throne. Tahir's victory also meant the triumph of the Khorasani troops, who now formed the backbone of the Abbasid army, over the Arabs of Iraqi descent.

The new caliph, al-Ma'mun (r. 813–33), appointed Tahir governor of the comparatively insignificant provinces of al-Jazira and Syria, but also chief of police in Baghdad, so that Tahir, with the help of his son Abdallah ibn Tahir, controlled the capital city. On becoming caliph, al-Ma'mun, who was popular with the inhabitants of Khorasan and Mawarannahr, remained in Merv, so that the focus of the realm shifted to Central Asia. At the same time, he extended the province of Khorasan to include the entire Muslim part of Central Asia, presumably to bring more effective administration to this exposed region, which was vulnerable to raids and attacks by steppe warriors of Turkic origin.[77]

But in the absence of the caliph the western provinces were shaken by unrest, so that in 818–19 al-Ma'mun returned to Baghdad and, it seems, had his designated successor, Imam Ali ibn Musa al-Ridha, poisoned.[78] In the spring of 821, the caliph appointed Tahir governor of the vast province of Greater Khorasan, which extended from Rayy and Shiraz in the west to Tashkent and Herat in the east. Tahir ibn Husain was now the second most powerful man in the Abbasid Empire, and his position resembled that of a viceroy of the east. At the same time, Tahir's son Abdallah took over the province of al-Jazira governed by his father in the west. On arrival in Khorasan, Tahir did not hesitate to assert his independence, having coins minted without the name of the caliph on them, and removing his name from Friday prayers.[79] But before Tahir could introduce further measures to consolidate his authority over the Islamic part of Central Asia, he died suddenly towards the end of 822. Tabari reports that a slave who had been given to Governor Tahir by al-Ma'mun's vizier Ahmad poisoned his master on the orders of the caliph.[80]

Tahir was succeeded by his son **Talha** (r. 822–28) in Khorasan, while his brother Abdallah stayed in Jazira. As a result the Tahirids held a position comparable to that of the Barmakids, though with the significant difference that the ruler of Khorasan was in command of troops, who considered themselves bound in loyalty to him rather than to the distant caliph. Like the earlier governor, Ali ibn Isa, Talha did not succeed in freeing Sistan from the Kharijite Hamza bin Adharak al-Khariji. The rather colourless Talha was succeeded by his brother **Abdallah** (r. 828–44/45), who transformed his capital, Nishapur, into a splendid metropolis. Unlike Tahir, Talha and Abdallah remained nominally loyal to the caliph and refrained from any conspicuous provocation. Nishapur was the most important city in Greater Khorasan, above even Merv, Herat and Balkh, and developed into a centre of philosophy and literature. In 1221 it was razed to the ground by the Mongols.[81] The city of Nishapur, and with it the Tahirids, owed their wealth not only to their power and the significant location of the city on one of the most important trade routes, but also to the highly lucrative slave trade. The Tahirids and the Samanid dynasty that succeeded them undertook military expeditions to the north-east, where they captured Oghuz and other young Turkic men, whom they then sold in the western caliphate. In order to meet the growing demand for Turkic slaves, the Tahirids commanded their vassals in today's Afghanistan to supply them with slaves. From the buyer's point of view, young male members of Turkic tribes made ideal slave soldiers. Since these tribes were barely organised, they were unable to offer unified resistance to raids by the Tahirids and Samanids, so that young men were relatively easy to 'procure'. Secondly, these men grew up in the steppes of South Kazakhstan and the mountains of Afghanistan and Baluchistan as natural warriors, who from their childhood tended their herds on horseback and defended them against robbers. In order to make good soldiers and officers, they only needed military training, in particular in discipline and in fighting in formations.

The main purchaser of young slaves was the caliph in Baghdad, who acquired them to build up his personal bodyguard.[82] The aim in buying Turkic and also Caucasian military slaves (called in Arabic *mamluk*, pl. *mamalik*) was to create a professional army of slaves, in order to break the power of the eastern Iranian-Khorasani troops stationed in Baghdad and its environs. Thus, within a short time, a further change took place in the ethnic composition of the armies under the caliph's control. Up to the conquest of Baghdad by Abu Muslim, Arab warriors predominated, but later professional soldiers from Khorasan and Mawarannahr formed an important group, until, in the mid-ninth century, they were replaced by Turkic slave soldiers. It was Caliph al-Mu'tasim (r. 833–42) who forced the building up of a Mamluk army – his mother had been a harem slave of Turkic origin.[83] However, a professional army stationed in the capital held great dangers for its nominal 'owners', the caliphs, as Caliph al-Mutawakkil (r. 847–61) learned to his cost. The centre of power shifted from the caliph to the Turkic commanders, and al-Mutawakkil's attempt to rein them in failed; in 861 he was murdered as part of a plot by Turkic officers. Subsequent caliphs were often little more than pawns of their own slaves. The disproportionate power of Turkic slave commanders only ended when a northern Iranian dynasty of officials, founded by three brothers, the Shi'ite Buyids (934–1062), seized power in Baghdad in 945. A century later, in 1055, the Seljuks conquered Baghdad, establishing Turkic sovereignty of the caliphate.[84]

Under Caliph al-Mu'tasim relations between Abdallah ibn Tahir and the caliph deteriorated sharply. But Abdallah, who not only ruled the eastern half of the empire, but also, thanks to his position as a

military and police commander, had troops of his own at his disposal in the capital city,[85] was much too powerful for the caliph to be able to depose him. Abdallah further strengthened his position when in 839 he crushed the rebellion of Mazyar, the ruler of Tabaristan, who enjoyed the support of Haydar ibn Kavus Afshin. But Haydar, who had hoped for the defeat and downfall of Abdallah and his own appointment as new governor of Khorasan, was incarcerated and died in prison in 841.[86]

Abdallah was far more than just an outstanding military commander. He was concerned with finding ways to improve agriculture, whose importance he described as follows: 'God feeds us by their [the farmers'] hands, welcomes us through their mouths and forbids their ill treatment.'[87] He had canals and irrigation systems constructed in Khorasan and Mawarannahr to safeguard the water supply of cities such as Tashkent. Moreover, 'he assembled all the legal scholars of Khorasan and some of those from Iraq, and he commissioned them to compose a book on the legal aspects and regulation of such channels. This book was called the *Kitab-i Qunni*, "Book Concerning Irrigation Channels".'[88] Finally, Abdallah was convinced of the value of a general education for all social classes: 'Knowledge must be accessible to the worthy and unworthy; knowledge will look after itself and not remain with the unworthy.'[89] There is evidence that formal education was open even to poor children of peasants, something quite revolutionary for the time.

Abdallah was succeeded by his son **Tahir ibn Abdallah** (r. 845–62), who, before becoming governor of Khorasan, led campaigns against the Turkic Oghuz in the steppes north of Mawarannahr. But in the mid-ninth century the near-absolute power of the Tahirids began to crumble, when they started fighting among themselves in the west, and the region of Sistan rebelled. Tahir ibn Abdallah was not succeeded, as he had wished, by his brother Mohammad bin Abdallah, who preferred to stay in Baghdad and Fars, but by the young and inexperienced son of the late governor, **Muhammad ibn Tahir** (r. 862–73, d. *ca.* 890). According to Gardizi, he led a dissolute life: 'He plunged himself into wine drinking, and became occupied with music and singing and with merrymaking.'[90] Thus he failed to control the Shi'ite rebellions that sprang up in Tabaristan, Dailam and Gilan, between the Caspian Sea and the Elburz mountains. Hasan ibn Zayd (r. 864–84) founded the Zaydi emirate of Tabaristan (864–900; 914–28), which lasted until 928, when the Samanids deported the last emir to Bukhara. The death blow, however, came from the south, when Yaqub ibn al-Layth conquered Kerman in 869, and Herat and Pushang in 871, and two years later marched against Nishapur. Muhammad's paternal cousins welcomed the intruder, and when Muhammad's messenger haughtily demanded of Yaqub ibn al-Layth[91] that he should show his document of appointment issued by the caliph, he drew his sword and cried: 'This is my document of appointment and standard!'[92] Yaqub then occupied Nishapur in 873 and deposed Muhammad ibn Tahir, allowing him to move to Baghdad three years later. There Muhammad and other Tahirids still held some positions up to 891, but then lost their influence in the west as well. Since the four governors of Greater Khorasan rarely made any public displays of independence between 822 and 873 and remained loyal to the caliph, leading historians such as Bosworth and Frye are of the opinion that 'the Tahirids were not a separate dynasty, but merely the hereditary governors of Khorasan'.[93]

3. The Saffarids

The Saffarid dynasty, which lasted only 39 years (861–900), was in many respects a novelty. For one thing, unlike the Barmakids, who came from a respected dynasty of officials, or the Tahirids, the descendants of army officers, the Saffarids were a family of simple tradespeople. Secondly, the dynasty's aggressive founder, **Yaqub ibn al-Layth al-Saffar** (r. 861–79), was even confident enough to launch an attack on the caliphate itself in Baghdad. Thirdly, Yaqub was an ardent Iranian nationalist, who for the first time shattered the territorial integrity of the Abbasid Empire and set up a military empire of his own. Yaqub and his three brothers Amr, Ali and Tahir grew up in Sistan and came from humble origins. By trade Yaqub was a coppersmith (in Arabic *saffar*, the word from which the name of the dynasty is derived). Amr is believed to have been a muleteer, Ali a

carpenter and Tahir a mason. In the mid-ninth century, the security situation in Sistan was precarious, since many regions were controlled by Kharijites and the smaller Sunni towns and villages formed militia groups against them. These local troops, known as *ayyars*, fought the Kharijites in the name of orthodoxy, but at the same time were active as robber bands.[94] The ibn al-Layth brothers joined one of these *ayyars* around 852; they broke the power of the Kharijites and in 854 drove the Tahirid governor out of Zaranj. In 861 Yaqub overthrew his leader and appointed himself ruler of Sistan.

Yaqub was proud of his eastern Iranian origin and despised Arabs as ignorant philistines; at the same time he commissioned poets to attribute to him a descent from Sassanid kings:

> *'I am the son of the noble descendants of Jam [the mythological king of Iran, Jamshid], and the inheritance of the kings of Persia has fallen to my lot.*
>
> *I am reviving their glory, which has been lost and effaced by the long passage of time.*
>
> *I am openly seeking revenge for them; although men have closed their eyes to recognizing their regal rights, I do not do so.*
>
> *With me is the banner of Kawi (alam al-Kabiyan), through which I hope to rule all nations.*
>
> *So say to all the sons of Hashim [the Abbasids], "Abdicate quickly, before you have reason to feel sorry!" We have gained power over you by force, with our lance-thrusts and cuts from our sharp swords.*
>
> *Our forefathers gave you kingly power, but you never showed proper gratitude for our benefactions.*
>
> *Return to your country in the Hijaz [the Prophet's homeland in Arabia], to eat lizards and graze sheep.*
>
> *For I shall mount the throne of the kings, with the aid of my sword blade and the point of my pen!'*[95]

During the years that followed, Yaqub made his peace with the subjugated Kharijites, conquered the rutbil of Zabulistan and in 870/71 undertook a looting campaign to Ghazna, Gardez, Kabul, Bamiyan and Balkh. Yaqub sent dozens of gold and silver statues plundered from Buddhist and Hindu temples to the caliph in Baghdad, and his brother and successor Amr did the same in 896. Yaqub then seized Herat, Badghis and, in 873, Nishapur, where he captured Muhammad ibn Tahir. Next, Yaqub led his army west, to Fars in southern Iran; Caliph al-Mu'tamid (r. 870–92) panicked and tried to placate him by confirming his rule of Khorasan, Tabaristan, Gorgan, Fars and the city of Rayy. Yaqub interpreted

this decree as a sign of weakness and marched on to Baghdad, where however, al-Mu'tamid's brother, the regent al-Muwaffaq (in office 870–91), inflicted a crushing defeat on him.[96] After Yaqub's death in 879 his brother **Amr ibn al-Layth al-Saffar** (r. 879–900) took power, but had to defend his rule in Khorasan, with interruptions, up to 896. Amr's attempt to wrest Chorasmia from the Samanids, the former vassals of the Tahirids, and at the same time obtain from the caliph the transfer of power over their region in Mawarannahr, failed miserably, for Ismail ibn Ahmad Samani defeated Amr at Balkh, captured him and annexed Khorasan.[97] So ended the rule of the Saffarids in Khorasan, and their military empire soon collapsed, for their own administration was weak and outside Nishapur consisted mainly of unscrupulous tax collectors.

After the fall of Amr ibn al-Layth, representatives of the Saffarids were able to survive in Fars and Sistan up to 913. After chaos had broken out in Sistan after the murder of the Samanid Ahmad ibn Ismail, the *ayyar* of Zaranj chose the Saffarid **Abu Ja'afar Ahmad ibn Muhammad bin Khalaf** (r. 923–63) as their ruler. Abu Ja'far, who was murdered by his slaves, was succeeded by his son **Abu Ahmad Khalaf** (r. 963–1003), who then had to struggle for two decades against Turkic warlords and Tahirid sympathisers to secure his position. But in 1000, Mahmud of Ghazna forced him to make tribute payments and three years later to abdicate.

4. The Samanids

In contrast to the Saffarids, the Samanids (819/875–999)[98] created an empire that was more than merely military; it was a highly developed state, which also endeavoured to encourage scientific and philosophical enquiry. In this sense, the Samanids were the only Iranian dynasty that formed a real state in Muslim Central Asia. After its fall in 999, a rapid Turkification took place in present-day Uzbekistan, Turkmenistan and Afghanistan, and the dynasties that followed were, with the exception of the Ghurids,[99] either Turkic or Mongolian. The ancestor of the Samanid dynasty was a Zoroastrian nobleman from Balkh or Termez, **Saman Khudah** (eighth century),[100] who claimed descent from the Sassanid general and usurper Vahram Chobin.[101] In the 720s or 730s Saman Khudah came to Merv and converted to Islam. Saman's son **Asad** (eighth century) was also a Muslim and his four sons took part in quelling the rebellion of Rafi bin Layth,[102] for which, around 819, Caliph al-Ma'mun rewarded them with the governorship of four important cities and regions: **Nuh ibn Asad** (r. 819–41/42) was given Samarkand, **Ahmad ibn Asad** (r. 819–64/65) Fergana, **Yahya ibn Asad** (r. 819–55) Čač and **Ilyas ibn Asad** (r. 819–56) Herat.[103] As the historians Gardizi and Juzjani (1193–after 1260) report, 'Ahmad was the most useful and experienced', so that in time, in addition to Fergana, he also gained authority over Samarkand and Čač and extended his sphere of control eastwards as far as Kashgar.[104] On his death, Ahmad bequeathed Čač to his son **Yaqub ibn Ahmad** (dates unknown) and the more important Samarkand to **Nasr ibn Ahmad ibn Asad ibn Saman** (**Nasr I**, r. 864/65–88, as representative of his brother Ismail 888–92). After Yaqub ibn Layth's victory over Muhammad ibn Tahir in 873, Emir Nasr ibn Ahmad became de facto independent ruler of Mawarannahr, with Samarkand as his capital. When a year later Chorasmian troops occupied and looted Bukhara, Nasr sent his brother **Ismail ibn Ahmad ibn Asad ibn Saman** (governor of Bukhara 874–88, r. de facto in the united empire 888–92; de jure 892–907) to that city, where he was warmly welcomed by the population and installed as governor. In 875 Nasr I received the confirmation of his investiture from Caliph al-Mu'tamid.

Vellum, University of Edinburgh, Edinburgh, Oriental Manuscript Collection, 20 f.118r.**

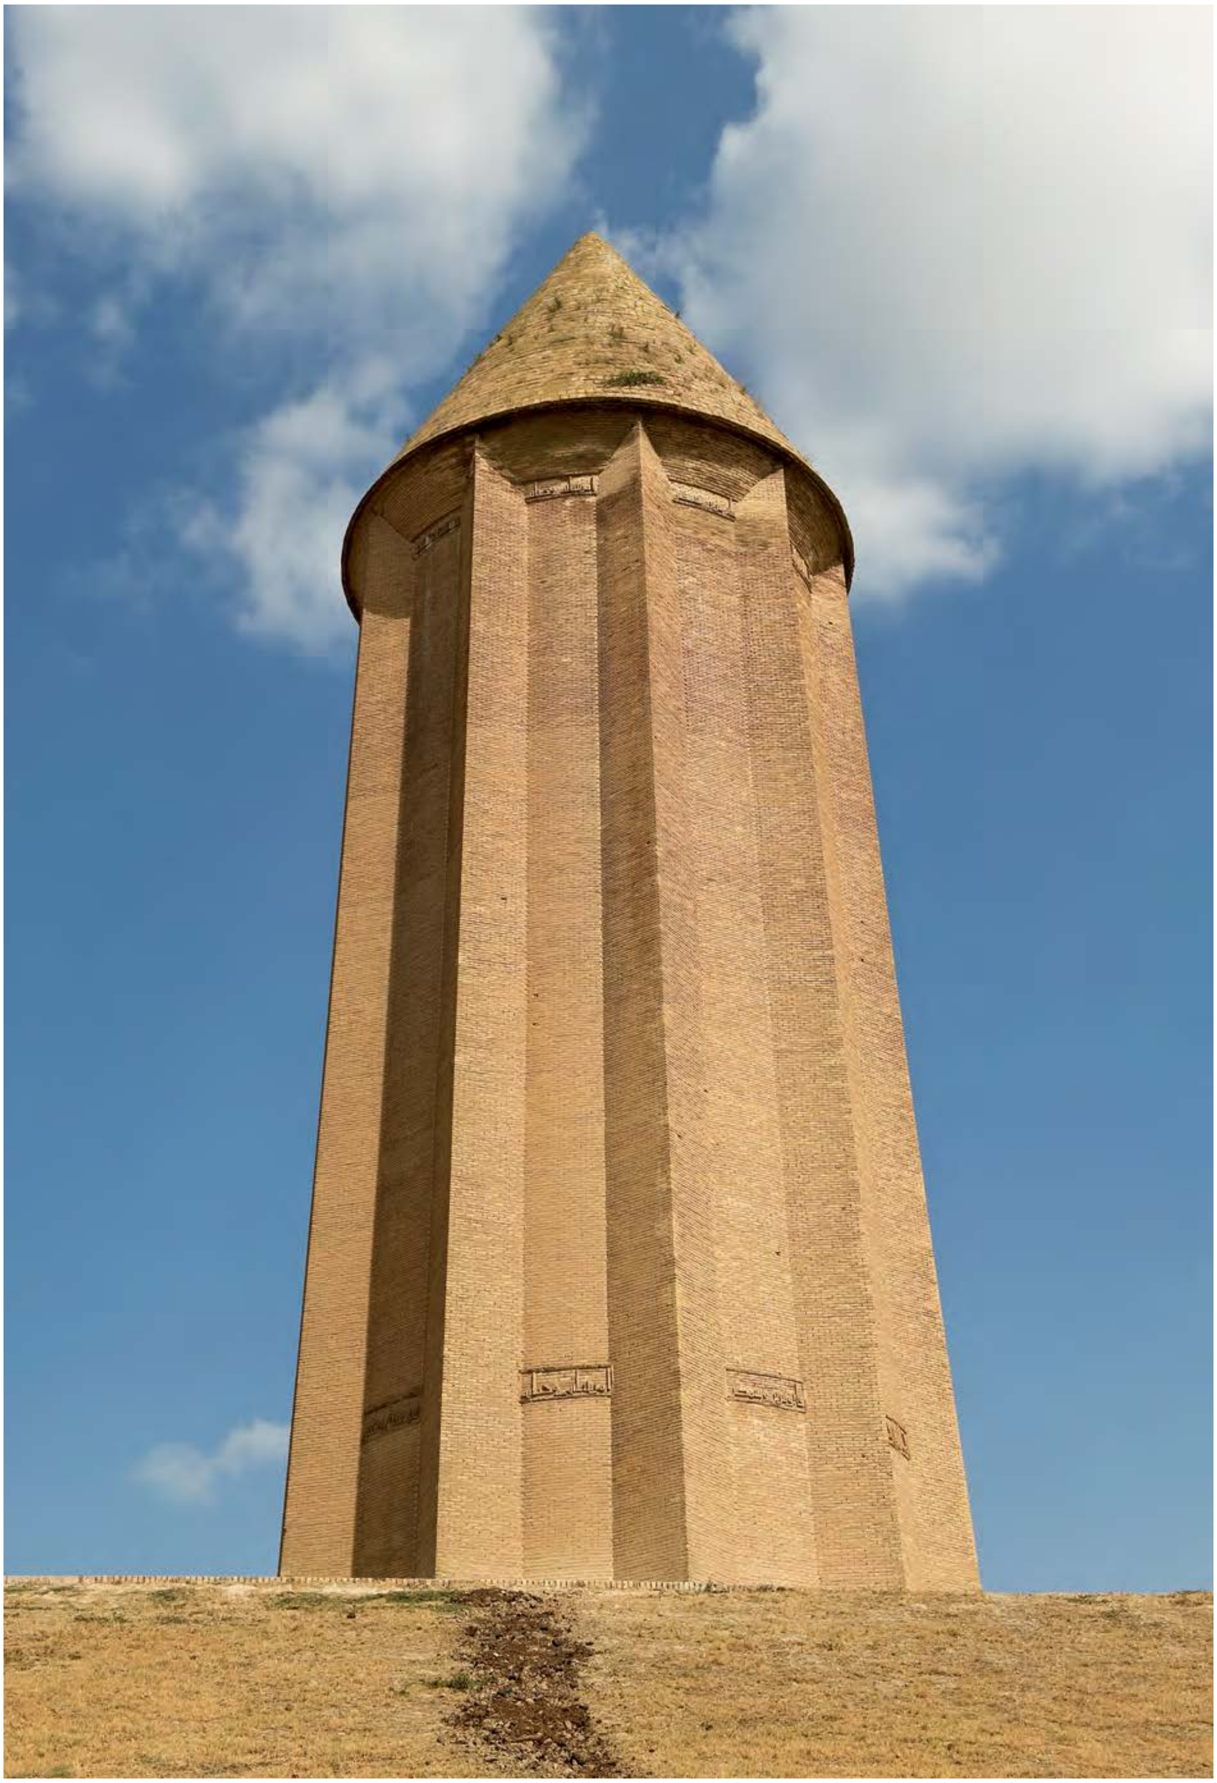
After Ismail had refused for several years to pay the taxes his brother Nasr demanded, Nasr marched on Bukhara but was defeated and taken prisoner by Ismail. Instead of moving to Samarkand, the more important city in economic terms, Ismail moved the capital to Bukhara and sent his defeated brother back to Samarkand. After Nasr's death in 892, Ismail officially became emir of all Transoxania; he is therefore considered the founder of the united Samanid Empire. In 893 he undertook a campaign in the north, into the territory of the Karluks, where he forced the ruler of Taraz, in the south of Kazakhstan, to convert to Islam. At the same time he ordered that the Nestorian cathedral of Taraz be turned into a congregational mosque; presumably the same happened in the neighbouring city of Merke.[105] The real purpose of this and further military expeditions to the north, though, was not to convert infidels but to acquire slaves[106] and to weaken the tribes of Turkic horsemen. In the same year, he put an end to the semi-independence of Ustrushana, which had been a Samanid vassal state since 822/23. Six years later, around 899, the Saffarid ruler Amr ibn al-Layth al-Saffar demanded that Ismail should recognise Amr's suzerainty. Ismail responded: 'My answer to you is with the sword.'[107] After Ismail had destroyed a first Saffarid army sent against him at the Oxus, in the following year Amr ibn al-Layth attacked Balkh, where he was captured by Ismail. Immediately afterwards, a Samanid force occupied the Zaidi emirate of Tabaristan, and when the latter rebelled, in 902 Ismail advanced as far as Rayy.

The Samanid Empire now included Mawarannahr, Fergana, Kashgar, Ustrushana, Khorasan, Tokharistan, Kabulistan and Tabaristan. In the north, the Karluk vassals guarded the frontier, and in the south, the empire continued to expand towards Sistan, Ghazna and Kandahar.[108] Since the Samanids considered themselves staunch representatives of Sunni Islam and warriors against Shi'ites, above all against the Zaidis, and at the same time harboured no intention of toppling the Abbasid ruler, they formed a bulwark for the rump caliphate against invasions by Turkic peoples. With the fall of the Samanids a century later, the floodgates opened, and, from about 1025/27, Turkmen and Seljuk invaders poured in. Meanwhile, Ismail's successor **Ahmad ibn Ismail Samani** (r. 907–14) succeeded in capturing Sistan, but at the beginning of 914 was murdered by his own slave soldiers before he could deal with a Zaidi rebellion in Tabaristan. Narshakhi describes what happened: 'He had a rule, viz. – he had a lion which was fastened by a chain at the door of the house where he slept, so if anyone sought to enter the house the lion would destroy him. That night, when he was sad, [because of the rebellion in Tabaristan] all of his domestics grieved and forgot to bring the lion. He fell asleep and a group of the amir's slaves entered [the tent] and cut off his head.'[109] The murder of Ahmad shows that he, too, surrounded himself with Turkic slave soldiers.

Emir **Nasr ibn Ahmad** (**Nasr II**, r. 914–43), known as al-Said, 'the Fortunate', was only eight years old when his father Ahmad was murdered, so that at first it was the vizier (prime minister) Abdallah Muhammad ibn Ahmad al-Jaihani who conducted the business of government. As soon as Nasr II came to the throne, several revolts broke out in Nishapur, Tabaristan and Rayy, and were difficult to put down. Three of Nasr's brothers also rebelled, and he imprisoned them in the citadel at Bukhara until 929. In 943, high-ranking officers who resented the emir's Ismaili sympathies forced Nasr II to abdicate in favour of his son Nuh. Ismaili missionaries were massacred, and Nasr died a few weeks after his abdication.[110] For the leading Samanid officials and the religious scholars or *ulama* of Bukhara, who saw themselves as campaigners for Sunni Islam, the growing influence of Shi'ite, and in particular Ismaili, missionaries in Samanid territory was unacceptable, the more so since local Sunni rulers and the caliph were hard pressed by the Shi'ite Buyids in the west of the Abbasid realm. In 945 the Buyids actually succeeded in unseating the caliph and downgrading him to a merely spiritual leader.

The reign of Emir Nasr II represented the cultural zenith of the Samanids, thanks not least to two outstanding viziers. The state was organised in a similar way to that of the Abbasids, with a central government consisting of ten ministries, diwans, presided over by the prime minister or vizier, and similar organisations in the provinces. Vizier al-Jaihani (in office 914–22 and 938–41) was not only a prudent statesman, but also the author of a geographical compendium, now lost, which provided the basis for later geographical works such as the *Hudud al-Alam* of 982–83. Presumably al-Jaihani's geographical work also served as one of

17. The Khodja Mashhad complex in Tajikistan, dating from between the ninth and eleventh centuries. On the right of the picture is the ninth-century eastern domed hall, which was the mausoleum for the Shi'ite missionary Khodja Mashhad. The tenth- and eleventh-century western domed hall, seen on the left, was a mosque. Unfortunately, the present restorers used modern, industrially produced bricks. Photo: 2008.



18. The brick-built Gunbad-i Qabus tower tomb in Gorgan, Khorasan, Iran. The 56-metre-high mausoleum was built in 1006/7 by the Ziyarid Prince Shams al-Ma'ali Qabus ibn Wushmagir (r. 977–81, 997–1012) on an artificial mound 15 metres high. It is the oldest tomb tower in Iran. Ten pilasters, each with a 3 metre projection, emphasise the tower's soaring height. Prince Qabus is famous for his patronage of the polymaths Ibn Sina (Avicenna, *ca.* 980–1037), and al-Biruni (973–1048). Photo: 2014.

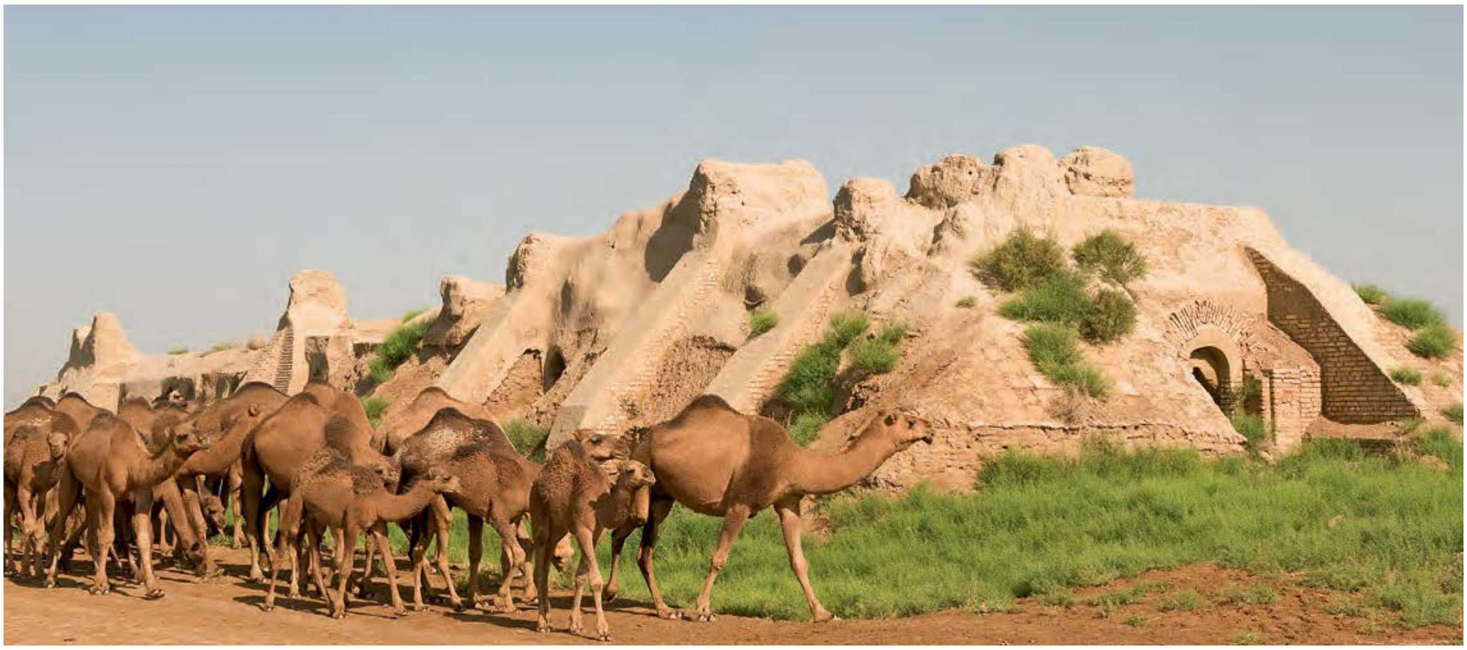
the sources of Abu Dulaf's tenth-century tale of an alleged journey he claimed to have made with a Samanid embassy to China, and from there back via the Malay Peninsula and India.[111] The second important vizier under Nasr was Abu'l Fadhl al-Bal'ami (in office 922–38), who, during a revolt by Nasr's brothers, cunningly turned them against each other. Al-Bal'ami's son, Vizier Amirak Bal'ami, then translated al-Tabari's *Tarikh al-Rusul wa al-Muluk* from Arabic into Persian.[112]

From the mid-tenth century, however, the *diwan* was confronted with a second centre of power which was rapidly getting stronger: the military or soldier slaves, called *ghulam* in Iran. So the century-old development in the Abbasid caliphate was repeated. The trade in young Turkic prisoners formed a significant pillar in the economy of the Samanid Empire, and thus the military expeditions in the northern steppes, under the guise of a *jihad* against the infidels, in fact served primarily to procure slaves and plunder. These official abduction campaigns also attracted many volunteers, for 'a Muslim could combine his Islamic duty [of *jihad*] with the hope for booty'.[113] But the Samanid emirs did not sell all their slaves on to Baghdad; they also assembled a personal guard consisting of soldier slaves, and filled up the ranks of the army with these *ghulams*, so that the Samanids became ever more dependent on their own slaves. As Richard Nelson Frye explains, 'the Turkish [Turkic] slave institution gained power and dominated the court, while the governor of Khorasan, as commander of the army, also grew in power, and the result was a clash between different Turkish [Turkic] factions, since the Turks came to dominate all military establishments'.[114] In relying on military slaves and dispensing with troops of Iranian origin, the emirs sabotaged their own power base, for they were alienated from the population and became the pawns of their own slaves, who were no longer satisfied with controlling the appointment and removal of emirs, but founded their own ruling dynasties. The most famous of these were the Ghaznavids.

Under the Samanids, international trade on the silk roads once again flourished. While Samarkand formed the economic centre, Balkh asserted itself as the most important trading centre for goods from China, India and Southeast Asia. From Balkh and Samarkand the trade routes led via Merv and Nishapur to Rayy, Isfahan and Baghdad, or north via Chorasmia to the Ural region, and from there either to the Sea of Azov and the Black Sea and on to Kiev or Byzantium, or from the Urals via Bolghar to the Old Russian princedoms. The exported goods were by no means restricted to silks and other fabrics, but encompassed a broad range of raw materials, luxury goods and everyday objects. Thanks to rich deposits of ores and minerals, the Samanids dealt in lapis lazuli, rubies, turquoise, gold, silver and lead. Added to these were gold and silver jewellery, metal containers, swords and daggers, glass, which was particularly prized in China, and the famous Samarkand paper, which was exported to Iran and Mesopotamia. While Chinese paper was predominantly made with fibres from mulberry bark, bamboo and ramie, with the occasional addition of rags, the Mawarannahr paper-makers used long-strand cotton fibres, mostly from rags, which ensured that this paper was more durable and flexible than the Chinese version.[115] As late as the sixteenth century, Sultan Babur (1483–1530), the founder of the northern Indian Mughal dynasty, praised Samarkand paper: 'The best paper in the world comes from Samarkand.'[116] In order to encourage trade further and to safeguard their routes, the later Samanids, and after them the Seljuks, had caravanserais built, which were known in Iranian-speaking areas as *khan* or *ribat*.

The development and expansion of Samanid cities was accompanied by architectural innovations, the most important being the use of fired brick in the construction of monumental buildings, instead of the unfired mudbrick known as adobe. Fired brick is much more durable than adobe, which rapidly disintegrates in rain, snow and strong wind, and has to be renewed at regular intervals. But adobe buildings were easier and cheaper to produce than those of fired brick and, above all, they are better suited to the climate of southern Central Asia based on the high thermal mass and low thermal conductivity of adobe, thus offering protection from the burning summer sun and the icy winters.

The Samanid mausoleum of Emir Nasr II in Bukhara (fig. 15), is a beautiful example of a new style of façade design that developed at the time. This new arrangement of brick, which the Samanids adopted from the Sassanids, would be further developed and brought to perfection by their successors, the Karakhanids and Seljuks. With this technique there is no differentiation between the functional masonry and the secondary, external decoration. The façade presents 'a densely textured surface of sun-baked bricks forming courses of alternating vertical and horizontal patterns of headers and stretchers, producing a strong wicker-work pattern of enormous vitality'.[117] Discussing the Samanid mausoleum, Oleg Grabar compares this type of façade design with that of the austere-looking tower tomb of Gunbad-i Qabus (fig. 18): 'Here instead of having each brick so to say disappear into the form of the building as it does in the Gunbad-i Qabus, each one is also part of an intricate series of designs which cover the whole building like a sheath. The medium of construction has become the medium of decoration. The effect is on the one hand that of a textured, almost tapestry-like surface and on the other of an almost endless development



19. **The Nestorian Christian Church, Khoruba Koshuk, founded in the fourth/fifth century, stands in a northern outskirt of the early medieval city of Merv, Turkmenistan. It was in use, possibly with some disruption during the late Sassanid era, until the eleventh century.[6] Based on its size, we can assume that it served as an episcopal see. Merv was a Nestorian diocese from the fourth/fifth century onwards and an archdiocese from 544 until around 1340. The ruins were stabilised after 2004. Photo: 2014.[7]**

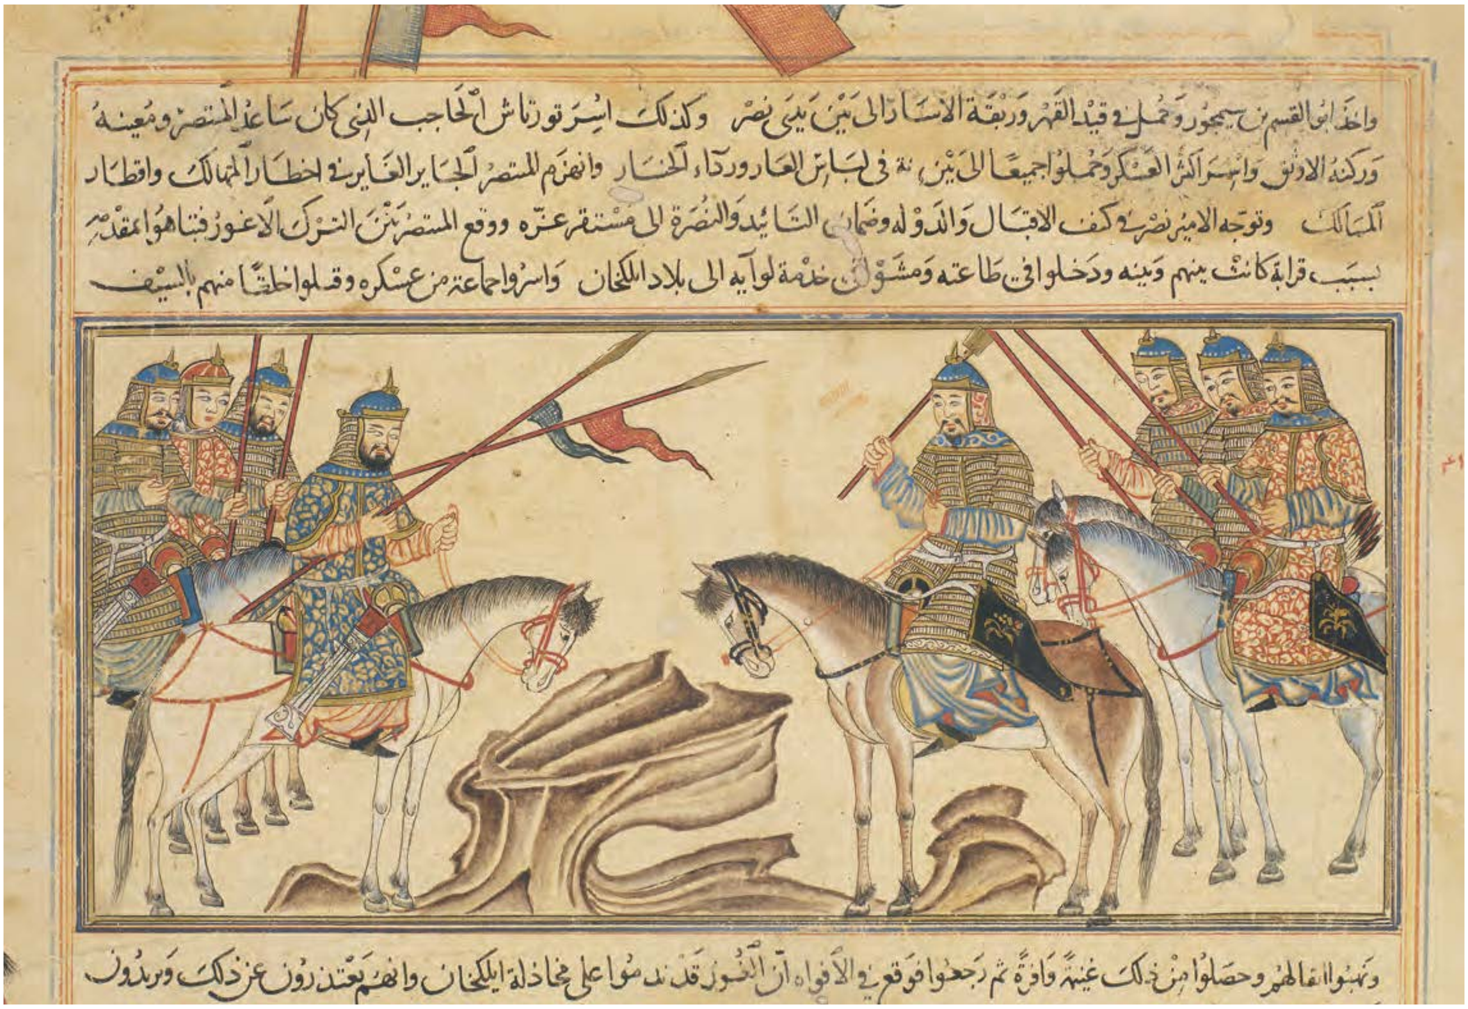
of light and shade, in total opposition to the massive purity of the Gunbad-i Qabus.'[118] The architecture of the domed tomb of Emir Nasr II was modelled on the form of the pre-Islamic fire temple of Chahar-taq[119] and its concept presumably also on the ceremonial tents of the period, in particular the practice of Central Asian steppe peoples of laying out the bodies of deceased nobles in a tent before the actual funeral. 'The ceremonial tent as a resting place for the living served the deceased as a funerary tent and was recreated in monumental form in this manner [of the brick-domed tomb].'[120]

A further architectural innovation during the Samanid period was the madrasa, exemplified by the madrasa complex of Khodja Mashhad (fig. 17) in southern Tajikistan. The vaulted *iwan* with its main portal is flanked by two domed halls of almost square ground plan. The eastern hall was built in the ninth century and served as a mausoleum for the Shi'ite missionary Khodja Mashhad.[121] The western domed hall, a mosque, was built in the tenth and the eleventh century, as were the entrance *iwan* and the surrounding madrasa buildings, the courtyard with four *iwans* and the enclosing building with the residential cells of the *ulama* and students. The two domed halls and the main *iwan* were built of fired bricks, the other buildings of mudbricks. As Vasily Barthold (1869–1939) already realised, the ground plan of the Islamic madrasa is based on that of Buddhist monastery schools such as Ajina Tepe in central Tajikistan.[122]

The Samanid period also saw a linguistic upheaval, when Persian, a south-western Iranian language, replaced the eastern Iranian languages of Central Asia as lingua franca. Persian was originally the language of the southern Iranian province of Fars and became the official court language of the pre-Islamic empire of the Sassanids. With the Arab invaders, whose numbers included many Iranian converts, the Persian language reached western Central Asia. Here it gradually ousted the eastern Iranian languages Sogdian,[123] Chorasmian, Parthian and Bactrian. New Persian owed its dominance to its encouragement by the Saffarids and in particular the Samanids, who also supported poets writing in New Persian. The most famous of these poets was Abu Abdallah Ja'far ibn Muhammad Rudaki (858–*ca*. 941) from Panjikant in north-western Tajikistan, the court poet of Emir Nasr II. For his poetry, Rudaki used a slightly modified form of the Arabic script,[124] which Emir Ismail had already introduced as the official script of his government. The Samanid administration was bilingual, since official documents were written in New Persian, while religious documents and correspondence with the caliph were written in Arabic.[125] New Persian, written in Arabic script, then spread to central and western Iran. To simplify a little, the Arabs brought the Persian language to Central Asia, and in the eleventh century the Seljuks of Turkic origin disseminated New Persian and the post-Samanid culture in the west of the Abbasid Empire. New Persian subsequently evolved into several local variants, including Tajik,[126] which also adopted many Uzbek elements. Tajik was written in Perso-Arabic script until 1928 and then in Latin script until Cyrillic script was introduced in 1939. New Persian, generally known as Farsi, is called Dari in Afghanistan.

In religious respects, too, the Samanids made a significant contribution, by opening up written access to the Qur'an and its interpretation to the New Persian speakers of their empire, who had no command of Arabic. It was Emir Muzaffar Abu Salih Mansur ibn Nuh (r. 961–76) who commissioned his vizier Amirak Bal'ami (in office *ca.* 959/60–74 and possibly 992) to translate al-Tabari's second major work. This work, *al-musamma Jami al-bayan fi ta'wil al-Qur'an*, known more briefly as *Tafsir al-Tabari*, represents a comprehensive exegesis of the Qur'an. The legal scholar Abu Qasim al-Samarkandi (late ninth–mid-tenth century) reported: 'The amir of Khorasan [Mansur ibn Nuh] ordered that this book should be translated into Persian, so that, being already available to [Arabic-speaking] experts, it might also be useful to the masses.'[127] Before giving his vizier the task of translating this work, completed by Tabari in Arabic in 883, into New Persian, the emir obtained confirmation from a group of legal scholars that a translation of the Qur'an into Persian was permitted. These initiatives, together with the achievements described below in philosophy, theology and the exact sciences, definitively freed Islam from the constraints of an Arab Bedouin culture and anchored it in the Iranian-speaking world. The Samanids also operated a fairly tolerant policy on religion, as can be recognised from the five Nestorian Christian Metropolitan sees of Merv, Nishapur, Herat, Sistan and the Caspian provinces.[128]

Emir Nasr's son and successor **Nuh ibn Nasr** (**Nuh I**, r. 943–54) faced several revolts during his rule. Once he even had to flee from the capital to Samarkand to escape an uncle and two brothers. But because the people of Bukhara resisted the usurpers, Nuh managed to return, and had the three rebels blinded.[129] Under the next emir, **Abd al-Malik ibn Nuh** (r. 954–61), the stealthy takeover of power by Turkic military



20. The start of the battle between the Samanid prince al-Muntasir (d. 1005) and the Ghaznavid conqueror Sultan Abu'l Qasim Mahmud, for the restoration of Samanid rule in 1003 or 1004. From *Jamia al-Tawarikh*, a history of the world by Rashid al-Din Hamdani (1247–1318) produced *ca.* 1307 in Tabriz, Iran, Vellum. University of Edinburgh, Edinburgh, Oriental Manuscript Collection. 20 f.122r(a).

slaves became obvious when, in 957, two Turks, the majordomo and commander of the guard Alp Tegin and the treasurer Qut Tegin, murdered the army commander-in-chief and governor of Khorasan, Bakr ibn Malik, in front of the government building, and went unpunished. Soon afterwards, Alp Tegin (d. 963) had his loyal friend Amirak Bal'ami appointed vizier, and in the winter of 960/61 he installed himself as governor of Khorasan and supreme commander of the Samanid army,[130] so that the former slaves now controlled the government and the emir. When, towards the end of 961, Emir Abd al-Malik died after falling from his horse, an open struggle for power broke out between the two Turkic military slaves Alp Tegin and Fa'iq (d. 999). The eunuch Fa'iq was victorious, and placed his boyhood friend, **Abu Salih Mansur ibn Nuh** (r. 961–76) on the throne, at which point Vizier Amirak Bal'ami swiftly changed sides; Alp Tegin fled with his personal guard from Nishapur to Balkh, after which he marched south and conquered Ghazna. Immediately, Emir Mansur confirmed Alp Tegin as Samanid governor of Ghazna,[131] laying the foundation stone for the Ghaznavid dynasty.

Under the emirs Mansur ibn Nuh and his successor **Abu'l Qasim Nuh ibn Mansur** (**Nuh II**, r. 976–97) the economic and political situation deteriorated dramatically. While the army, ruled by Turkic commanders, devoured ever more money, the state income plummeted. Three undesirable developments led to this decline in tax revenue. The first of these was the neglect in maintenance of the irrigation systems and (in the greater Bukhara oasis) of the long walls that protected against wind and desert sand; this cut income from agriculture and reduced the areas under cultivation, so that impoverished farmers fled to the cities, while the rural nobility sank into poverty. Secondly, the landholdings of the religious and social foundations known as *waqf*, which were exempt from tax, expanded rapidly, so that their total income benefited the mosque, school or hospital to which the property belonged. Thirdly, there was a growing number of *sayyids* (alleged descendants of the Prophet, who were also tax exempt) in the guard corps and among high officials. And in 982/83, the Turkic eunuch Fa'iq had no qualms about ordering the assassination of the vizier Abu'l Husain Utbi, a highly competent statesman.

The final blow to the Iranian Samanid dynasty came with the rise of two young Turkic dynasties in the north and south, the Karakhanids and the Ghaznavids. In 990 the Karakhanids, with their power centres in Balasaghun (east of the present city of Bishkek) and Kashgar, under Bughra Khan Hasan (Harun), wrested Isfijab, the present-day Sayram east of Shimkent in the south of Kazakhstan, from the Samanids, whereupon many small Samanid cities, which were ruled by governors of Turkic origin, welcomed the Karakhanids. Resistance against the Karakhanids was slight, since they (or at least their elite) had converted to Islam in the mid-tenth century, and were considered good Sunni Muslims. In the late autumn of 991, Bughra Khan attacked the Samanid Empire, and in the spring of 992, together with Fa'iq, who had defected to the Karakhanids, he marched on Bukhara. Nuh II fled, but Bughra Khan soon became ill and died towards the end of 992 on the road back to Balasaghun or Kashgar,[132] whereupon Nuh returned to his capital. Two years later, Fa'iq joined another rebel in order to depose Nuh. The latter then appealed for help to Sebük Tegin, a former Karluk slave and son-in-law of Alp Tegin, who had ruled Ghazna since 977. Sebük Tegin defeated the rebels in two battles and appointed his son Mahmud as governor of Khorasan.[133] Nominally Sebük Tegin and Mahmud were merely Samanid governors, but in practice they ruled Afghanistan and Khorasan independently.

The luckless successor of Emir Nuh ibn Mansur, **Abu'l Harith Mansur ibn Nuh II** (r. 997–99), was blinded on the orders of Fa'iq, who placed Mansur's brother, **Abd al-Malik ibn Nuh II** (r. 999) on the throne. This gave Sultan Mahmud of Ghazna (r. 998–1030) the excuse to play the part of the avenger of the blinded emir, and in 999 to conquer the whole of Khorasan. At the same time, Arslan Ilek Abu'l Hasan Nasr ibn Ali, the subordinate khan of the Karakhanids in Uzgend, advanced, and on 23 October 999 he occupied Bukhara without encountering any resistance. He took Malik ibn Nuh II prisoner and transported him to Uzgend. Then, in 1001, the victors divided the Samanid Empire among themselves[134] and declared the Oxus to be their common border: north of the river the Karakhanids ruled, and south of it the Ghaznavids. Malik ibn Nuh's brother Ismail, who called himself *al-Muntasir*, 'the victorious', succeeded in inflicting a few defeats on the Karakhanids, until in 1005 the Oghuz, his allies, betrayed him, and he fell in battle at Merv.[135] But the division of the Samanid Empire was more than a mere apportioning of territorial spoils between two victorious powers: it amounted to a transformation of the Islamised part of Central Asia, in which confederations of Turkic origin were reshaping the geography. In the north, most of Mawarannahr fell to the Karakhanids, primarily to Ali bin Harun Bughra Khan, called Ali Tegin (r. 1014/15 or 1020/21–34/35);[136] the south was annexed by the Ghaznavids; in the west, the Ghaznavids appointed the former military slave Altun Tash (r. 1017–32) as governor, with the title of a Chorasmian shah; and in the south-west, from *ca.* 1025 Ghaznavids and Seljuk invaders struggled for power. This new geographical and ethnic configuration of the south-west of Central Asia formed the springboard for the Turkification of broad areas of the Near East and the Balkans.

II

Central Asian Pioneers of Islamic Philosophy and Sciences

'Man has a property [reason and free will] by which he is distinguished from other existent beings. But he has other actions and faculties, in some of which the animal species share with him, and in some others the types of plants or the minerals and other bodies.'

NASIR AL-DIN TUSI (1201–74), polymath from Khorasan.[1]

Around 750, Central Asia witnessed the birth of an intellectual movement of enormous importance which would endure for the next four centuries and which expressed a spirit of optimism and scientific curiosity surprisingly similar to that of the European Renaissance and Enlightenment. It was an era of polymaths, who dedicated themselves to the exact sciences and pursued philosophical questions beyond the narrow constraints of religious dogmas and tradition. Initially, they concentrated on gathering existing knowledge, above all from Greek and Indian sources, and then examining and evaluating it according to rational criteria. Thereafter, depending on each field of knowledge, scholars would develop hypotheses and then reach conclusions through logic, or they would conduct experiments to test their hypotheses and theories. Anticipating the eighteenth-century French *encyclopédistes*, the work of the Islamic scholars al-Biruni (973–1048) and Ibn Sina (better known in Europe by his Latinised name, Avicenna; *ca*. 980–1037) resembles a compendium of the scientific knowledge of the time. In the same way that, half a millennium later, open-minded, cosmopolitan Renaissance princes and enlightened absolutist rulers would invite philosophers, poets and musicians to their courts and build up libraries, the early Abbasid caliphs, Samanid emirs and Ghaznavid sultans vied to bring the leading scholars of their time to their own courts and to acquire the most magnificent libraries. To these rulers, knowledge was considered a desirable symbol of wealth and liberality.

Western accounts often refer to the great Islamic scholars of the eighth to twelfth centuries as ‘Arab’. But this was not the case, as the historian Ibn Khaldun (1332–1406) pointed out: ‘It is a remarkable fact that, with few exceptions, most Muslim scholars both in the religious and intellectual sciences have been non-Arabs. [. . .] Only the Persians engaged in the task of preserving knowledge and writing systematic scholarly works.’[2] Indeed, the overwhelming majority of scholars at the time were of Iranian origin and came from Mawarannahr or Khorasan. The fact that they wrote mainly in Arabic does not mean they were Arabs, any more than someone who writes in the English language is necessarily English.

1. Early Scientists and Philosophers

The remarkable flourishing of science and philosophy in the Islamic world, which started around the middle of the eighth century, was spurred on by the extensive translation work of Christian, mainly Nestorian, scholars from the seventh to the ninth century. The Barmakids, among others, were leading sponsors of this work. Philosophical, medical and astronomical treatises were translated from Greek and Sanskrit, initially into Syriac, and later also into Arabic.[3] Caliph al-Ma’mun, who had resided in Khorasan for four years as governor of the eastern provinces and for five or six years as caliph, gave a further stimulus to this intellectual awakening in 830 when he founded the famous *Bayt al-Hikma* in Baghdad.[4] This ‘House of Wisdom’ included a vast library, which originated from the book collections of the caliphs al-Mansur and Harun al-Rashid, and included the confiscated library of the Barmakids. Two years earlier al-Ma’mun had built an observatory in Baghdad, not least in order to check the data and observations in the works of the Greek astronomer and mathematician Ptolemy, which had been translated into Arabic. He also expressed the wish ‘to know the size of the earth’.[5] Land surveyors were sent to the Syrian Desert near al-Raqqa and Palmyra where they measured the angle of elevation of the sun and the geographical degree of latitude, from which they calculated the radius and circumference of the Earth, within one per cent of today’s known value. The House of

Wisdom was not a university with formal teaching programmes, but a centre of research and translation, which also fostered the exchange of ideas between scholars. The fields of enquiry included medicine, mathematics, geometry, astronomy, the life sciences, chemistry, geography and cartography, as well as architecture, structural engineering, mechanics and hydraulics. Two groups were particularly important in the House of Wisdom: first the Nestorians, since they had a command of Greek and Arabic, above all Hunayn ibn Ishaq (809–73), a physician and translator from southern Persia, and his son Ishaq ibn-Hunayn,[6] and secondly eastern Iranian/Central Asian scholars and translators, who studied Indian sources. The House of Wisdom was destroyed during the sacking of Baghdad in 1258 by the Mongol Il-Khan Hülegü, although it seems that Nasir al-Din al-Tusi (see below) managed to rescue 400,000 manuscripts from the library before the siege, and have them brought to Maragheh.[7]

Among the leading scholars at the House of Wisdom were the three **Banu Musa** brothers from Merv, **Abu Ja'far Mohammad ibn Musa ibn Shakir** (*ca.* 800–73), a friend of the Christian Hunayn ibn Ishaq, **Ahmad ibn Musa ibn Shakir** (*ca.* 805–?) and **Hasan ibn Musa ibn Shakir** (*ca.* 810–?), who all accompanied Caliph Ma'mun to Baghdad in 818–19. The brothers re-examined the theories of Archimedes and Ptolemy and made important contributions to observational geometry and astronomy. They also measured the length of the year and found that it lasted 365 days and six hours,[8] a value which comes very close to that of the Gregorian calendar year of 365 days, 5 hours, 49 minutes and 12 seconds. Together with al-Khwarizmi, the brothers took part in a project to calculate the size of the Earth.[9]

The most original work by the *Banu Musa*, as the three brothers were known, is the *Kitab al-Hiyal* or 'Book of Ingenious Devices',[10] published around 850, richly illustrated with drawings and

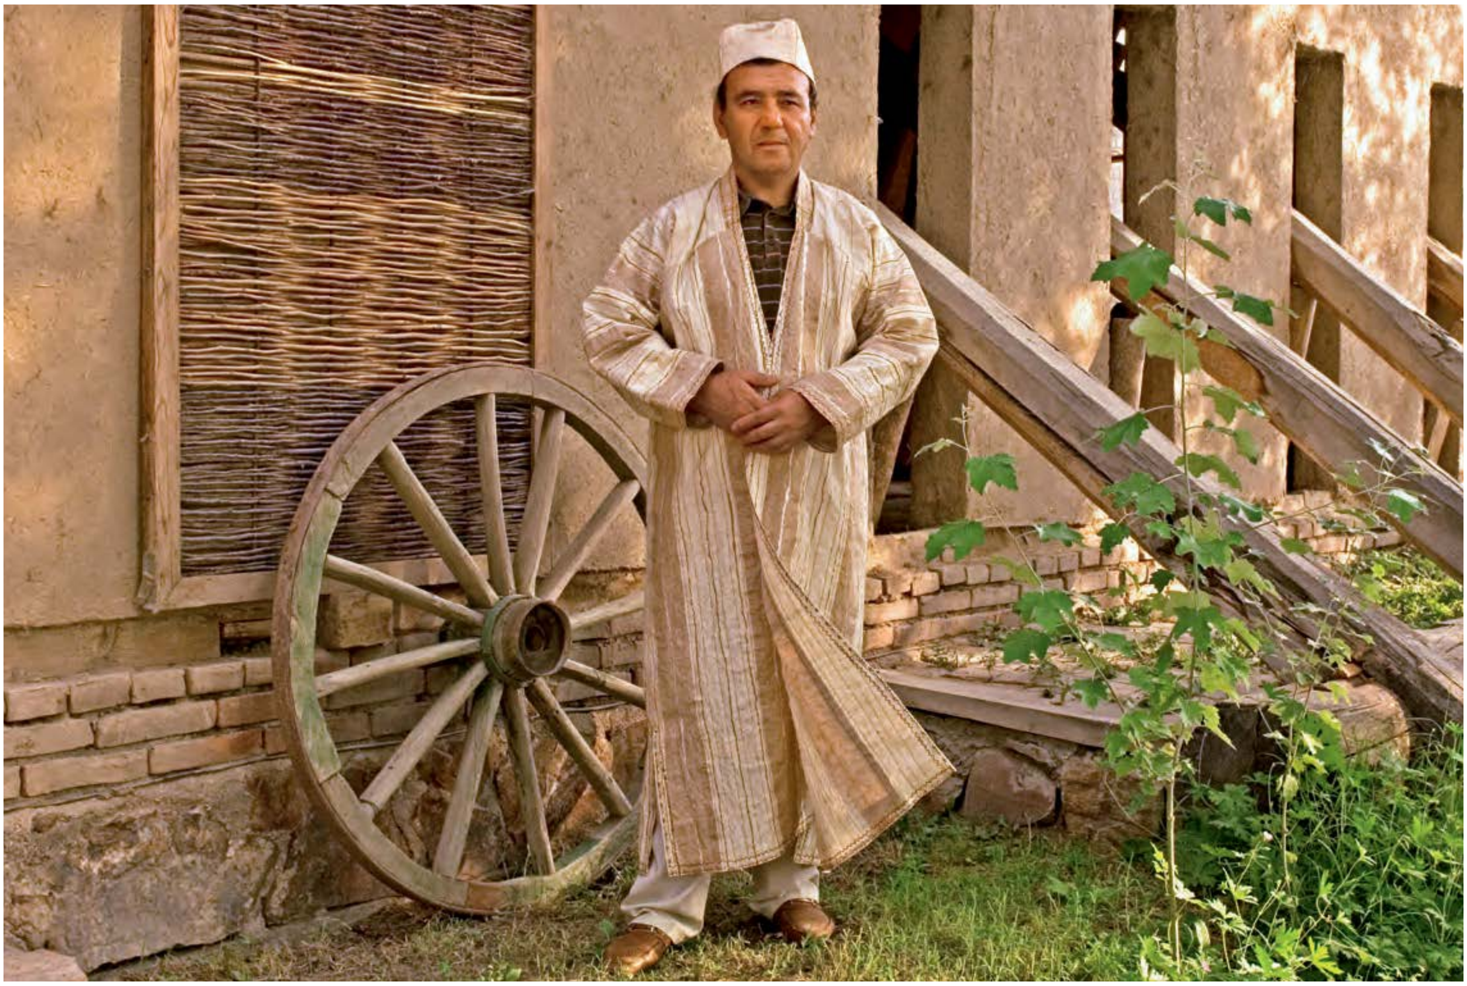
expounding 100 inventions in the fields of control engineering, pneumatic instruments and automation.[11] Among these inventions were self-regulating syphons,[12] cone valves in hydrostatic and aerostatic sensors in combination with simple crank applications,[13] automatic fountains[14] and an automatic, hydro-powered whistle or flute player.[15] Other devices include a grab for extracting objects from underwater,[16] a lamp with automatic oil feed (fig. 21) and a storm lantern with self-positioning wind shield.[17] Finally, they invented an early form of gas mask, as well as bellows with a valve for sucking foul air out of wells or dangerous air out of mines.[18]

Two more famous scholars affiliated to the House of Wisdom were al-Kindi and al-Khwarizmi. **Abu Yaqub ibn Ishaq al-Kindi** (*ca.* 801–73), from Kufa, who was one of the few Arab philosophers, was deeply influenced by Aristotle and to some extent by the rationalist theology of the Mu'tazilites. Al-Kindi held philosophical enquiry and the revelations of prophets, or faith in the case of ordinary people, to be compatible sources of knowledge and truth, a view that was strongly opposed by some later thinkers.[19] His three most important students came from Central Asia. **Abu Ma'shar al-Balkhi** (Albumasar, 787–886) was a famous astronomer and astrologer. **Ahmad ibn al-Tayyib al-Sarakhsi** (d. 899), a jurist of the Hanafi school feared for his eloquent use of logic, was executed on account of alleged Mu'tazilite views.[20] **Abu Zaid al-Balkhi** (850–934), finally, was a geographer, who in a work that has not been preserved described parts of the then known Muslim world.[21] Unlike al-Kindi, who believed that rational thought and religious faith could be compatible, **Abu Sulayman al-Sijistani** (*ca.* 912–*ca.* 985)[22] from Sistan, who was pious for personal and presumably also political reasons, thought that philosophy and religion represented two separate fields of enquiry; they were irreconcilable with each other, as was logical thinking with faith. This view was shared by the great polymath al-Biruni: 'Abu Sulayman says: Philosophy is true, but it has nothing to do with the law [of religion]; and the law is true, but it has nothing to do with philosophy. [. . .] It behooves whoever wishes to philosophize to avoid religious matters in his speculation.'[23]

As his name indicates, **Abu Ja'far Mohammad ibn Musa al-Khwarizmi** (*ca.* 780–850) came from Chorasmia, but he spent much of his career at the House of Wisdom in Baghdad. Al-Khwarizmi was one of the greatest scientific minds of the Islamic Middle Ages, and some of his innovations in mathematics were not only adopted in Europe, but are still in daily use today. In his book *Kitab al-Jabr wa -l-Muqabala* ('The Compendious Book on Calculation by Completion and Balancing') – the term *al-jabr*, 'completion' or 'restoration', is the source of the word 'algebra' – al-Khwarizmi described the basis for the solution of linear and quadratic equations and spherical trigonometry.[24] In another pioneering book, *Kitab al-Jamia wa-l-Tafriq bi Hisab al-Hind*, he deals with Hindu-Arabic arithmetics.[25] The Arabic text has been lost, but a Latin translation has survived. In the introduction al-Khwarizmi outlines his approach: 'We have decided to explain Indian calculating techniques using the nine characters and to show how, because of their simplicity and conciseness, these characters are capable of expressing any number,' including the zero, 'the tenth figure in the shape of a circle'.[26] Indian mathematicians had developed a positional numeral system with the digits 1 to 9 and a new digit for the zero, which acts as a placeholder. Zero thus on the one hand shows the absence of a number with actual value, and on the other hand it possesses a real place value. Thus each digit can be assigned a decimal place value in an array of figures. For example, in the array 5,050 the first 5 expresses the value of five thousand and the second 5 that of fifty.[27] Another Indian concept, that of negative numbers, was also adopted a bit later by the mathematician **Abu al-Wafa Buzjani** (940–98) from north-eastern Khorasan.[28] The glyphs 1 to 9, originally created in the first century CE in the Brahmi script and further developed in the Devanagari script, and the zero, introduced in the early seventh century, evolved into a western and an eastern Arabic version during the seventh century. The eastern Arabic variant became what is now known as Eastern Arabic or Arabic-Indic numerals which are currently used in the Arabic script, whereas the Western Arabic numerals – which are still used in Europe today – replaced the Roman system, which was cumbersome and unsuitable for complex calculations.[29] Al-Khwarizmi also made an important contribution to cartography: he compiled a table of the longitudes and latitudes of 2,402 locations, and, adopting a Ptolemaic concept, arranged the data according to a system in which the known world was divided into seven longitudinal climates (from the Greek *klimata*, translated into Arabic as *aqalim* or *iqlim*).

But intellectual life in Baghdad in the first half of the ninth century was shaped not only by the liberal spirit of the House of Wisdom, but also by a kind of state-decreed, rationalist inquisition. It was concerned with theological and epistemological questions such as free will, the origin of evil, the correct interpretation of the Qur'an and the limits of human knowledge. A group of scholars



24. Paper maker Zarif Mokhtarov in front of his paper mill in Samarkand, Uzbekistan, wearing a coat made out of his mould-made paper. The damp paper sheets are crumpled to give them suppleness and structure. The mill stands beside the little River Siyob in the village of Koni Ghil, 5 kilometres from Samarkand. The Mokhtarov brothers chose this site to set up their paper mill. In his autobiography, Sultan Babur (1483–1530), a descendant of Timur-e Lang, was full of praise for paper made in Samarkand, hailing it as 'the best paper in the world', adding that 'the species of paper called *juaz* comes entirely from Kanegil',[8] which is today's Koni Ghil. حضرت رسول علیه السلام اول بو ملك کوردکیدکه یتمش باشی وارایدی واوزنلغی دنیا مقداری ایدی که هر باشنده
زبان فصیح وارایدی که حق تعالیه تسبیح ایدردی وهم بو ملك دغی کورددی اکو جمیع دریالر وصوی بو کوزینه
قویسلر اول بو آخر کوزینه یتشمزدی

from Basra and Baghdad called the **Mu'tazilites**[30] propounded radically rationalist positions; one of them was the theologian **Jahm ibn Safwan al-Tirmidhi** (d. 745/46),[31] who participated in the revolts led by Harith ibn Surayj in Khorasan and Mawarannahr. Mu'tazilite theologians attributed to humans the power of free will to choose between good and evil, so that evil represented the result of a bad choice and was not predetermined by fate. Like al-Tirmidhi, they rejected the doctrine of *jabr* (predetermination or predestination), stressing that humans have power over their actions and are therefore responsible for them. A grave sinner should be regarded neither as a believer nor an unbeliever, but occupied an intermediate position. The Mu'tazilites were also convinced that human reason was an adequate tool for the understanding of God's creation. Finally, they held the Qur'an to be created, so that one day, in the distant future, its message may lose in significance. Although they believed that the Qur'an was God's word to the extent that its contents were inspired by God, its form and language were determined by Muhammad's personality and sphere of life, so that the Qur'an was open to both a literal and a figurative interpretation. For the Mu'tazilites, the doctrine that the Qur'an was uncreated was heretical because it gave an attribute that was God's alone, eternity, to the Holy Book.[32] The majority of theologians, who saw belief in the prophetic revelations as the only path to true knowledge and correct conduct of life and who were convinced of the uncreated divinity of the Qur'an in form and language, regarded the Mu'tazilite position as heretical. These theologians – and notably the staunch traditionalist Ahmad ibn Hanbal, a bitter opponent of the Mu'tazilites – held the Qur'an to be the unmediated word of Allah, inseparable from him and therefore uncreated.[33]

Caliph al-Ma'mun intervened in this heated debate, in which the traditionalist majority appeared to have won the upper hand. The caliph may well have understood that the new discoveries which the scholars and translators of the House of Wisdom were making and publishing were much more compatible with the more liberal views of the Mu'tazilites than with the traditionalist schools, which held stubbornly to the pre-eminence of faith over reason. Thus, towards the end of his caliphate, he introduced a state-decreed test called *mihna* (usually translated as inquisition), which judges and leading theologians had to undergo. The most important question concerned the character of the Qur'an. The candidates had to attest under oath to its created nature.[34] Anyone who refused was removed from office, arrested and sometimes also executed; ibn Hanbal, for example, only narrowly escaped the death sentence. The test introduced by al-Ma'mun and continued by his two successors, al-Mu'tasim (r. 833–42) and al-Wathiq (r. 842–47), also reflected a power struggle between the caliph and the traditionalist theologians over the prerogative of interpreting questions of faith and law.

The introduction of the *mihna* provoked a violent reaction, led by the new caliph, al-Mutawakkil (r. 847–61). The Mu'tazilites, now considered heretics, were persecuted, translators were arrested, and members of other religions, such as Christians and Jews, were victimised. They were driven from public office, their churches and synagogues were closed, and they had to wear certain yellow garments and affix wooden figures of the devil to the doors of their houses.[35] While al-Ma'mun had tried to unite in his person the responsibilities of the temporal ruler with those of the imam, in order to break the power of the hostile Ulama, al-Mutawakkil and his successors chose the typical path of authoritarian regimes: 'The Abbasids hoped to regulate [an increasingly restive] society from above by merging their laws with the strictures of faith.'[36]

One of the heirs of the Mu'tazilites was **Abu 'l-Hasan Ahmad ibn al-Rawandi** (*ca.* 827–910?), who is believed to have come from Merv al-Rud, between Sarakhs and Balkh. He changed his faith several times: after abandoning Judaism for Sunni Islam, he adopted Mu'tazilite ideas but then became a Shi'ite, and finally a freethinker. He preached the superiority of human reason, power of observation and command of language. Rejecting Islam and the other prophetic religions based on revelation, he posed the polemical question as to how it was possible for God to have sent out different prophets who contradicted each other. Al-Rawandi conceived the universe as eternal, so there was no sensible reason to invent a creator God.[37] Although not a Mu'tazilite, the Persian polymath **Abu Bakr Muhammad ibn Zakariya al-Razi** (*ca.* 865–925), who came from Rayy, also espoused a materialist worldview. He thought that the material world consisted of tiny, indivisible and eternal particles (atoms) that were surrounded by

◀ 25. In the Third Heaven, the Archangel Gabriel leads the Prophet, mounted on the winged horse with human face Buraq, to a large angel who points to another large angel with 70 heads and 70 tongues, praising Allah in 70 different languages. The first-ever Muslim visual representation of a many-headed angel appeared in the *Miraj Nameh* dating from 1436/37, the account of the Prophet's midnight journey and ascension to Paradise. It draws on Buddhist influences from Central Asia or China, especially images of the multi-headed Avalokiteshvara, the Bodhisattva of Compassion, called Guanyin in Chinese.[9] Manuscript from the late Timurid period *Nahj al-Faradis* ('The Path to Paradise'), which describes and depicts Muhammad's ascension. Written on paper in 1465/66 by the calligrapher Ali al-Sultani for Sultan Abu Said (r. 1451–69), the manuscript more or less replicates Shah Rukh's *Miraj Nameh,* produced 30 years earlier. In common with the latter, it is written in Turkic Chagatai in Arabised Uyghur script. The David Collection, Copenhagen. Inv. no. 14/2012 r.

an infinite void. The world's material diversity was the result of different combinations of atoms, and the properties of a substance were determined by the proportion of empty space between the atoms.[38] Al-Razi understood God not as the creator of the world *ex nihilo*, but as a kind of primordial substance. Like al-Rawandi, he attacked revealed religions, holding their claim to absolute and sole truth to be a major cause of all wars.

From the ninth century onwards, Sunni traditionalist currents spread not only in Baghdad but throughout the whole of Muslim Central Asia. One sign of this was the proliferation of *hadith* collections. *Hadiths* are records of the sayings and daily practice of the Prophet, and as a vital source of religious law and moral guidance in everyday life they are considered to be the second pillar of Islamic law. Tens of thousands of *hadiths*, mostly attributed to the Prophet after his death so as to legitimise retrospectively some statement or development, had accumulated over time and had to be examined and ordered. A total of some 400 collections are known, but not all their compilers took the same care in verifying their lines of transmission. Ideally the authentication should go back to at least two of Muhammad's companions. In fact, only six of the 400 collections are recognised by the Sunnis as canonical, and five of these were compiled by Central Asian scholars. Among the first pre-canonical collections are those by two scholars from Merv, **Husain bin Waqid** (d. *ca.* 775) and **Abdullah ibn Mubarak** (d. *ca.* 797), who, although originally a slave, was a student of Abu Hanifa[39] and a renowned Islamic scholar known as *Amir al-Mu'minin fi al-Hadith*, which means 'commander of the faithful on matters relating to the *hadiths*'. Another was the famous collection of **Ishaq bin Rahuya** (d. 852) of Nishapur.[40]

The earliest and most famous compiler of canonical *hadiths* was **Muhammad ibn Ismail al-Bukhari** (810–70), who lived in Bukhara, Mecca, Baghdad and Nishapur. As a young man he travelled extensively, studying at the most important centres of Islamic knowledge. One of his teachers was Ahmad ibn Hanbal, who was said to have collected 99,000 *hadiths*, of which al-Bukhari learned 70,000 by heart (nearly 30,000 of these hadiths were published).[41] Al-Bukhari's compilation, called *Jamia al-Sahih*, also *Sahih al-Bukhari*, included 7,250 *hadiths* with commentary and evidence of textual authenticity, and is considered the most reliable of all collections. Towards the end of his life, al-Bukhari was suspected of being close to the Mu'tazilites and of propagating the idea that the Qur'an was created. Although this suspicion was unjustified, he had to flee from Nishapur to Bukhara and from there to a small village called Khartank near Samarkand, where he died.[42]

Abu 'l-Husain Muslim ibn al-Hajjaj al-Nishapuri (d. 875) from Nishapur, a student and friend of al-Bukhari, and **Abu Isa Muhammad al-Tirmidhi** (*ca.* 824/25–92) from Termez, also a student of al-Bukhari, both compiled well-respected collections of *hadiths*. A further compilation recognised as authoritative and famous for the meticulous critical commentaries was published by **Abu Dawud al-Sijistani** (817–88) from Sistan. The fifth of these Central Asian compilations, also highly esteemed, was brought out by **Abu Abd al-Rahman al-Nasa'i** (829–915) from Khorasan, who travelled through almost the whole of the Islamic world and eventually settled in Egypt.[43]

With these five collections, Central Asian scholars made a very important contribution to the consolidation of Islamic jurisdiction. However, the *hadiths* greatly restricted personal freedom in everyday life, and reduced to a minimum judicial discretion in assessing apparent transgressions of rules of correct Islamic life. It would seem the compilers considered that every aspect of daily existence needed written instructions. Thus they paved the way for a codification of rules of conduct, which ultimately stemmed from a seventh-century provincial Arab tribal society.

Central Asian scholars also made a significant contribution to the historiography of the pre-Mongol Islamic world. **Abu Ja'far Muhammad ibn Jarir al-Tabari** (839–923) from Tabaristan is considered one of the outstanding historians. In fact he was not only a historian, but also produced an exegesis of the Qur'an which is still highly esteemed today,[44] and founded his own school of law, called Jaririyya. His chronicle, *Tarikh al-Rusul wa al-Muluk*[45] ('History of the Prophets and Kings'), is a universal history that begins with the Creation and ends in al-Tabari's own era, in 915. It is an invaluable source for the history of the pre-Islamic Sassanids, since texts sources of late antiquity, today lost, were available to him, and also provides information on the life of Muhammad and the eras of the Four Righteous Caliphs, the Umayyads and Abbasids. After al-Tabari, other historians from Khorasan and Mawarannahr produced further chronicles, most of which concentrated on a single region, dynasty or ruler. Among the most important were certainly **Abu Bakr al-Narshakhi** (*ca.* 899–960) from Bukhara, who recorded the history of that city from its foundation up to the period of office of the Samanid Nuh ibn Nasr (r. 943–54),[46] and the polymath **Abu Rayhan Muhammad al-Biruni** (973–1048) from Chorasmia, whose legacy includes a history of India, *Kitab tarikh al-Hind*,[47] and *Al-Athar al-Baqiya'an al Qurun al-Khaliya*, translated into English as *The Chronology of Ancient Nations*.[48] Another important historian was **Abu Said Abd al-Hayy Gardizi** (d. *ca.* 1061) from Gardez, Khorasan, whose *Zayn al-akhbar, The Ornament of Histories*, discusses the period from the pre-Islamic rulers of Persia up to 1032 as well as the history of Khorasan up to 1041, in a sober style not unlike academic writing today.[49]

Gardizi's contemporary **Abu 'l-Fadl Beyhaqi** (995–1077), also from Khorasan, lived in Ghazna as the court secretary of Ghaznavid sultans. After his retirement, he turned the extensive notes that he had taken over many years into a 30-volume work on the history of the Ghaznavids. The only five volumes that have survived are concerned with the reign of Sultan Masud I (r. 1030–41) and known as *Tarikh-e Mas'udi*.[50] Also lost are the original copies of a history of the Seljuks, *The Saljuqnama*, by **Zahir al-Din Nishapuri** (d. *ca.* 1184); only later, revised copies are extant.[51] Although **Minhaj al-Din Juzjani** (1193–after 1265/66), from Firuzkuh, Afghanistan, lived almost a century later than Zahir al-Din, he belongs to the same tradition of disinterested and unbiased chroniclers, and his writings are extremely valuable for the historical understanding of the Central Asian dynasties of the Seljuks, the Afghan Ghurids and the shahs of Chorasmia as well as the Mongol invasions. As a young man, Juzjani witnessed the downfall of the Ghur dynasty, and during the early 1220s he lived through the devastation of Afghanistan by the Mongols. By 1226 he had fled to India, first to Uch and then to Delhi, where he found refuge with Sultan Shams al-Din Iltutmish (r. 1211–36) and wrote his universal history of the Muslim world, *Tabakat-i Nasiri*, which he dedicated to Iltutmish's son Nasr al-Din Mahmud.[52] Unlike the Persian historians al-Juvaini and Rashid al-Din, who were in the service of the Mongolian Il-Khanate and therefore had to consider the sensibilities of their employers, Juzjani was free from such constraints.

2. The Golden Age of Science and Philosophy

Abu Nasr Muhammad al-Farabi (*ca*. 870–950) was a renowned philosopher and scientist with a keen interest in the theory of knowledge. Probably a Sogdian from the great merchant city of Farab, now called Otrar, in southern Kazakhstan,[53] he was proficient in the Sogdian language. In Merv he studied under the Nestorian scholar and logician Yuhanna ibn Haylan, who introduced him to Aristotle, Plato and the Neoplatonists. Engaging with a debate that had started in the late eighth century, about God's role in the universe and the status of reason, al-Farabi embraced Aristotelian as well as Neoplatonic ideas: he understood God to be the 'first cause' from which the whole universe emanated. Despite God's omniscience, al-Farabi attributed free will in thought and deed to humans.[54] In his classification of the sciences, the *Kitab ihsa' al-'ulum*, he proposed eight major disciplines: science of language, logic, mathematics, physics, metaphysics, civic science and civic philosophy, jurisprudence and *kalam*, a discursive Islamic theology conducted through dialectical disputes.[55] He also elaborated a comprehensive theory of music.

The two intellectual giants of Central Asia, al-Biruni and ibn Sina, lived a century later than al-Farabi. Their paths crossed, and during 998–99 they kept up a correspondence about scientific questions which at times was fiercely polemical. **Abu Rayhan Muhammad ibn Ahmad al-Biruni** (973–1048) was born in Kath, north-east of the present city of Khiva in southern Uzbekistan, which was then the capital of the small kingdom of the Afrighid dynasty in the east of Chorasmia that was part of the Samanid Empire. According to al-Biruni, 22 Afrighid kings ruled in this area over a period of 690 years (305–995).[56] When the founder of the Ma'munid dynasty Abu Ali Ma'mun ibn Muhammad (r. 992–97), who resided in Gurganj, today Konye-Urgench in northern

28. **The Prophet Muhammad forbids the intercalation of extra days into the Islamic lunar calendar year so that it would match the solar year. This prohibition was criticised by al-Biruni, since it had an adverse effect on both astronomy and agriculture. Manuscript entitled *The Chronology of Ancient Nations* completed in 1307 by al-Biruni (973–1048). University of Edinburgh, gouache on paper, Oriental Manuscript Collection. Ms. 161 fol.6v.**

Turkmenistan, conquered Kath in 995 and had the last Afrighid ruler, Abu Abdallah Muhammad (r. 967–95), executed, al-Biruni, who was close to the Afrighids, fled first to Bukhara, then to Rayy and later to Gorgan, where until 1004 he lived at the royal residence of Shams al-Ma'ali Qabus (r. 977–81, 997–1012). Al-Biruni's flight from Kath meant that he had to give up his important project, the mapping of the then known northern hemisphere of the globe that was to include the precise location of cities. Another 200 years later, in 1208/9, the geographer Muhammad ibn Najib Bakran, who lived in Khorasan, would produce the first grid map of the Islamic world, true to scale and using, among others, al-Biruni's tables of the latitudes and longitudes of important cities.[57] Bakran described in his treatise *Jahan namah* the unique peculiarity of his map: he wrote that the 'many red lines, some [running] from the east to the west and some from the north to the south, these are the lines [*khutut*] of longitude [*tul*] and latitude [*'arz*]', and adds that the 'great advantage' of his map is that 'by means of longitude and latitude the location of each city can be determined'.[58] Meanwhile Abu Ali Ma'mun's son Abu 'l Hasan Ali (r. 997–1008/9), having successfully incorporated eastern Chorasmia into his domain, began not only to rebuild Gurganj, the capital of the unified Chorasmia, in magnificent style, but also to invite famous scholars to his court. Al-Biruni made peace with the Ma'munids and returned to Gurganj around 1004, where Ibn Sina also moved in 1005.[59]

But soon the two men became victims of the volatile political situation. Although Abu 'l-Hasan Ali and his successor Abu 'l-Abbas Ma'mun II ibn Ma'mun (r. 1009–17) managed to some extent to keep their nominal Karakhanid overlords at a distance, they were powerless against their aggressive neighbour to the south, Sultan Mahmud of Ghazna (r. 998–1030). Around 1015 or 1016, Mahmud presented Ma'mun II with an ultimatum, demanding from him not only formal submission, but also that he should deliver al-Biruni and Ibn Sina to him forthwith. Ibn Sina, who had already been driven from his homeland once by a Turkic conqueror, immediately fled westwards, while al-Biruni remained in Gurganj. Although Mahmud had placed a bounty on his head, Ibn Sina escaped capture. But for nearly all the rest of his life he remained a fugitive, threatened by the Ghaznavid advances into Iran. When in 1017 Mahmud conquered Gurganj and incorporated Chorasmia into his territory, al-Biruni and the astronomer Abu Nasr Mansur ibn Iraq, as well as other scholars, were exiled to Ghazna.[60] Although he was a prisoner, al-Biruni enjoyed freedom of movement in the Ghaznavid kingdom and was allowed to conduct astronomical observations. In the 1020s, Mahmud's Indian campaigns gave al-Biruni the opportunity to learn Sanskrit and other contemporary Indian languages, so that he could study the local literature, which interested him greatly, in its original language. He also debated with leading Indian scholars and researched Indian society and Indian religions using direct observation. Al-Biruni was the first Islamic scholar who took an interest in non-Muslim Indian culture as a whole, not only individual areas such as medicine and astronomy; he was also the first to write extensively on the *Bhagavad Gita*, a holy text of Hinduism. In India, al-Biruni made significant contributions to astronomy and through pioneering geological work developed the idea of a dynamic and evolving history of the Earth.[61] Al-Biruni died in Ghazna in 1048.

Al-Biruni shared al-Sijistani's view that science and religion were separate realms; he took a special interest in experimental enquiry and rejected the intervention of theologians, even of the Prophet Muhammad, into scientific debate. Al-Biruni calculated the duration of a solar year very accurately at 365 days, 5 hours and 49 minutes,[62] and he criticised – albeit cautiously – the decision of Muhammad to adopt a strictly lunar calendar, outlawing intercalated days, which would have brought the Islamic year into harmony with astronomical reality.[63] He considered the Prophet's decision to be a retrograde step in comparison with the pre-Islamic Persian calendar: 'When Islam had been established, intercalation [of additional days] was abolished, and that did much harm to the people.'[64] Because the lunar year has only 354 days, it is not only unusable for agricultural and astronomical purposes, but also for the calculation of annual tax liability (fig. 28). In *The Chronology of Ancient Nations*, al-Biruni set himself the aim of converting the traditional calendars of the world's different religions and civilisations into a global calendar system.

In 1023, while al-Biruni was staying in the fortress of Nandana, not far from the Jhelum river in the Punjab, Pakistan, he calculated the radius of the Earth as 6,339.6 kilometres, coming very close to today's accepted value of 6,378.1 at the equator. The result he obtained for the Earth's circumference, 39,964.9 kilometres, was also not far off the current mark of 40,074 kilometres at the equator and 40,008 kilometres at the poles.[65] Al-Biruni developed his own method of measurement and calculation (fig. 29). First he determined the height of a mountain at Nandana 'with the help of the following method: a square board is placed vertically on the ground on one of its corners in such a way that the bottom edge is aligned with the top of the mountain'. The upper right corner B 'is also aligned with the mountain peak; from the location of the marking on the opposite side of the square board the height of the mountain h can then be calculated with the help of the intercept theorem'. Al-Biruni then climbed the mountain, and standing on its top, he measured with the help of an astrolabe 'the dip angle between the "astronomical horizon" (the plane perpendicular to the Earth's axis) and the "true horizon" (tangent to the Earth's surface)'. Imagining a virtual right-angled triangle, with the top of the mountain, the centre of the Earth, and the horizon at its three corners, he applied the law of sines to calculate the Earth's radius R, obtaining a value of 6,339.6 kilometres.[66] Although al-Biruni knew that the Earth rotates on its axis and was familiar with heliocentric theories, it seems that he stuck with the geocentric worldview.[67]

Al-Biruni also pioneered geological research. In the mountains of northern India and in the desert in southern Chorasmia, he observed that rocks are arranged in layers, and his discovery of marine fossils enclosed in rocks led him to the hypothesis that India and the region west of Gurganj must once have been covered by the sea, and that the Earth was in a continuous process of development.[68] In Chapter 47 of *Kitab tarikh al-Hind*, al-Biruni makes the even more far-reaching suggestion that nature behaves in a similar way to a farmer, who lets only plants useful to him to grow, and pulls out the rest; nature too allows one plant to crowd out another. However, he qualifies his bold idea by specifying that nature 'does not distinguish' like a farmer and by assuming the existence of an anonymous 'ruler' of the Earth, by whom he means God. Al-Biruni's cautious observations can be interpreted in the sense that he assumed that plants and animals undergo a permanent process of changes and crowding out, which takes place according to certain rules prescribed by God.[69]

Abu Ali al-Husain ibn Abdallah ibn Sina (Avicenna, *ca.* 980–1037) was born in Afshana near Bukhara. His father was originally from Balkh, and in 985 his family moved to the city of Bukhara, where

30. *Tahir Uqlidus,* translation into Arabic, with Arabic commentary, of Euclid's *Elements of Geometry* by Nasir al-Din Tusi (1201–74). Manuscript, thirteenth century. University of Edinburgh, gouache on paper, Oriental Manuscript Collection. Ms. 27.

the highly gifted Ibn Sina received an excellent education. As he dictated to his student and biographer Abu Ubayid al-Juzjani, 'by the time I was ten, I had mastered the Qur'an', which meant that he could recite it from memory.[70] Ibn Sina then studied mathematics, algebra and geometry as well as medicine. According to his own opinion he was already at the age of 15 a respected physician, who considered medicine to be 'not particularly difficult'. His enthusiasm for philosophy was kindled by a chance encounter. By the time he was 17, he had already read Aristotle's *Metaphysics* so often that he knew the work by heart. Its full meaning, however, only became clear to him when he read al-Farabi's commentary. A street vendor urged him to buy it but he hesitated until the bookseller gave him the book for almost nothing. Al-Farabi's elucidations opened the door to classical Greek philosophy.[71] A little later, Emir Abu'l Qasim Nuh ibn Mansur (Nuh II, r. 976–97) appointed Ibn Sina court physician, which enabled him to use the royal Samanid library with its magnificent collections of books on every branch of learning. But when the Turkic Karakhanids conquered Bukhara in 999, Ibn Sina lost his post and thus his access to the library; he fled to Nishapur, then to Merv, and finally to Gurganj, the Chorasmian capital, where he arrived in 1005. His untroubled stay at the court of Chorasmia was ended by the Ghaznavid Sultan Mahmud, when the latter demanded from the ruler of Gurganj the immediate handover of all scholars living there. Ibn Sina now fled westwards.

Despite, or precisely because of, his fame, Ibn Sina was unable to find a permanent position. Either the local rulers of Iran feared the wrath of Mahmud, or the Ghaznavid advances into Iran forced Ibn Sina to flee again. After a turbulent stay in Hamadan, where he twice occupied the post of vizier and was twice imprisoned, in 1022 he found a new refuge in Isfahan. But seven years later Mahmud captured Rayy, and tried to eradicate the local heterodox (non-Sunni) population. As Ghardizi reports, Mahmud 'gave orders that anybody suspected of holding that belief [Ismailite or Qarmatian[72]] should be brought out and stoned to death'.[73] In 1029 Mahmud's son Masud entered Isfahan, causing Ibn Sina to leave the city. As in Rayy, the Ghaznavids confiscated the palace library, and also Ibn Sina's private library, and brought everything to Ghazna.[74] The philosopher died in 1037 in Hamadan.

Ibn Sina was not only an important philosopher but he also set new standards in science, especially in medicine. In his *Canon of Medicine* he explained that tuberculosis was infectious and that minute pathogenic agents were transmitted via contaminated water or soil, so he recommended that drinking water should be boiled to prevent the spread of illness. He also proposed that new medicines should be tested by experiments on animals before they were administered to humans. Like his contemporary Abu Ali al-Hasan ibn al-Haytham (Alhazen) from Basra, Ibn Sina made significant contributions to the field of optics. He refuted the Platonic extramission theory of vision, according to which the eye emitted visual rays and thus could see objects by reaching out to them. Otherwise, he argued, small animals which see the starry sky would send out an endless number of visual rays to the countless and immeasurably distant stars, which was inconceivable. Ibn Sina built on Aristotle's intromission theory of vision, which explained the process of vision in the opposite way: rays from the object influenced by light (or to express it more accurately, rays of light reflected from the object) are received by the eye.[75]

Concerning the question of the origin of the universe, Ibn Sina believed that the Earth and the cosmos were eternal. But like the Neoplatonists, Ibn Sina stated that only the *idea* of the universe was eternal, not its material existence, so that God was needed to transform the concept of the universe into reality. Drawing on ideas by al-Farabi, Ibn Sina argued that God was the only necessary existent, who was the cause of his own existence, whereas the existence of everything else was only contingent. However, al-Farabi and Ibn Sina did not regard the relationship between necessary and contingent existent in a religious sense, as one of creator and created, but in a more rational sense, of cause and effect: they 'did not consider the Necessary Being as Sovereign Creator, but made its action subject to necessity and limited its strength and power to the proposition that God has no power over the impossible'.[76] Ibn Sina's concept of the co-eternity of the universe with God, which rejected the doctrine of a *creatio ex nihilo* ('creation out of nothing'), would later be vehemently opposed by the philosopher, jurist and theologian al-Ghazali (1058–1111), who helped to pave the way for the Sunni revival promoted by the Seljuks.

In the late 1070s **Omar ibn Ibrahim al-Khayyam Nishapuri** (1048–1131, also known as Omar Khayyam) from Nishapur, a mathematician, astronomer and philosopher known in the West above all as a poet, was commissioned by the Seljuk sultan Jalal al-Daula Malik Shah I to recalculate the solar year for a reform of the calendar. The result he obtained was 365.24242 days, that is 365 days, 5 hours, 49 minutes and 3.35 seconds.[77] The new calculation drew on measurements that Omar Khayyam had undertaken at the observatory in Isfahan. The Jalali calendar based on this (named after the sultan who had commissioned it) was introduced in 1079, and in Iran it remained in force until 1925.

3. On Astronomy and Towards a Theory of Evolution

Al-Biruni's cautious hypotheses about the development of the universe and life on Earth were boldly taken to a new stage by **Muhammad ibn Muhammad ibn Hasan al-Tusi** from Khorasan, better known as **Nasir al-Din al-Tusi** (1201–74).[78] Al-Tusi, who came from a family of Twelver Shi'ites, was an outstanding astronomer and mathematician; he was also interested in ethics and the natural sciences. In 1221, when Genghis Khan's armies threatened Nishapur, the young al-Tusi, already considered a brilliant scholar, fled, finding sanctuary in Khorasan's many Ismaili fortresses. He lived and worked in some of these strongholds, before arriving at the mountain fortress of Alamut in northern Iran, the centre of Nizari Ismaili government. Whether he lived for years in this isolated 'eagle's nest' voluntarily is questionable, especially if it is true, as sometimes claimed, that in 1256 he betrayed the defences of Alamut Castle to the Mongol general Hülegü.[79] At any rate he was able, together with the historian Ata Malik Juvaini, to rescue parts of the valuable Alamut library before the fortress was razed to the ground. Al-Tusi then entered the service of Hülegü, who allowed him to save many manuscripts from the Grand Library of Baghdad (part of the House of Wisdom) before the city was sacked. Hülegü built a four-storey stone observatory for al-Tusi in Maragheh, north-western Iran, designed with the help of Chinese astronomers. It was here that al-Tusi wrote his major astronomical works, the *Zij-i ilkhani* ('The Il-khanid Tables'), a handbook of astronomy which includes tables for calculating the positions of the planets and a star catalogue, and the *al-Tadhkira fi-'ilm al-hay'a* ('Memoir on the Science of Astronomy'). In the latter he developed the new model of planetary motion that he had already sketched out in 1247 in his *History of the Almagest*.[80] Al-Tusi wanted to overcome the shortcomings of the Ptolemaic model of the solar system, in particular the concept of the equant that Ptolemy had introduced to explain non-uniform planetary motion. Al-Tusi had realised that 'the combined circular motions [of two identical circles] generates a back-and-forth linear motion'.[81] As F. Jamil Ragep succinctly put it, 'Tusi sought to rid the Ptolemaic system of its inconsistencies, in particular its violation of the fundamental principle of uniform circular motion in the heavens. Tusi set forth an astronomical device (now known as the Tusi couple) that consisted of two circles, the smaller of which was internally tangent to the other that was twice as large. The smaller rotated twice as fast as the larger and in the opposite direction. Tusi was able to prove that a given point on the smaller sphere would oscillate along a straight line.'[82]

Al-Tusi's model of planetary motion and the 'Tusi-couple' revolutionised Islamic astronomy and later found their way into the treatises of Ali al-Qushi (*ca*. 1402–74) and Nicolaus Copernicus (1473–1543). Al-Qushi, born in Samarkand, was a confidant of the Timurid ruler Ulugh Beg (viceroy of Mawarannahr 1409–47, r. 1447–49), and was in charge of his observatory in Samarkand.[83] He vehemently opposed Aristotle's and Ptolemy's doctrine of a geostatic, stationary Earth, supplying empirical evidence for a theory of a rotating Earth.[84] Three centuries after al-Tusi, the first astronomer in Europe to publish a critique of Ptolemaic astronomy was Copernicus. Adopting al-Tusi's and al-Qushi's arguments against Ptolemy's geostatic concept of the Earth, he proposed a heliocentric model of the universe in his remarkable work *On the Revolutions of Heavenly Spheres*.[85]

Also in Maragheh, al-Tusi completed *Aklaq-e Nasiri* ('The Nasirean Ethics').[86] In the first chapter, al-Tusi discusses basic principles of the development of life and the human soul. Adopting the Aristotelian principle according to which nature has developed gradually from the inanimate to the animate, he divides the animate world into three forms of existence, each with a 'soul' that possesses a specific faculty: the vegetative soul is characterised by the concupiscible faculty for existence, survival and reproduction; the animal soul possesses in addition the faculties of voluntary motion and of sensory perception; and the human soul combines the vegetative and animal faculties as well as the faculties of rationality and free will.[87]

Al-Tusi divided the development from the inanimate to the animate up to the human being into five stages, with gradual transitions from one stage to the next:

1. **The inanimate world of elementary particles:** At first the Earth consisted of elementary particles, equal in value. 'Natural bodies, as bodies, are equal one with another in rank, none having nobility [advantage] or virtue above the other; for [. . .] one generic form of primary matter constitutes them as a whole.'[88] The first differences within the inanimate world appear as soon as the elementary particles (atoms) meet and mingle, and thus divergences come into being – the originally static world has become dynamic.
2. **The vegetative world:** As a result of the dynamic in the inanimate world, various solid compounds appear, and some of these will eventually develop vegetative faculties. 'These faculties likewise occur variously in it [the vegetative soul] in accordance with variation of aptitude.'[89] Thanks to adaptation to environmental conditions, 'perfect' plants such as fruit-bearing

31. Illustration from *Aklaq-e Nasiri* ('The Nasirian Ethics'), by Nasir al-Din Tusi (1201–74). In the centre of the picture, a student reads under the watchful eye of his teacher. More students can be seen in the courtyard, reading or preparing to read. Manuscript produced between 1590 and 1595 in northern India for the Mughal Emperor Akbar (r. 1556–1605). Aga Khan Museum, Toronto. Folio 149v of the Aklaq-e Nasiri, opaque watercolour, ink and gold on paper, AKM 288.

trees appear, which have ‘the faculty for individual survival and the perpetuation of the species’.[90] According to al-Tusi evolution from inanimate matter to plants, animals and humans is driven by the inherent variability of the elementary particles and their innumerable possibilities of combinations. These inanimate compounds and animate organisms are constantly changing; whatever or whoever changes in the fastest and most adequate way has an advantage over other compounds or organisms.

3. **The animal world:** The most highly developed plants possess mechanisms to attract pollinating animals or to ward off predators, so that they are intermediates between plants and simple animals such as earthworms or certain insects that only live for one season. Natural variability and the need for adaptation lead to the development of diverse survival and reproduction strategies, as well as to a complex hierarchy within the animal world. All animals can move of their own volition and experience sensations; some have developed parts of their bodies into offensive weapons such as teeth, claws, antlers or horns whereas others protect themselves with their ability to flee quickly, or their cunning. The most highly developed animals possess intelligence and an ability to learn, they learn new behavioural patterns and skills that they have not inherited: ‘The noblest of the species is that one whose sagacity and perception is such that it accepts discipline and instruction; thus there accrues to it the perfection [the additional competence] not originally inborn.’[91] As examples of animals with the ability to learn, al-Tusi mentions a trained horse or hunting falcon.
4. **The anthropoid beings:** The more learning ability animals possess, the nearer they get to the development stage of the human until ‘a point is reached where the (mere) observation of action suffices as instruction: thus, when they see a thing, they perform the like of it by mimicry. [. . .] This is the utmost of the animal degrees, and the first of the degrees of Man is contiguous therewith. Such are the peoples dwelling on the fringes of the inhabited world, like [or resembling][92] the negroes [black people] in the West and others, for the movements and actions of the likes of this type correspond to the actions of animals.’[93] For al-Tusi, these beings of north and central Africa or similar to them possess some human abilities, but their movements and actions identify them as animals. Al-Tusi thus makes it clear that he sees no abrupt difference, created out of nothing, between animal and human, but a gradual transition, driven by the universal principles of variation and the search for optimal adaptation.
5. **Humans:** Humans are characterised by free will, ability to think, and reason. ‘Up to this limit, every gradation and discrepancy occurs in conformity with nature, but henceforth ranks of perfection or deficiency are determined according to will and reason.’[94] These two faculties, possessed only by humans, offer them the possibility of further development; but they also conceal the danger that, if they neglect them, they will fall back to the level of animals. Al-Tusi often stresses that man is a mixed being: ‘Man has a property by which he is distinguished from other existent beings. But he has other actions and faculties, in some of which the animal species share with him, and in some others the types of plants or the minerals and other bodies.’[95] No longer arguing on the biological, but on the ethical level, he concludes elsewhere: ‘Man has a road, by will to a higher rank, and by nature to a lower.’[96] In summary, it can be maintained that al-Tusi developed an early theory of evolution according to which the world and life developed in countless small steps, from elementary particles to humanity. The originality of al-Tusi’s ideas is not diminished by the fact that he also briefly mentions the ‘absolute truth’ which laid down the mechanisms of evolution during the primary creation of the primordial particles.

4. An Anti-rationalist Counter-movement

The waning of this creative and innovative movement in science and philosophy began in the second half of the eleventh century, almost two centuries before the Mongol invasion. It was the result of a community of interests between various conservative religious groups and the Turkic Seljuks, whose territory would eventually extend from Khorasan as far as eastern Anatolia, and whose most important figures came from Central Asia and Khorasan. As their campaign of conquest moved further and further west, the Seljuks, whose homeland lay at the lower reaches of the River Jaxartes (called Seyhun by Muslim historians), cast themselves as pioneers of a Sunni revival. In 1055 they toppled the dynasty of the Shi’ite Buyids, who ruled the rump Abbasid caliphate. However, as the contemporary Iranian philosopher and theologian Muayyad fi’l-Din al-Shirazi (1000–78) argued, their main concern was not so much the restoration of Sunni orthodoxy as the acquisition of power and material wealth: ‘The Türkmen [Seljuks] have not come to these lands [Iran and Iraq] to help the caliph, but in search of worldly possessions (mulk).'[97]

The founder of the Seljuk dynasty, Tughril (r. 1038–63), was succeeded on the throne by his nephew Alp Arslan (r. 1063–72) and the latter's son Malik Shah I (r. 1072–92). The vizier serving these last two rulers was **Abu Ali Hasan ibn Ali Tusi** (1018–92) from Tus, Khorasan, who bore the honorific title Nizam al-Mulk, 'The Order of the Realm'. After the death of Alp Arslan, he possessed almost unlimited power over the Seljuk sultanate.[98] Nizam al-Mulk not only organised and controlled the administration of the empire, but also introduced a network of state-supported colleges, the *Nizamiyyas*, which were to teach Sunni orthodoxy in the form of Ash'arite theology and conservative Shafi'i Islamic law. The *Nizamiyyas* formed an extension of the madrasas which already existed in Iran and Mesopotamia. They were not intended to foster a spirit of open enquiry, nor did they resemble the House of Wisdom; rather, their aim was comparable to that of the Jesuit colleges established in the sixteenth century to support the Catholic Counter-Reformation.[99] Since they attempted to curb the influence of the rationalist philosophers on the one hand and the Mu'tazilites and the Ismailite Fatimid[100] Shi'ites on the other, they enjoyed the tacit support of the staunchly conservative and literalist Hanbalites.[101]

The best-known leader of a Nizamiyya was **Abu Hamid Muhammad ibn Muhammad al-Ghazali** (*ca*. 1058–1111), a theologian from Tus. After studying with the Shafi'i legal scholar **Abd al-Malik ibn Yusuf al-Juwayni al-Shafi'i** (1028–85) from Khorasan, who was in charge of the Nizamiyya of Nishapur for 20 years, in 1091 al-Ghazali took over the direction of the Nizamiyya of Baghdad. The sharp-witted al-Ghazali was a trenchant opponent of philosophers who were influenced by Neoplatonism, such as al-Farabi and Ibn Sina, as well as of all freethinkers. He considered their concept of the eternal nature of matter and the universe to be heretical, since it denied the omnipotence of God and contradicted the doctrine of God's creation of the world *ex nihilo*; and furthermore, the concept of a universe that was co-eternal with God introduced a dualism that was irreconcilable with monotheism.[102] For this reason, al-Ghazali demanded that the death sentence intended by the Qur'an for apostates should also be imposed on philosophers who contradicted three basic dogmas of the Qur'an. These three dogmas are belief in God's creation of the world in time, belief in eschatology as laid down in the Qur'an and belief in the omniscience of God. Anyone who diverged from these dogmas was an opponent of the laws of God, an unbeliever and a 'clandestine apostate',[103] who deserved the death sentence: 'Whoever claims this [unbelief in the three principles], annihilates the achievement of the religious laws.'[104] Al-Ghazali also denied to these philosophers the traditional right to forgiveness if they repented. 'The secret apostate (*zindiq*)' [such as a Mu'tazilite philosopher] 'does not give up his inner confessions when he professes the words of the *shahada* [the Islamic creed]. He may be killed for his unbelief because we are convinced that he stays an unbeliever who sticks to his unbelief.'[105]

Al-Ghazali's uncompromising position, especially in his later life when he was drawn to Sufism, won approval from both traditionalist religious scholars and others who advocated a rigid, literalist interpretation of the Sharia, as well as the anti-intellectual Sufis. Thanks to state support, anti-philosophical and anti-scientific reaction spread throughout the Seljuk Empire. This not only made advances in philosophy difficult or even impossible, but also hardened the respective positions of Sunnis and Shi'ites. From now on, in the Seljuk Empire and its successor states, it was no longer logical stringency and reason that formed the yardstick for truth in philosophical and, to a lesser extent, scientific questions, but conformity with the state-supported theological and legal interpretations of the Qur'an. It is no coincidence that there were almost no further advances in philosophy, and most future intellectual achievements were in the more 'harmless' disciplines such as cartography and astronomy, above all at the time of the Mongol Il-Khanids.

From the late eleventh century, the legacy of the early Islamic philosophers and scientists from Khorasan and Central Asia was taken up by scholars in Europe, whose own cultural roots in classical antiquity had been lost in the early Middle Ages. One of the most important points of contact between the Islamic sciences and the Latin West was the Spanish city of Toledo. After the fragmentation of the Umayyad caliphate of Córdoba into a number of independent Muslim kingdoms in 1031, Toledo, the cosmopolitan capital of the eponymous petty kingdom, developed into a leading centre of science and philosophical debate that attracted scholars from all over Europe. There they could explore not only Arabic texts and thus their lost classical heritage (many Greek treatises now existed only in Arabic translations) but also scientific work from India which was totally foreign to them.

An early European pioneer was Gerbert of Aurillac (*ca*. 950–1003), the later Pope Sylvester II, who stayed from 967 to 970 in the Christian city of Vic north of Barcelona and probably also studied at the nearby monastery of Santa Maria de Ripoll which possessed a famous library.[106] Here he most likely came into contact with treatises on the Arabic numerals of Indian origin. According to Gerbert's disciple and biographer Richerus of Reims, after 970 he applied his new findings on the abacus, using columns on a flat board and the numbers 1 to 9 as place-markers, but he omitted the zero, which was represented by an empty column.[107] Later, in the year 984, he asked his Catalan friend Lupitus (Seniofredus) of Barcelona for his recent translation of an Arabic treatise on astronomy called *Sententiae astrolabii*, whereupon he composed his own treatise on the astrolabe *Liber de astrolabio*.[108] Al-Khwarizmi's work was later translated by Adelard of Bath (*ca*. 1070–*ca*. 1160) and Gerard of Cremona (1114–87), but it was the *Liber abaci*, a treatise written around 1202 by Leonardo Fibonacci (*ca*. 1170–*ca*. 1245), that helped to introduce the Hindu–Arabic numeral system to Western Europe, for commercial as well as scientific use.[109]

The translation movement of Arabic texts into Latin, which had started at the end of the tenth century, reached its climax after the conquest of Toledo by the Christian king Alfonso VI of Castile in 1085. Soon after this, numerous centres of translation began to appear, often based around cathedral chapters where the work was carried out by prelates and other clerics. Most of the Latin translators were proficient in Arabic and collaborated with Muslim, Jewish and Mozarabic[110] scholars. Two of the most important translators were Adelard of Bath, who tackled the astronomical and mathematical works of al-Khwarizmi and the works of Euclid, and Gerard of Cremona, who during his 30-year residence in Toledo translated more than 70 works from Arabic into Latin. Among Gerard's most important translations in the field of astronomy are the *Almagest* of Ptolemy, the critique of Ptolemy's *Almagest* by Abu Muhammad Jabir ibn Aflah (*ca*. 1100–*ca*. 1160), and the *Tables of Toledo* by the astronomer Abu Ishaq Ibrahim al-Zarkali (1029–87), who worked in Toledo and Córdoba and had drawn on earlier scholarship by al-Khwarizmi and al-Battani. Gerard also translated outstanding works on mathematics, including al-Khwarizmi's book on algebra[111] and Euclid's writings on geometry,[112] and books from the fields of science, medicine and philosophy by authors such as al-Razi, al-Farabi, Ibn Sina, Archimedes and Aristotle. Later, in the thirteenth century, Hermannus Alemannus in Toledo translated works by Ibn Sina, Ibn Rushd (Averroes, 1126–98) and Aristotle into Latin, while the itinerant Scottish mathematician and scholar Michael Scotus (*ca*. 1175–*ca*. 1235) produced acclaimed translations of the critique by Nur al-Din al-Bitruji (d. *ca*. 1204) of Ptolemy's *Almagest*, and Ibn Rushd's commentaries on Aristotle.[113]

Thanks to the new knowledge gained, European scholars began to catch up with those of the Islamic world, whose understanding of many of the exact sciences (mathematics, algebra, geometry, astronomy, for example) was some 400 years ahead of theirs. By the time of the Renaissance, Europe was even gaining a competitive edge. Islamic science and philosophy may have encountered constraints in the twelfth and thirteenth centuries and as a result of the Mongol invasion, yet in hindsight it remains surprising that they never had a second flowering like that of the European Renaissance. In Europe, on the other hand, neither the reign of terror of the Roman Catholic Inquisition nor the countless wars were able in the long term to stifle scientific curiosity and the quest for new knowledge which was born out of engagement with the pioneering scholarship of the Islamic world.

The Second Turkic Migrations to the West

'It is always greatly to the advantage of the emperor of the Romans [Byzantines] to be minded to keep the peace with the nation of the Pechenegs and to conclude conventions and treaties of friendship with them.'

BYZANTINE EMPEROR CONSTANTINE VII PORPHYROGENITUS, written around 948–52.[1]

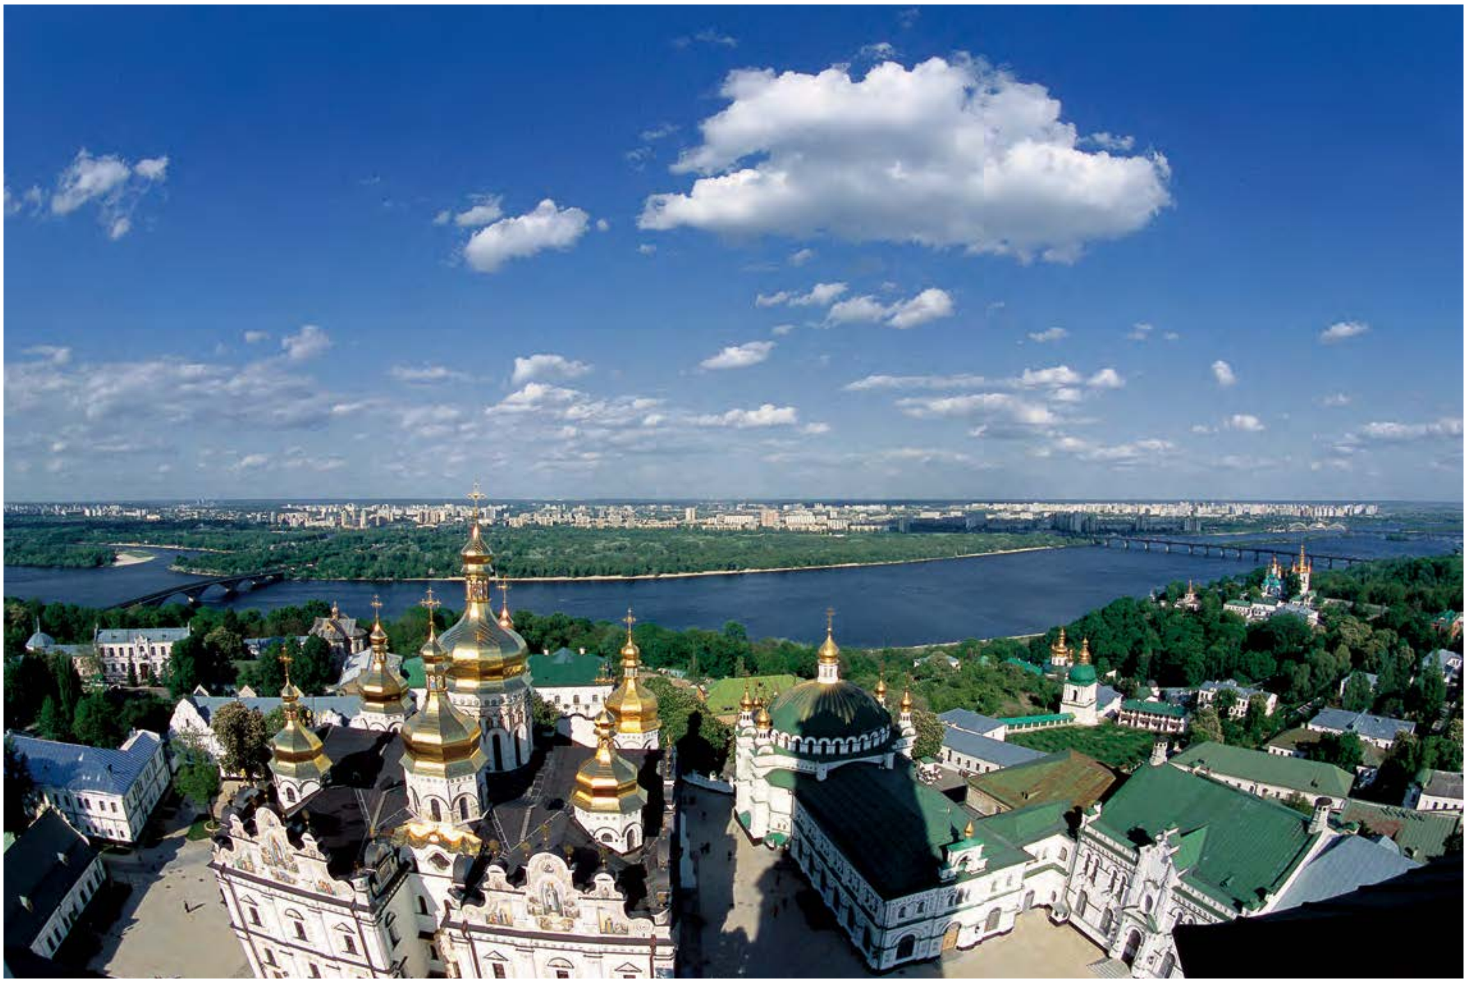
1. The Pechenegs

The Byzantine emperor Constantine VII (r. nominally from 913, de facto 945–59) was a witness to the beginning of the second migrations of Turkic equestrian tribes. In the first wave of migrations, the Avars from Central Asia appeared on the Pontic grass steppe around 557 or 558, on their flight from the Western Turks to the west. The Avars were a heterogeneous people consisting of Rouran and Hephthalites as well as Turco-Oghur tribes. After negotiations with Byzantium, at the behest of Constantinople they attacked and defeated some Hunnic and Slavic tribes, and then settled in Pannonia, the Hungarian Plain.[2] They were followed by Western Turkic horse warriors who advanced as far as Crimea and the Caucasus. Diplomatic contacts between the Western Turks and Byzantium led to trade agreements, and an offensive military alliance directed against the Iranian Sassanids. Coordinated operations carried out between 626 and 628 in the Caucasus and northern Mesopotamia brought about the downfall of the Sassanid ruler Khosrau II. Then, in the 630s, the short-lived empire of the Turkic-speaking Great Bulgars was founded north-east of the Sea of Azov. Thirty years later it was subjugated by the Khazars.[3] The Khazar Empire, which dominated the Caucasus, the Pontic steppe and the Volga delta, had emerged between 630 and 650 from the local Western Turkic warrior nobility, and flourished up to the late 960s; it was then crushed by an alliance of the Kievan Rus' with Turkic Oghuz.[4]

In his political legacy, *De administrando imperio* ('On the Governance of the Empire'), which outlines foreign and internal politics, Emperor Constantine summarises the political situation in the north of the Byzantine Empire at the beginning of the second Turkic migration in the first half of the tenth century: 'Originally, the Pechenegs had their dwelling on the river Atil [Volga], and likewise on the river Geïch [Jaik, Ural], having common frontiers



32. St Sophia Cathedral in Kiev, Ukraine, was founded by Prince Yaroslav in 1037 in gratitude for his victory over the Pechenegs in 1036. It was built on the site of the battle.[10] Parts of the cathedral were destroyed, first by the Mongols in 1240 and later by the Crimean Tatars. It was rebuilt in the 1630s and, following the fire of 1697, it was reconstructed in the Ukrainian Baroque style between 1699 and 1707. Photo: 2004.

with the Chazars and the so-called Uzes [Oghuz]. But fifty years ago[5] the so-called Uzes made common cause with the Chazars and joined battle with the Pechenegs and prevailed over them and expelled them from their country, which the so-called Uzes have occupied till this day. The Pechenegs fled and wandered round, casting about for a place for their settlement; and when they reached the land which they now possess and found the Turks [here the Magyars] living in it, they defeated them in battle and expelled and cast them out, and settled in it, and have been masters of this country, as has been said, for fifty-five years to this day,'[6] which means since about 893/97, for Constantine wrote his book between 948 and 952. Here Constantine sketches the expulsion of the Pechenegs by the Oghuz and the resulting expulsion of the Magyars by the fleeing Pechenegs. As Constantine specifies, the Pechenegs' new home lay in Atelkuzu (Etelköz),[7] the 'land between two rivers', which extended from the Dniester in the west as far as the Dnieper in the east, perhaps even as far as the Donets.

The origins of the Pechenegs are unclear. Emperor Constantine mentions that in the first half of the tenth century three of their eight Turkic-speaking tribes were called Kangars and formed the elite.[8] This name is close to the Chinese term *Kangjü* as well as the names *Kangu Tarman* and *Kängäräs* on the Old Turkic memorial stele in honour of Kül Tegin of *ca*. 732. On this stele, the Kangars appear as allies of the second Turkic Khaganate in the struggle against Western Turks, Türgesh and Karluks. Their homeland at that time can therefore be pinpointed east of the Aral Sea and at the lower course of the Seyhun river (Syr Darya).[9] At the beginning of the last quarter of the eighth century, the ethnographic composition of the Turkic tribes in the northern half of Central Asia was as follows: the Uyghur Empire occupied a territory that is today Mongolia; on its north-western border lived the Kyrgyz, enemies of the Uyghurs, in the valley of the River Ienissei, and the Oghuz between Lake Baikal and the Altai Mountains. South of the Altai lay the homelands of the Karluks, and west of them, that is south and west of Lake Balkhash, those of the Türgesh and On Oq. West of the On Oq and Türgesh lived the Pechenegs. In the 770s, the pressure on the Karluks, and in particular the Pechenegs, from the Oghuz who were pushing south-westwards strongly increased, for the Oghuz, who formed a turbulent confederacy apparently led by a ruler with the title *yabghu*,[10] were discontented with living under Uyghur suzerainty and were looking for new territory. The military conflicts between Uyghurs and Karluks[11] further encouraged Oghuz migration. West of the Kyrgyz, in western Siberia on the River Irtysh, lived the Turkic-Mongolic confederation of the Kimek, to which the Kipchaks probably also belonged.[12]

Military pressure exerted in turn by the Karluks, who in 766 had already wrested control of Semirechie from the Türgesh elite,[13] making them neighbours of the Pechenegs, and the threat from the advancing Oghuz, forced the Pechenegs to leave their homeland and move into the area between the Ural and Volga rivers. This migration had two consequences. On the one hand it opened a serious breach in the Khazar–Byzantine defence line against eastern steppe warriors, which, as recorded by John Skylitzes, a Byzantine historian of the later eleventh century, persuaded Constantinople to build a strong fortress for its Khazar allies: Emperor Theophilos [r. 829–42] 'received an embassy from the Khagan of the Khazars, requesting that the fortress known as Sarkel be built [in 838–41]. This seemed to be a sure fortification, protecting them from the onslaught of the Patzinags [Pechenegs] in the region of the river Tanais [Don].'[14] On the other hand, this incursion into the land between the Ural and Volga rivers, which Constantine Porphyrogenitus erroneously believed to be their homeland, incited individual Magyar tribes living in Magna Hungaria (the land of the Bashkirs) to move westwards towards the Pontic grass steppe, first to Levédia on the lower courses of the Donets and Don, and later to Atelkuzu; others fled to the Khazars in the area around the Maeotis.[15] As Constantine wrote, in the early 890s the Khazars, in alliance with the Oghuz advancing from the east, attacked the Pechenegs, who were continually launching raids on Khazar territory, with the aim of wiping them out. The alliance succeeded in driving out the Pechenegs, and the Oghuz were able to seize their pastures, but did not manage to destroy them, for the Pechenegs fought their way through the Khazar region to Levédia and Atelkuzu, where, in alliance with the Bulgar ruler Simeon I, they defeated the Magyars in the battle of the Southern Bug. The Magyars fled to the upper course of the Tisza, and the Pechenegs settled in Atelkuzu, so that their territory, which extended from the Don to the Danube, bordered on Bulgaria to the south.

Byzantium quickly recognised the possibility of tactically deploying the Pechenegs in the conflicts with Bulgaria and, above all, against the Kievan Rus',[16] for example in the years 915, 968 and 972. In 915, the Pechenegs first harassed the Kievan Rus', and then, together with Byzantium, attacked Bulgaria.[17] Nonetheless, these alliances did not prevent the Pechenegs from joining with Kiev in attacking Constantinople, in 943/44 and 970/71. Since the Pechenegs did not form an established state, it was easy for the sedentary states to enlist individual tribal support for themselves as allies or mercenaries. Only a year after some Pecheneg tribes had fought alongside the Kievan Rus' prince Sviatoslav I (r. nominally from 945, de facto 959/63–72), Sviatoslav himself fell in 972 in a

Pecheneg ambush instigated by Byzantium. According to an old custom of Turco-Mongol steppe warriors, the Pecheneg khan Kurya had a drinking vessel fashioned from Sviatoslav's skull.[18] The war between the Pechenegs and Kiev flared up again from 988 to 997 and dragged on until about 1007 without ever being resolved.

By the end of the tenth century, the Pechenegs, who were also very active as traders, in particular with Crimea, had already come under increasing pressure from their arch-enemies, the Oghuz, allies of the Kievan Rus' since 985. Between 1027 and 1035, the Pechenegs crossed the Danube several times, where they encountered the Byzantines. In 1036 they suffered a crushing defeat near Kiev, and in 1050 were driven from the Pontic steppe by the Oghuz, who for their part were under pressure from the advancing Kipchaks (Cumans),[19] forcing them to seek refuge south of the Danube. In 1053, after a defeat by the Pechenegs the previous year, Byzantium reluctantly gave official recognition to their settlement at Preslav, in north-eastern Bulgaria. Emperor Romanos IV (r. 1068–71) discovered to his cost that the Pechenegs were unreliable vassals of the Eastern Roman Empire when they betrayed him in the crucial Battle of Manzikert by switching sides to join the Seljuks. Their defection helped the Seljuks win the battle, a victory that would seriously weaken the Byzantine Empire and decide the future of Anatolia. When, 20 years later, the Pechenegs were raiding the Balkans and threatening Constantinople, Emperor Alexios I Komnenos (r. 1081–1118) formed an alliance with the Cumans and destroyed the invaders in 1091 at the Battle of Levounion near the Maritsa river. This enabled the emperor to ward off the looming danger of a Pecheneg–Seljuk pincer movement. Two further defeats, in 1094 by the Cumans and in 1122 by Byzantium, sealed their fate and they disappeared from history as an independent alliance of tribes.[20] Thus ended a 300-year migration, which had taken the Pechenegs over a distance of more than 3,000 kilometres.

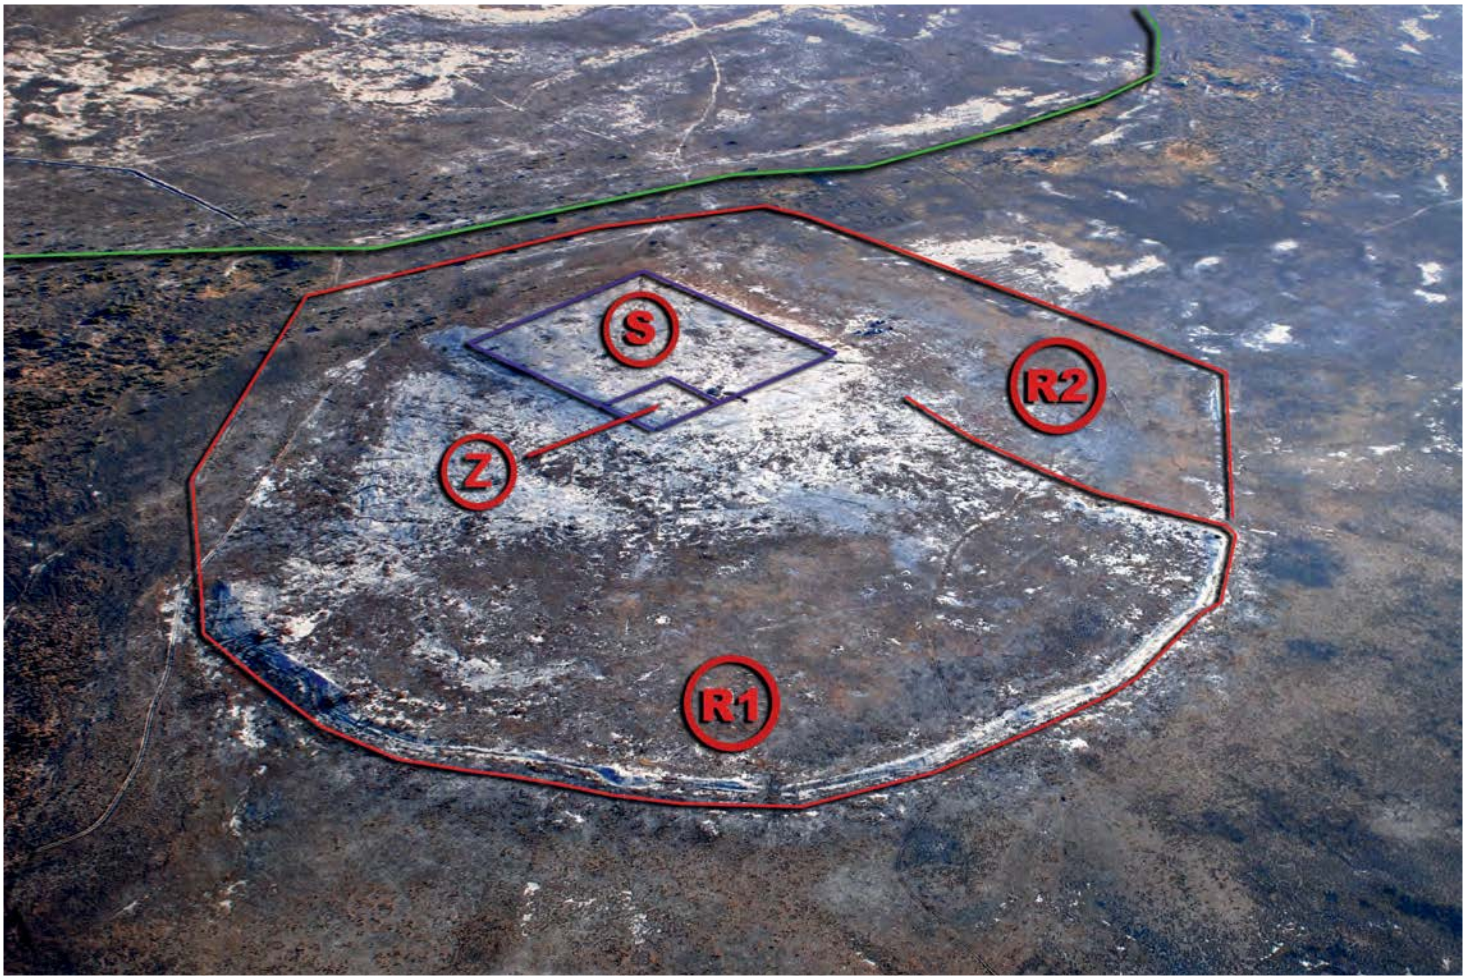
These conflicts between migrating Turkic equestrian tribes had a domino effect. The Oghuz, oppressed by the Uyghurs, Karluks and later the Kipchaks, displaced the Pechenegs three times: first from the lower course of the Seyhun river, then from the land between the Ural and Volga, and finally from Atelkuzu. The Pechenegs for their part forced the Magyars to emigrate three times, first from the region between Ural and Volga, then from Levédia and finally from Atelkuzu, whereupon the Magyars invaded Pannonia and undertook raids in Western Europe. In the wake of the Oghuz there then followed the Kipchaks, who in turn were defeated by the Mongols between 1221/1223 and 1236/40.

The Magyars, who were repeatedly harassed by the Pechenegs, originally came from the area around the Irtysh river. Their language belonged to the Finno-Ugric group of the Uralic family, which between the sixth and the fourth millennium BCE split into the Samoyedic and Finno-Ugric subfamilies. Samoyedic languages were spoken east and north of the Ural, while Finno-Ugric speakers migrated towards the south-west. In the course of this migration Ugric speakers broke away and settled in the region between the middle courses of the rivers Ural, Kama and Volga, in medieval sources also called *Magna Hungaria*. These forebears of the Magyars were probably hunters and trappers, who came into contact with the Huns in the second half of the fourth century and took over their economic system and pastoralist way of life. From the last quarter of the seventh century onwards, the Magyars directly faced the Turkic-speaking Volga Bulgars who settled at the confluence of the Kama and Volga[21] and were influenced by the Bulgars' language and culture. About 100 years later, in the late eighth or early ninth century, some Magyar tribes were driven further south-west by invading Pechenegs, to Levédia, north of the Sea of Azov. In the mid-ninth century the Pechenegs forced the Magyars to leave Levédia and go to Atelkuzu. Towards the end of that century, the Magyars yet again had to flee from the Pechenegs, who had themselves been driven out of some of their territory by the Khazars and Oghuz. The Magyars crossed the Carpathian Mountains and settled in the lowland plain of Pannonia, which they had already ravaged several times in earlier raids. Over the next 60 years the Magyars, who fought as lightly armoured mounted archers, raided and ravaged much of Western Europe, as the Huns had done before them. It was not until 955, at Lechfeld, near Augsburg, that the heavily armoured cavalry of the East Frankish king Otto I succeeded in routing the Magyars, and in 970 they suffered a further devastating defeat, this time at the hands of the Byzantine emperor John Tzimiskes (r. 969–76). After these defeats, the Magyar elite fundamentally changed their strategy: the Magyars largely abandoned raiding expeditions, particularly against the West, became increasingly sedentary, intermarried with local populations and also allowed Pechenegs to settle. They shifted their centre of power to the east and created a stable state with an effective administration. This was a necessary step, not least because they had to compensate for the loss of income from raids. Finally, King Stephen I (r. 997–1038) forced the Magyars to become Christians.[22]

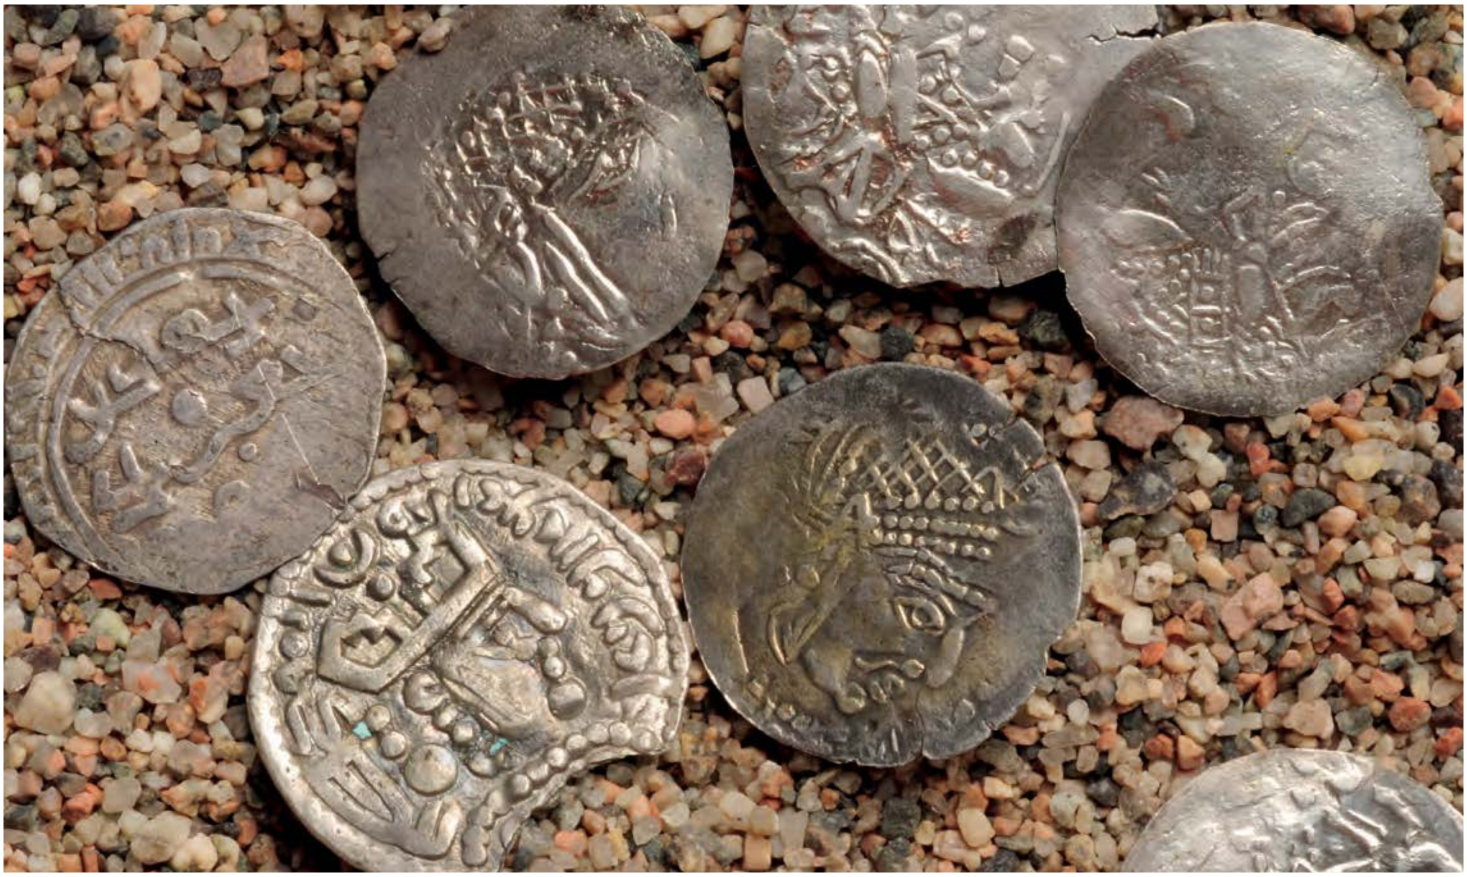
2. The Oghuz

The Oghuz were a confederacy of Turkic-speaking, semi-nomadic equestrian tribes, who, together with the Seljuks, had a profound influence on the history of Central Asia and the Near East. They contributed substantially to the Turkification not only of Mawarannahr; that is, today's Uzbekistan, but also of Turkmenistan, Iran, Azerbaijan and Anatolia. The Oghuz, Turkmen and Seljuks permanently changed the demographic composition in south-west Central Asia and the Near East. In the Oghuz, in particular the Islamised Oghuz, known as Turkmen, two fundamentally different types of civilisation can be observed. One was sedentary and urban with stable states and flourishing cultures: examples are the Seljuk and Rum-Seljuk Empires, the Ottoman Empire which emerged from them, and those of the Qara Qoyunlu and their opponents, the Aq Qoyunlu.[23] The other was nomadic – tribes and clans of horse warriors, who were constantly seeking opportunities for looting and the extortion of tribute. These groups did not form states, but more or less mobile armies, which controlled secure base areas with rich pastures, such as Azerbaijan, from which they would ride out on raids to pillage and plunder. Since such raids were extremely disruptive for the sedentary Oghuz, they often led to tensions and hostilities among them, so that the Seljuks goaded their unruly relatives to attack the states of 'infidel' Christians, like Georgia and Byzantium. But if ever the Seljuk-Oghuz central power showed weakness, the 'wild Oghuz' did not hesitate to raid and ravage Muslim Seljuk territory such as Iran as well.

As the steles in honour of the Turkic generals Tonyukuk (erected after 725), Kül Tegin (*ca.* 732) and Bilge Khagan (*ca.* 735) consistently reveal, some of the Oghuz living between Lake Baikal and the Altai Mountains were considered rebels and enemies of the khaganate led by the Ashina clan.[24] The majority of the loosely



33. The city of Juvara (today called Kesken Kuyuk Kala), standing on what were once the lower reaches of the River Seyhun (Syr Darya) in Kazakhstan, was already mentioned by the Roman historian Ammianus Marcellinus as far back as the fourth century. In the centre (marked S) is the *Sharistan*, the fortified city with its citadel (marked Z), while the outer quarters of the city, *Rabat* 1 and *Rabat* 2 are marked R1 and R2. Photo: 2008.



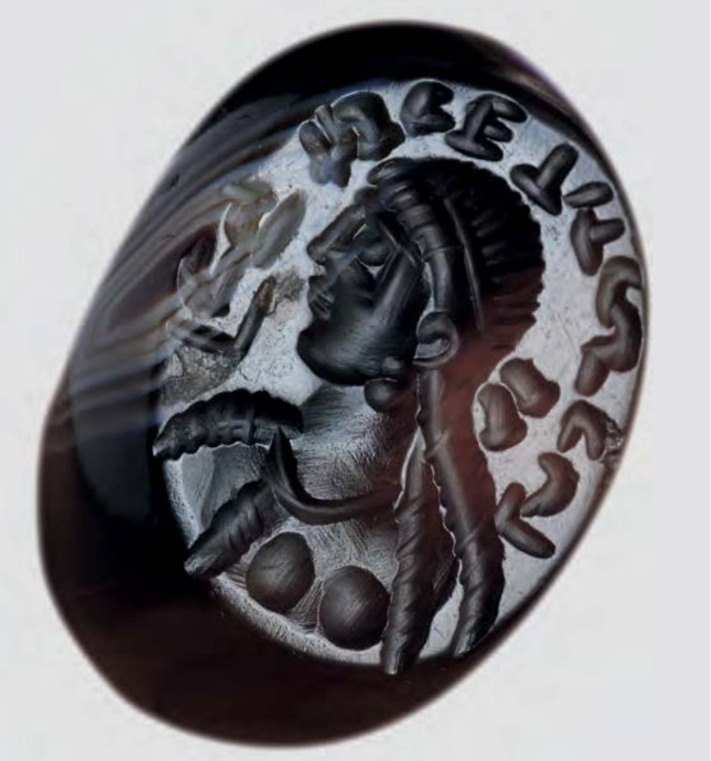
34. Medieval coins from Kazakhstan. The coins at the top of the picture are, from left to right, an unidentified thirteenth-century silver drachma from Kayalik with an Arabic inscription, and three 'Jabuyah type' silver coins of Oghuz mint from Kesken Kuyuk Kala, ninth–tenth century. The three coins at the bottom are, from left to right, a silver coin found in Otrar, dating from the time of the Bukhar Khudah dynasty, seventh–eighth century, and two 'Jabuyah type' silver coins of Oghuz mint from Kesken Kuyuk Kala, ninth–tenth century. All five silver coins of the 'Jabuyah type' were found close to the surface at the start of the 2008 excavations at Kesken Kuyuk Kala. Photo: 2008.

organised Oghuz confederation also opposed the Uyghur claim to leadership, and in the early 770s left their homeland, travelling south-westwards. Between about 775 and 783 they drove the Pechenegs out of the area between the Aral Sea and the lower course of the Seyhun (Jaxartes, today's Syr Darya) and settled there themselves.[25] Here the Oghuz lived not only from livestock farming, but also from agriculture, fishing and trade, so that they rebuilt or expanded towns and cities.[26] The Soviet archaeologist Sergei Tolstov (1907–76), who explored the Oghuz settlements in the late 1940s and also used information supplied by the geographer al-Idrisi (*ca*. 1099–1165), counted some 20 towns and cities.[27] Three cities in particular, at the lower reaches of former courses of the Seyhun, aroused Tolstov's interest: the ancient Jand (today's Jand Kala), Juvara (Kesken Kuyuk Kala) further north-west, and, still further north, Yangikent (Jankent), called Dach-i Nau in Persian; all three had at that time stood on a floodplain, which was rich in fish and easy to defend. Both Yangikent and Juvara can be found on a map in the atlas *The Book of Curiosities*, which was created by an anonymous author in the first half of the eleventh century in Egypt (fig. 38).

Although Yangikent, at 375 x 225 metres in extent, was comparatively small, it served as a winter residence of the yabghu of the Oghuz, as we learn from the travel account, completed about 988, of the geographer Ibn Hawqal, and the *Hudud al-Alam*, which was finished at about the same time by an anonymous historian.[28] Tolstov noticed that Yangikent, whose name meant 'new city', had been rebuilt and newly fortified in the mid-tenth century on the model of Chorasmia, from which he concluded that it was not until the tenth century that Yangikent replaced the significantly larger city of Juvara as the Oghuz capital.[29] East of the Seyhun, the cities of Sauran, Signak, Karnak, Karachuk, Otrar, Dahlan and Garbian formed the urban centre of the Oghuz; further east, Jadjan, north of Lake Issyk Kul, marked the eastern border of the sedentary Oghuz, while the city of Gorguz, in the delta of the River Ili, which flows into Lake Balkhash, lay on the north-eastern border. The northernmost settlements of the Yangikent Oghuz were presumably the trading centres of Nudjan and Badagan in today's central Kazakhstan.[30] West and south-west of Juvara there were hardly any Oghuz cities, for the city of Gurganj (today Konya Urgench) south-west of the desert of Kyzyl Kum belonged to Chorasmia. But it is conceivable that cities such as Gurganj, which lay on the edge of the Oghuz sphere of influence, sometimes also had to pay tribute to the Oghuz.

Numerous finds of coins and ceramics from the fifth to eighth centuries CE that have been made since the Society for the Exploration of EurAsia started systematic excavations bear witness to the great age of the city of Juvara (Huwara, fig. 33), which extended over some 530,000 square metres.[31] But Juvara (Huwara) is probably even older than that: Ammianus Marcellinus (*ca.* 330–*ca.* 395/400) in his *Res gestae* mentions three cities on the lower course of the Jaxartes (Syr Darya) named Aspabota, Chauriana (Huwara) and Saga.[32] There is evidence for settlements in the region of the so-called 'swamp cities' in the delta of the Seyhun river as early as the Bronze Age; in addition, a looted cemetery of what appear to be Saka horse nomads from the early Iron Age was discovered 2.4 kilometres south-east of Juvara where the earliest Iron Age Saka kurgans have been found. Finds of coins suggest that there was trade between Juvara and the pre-Islamic princedoms of Chorasmia and Sogdiana. But silver coins of a Chorasmian type with Arabic inscriptions in three variants were also discovered which were related to the Tahirid suzerainty in the second quarter of the ninth century (fig. 34). The first variant bears the inscription *Abdallah bin Tahir* on its front and *Jabuyah Arslan* on the reverse. The first name relates to the third Tahirid ruler Abdallah ibn[33] Tahir (r. 828–44/45), and the second means 'Yabghu Arslan', which suggests that Yabghu Arslan minted coins in the name of his Tahirid overlord.[34] According to the Persian historian al-Baladhuri (d. 892), Abdallah ibn Tahir sent his son Tahir ibn Abdallah on a campaign against the Oghuz around 830: 'Abdallâh ibn-Tâhir had his son Tâhir ibn-Abdallâh raid the county of the Ghûziyah, and he conquered places that none of the Muslims before him had reached.'[35] On the coins of the second type the names change place: now the inscription on the front reads *Jabuyah malik al-guziah mawla amir al-mu'minin*, that is 'Yabghu, king of the Oghuz and client of the commander of the faithful' (that is the caliph), and the name *Abdallah bin Tahir* has been demoted to the reverse, which implicates a higher degree of independence of the yabghu from the Tahirids. But by calling himself '*mawali*', the yabghu emphasised his submission to the caliph and implied that he was a Muslim. On the coin of the third variant the name *Abdallah bin Tahir* does not appear at all, which suggests that the Oghuz yabghu was entirely independent. A coin of the second variant of the 'Jabuyah type' found in 2013 additionally bears the Arabic inscription *dharb harwua*, 'struck in Harwua'. This suggests that the Oghuz minted their coins in the delta of the Syr Darya in Huwara (Juvara) and that Huwara served as capital in the ninth century.[36]

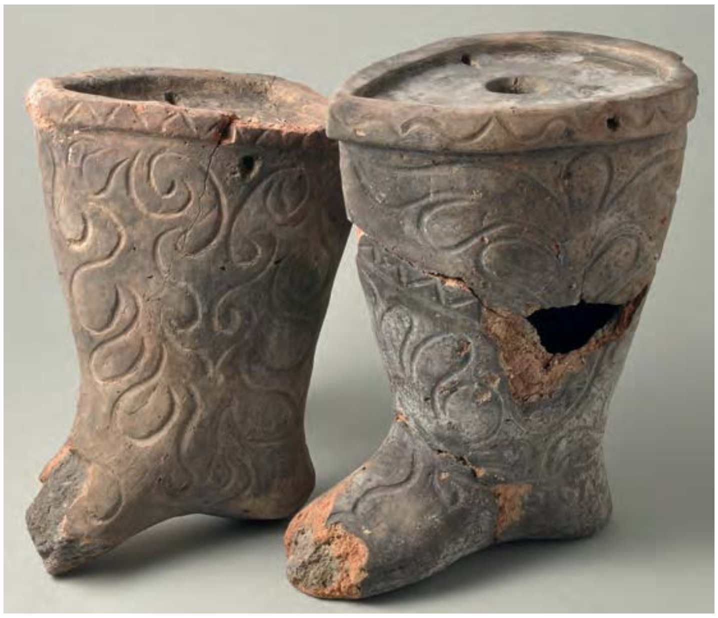
The city was divided into three quarters, the two outer quarters – *rabat 1* and *rabat 2* – and the *shahristan,* a walled inner quarter located on a 5-metre-high hill and measuring 48,300 square metres. The whole city was surrounded by a wall strengthened with a tower every 20 to 25 metres. The hill was also fortified by a wall and divided into ten sectors. The south-western sector formed the great citadel, which has a square groundplan of 60 x 60 metres. Excavations revealed a palace and temple complex with at least 34 rooms, and finds point towards a fire cult. As in Yangikent, well-preserved fragments of ceramic altars with protomes in the shape of stylised ram's heads were discovered in the palace temple of Juvara, which suggests a ram cult.[37] The archaeologists Karl Baipakov and Dmitri Voyakin, who conduct the excavations in Juvara, have pointed out that the Oghuz were still holding on to their traditional fire and ram cults in the twelfth century although Islam had been widespread in the region since the eleventh



35. Gem intaglio with an inscription in Pahlavi (Middle-Persian) *bylpyk y wyhdyn*, fourth–fifth (or first-second) century found at Juvara (Kesken Kuyuk Kala), Kazakhstan. In 2008 the inscription was translated by A.I. Kolesnikov and V.A. Livshits as *bylpyk* (daughter) of *wyhdyn* (a name), or as *bylpyk* (blessed, the literal translation being 'witness of the true faith') *wyhdyn*.[11] Photo: 2008.

century.[38] Juvara was destroyed by the Mongols around 1219/20[39] and later rebuilt 600 metres further east; from then on it belonged to the Ulus Jochi (the Golden Horde).[40] As the Franciscan friar and papal emissary Giovanni da Pian del Carpine remarked in 1246, Yangikent, unlike Juvara, did not resist the Mongols and was therefore spared destruction.[41] The size of the palace complex at Juvara, which, like the capital Yangikent, was located on an important trade route, suggests that Juvara remained a second residence of the yabghu.

Interestingly, the Oghuz elite preserved a thousand-year-old foundational myth that ultimately goes back to the Xiongnu. The historian of the Il-Khanid rulers, Rashid al-Din (1247–1318) recounts that they traced their descent back to the legendary Oghuz Khan, the young son of the Turkic Kara Khan, who far surpassed his father in energy and wisdom. As in the traditional story of the early Xiongnu, in which the ruler Touman (d. 209 BCE) fears his son Modu (r. 209–174 BCE) and seeks to eliminate him, but his son kills him instead,[42] Kara Khan planned the murder of his son Oghuz. But Oghuz discovered the plot and killed his father in battle, upon which he was appointed supreme khan.[43] And like Modu, Oghuz Khan divided his army and his people into a left and a right wing, two parallel units of twelve tribes each.[44] That this tradition was significantly older than Rashid al-Din's work is shown by the fact that Mahmud al-Kashgari (*ca*. 1008–*ca*. 1105) already mentions the 24 original Oghuz tribes.[45]



36. Ceramic incense burners in the shape of boots from the Oghuz, *ca*. tenth/eleventh century. Juvara (Kesken Kuyuk Kala), Kazakhstan. Photo: 2010.

We learn from Ahmad ibn Fadlan's account of his travels in 921 and 922,[46] in which he describes his encounters with Oghuz north of Gurganj, that Oghuz funeral rites followed the traditions of earlier Turkic peoples:[47] 'When one of their prominent men dies, they dig for him a large pit in the form of a house, and they go to him, dress him in a robe with his belt and bow, put a drinking cup of wood in his hand with intoxicating drink in it, and place in front of him a wooden vessel of mead. They come with his entire possessions and put them with him in this house. Then they set him down in it. They then build a structure over him and make a kind of cupola out of mud. Then they go to his horses and [. . .] slaughter one to two hundred at the grave down to the last one. Then they eat their flesh down to the head, the hooves, the hide and the tail, for they hang these upon wooden poles and say: "These are his steeds on which he rides to paradise." If he has killed any one and has been a hero, then they carve statues out of wood in the number of those whom he has slain, place them on his grave and say: "These are his pages that serve him in paradise."'[48]

As Constantine Porphyrogenitus relates, the Khazars and the Oghuz mounted a pincer attack on the Pechenegs in the early 890s, after which the Oghuz occupied the area between the rivers Ural and Volga.[49] Seventy years later the Oghuz formed an alliance with the Kievan Rus', who wanted to eliminate their Khazar trade competitors. The allies captured the fortress of Sarkel in 965 and the Khazar capital Atil in 968 or 969, thus dealing the death blow to the Khazar Empire. In 985 the Oghuz–Russian alliance also laid siege to Bolghar, the capital of the Volga Bulgars, after which Kiev rose to become the dominant trading power in the region.[50] The destruction of the Khazar Empire saw the collapse of the strongest bulwark against an almost unchecked migration of nomadic steppe warriors from Central Asia to eastern Europe.

At that time, the western Oghuz most probably operated independently of the yabghu in Yangikent, who had to deal with a rebellion by a group of Oghuz from whom the Seljuks would later emerge. There were now three different Oghuz centres of power: the Oghuz of Yangikent and Juvara, the rebellious proto-Seljuks and the western Oghuz. The western Oghuz, under increasing pressure from the Kipchaks, moved west, and between about 1036 and 1050 occupied the Pontic grass steppe, so that their pastures adjoined the heartland of the Kievan Rus'. The first conflicts with Kiev broke out in 1054 and ended in 1060 in a devastating defeat for the western Oghuz, who then fled to the south-west only to be routed in 1064 by Byzantium and in 1068 by the Hungarians. This in turn opened up the Pontic steppe and Atelkuzu to the Kipchaks.[51] After the destruction of the western Oghuz, some

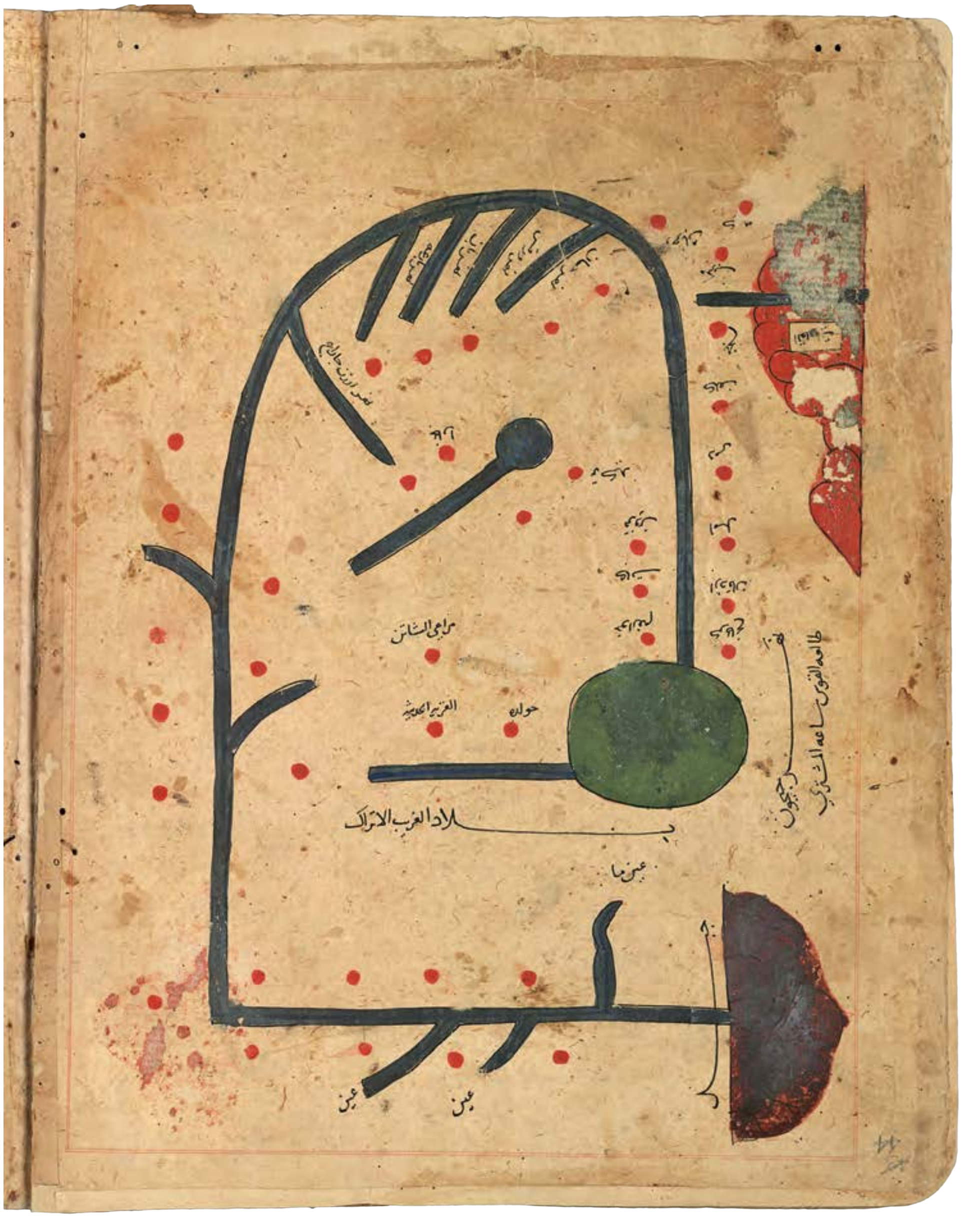
Oghuz groups entered the service of Byzantium and the Kievan Rus' as mercenaries; chronicles from Kiev call them *Chorni Klobuky*, 'Black Hats'.[52] The Oghuz mercenaries proved to be just as unreliable as the Pecheneg ones, for at the battle of Manzikert in 1071 they defected with one accord to the enemy, thus enabling the Seljuks to defeat Byzantium.[53]

The downfall of the Pechenegs and the western Oghuz illustrated the fact that sedentary, urban states in eastern Europe were quite able to ward off the attacks of inadequately organised Central Asian horse warriors. The high mobility of such nomadic warriors was both a military advantage and a source of political weakness, since they seldom appeared as a united force and often followed different aims. It was Genghis Khan who first succeeded in combining military mobility with central control and administration. The rulers of well-structured, sedentary states such as Constantinople or Kiev made every effort to defend strategically important territory against bands of nomadic horsemen, but they also secured their services as mercenaries in wars against other sedentary states or in defence against other equestrian warriors. The semi-nomadic pastoralists for their part were secure at home, as long as they did not threaten the sedentary states because launching attacks on horse warriors carried high risks and little prospect of significant gains.

The instability in the territory of the Oghuz of Yangikent became apparent under **Ali Khan** (r. late tenth to early eleventh century), when around 985 a power struggle broke out between him and his *subashi* (military commander) Seljuk; both belonged to the leading clan of the Qinik.[54] At the same time, Ali Khan's efforts to levy annual taxes from his Oghuz subjects caused great resentment. Seljuk had to leave Yangikent with his close followers and loyal troops; he succeeded in establishing a new power base in the city of Jand, 120 kilometres to the south-east. The fact that the Oghuz attack on Bolghar and the Seljuk's secession took place at almost the same time underlines the centrifugal forces that prevailed in the Oghuz confederation. In Jand, which lay near the border of the Samanid Empire, Seljuk and his followers adopted Islam, following the example of the converted Karluks around Isfijab. Even though it is sometimes claimed that in the pre-Mongol period Sufi missionaries were instrumental in the conversion of Turkic tribes, those were times when conversions took place en masse, when a leader together with his whole tribe, or entire armies, adopted Islam. The conversion of the Karakhanid ruler Satuk Bughra Khan (d. 955) together with '400,000 tents' of his subjects is a good example.[55]

Further evidence of the absence of Muslim missionaries is indirectly supplied by the fact that up to the thirteenth century there were no conversions to Islam among the Turkic and Mongolic peoples in Mongolia, while some people in the same populations did adopt Nestorian Christian beliefs. Gregory Abu'l Faraj (1225/26–86), better known as Bar Hebraeus, for example, reports that in 1007 a Turkic people in Asia adopted Christianity: 'And in this year [1007] the people of one of the tribes of the Inner Tûrkâyê in the East, which is called Kirîth [the Keraits], believed in Christ, and they became disciples and were baptised through the miracle which was wrought in connexion with their king.' The miracle to which Bar Hebraeus alluded, which moved the khan of the Keraits to convert to Christianity together with 200,000 clan members, consisted in the claim that St Sergius rescued him



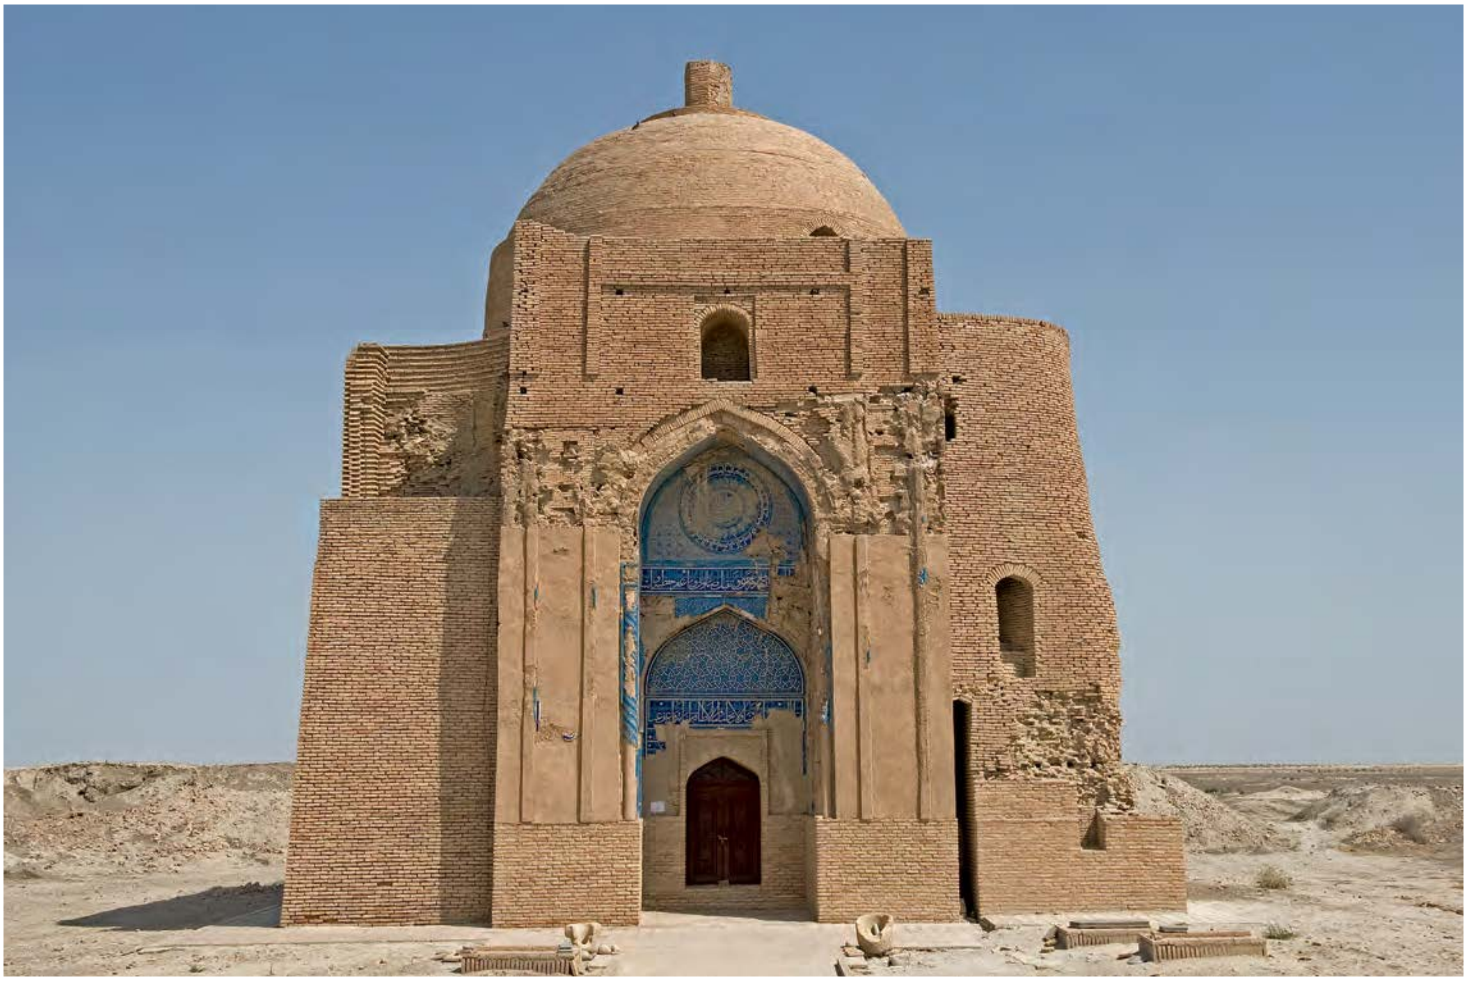
38. Map of Transoxania from *The Book of Curiosities,* an atlas produced by an unnamed author in the first half of the eleventh century. As was customary in the Islamic world at that time, the south is shown at the top and the north at the bottom of the map. Below right are mountains and above them the Aral Sea. The river rising in the mountains and flowing into the Aral Sea is (incorrectly) shown to link the rivers Oxus and Jaxartes. Juvara, also called Huvarah and Khuvarah, and Yangikent, the 'new town', stand to the left (east) of the Aral Sea. The Arabic caption below the Aral Sea says 'The lands of the Guzz Turks'. The Bodleian Libraries, University of Oxford. Shelfmark: MS. Arab. c. 90, fol. 44a Ch. 2.18 (Oxus map).

one day from a snowstorm.[56] The success of Nestorian Christian missionary work can also be recognised by the fact that between about 1150 and 1250 significant numbers of the Turco-Mongol Keraits, Naimans, Oirats, Merkits and Onguts were Nestorians; but there are no sources that speak of Muslims in those areas.[57]

Conversion to Islam opened up new possibilities for the Seljuks. In the name of war against infidels they launched raids into the territory of the non-Muslim Oghuz of Yangikent. This provoked a violent conflict between the two feuding clans of the Qinik, which ended only in 1042/43 with the defeat of Yabghu Shah Malik of Yangikent. At the same time, the Seljuks, under Seljuk's son Arslan[58] Israïl ibn Seljuk, offered their services as auxiliary troops to the Samanids, whose power was now crumbling and who were being hard-pressed by the Karakhanids, and settled near Nur, between Bukhara and Samarkand. With the imminent collapse of the Samanid Empire, a power vacuum in Mawarannahr was starting to appear. This, together with a lack of pastureland in Jand, spurred many Oghuz on to join Arslan Israïl ibn Seljuk some time after 992; among them were his nephews Tughril and Chagri.[59] As the geographer al-Muqaddasi (945–*ca.* 991) and al-Biruni recorded, the Oghuz who converted to Islam were called *Turkmen*.[60]

With the fall of the Samanids, the political geography of southwest Central Asia took on a new face. While the Karakhanids established themselves in Mawarannahr north of the Oxus and the Ghaznavids settled in the regions south of the river, Chorasmia and above all Khorasan were violently contested between the Oghuz of Yangikent, the Seljuks and Ghaznavids (who captured Arslan Israïl between 1025 and 1026).[61] As well as all these there were independent, marauding bands of Oghuz horsemen, joined by many followers of the defeated Israïl, who after ravaging Khorasan, advanced further west around 1025/27. They neither formed states nor established any functioning administration, but raided the rich cities, extorted tribute from those they did not kill and enslaved young women. Once a city had been thoroughly looted, they moved on like locusts. The historian Ibn al-Athir (1160–1233) reports in his work *al-Kamil fi'l-Tarikh*, the 'perfect history', that between 1035 and 1045 Oghuz bands like these, also called 'Iraqi Turkmen'[62] or members of the *Iraqiyya*,[63] plundered Rayy, Hamadan, Urmia in western Iran and Maragheh in Azerbaijan,[64] burnt down mosques and captured women to sell them into slavery. At Tabriz, the largest city in Azerbaijan, the Oghuz defeated the local Kurds, who fled to Mosul and further into the Hakkari mountains. In their search for new places to plunder, they raided Mosul (in today's northern Iraq) twice in a row, then they seized parts of Armenia and Diyarbakr, the ancient Roman city of Amida. They abducted so many young people that 'eventually the cost of a beautiful girl came down to five dinars and there was no demand for boys at all'.[65]

In 1034/35 the Seljuks advanced from Bukhara towards Khorasan, with the aim of settling in Chorasmia. They initially suffered a devastating defeat at the hands of Ali Khan's son and successor **Shah Malik ibn Ali** of Yangikent (r. ?–1042/43).[66] But after wresting Khorasan from the Ghaznavids in 1040, the



39. The Seljuk Maene Baba Mausoleum of the Sufi master Abu Kheyr Abu Said stands in the Tejen Valley at the foot of the north side of the Kopet Dag mountain range in Turkmenistan. Abu Said (967–1049) had significant political and religious influence on the Seljuk brothers Tughril Beg and Chagri Beg, to whom he lent spiritual support in their fight against the Ghaznavid Sultan Mas'ud. His prayers are said to have helped the brothers achieve their decisive victory over Mas'ud at the Battle of Dandankan in 1040. The mausoleum, built in the Seljuk style with a double-shell dome, was restored by the Timurids in the fifteenth century. Photo: 2014.

Seljuks once more turned against Shah Malik, their relative and arch-enemy, who had been occupying Chorasmia since the winter of 1040/41. The brothers Tughril ibn Mikhail and Chagri ibn Mikhail, two grandsons of Seljuk, invaded Chorasmia and in 1042 or 1043 inflicted a decisive defeat on Shah Malik, who was now caught in a trap: with his few remaining troops he could no longer return to his heartland near Yangikent, which had been invaded by the Kipchaks. So he fled south to the coastal strip of Makran in today's Baluchistan. But a Seljuk troop tracked him down and handed him over to Chaghri Beg, who had him killed.[67] Thus the more than 50-year-old internal Oghuz rivalry between the traditional ruling line of Yangikent and the rebellious followers of Seljuk ended with the triumph of the latter.[68] The death of Shah Malik made it easier for the Kipchaks to occupy the region at the lower course of the Seyhun river, where, as al-Athir reports, 'ten thousand tents of the Turks [. . .] converted to Islam'.[69]

3. The Kipchaks

The earliest mention of the Turkic Kipchaks is found in an inscription on the so-called Selenga Stone, a stele found on the banks of the Selenga river in Central Mongolia, which was carved in honour of the Uyghur khagan Etmish Bilge Khagan (Bayanchur, r. 747–59). In the translation by its discoverer Gustaf Ramstedt, the passage in question reads: 'when Turk-Kipchaks ruled over us [Uyghurs] for 50 years'.[70] The very loose confederation of the Turkic-speaking Kimek – to which the Kipchaks probably belonged – had its centre at the River Irtysh in western Siberia. If we accept the account of the physician and author Sharaf al-Zaman Marwazi (*ca.* 1057–1125), the expansion of the eastern Mongolian Khitan, who had founded the Liao dynasty (907–1225), triggered the westward migration of the Kipchaks. According to al-Marwazi, the Qun,[71] whose name could be a variation of the ethnonym of the Cumans, fled from the Khitan to the Kimek in the early eleventh century and rapidly seized power, at least over the western Kimek groups. From as early as 1018 the Kipchaks (Cumans) began their westward and southward expansion, which broke up the Kimek confederation. One line of attack was directed against the Oghuz living between the Volga and the Ural rivers, and further on to the Pontic steppe and Atelkuzu, the other against the Oghuz of Yangikent, whose territory they seized from 1043, almost without a struggle.[72]

Between 1115 and 1125, the Ölberli, a tribe of Mongolic origin, joined forces with the Kipchaks as a result of the conflicts between the Manchurian Jurchens and the empire of the Liao, which collapsed in 1125. From the 1120s the territory of the Kipchaks, called by Persian authors *Dasht-i Kipchak* (plain of the Kipchaks) and by Russian historians *Polovetskoye Pole* (land of the Polovtsy), extended from the Irtysh in the east to the Dniester in the west or even as far as the Danube. Three large groups had now formed: in the east lived the western Siberian Kipchaks, led by the Ölberli; in the heartland of Central Asia the Kangli-Kipchaks, whose most important cities lay in the hinterland of the Seyhun river (Syr Darya); and west of the Aral Sea those Kipchaks who are called Polovtsy by Russians and Cumans by Byzantine and Latin sources, joined by individual groups of Pechenegs and Oghuz.[73] William of Rubruck's account of his journey in 1253–55 from Constantinople to Karakorum and back to Tripoli (in today's Lebanon) explicitly states that the Cumans, Kipchaks and Kangli were all members of the same linguistic group.[74]

The mostly Turkic-speaking Kipchaks, who in the east also included Mongolic-speaking tribes, formed neither a state nor an empire, nor even a confederation. The Kipchaks were divided into a number of hordes, which owned strictly delimited pasturelands assigned to individual tribes and clans. In times of peace, the clans changed their pastures according to a pattern laid down by their elders and leaders, which prevented overgrazing and conflicts over land, access to water and winter camps. Although individual khans or begs often ruled over large areas, there was neither a central authority nor any coordination between the Kipchak power bases, which was a significant factor in the rapid victories of the invading Mongols between 1221 and 1242.

The loss of freedom and the breakdown of social relationships resulting from state formation, whether for individuals, clans or tribes, and the subjection to an administration often perceived by a clan or tribe as alien, was a threat to the identity and way of life of Central Asian horse nomads. It was only in the face of an even greater threat from an expanding, sedentary state, or with the emergence of exceptionally ambitious leaders such as the Xiongnu Modu, the Turkic Bumin, Ishtemi and Tonyukuk and the Mongol Temujin (Genghis Khan) that nomadic steppe peoples were ready to form and to accept a state with a strong administrative structure. But as Peter Golden emphasises, several states controlled by steppe dynasties were not created by them but taken over: nomadic warriors conquered states which already functioned, and merely adopted the existing system of administration. 'The Qaraxanids [and Seljuks] simply grafted some basic Turkic rule on the formerly Sâmânid [or Abbasid] sedentary territory and government that they encountered. [. . .] The Qaraxanid and Seljük states were really the consequences of their conquest of already existing states.'[75] Put succinctly, the result was close cooperation between the 'Iranian men of the pen' and the 'Turkic men of the sword'.[76] The same is true for the states of the Liao and Qara Khitai,

41. Stone figures provide the most important material evidence of both the Cumans, known as Polovtsy in Russian, and of the pre-Christian Slavic peoples of what is now Ukraine. The picture taken in a Kiev park shows a replica, 267 centimetres high, of the Zbruch Idol, a sculpture believed to represent the four-headed Slavic war god Svetovid. The ninth-century original is in the Archaeological Museum in Krakow, Poland. Photo: 2004.

42. Chalk formations at Bozzhira on the Ustyurt Plateau on the Mangyshlak Peninsula in western Kazakhstan. In the eleventh century, Kipchak forces invaded the Mangyshlak Peninsula and conquered the Oghuz, thereby taking control of one of the trade routes linking the drainage basin of the Volga with Chorasmia and Samarkand. Photo: 2005.

who, as the Northern Wei had done before them,[77] employed dual systems of administration: they allowed the subjected sedentary population to keep their existing administrative and legal structures, while maintaining the traditional mechanisms of governance and law for members of their own tribes.

Even Genghis Khan's Mongols had to adopt a hybrid form of government with dual administrative structures once they no longer simply plundered territories they had conquered but chose to exploit them in the long term. For this reason, Genghis Khan's third son and successor Ögödei (r. 1229–41) divided the Mongol administration into two distinct parts. The empire's steppes and pastures were under the direct control of Genghis Khan's four sons and their nearest relatives, just as the founder of the state had decreed. For the urban regions of northern China, Turkestan and Mawarannahr, and soon afterwards Iran, Great Khan Ögödei created three administrations, each led by a governor general and directly responsible to Chinkai, the prime minister. The princes of Genghis Khan's family received their share of the tax revenue from the urban centres, but had no executive control over these centres.[78]

For the Kipchaks, the way of life of semi-nomadic pastoralists, and the Kipchak-Turkic language, which was a lingua franca understood in nearly all of Dasht-i Kipchak, provided a shared and unifying identity. Thanks to the *Codex Cumanicus*, the western dialect of the Kipchak language is known. This codex, assembled between 1330 and 1340, kept in the National Library of St Mark's in Venice, consists of several parts and is the work of several authors from the twelfth and thirteenth centuries; it was intended to help merchants, diplomats and Catholic missionaries to communicate with the Cumans. The first part, the commercial part as it might be called, translates an Italo-Latin vocabulary into Kipchak and Persian, while the second, religious part is a collection of religious and folkloric texts translated from Kipchak into Latin and Middle High German.[79] From the second half of the thirteenth century, Kipchak formed the language of everyday use within the Golden Horde, even though official documents were written in Mongolian.[80] The Tatar language, among others, derived from Kipchak.

South-east of Dasht-i Kipchak, from 1043 the Kipchaks occupied cities east and west of the River Syr Darya, including the 'swamp cities' of Yangikent, Juvara and Jand, along with Signak, Isfijab and Otrar, which were located further to the east. At the same time they seized the regions between the Syr Darya, the Aral Sea and the Ural; this gave them control over an important section of the trade routes between the Kievan Rus' and Mawarannahr as well as China. However, this dominant position in a busy urban transit region,

and the fact that Turkmen tribes regularly looted traders' caravans in Mangyshlak and on the Ustyurt Plateau, soon provoked a violent reaction. In the winter of 1065/66, the second Seljuk sultan, Alp Arslan, led a campaign against northern Chorasmia and advanced as far as Jand, where the Kipchak ruler was forced to capitulate to him.[81] Now Alp Arslan's Seljuks controlled a narrow corridor, which led north-westwards from Merv to Gurganj and extended as far as Jand, but included neither Chorasmia (apart from Gurganj) nor Mawarannahr (map 4, p. 86). The twelfth and the early thirteenth centuries were marked by the changing relationships between the Kipchaks and the expanding Chorasmian Empire. In 1127 and 1133 the Kipchaks suffered two serious defeats at the hands of the Chorasmians, who occupied Jand. Although the Chorasmian Shah Ala al-Din Tekish (r. 1172–1200) married Terken Khatun, the daughter of a Kipchak ruler, relations between Kipchaks and Chorasmia remained tense. As the successor of Shah Tekish, Terken Khatun's son, Ala al-Din Muhammad (r. 1200–20/21), ascended the throne of Chorasmia, but the princess herself controlled the Kipchak elite troops of the Chorasmian army and undermined her son's authority, so that he lost confidence in his troops. In 1219/20 this competitive mother–son relationship, marked by mutual mistrust, and hostility between Kipchaks and Chorasmians prevented the creation of a common front against the Mongols, and this led to the rapid fall of Chorasmia and the Kipchaks.[82] Most of the Kangli-Kipchaks, who remained loyal to Shah Muhammad, such as the garrison of Samarkand, were massacred by the Mongols.

The northern part of Dasht-i Kipchak bordered on the territory of the Volga Bulgars, so that the Kipchak tribes who lived there controlled the lower course of the Volga, and the Bulgars its middle reaches. In the autumn of 1223 the Mongols, led by generals Sübotai and Jebe, appeared for the first time in the Volga region, after destroying a Cuman army in the Caucasus. At first the Bulgars, probably with the help of the Kipchaks, succeeded in luring the Mongol vanguard into an ambush and defeating it at the Battle of Kernek, also known as the 'Battle of Samara Bend', but they were later defeated themselves. The Mongols were hardly weakened, for soon afterwards, they destroyed a Kangli army south-east of the Ural river and forced the Kangli-Kipchaks to pay a tribute of 100,000 horses.[83] In 1229–32 Volga Kipchaks and Bulgars merely had to endure a few minor Mongol raids on their territory, but in the winter of 1236/37 the right wing of a Mongol army, led by the future Great Khan Möngke and his brother Böchok (Budjek), launched a major assault on the Volga Bulgars and Pontic Kipchaks. While advancing against the cities of the Rus', the Mongols sought to protect their right flank from possible attacks and cover their rear; for this reason the Bulgars and Kipchaks had to be destroyed first. It was also important for the Mongols to deal with the Kipchaks, who were now the only horse nomads in Central Asia who did not recognise their supremacy. Within a short time the Mongols had destroyed the Bulgar Empire. When the Kipchaks fled to the forests on the Danube, the Mongols flushed them out like hunters organising a battue.[84] The leader of the Kipchaks, Khan Bachman, was among the dead, and the Kipchak warriors, who like the Mongols fought as mounted archers, were either incorporated into the Mongol army or sold as slaves to the Italian, Bulgarian and Muslim slave traders of the Black Sea.[85] Those Kipchaks who were integrated into the Mongol troops operating in the north-west of Central Asia and the north-east of eastern Europe soon formed the backbone of the Golden Horde.

It is an irony of history that many of the Kipchak warriors and young men enslaved in 1236/37 were sold to Egypt, where, as Mamluks, they soon joined the professional warrior elite of the Egyptian army, quite different from the Mongol forces. The Mongols had outstanding military commanders, but their army was really a militia – all healthy male adults served as warriors and received no special training[86] except on manoeuvres in the case of battues. The young Kipchaks received thorough training in all aspects of horsemanship, in handling bows and lances on horseback, and in swordsmanship with the long, double-edged rider's sword. As protection they wore chainmail or a brigandine (a short jacket with small iron plates fastened on the inside), an iron helmet and a small round shield. The young warriors were also drilled in combat in various formations, so that, according to the chosen tactics, they could fight like Western European knights as well as steppe warriors.[87] The Mamluks of Kipchak origin were the best-trained military elite of the Middle Ages.

These Kipchak Mamluks not only inflicted a decisive defeat on the Mongols in Palestine two decades later at Ain Jalut, but, under the leadership of the former Kipchak slave Baibars al-Bunduqdari (r. 1260–77), seized power in Egypt and rapidly grew to become more than worthy opponents to the Il-Khanid Mongols of Iran.[88] At the same time, in the period up until 1291, they annihilated the Crusader states. Baibars, born around 1223, had fled from the Mongol campaign of 1236–38 against the Volga Bulgars and the Kipchaks to Bulgaria, where he was sold as a slave to Sivas, in Central Anatolia. From there, the young slave reached Hama in Syria and finally Cairo, where he built his career in the guard of the Ayyubid and Mamluk rulers. After his victory over a Mongol army on 3 September 1260 at Ain Jalut, he murdered his master, Sultan

Qutuz, and continued the dynasty of the Egyptian Mamluks (1250–1517).[89]

Appearing for the first time in 1055 at the borders of the Kievan Rus', to the west of the Dasht-i Kipchak, the Cumans drove the Oghuz out of the western Pontic steppe by 1064; at the same time they raided in the southern areas of Kiev.[90] As already mentioned, in 1091 Kipchak troops helped the Byzantine emperor Alexios I to drive off the Pechenegs who were threatening Constantinople. Weary of the Polovtsy attacks, Prince Vladimir II Monomakh (r. as Prince of Chernigov 1078–94, of Pereyaslav 1094–1113, Grand Prince of Kiev 1113–25) seized the initiative and inflicted severe defeats on the Cumans in 1103, 1109, 1111, 1113 and 1116, penetrating deep into the steppe and destroying their encampments. As a result of these counter-attacks from Kiev, a number of Kipchak tribes left the Pontic steppe – some moved south-west to the Bulgars who were under Byzantine rule, while others under Khan Äträk (Otrok) found refuge with King David IV of Georgia (r. 1089–1125), who incorporated the Kipchak warriors into his army.[91] But the majority of the Kipchaks remained in the Pontic steppe, not least because the unity of the Kievan Rus' collapsed after the death of Vladimir Monomakh, and the Rus' princes fought each other, each employing Kipchak mercenaies against their opponents. The most important Kipchak campaigns were led by Äträk's sons Eltut and Könchek. Eltut fell in battle in 1180, but five years later Könchek, with his ally Koza, gained a triumphant victory over Prince Igor Sviatoslavich of Novgorod-Seversk, and took him prisoner. In 1185 the princedoms of Rus' escaped disaster only because the Kipchak victors Könchek and Koza quarrelled over the continuation of the campaign.[92] In 1203 Cumans in the service of Prince Rurik Rostislavich captured and plundered the city of Kiev, though never intending to occupy it permanently.

Turkic-Kipchak Equestrian Warriors in the Service of the Christian Kingdom of Georgia

The move of Kipchak warriors to Georgia represents an unusual case of Turkic steppe warriors placing themselves voluntarily in the service of a Christian kingdom and fighting more or less loyally over a long period at the side of their new Christian leader against distant tribal comrades, Turkmen and Seljuks. Forty thousand Kipchak families moved to Georgia, where they were warmly welcomed by the Georgian king David IV (r. 1089–1125) – though on condition that each family should supply him with a mounted and fully equipped warrior. The initiative for this relocation probably came from King David, who was the brother-in-law of Äträk, the son of the Kipchak khan Sharukhan.[93] David's long reign was marked by a struggle for the unification and sovereignty of the Georgian state, for on his accession he controlled only western Georgia. The Georgian provinces either had to pay tribute to the Seljuks or were under Muslim rule, as were the cities of Tbilisi and Ganja (in the west of today's Azerbaijan). In addition, the whole country was repeatedly subjected to Turkmen raids and the seasonal migrations of Turkmen pastoralists, who turned arable land into pastures.

Two external events were to the advantage of King David. In 1092 both the Seljuk vizier Nizam al-Mulk and Sultan Malik Shah I were murdered, which provoked unrest and power struggles in the Seljuk Empire. Then, in 1095, Pope Urban II proclaimed the First Crusade; the Crusaders took Damascus in 1098 and Jerusalem in 1099, forcing the Seljuks to focus on defending themselves from Christian conquerors. At the same time as the capture of Jerusalem, King David stopped paying tribute to the Seljuks and by 1105 had united the Georgian provinces. His next measure was to rid the realm of Turkmen feudal lords and turn the pastures back into arable land, which rapidly increased the productivity of the Georgian economy. Alarmed by the growing strength of Georgia, the Seljuk sultan Muhammad I Tapar (r. 1105–18) sent two punitive expeditions, one shortly after 1110 and another in 1116. Both were annihilated by David. Since David envisaged a further Seljuk attack and wanted to expand his territory into a Transcaucasian kingdom, he was in urgent need of military reinforcements. So in 1117 or 1118 he invited the Kipchak prince Äträk, who was under severe pressure from the Rus' led by Vladimir Monomakh, to come to Georgia; he settled the

new arrivals in the threatened regions in the south and east of the country. At the same time, Caucasian Alans and about 100 Crusaders joined the Georgian army.

The strengthening of Georgian military forces soon proved decisive in enabling the state to consolidate its sovereignty. In 1121 the Seljuk sultan Mahmud bin Muhammad (1118–31) called for a Holy War against Georgia and organised a Muslim coalition, composed of Seljuk troops and alliances of Turkmen and regional princes. On 12 August 1121, at Didgori, west of Tbilisi, the Georgian-Kipchak troops met the Muslim army, which was three to five times as large. To foil any possibility of flight by his soldiers, including the reputedly unreliable Kipchaks, David gathered them in a ravine and had their exit barricaded by boulders and tree trunks. Another contingent, under the command of David's son Demetrius secretly occupied the surrounding heights, while a troop of heavily armoured Crusaders appeared at the Seljuk headquarters, where they pretended to be deserters. Just as the battle began, these Crusaders drew their swords and massacred many of the senior Seljuk commanders, and while the Seljuks were in disarray, the Georgian-Kipchak cavalry rapidly destroyed their huge army. As a result of this victory, David IV regained control of the city of Tbilisi, which had been occupied by Muslims since 737, in 1122, and two years later he also took the strongly fortified city of Derbent on the Caspian Sea and the Armenian city of Ani. Thanks to its assimilation of the Turkic Kipchaks, Georgia had now become a great regional power: its territory extended from the Black Sea in the west to the Caspian Sea in the east, and from the northern Caucasus as far as eastern Anatolia in the south, and its surface area was five times as great as that of today's republic of Georgia. The victories of the Christian king David over the Muslim armies played their part in creating the legend of Prester John, the mysterious and powerful Christian priest-king who was believed by some in Western Europe to have driven back the Muslims in distant Asia.[94] Although Äträk returned to the Pontic steppe after the death of Vladimir Monomakh in 1125, many Kipchaks stayed in Georgia, gradually converted to Christianity and adopted Georgian culture, becoming an established part of the Georgian nation.[95] A century later, however, Kipchak groups in the service of Georgia proved disloyal: when Jalal al-Din, son of the Shah of Chorasmia, Ala al-Din Muhammad, who had been defeated by the Mongols, and grandson of the Kipchak empress Terken Khatun, attacked Georgia in 1225, 1226 and 1229, the Kipchaks twice defected to him.[96]

Just as they had in Georgia, the Kipchaks played a decisive role in the Balkans. The Cumans, who had lived in the western Black Sea region since the beginning of the twelfth century, took part in the Bulgarian uprising against Byzantium, which had crushed the First Bulgarian Empire in 1018 and incorporated it into its own empire as a *theme* (military province).[97] The uprising, which began in late 1185 or early 1186, was led by the brothers Ivan Asen and Theodore Peter, who founded the Bulgarian Asen dynasty (1185/86–1257/80).[98] The brothers were probably of Cuman origin, and this was why the successful Bulgarian liberation movement enjoyed the support of Cuman tribal warriors and the Vlachs, who spoke an Eastern Romance language, a variant of Vulgar Latin.[99] When the Fourth Crusade conquered Constantinople in 1204 and enthroned the Crusader Baldwin I of Flanders and Hainaut as first emperor of the Latin Empire of Constantinople, the Bulgarians fought on the side of the 'Greek Byzantines', their former enemies, who had fled into exile. In 1205 the Bulgarian-Cuman army of Tsar Kaloyan (r. 1197–1207), the younger brother of Asen and Peter, defeated the Latin Empire forces at Adrianopolis and took Emperor Baldwin captive.[100] Thanks to this victory, the Greek Empire of Nicaea was able to assert itself and to win Constantinople back five decades later, in 1261. That the Cumans who had immigrated to Bulgaria preserved their traditional beliefs can be clearly seen in accounts of the funeral of their prince Jonah in 1241 near Constantinople. Although Jonah bore a Christian name, eight volunteer warriors and 26 horses were sacrificed at his pagan burial ceremony, and the grave was covered by a tumulus.[101]

The Mongol advances into the Caucasus and eastern Europe between 1221 and 1242 brought an end to the Kipchaks as a politically independent power. This is shown in exemplary fashion by the fate of the powerful khan of the Cumans, Kotyan (Köten). In early 1221 the Mongol expeditionary force led by Sübotai and Jebe began its military reconnaissance of the Caucasus and the central part of Dasht-i Kipchak. First, in 1221, the Mongols inflicted severe losses on the Georgian-Cuman troops of King George IV (r. 1213–23) in two battles by the Kura river, partly, it

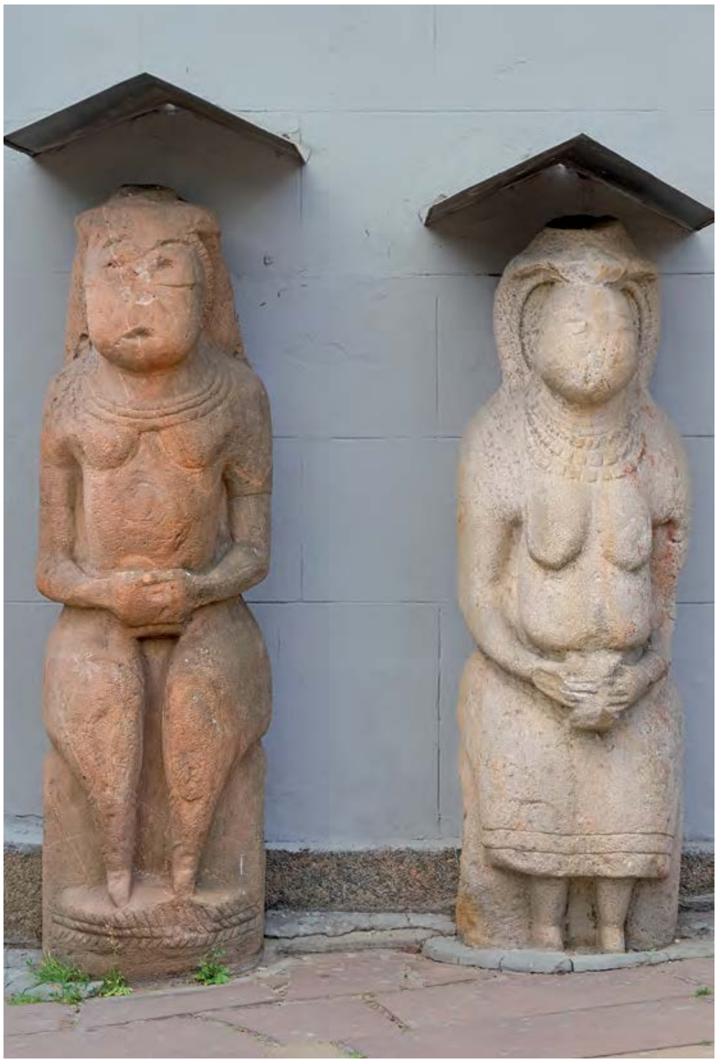
49. The fortified villages of Chazhashi, in the foreground, and, in the distance, Murk'meli are part of the community of Ushguli, Upper Svaneti, Georgia. The Svans, together with the Alans, forefathers of present-day Ossetians, offered the strongest resistance against invaders from Central Asia, such as Seljuks, Turkmen and Mongols. The Greek geographer Strabo, who died *ca.* 24 CE, sang the praises of their fighting capacity. 'The Svans [. . .] are perhaps the most belligerent and the strongest [of all]. Living in the heights of the Caucasus, they dominate all the peoples surrounding them,' he wrote.[12] In his turn, William of Rubruck points out that the Svans were never subservient to the Mongols.[13] Photo: 2013.

seems, by using duplicity. As the Georgian commander-in-chief Ivané wrote to Pope Honorius III, advancing Mongol units carried a cross in front of them as they advanced, so that the Georgians took them for Christians and hastened towards them, whereupon they were all massacred.[102] The Franciscan friar Giovanni da Pian del Carpine, who visited the Mongol Empire from 1245 to 1247, remarked succinctly: 'At first they [the Mongols] are very mild, but in the end they sting like a scorpion.'[103] The Mongols then crossed the Caucasus and at the Terek river encountered a strong army consisting of Kipchak, Alan and Caucasian warriors led by the Kipchak prince Yuri, Kotyan's brother. Faced with this superior force, the Mongols retreated to the mountains. Once again they used treachery: General Sübotai bribed the Kipchaks with half of the treasures he had plundered in Georgia, which persuaded them to abandon their Caucasian allies in the night. The Mongols immediately attacked the remaining Caucasians and Alans and slaughtered them, and then they hunted down the unsuspecting Kipchaks and killed them too – thus regaining the treasures they had given them.[104] Now the Mongols invaded Dasht-i Kipchak and plundered the city of Saqsin in the Volga Delta (today in the province of Astrakhan). After this, Sübotai reconnoitred the shores of the Sea of Azov, crossed the frozen straits of Kerch in January 1223, and destroyed the fortified trade city of Soldaia (today's Sudak), which then belonged to Venice, bringing trade in the entire Black Sea basin to a standstill.[105] When the Mongols turned further north-west, Kotyan managed to forge an alliance against them with the princes of Galicia, Volhynia, Kiev, Chernigov, Kursk, Suzdal and Rostov. Seeing the superiority of the combined Rus'-Kipchak army, the Mongols retreated eastward, until the allies, who were pursuing them in a disorderly fashion and had no central command structure, lost contact with each other. On 31 May 1223, after a nine-day retreat, Sübotai and Jebe turned and attacked their pursuers by the River Khalkha, north of the Sea of Azov; their 18,000 warriors annihilated their pursuers, who were more than 80,000 strong.[106]

As mentioned above, in the winter of 1236/37 the Mongols Möngke and Böchok (Budjek) had crushed the Volga Bulgars, after which, in 1238, Berke, later to become a khan of the Golden Horde, systematically set fire to the villages and camps of the Kipchaks of the Pontic steppe.[107] These final blows, and the destruction of their economic base, provoked a mass exodus of the Kipchaks to Bulgaria and Hungary. Kotyan fled with 40,000 warriors to Hungary and offered his services to King Béla IV (r. 1235–70) in exchange for safe asylum. Like David IV more than a century earlier, Béla welcomed the Kipchak warriors, and Kotyan even had himself baptised in 1239 as a sign of his peaceful intentions. And just as the Turkic peoples of the First Khaganate in the 560s and 570s warned Byzantium against granting refuge to the Avars who had fled from the Turks, since this would represent a hostile action,[108] Batu Khan, the nominal leader of the Mongol campaign of 1236–42, warned Béla that giving sanctuary to the Cumans constituted a *casus belli*, and demanded their extradition. King Béla did not respond to the Mongol demand and ill-treated or killed the Mongol envoys, having already put to death members of some earlier Mongol delegations.[109] Batu's letter to Béla of 1237 left no doubt of his intentions: 'I, the Qa'an [Chayn], the representative [*nuntius*] of the Heavenly King, [the one] to whom he has given power over the earth, to raise up those who submit to me and to cast down those who resist. [. . .] It would be better for you, and healthier, were you to submit willingly. I have learned, moreover, that you keep the Cumans, my slaves, under your protection; and so I order that you do not keep them with you any longer and do not have me as an enemy on their account. For it is easier for them to escape than for you, since they are without houses. [. . .] But as for you, who dwell in houses and have fortresses and cities – how will you evade my grasp?'[110] The Dominican friar Julian who brought the letter also warned Béla that once they had defeated the Hungarians, the Mongols planned to conquer Rome.[111]

But the Hungarian nobility mistrusted Kotyan, and his Kipchak warriors, who needed extensive pastures for their horses, soon came into conflict with the Hungarian rural population.[112] When, in the early spring of 1241, General Sübotai's Mongols was preparing to invade Hungary, partly in order to 'punish' the Kipchaks who had refused to accept their suzerainty, a group of Hungarian nobles who considered Kotyan to be head of a 'fifth column' of the advancing Mongols murdered him and his entourage.[113] The enraged Kipchaks immediately began to plunder and burn large areas of the countryside, then left Hungary, heading for Bulgaria. A few weeks later the Mongols invaded and, on 11 April 1241, in the Battle of the Sajó river, also called the Battle of Mohi, destroyed King Béla's army of knights, which, as a result of the Kipchaks' departure, had no mounted archers.[114]

In conclusion, we must ask why the Kipchaks, who from the mid-thirteenth century formed the military backbone of the Golden Horde and provided the ethnic basis for today's Tatars of Russia and Crimea, as well as the Kazakhs and Uzbeks, disappeared from Western history books and collective memory. For lack of



50. Stone figures of Kipchak (Cuman, Polovtsian) women in front of the National Historical Museum of Ukraine in Kiev, eleventh–thirteenth century. Stone statues like these stood at the confluence of two rivers or on top of burial mounds. As the Franciscan monk William of Rubruck noted on his journey across the Eurasian steppes between 1253 and 1255: 'The Cumans raise a large mound over the deceased and set up a statue of him, facing eastwards and holding a cup in its hand in front of the navel.'[14] Photo: 2011.

better knowledge, their name in the territory of the Golden Horde was replaced by that of the Tatars. But the Turco-Mongol people of the Tatars, who had no connection at all with the Kipchaks, had already been largely wiped out by Genghis Khan, their mortal enemy, in 1202. The incorrect designation goes back to the English historian and Benedictine monk Matthew Paris (1200–59), who in 1240 was one of the first[115] to call the Mongols 'Tartars'. In an allusion to the term *Tartarus* for the lowest place of punishment in the underworld in classical mythology, he changed the name 'Tatars' into 'Tartars', underlining their terrifying characteristics: 'In this year [1240] [. . .] an immense horde of these detestable race of Satan, the Tartars, burst forth from their mountain-bound regions, and [. . .] rushed forth, like demons loosed from Tartarus (so that they are well called Tartars, as it were inhabitants of Tartarus).'[116] Then the monk described the massacre of the Cumans by the 'Tartars': 'After having massacred all they could set eyes upon, and pillaging every place, leaving behind them the signs of universal depopulation, these Tartars (or rather inhabitants of Tartarus) arrived at the populous colony of the Cumanians [. . .] and those who could not escape were slain by their bloody swords.'[117] In other passages Matthew Paris ascribed the play on words to Emperor Frederick II or King Louis IX of France. King Louis is said to have proclaimed: 'And if these people, whom we call Tartars, should come upon us, either we will thrust them back into the region of Tartarus, whence they emanated, or else they shall send all of us to heaven.'[118] Thus the ethnonym "Tartar" came to designate the Kipchaks and their Mongol overlords.

IV

Turco-Muslim Dynasties in Southern Central Asia

'Tell him that the stability of that [Malik Shah's] regal cap is bound up with this [Nizam's] vizierial inkstand. [. . .] If ever I close up this inkstand, that royal power will topple.'

VIZIER NIZAM AL-MULK'S reply to a rebuke by his Seljuk master Malik Shah in 1092.[1]

Between the years 1000 and *ca.* 1220, the Islamic part of Central Asia was completely reconfigured, ethnically, politically and linguistically. With the exception of the Ghurids, whose language was probably of eastern Iranian origin, Turkic dynasties came to rule all of Muslim Central Asia and left their mark on it as patrons of monumental architecture, the sciences and poetry. Since the Seljuks, Karakhanids and Ghaznavids ruled at more or less the same time, there were inevitably violent struggles for supremacy. Around the middle of the twelfth century, new players entered the scene to disturb this precarious balance, for in the south the Ghurids were aspiring to the status of a new major regional power, while the Qara Khitai were emerging from the north-east. But the Qara Khitai, who were of Mongol origin, were not Muslims but Buddhists, so that for the first time a non-Muslim state conquered a region of the *Dar al-Islam*, the world of Islam. The Qara Khitai pursued a policy of religious tolerance, but they had no intention of adopting Islam, the religion of their conquered subjects, and remained Buddhists. The Mongol western campaign of 1219–23 brought this rich political and cultural diversity to an abrupt end.

1. The Great Seljuks

As we saw earlier,[2] in about 985, after a dispute with the yabghu of the Oghuz, the Oghuz military commander **Seljuk** (r. *ca.* 985–*ca.* 1007) fled from Yangikent to Jand, which also lay on the left bank of the Seyhun. We learn from the contemporary scholar Mahmud al-Kashgari (1008–1105) that Seljuk and his father Dukak, who was known as Timur Yaghliq, 'the man with the iron bow', came from the ruling Qiniq clan, to which the yabghu also belonged.[3] In Jand, Seljuk converted to Islam, which allowed him to consolidate his heterogeneous followers thanks to the new faith and to undertake in the name of jihad military campaigns against his 'infidel' relatives in the Seyhun delta whom he could then enslave. As Kim Hodong wrote in relation to Tughlugh Temür, khan of Moghulistan, (r. 1347–63), 'Islam provided nomadic tribal people with the consciousness of a homogenous religious community (*umma*) and religious sanction for the wars for the expansion of the domain of Islam (*jihad*). [. . .] In that sense, Islam became an

ideology of unification as well as an ideology of expansion.'[4] The contemporary chronicle *Malik-nameh*, the 'Story of the King', originally dedicated to Sultan Alp Arslan (r. 1063–72), mentions that Seljuk's three sons Mikhail, Israïl and Musa (Moses), as well as two grandsons, Dawud (David) and Yusuf (Joseph), all bore biblical names.[5] Although these names are Muslim, they might also suggest a Jewish or Nestorian background for Seljuk.[6] On one of these raids, shortly after 994, Mikhail ibn Seljuk was killed, and as a result his father brought up Mikhail's sons Tughril Beg and Chagri Beg Dawud, the future founders of the Seljuk Empire.

In the 990s, several Seljuk groups departed southward to Mawarannahr, probably under pressure from the yabghu of Yangikent and to seek more pastureland. But Seljuk himself stayed in Jand, where he died around 1007.[7] Arslan Israïl ibn Seljuk was the first, with his followers, to enter the service of the Samanid ruler Nuh ibn Mansur (r. 976–97), who in 992 had to flee from his capital city, Bukhara, for several months to escape from the Karakhanid Bughra Khan. Nuh ibn Mansur offered his Seljuk mercenaries pastureland in the Nur Valley, which lay between Bukhara and Samarkand.[8] After the fall of the Samanids in 999 and the death of the last Samanid prince in 1005, Mawarannahr was ruled by Karakhanid princes, with the support of Seljuk's son Israïl and his two grandsons Tughril and Chagri. In Mawarannahr, Israïl fought alongside the Karakhanid Ali Tegin (r. *ca.* 1014/15 or 1020/21–34/35)[9] against other members of the same dynasty, the Great Khan Arslan Khan Mansur and Yusuf Qadïr Khan of Kashgar and Khotan, and he conquered Bukhara and Samarkand. Israïl reinforced his position as military commander by marrying Ali Tegin's daughter. Israïl's nephews Tughril and Chagri, however, did not benefit from their uncle's dominant position, and entered the service of the Karakhanid Bughra[10] Khan of Taraz and Isfijab.[11] Syriac and Armenian chronicles suggest that Turkmen led by Chagri ibn Mikhail undertook a campaign to eastern Anatolia in 1018 or 1021, but these dates are probably a decade too early.[12] However, it is clear that the two brothers joined their uncle Israïl in Bukhara before 1025.

In 1025 or 1026, Sultan Mahmud of Ghazna formed an alliance with the Karakhanid Qadïr Khan Yusuf, crossed the Oxus and forced Ali Tegin to flee. Then he set a trap for Israïl, captured him and imprisoned him in northern India, where he died in 1032.[13] Tughril and Chagri and their followers stayed in the Nur Valley and the now leaderless followers of Israïl, allegedly 4,000 tents, asked the victor, Mahmud, for permission to settle in southern Khorasan. When the sultan had given his consent and the Turkmen[14] had moved to Sarakhs, the Ghaznavid military commander Arslan al-Jadhib of Tus was appalled: 'Why did you bring these Turkmens into your realm? You committed an error here! But now that you have admitted them, either kill them all or [at least] allow me to cut off their thumbs so that they won't be able to shoot arrows.' When Mahmud chided him for his hard-heartedness, al-Jadhib warned him again: 'If you don't do it, you'll much regret it!'[15] Al-Jadhib was to be proved right, for barely 15 years later Mahmud's generosity to the untameable Seljuks and Turkmen would cost his son and successor Mas'ud the throne and the Ghaznavids Khorasan. Another group of former followers of Israïl preferred to move slowly westward, on raids into northern Iran. Around 1028, these independent bands of Turkmen were reinforced by further Turkmen groups, after Sultan Mas'ud had defeated and driven out some of the marauding Turkmen whom he had allowed to settle in southern Khorasan only a year or two earlier.[16] As the historian al-Athir (1160–1223)[17] recorded, these Iraqiyya-Turkmen appeared for the first time around 1029 in Azerbaijan, from where they ravaged Armenian territory.[18] A year later, Mahmud's son Mas'ud (r. 1030–41) made use of the services of the Turkmen of Rayy, in order to drive out his brother Mohammad, whom his father

favoured; in gratitude, Mas'ud assigned pastureland near Balkhan, in the far west by the Caspian Sea, to these Turkmen. But when, soon afterwards, Mas'ud departed on a campaign in India, the Turkmen once again began conducting raiding expeditions which reached as far as Rayy.[19]

In about 1034 or early 1035, the Seljuks who had been driven out of Bukhara again pressed towards Khorasan, led by the brothers Tughril and Chagri as well as by Musa (who had adopted the Oghuz title of yabghu) and by Ibrahim Yinal, a uterine half-brother of Tughril and Chagri. Their aim was to find refuge in Chorasmia. But Mas'ud urged Shah Malik ibn Ali of Yangikent (r. ?–1042/43) to destroy the Seljuks once and for all. Shah Malik did indeed defeat the Seljuks, who then retreated to northern Khorasan, where in 1035 they in turn defeated a Ghaznavid army sent by Mas'ud.[20] The conflict between the nomadic Seljuks and the sedentary populations of the towns and cities now escalated rapidly, for Seljuk herds were devastating precious farmland, and the nomads also cut off the cities' access to their water sources and destroyed their irrigation channels. At the same time, the Seljuks continued to plunder trade caravans. In the words of al-Beyhaqi: 'the Iraqi Turkmens had in the latter part of Mahmud's reign devoured Khorasan as if it were food laid out for hunting falcons'.[21] Although the political and economic situation in Khorasan continued to deteriorate after 1035, Sultan Mas'ud neglected the defence of his prosperous province, preferring to undertake a campaign in northern India, enticed by the prospect of rich booty. Instead of leading an army himself to Khorasan, he sent one of his generals, who was ignominiously defeated. After this, in 1037/38, the cities of Herat, Merv and Nishapur, whose inhabitants, abandoned by Mas'ud, were now starving, surrendered to the Seljuks without a fight.

In Nishapur, where **Tughril I** (r. 1038–63) declared himself sultan, the first rift appeared between the Seljuks, who were to support the maintenance of a properly administered state, and the Turkmen, who rejected it. Before occupying Nishapur, Tughril had prohibited all looting and destruction. Since it was Ramadan, Chagri at first followed his brother's instructions, but at the end of Ramadan he prepared to loot the city. In al-Athir's account, Tughril's reaction was dramatic: 'Tughril Beg then pulled out a dagger and said to him [Chagri Beg], "By God, if you plunder anything, I shall kill myself!"'[22] In contrast to the Mongols, who during their campaign of 1220/21 to Mawarannahr and Khorasan set the cities on fire and massacred the local population, Tughril saw himself as the founder of a new state, and so conquered states were not to be destroyed, but taxed. Tughril took his next logical step in 1055 after taking Baghdad; he replaced his recalcitrant Turkmen tribal warriors with disciplined slave soldiers.[23]

It was only the fall of Merv and Nishapur that persuaded Mas'ud to lead the attack on the Seljuks himself. In 1039 he managed to win a victory at Sarakhs thanks to his war elephants, but the Seljuks, who had moved their families and herds to the edges of the Kara Kum desert, returned and cut off the water supply to Mas'ud's army. As winter was approaching, they concluded an armistice: Mas'ud retreated to Herat, and the Seljuks moved out of Merv. When Mas'ud attacked again in 1040, the Seljuks had the advantage, since they fought as mounted archers, whereas Mas'ud's army, with his war elephants and infantry, was slow and cumbersome. In addition the Ghaznavid troops had a large train of camp followers, carrying food and supplies, not least because the impoverished land could not support a large army. The Seljuk army, however, travelled light, with no supply train to defend. They also burned the rare patches of grassland on Mas'ud's northward path, poisoned the wells with animal corpses, and kept launching lightning attacks on the thirsty Ghaznavid troop columns. On 23 May 1040, Mas'ud finally met the Seljuk forces between Sarakhs and Merv near Dandankan; he was heavily defeated and promptly fled to Ghazna.[24] After his victory, Tughril immediately had his tent erected on the battlefield and ordered his throne to be brought.

54. Icehouse No. 2 in Merv, Turkmenistan, dating back to the twelfth century. Originally Merv boasted 30 ice houses, used to store ice and perishable foods. Blocks of ice were placed in underfloor pits and the food was stored on top of them. External walls 2 metres thick and the conical shape of the building protected the goods from the heat. Photo: 2014.

55. Gonbad-e Jabaliyeh, an octagonal building with a double-shell dome in Kerman, eastern Iran, is thought to have been built by the Seljuks in the twelfth century. It is conceivable that the building with its eight-sided ground plan was the inspiration for the Il-Khanid mausoleum of Oljeitu, traditionally known as the Dome of Soltaniyeh, built between 1305 and 1314 (fig. 183). Photo: 2001.

As Mas'ud's biographer al-Beyhaqi, who had watched the battle, reports, 'Tughril sat down on it [the throne], and all the leading men came forward and hailed him as Amir of Khorasan.'[25] With this symbolic act, the tribal leader Tughril now completed his transformation into the ruler of a fully fledged state. Meanwhile the panic-stricken Mas'ud fled onward to northern India, where sections of his army mutinied, deposed him and, in early 1041, murdered him.

After this overwhelming victory, Tughril and Chagri then decisively defeated their old enemy Shah Malik of Yangikent in Chorasmia, and turned Chorasmia into a Seljuk province.[26] But even before this, they had divided up the Muslim world as they knew it, for the most part among themselves and their closest allies. This division of the Muslim world among the victors has parallels with Genghis Khan's succession, where states and regions were shared out which had not even been conquered yet. Surprisingly, during the negotiations Sultan Tughril, who despite his achievements as a leader was no more than a *primus inter pares*, had to relinquish the regions he had already secured, and was given almost exclusively territories which remained to be conquered. His elder brother **Chagri Beg** received Khorasan with Merv as its capital, Chorasmia and those areas of Mawarannahr that he would be able to take; Israïl's son **Qutlumush** was given Azerbaijan and Armenia, where Turkmen hordes were already causing havoc; **Ibrahim Yinal** was given the regions of Gorgan and Kohistan, which were yet to be conquered, and **Abu Ali al-Hasan ibn Musa** the similarly unconquered territories of Herat, Ghur and Sistan. Despite the resistance of the new Ghaznavid sultan Maudud ibn Masud, Chagri did take the city of Balkh, and in 1042/43 Musa was able to wrest the city of Herat[27] back from Maudud, as a result of which the border between the Seljuks and the Ghaznavids in the lower valley of the Helmand, between Sistan and Bust, was stabilised. In addition, in 1045 Chagri

Beg's son **Kavurd** secured the province of Kerman in the south-east of Iran and then subdued Oman.[28] Finally, **Tughril**, from his capital Nishapur, was to conquer the rump empire of the Abbasids, which was controlled by the Buyids.[29] But the Iraqiyya hordes had already penetrated this region, and in 1042 Tughril moved his capital west to Rayy, even before the victory over Shah Malik of Yangikent.[30] This forced the Turkmen to abandon the partly destroyed city of Rayy, and, led by Ibrahim Yinal, they marched to Azerbaijan and as far as the Byzantine border. With Ibrahim Yinal posted to the west, Tughril had now ditched the uncontrollable, plundering Turkmen and at the same time kept them as a spearhead for future conquests. The strategy of Tughril and Ibrahim Yinal was outlined by the latter in 1048/49, in an address to newly arrived Turkmen steppe warriors: 'My lands are too small to accommodate you and to provide what you require. The best plan is for you to go and raid the Byzantines, to strive on the path of God and to gain booty. I shall follow in your tracks and aid you in your enterprise.'[31] The best motivation for a war against infidels, pleasing to God, was the prospect of booty.

While Chagri was consolidating his rule over Khorasan and his son Alp Arslan, the future successor of Tughril as sultan, was fighting off in 1043 an attack from a Ghaznavid army,[32] Tughril was slowly extending his sphere of influence in Iran and in 1051 conquered the wealthy city of Isfahan. He made this city his new capital and had its ramparts torn down, declaring: 'Only those whose power is weak need walls. One whose fortress is his troops and his sword has no need of them.'[33] Just like the Göktürk commander Tonyukuk, who around 720 had warned Bilge Khagan against the building of fortified cities,[34] Tughril realised that the defence of cities by stationary garrisons would limit the mobility of his mounted troops, and that besieged cities could turn out to be inescapable traps. Tughril's conquest of Iran and Mesopotamia was greatly facilitated by the bitter rivalries between the ruling princes of the Shi'ite dynasty of the Buyids as well as those between the Buyid princes living in Baghdad and the caliph's Sunni vizier. In December 1055 Tughril occupied Baghdad, and the caliph ordered the *khutba* (public sermon) to be proclaimed in Tughril's name, in which he recognised the political supremacy of the sultan. But immediately afterwards Tughril's Turkmen troops desecrated and plundered the caliphs' tombs in the city,[35] an action which convinced Tughril that it was time to replace his tribal warriors with a professional army and a guard made up of slave soldiers. By then, if not before, Tughril understood the advantages of a standing army, an efficient administration, and acceptance of Iranian Muslim beliefs and practices concerning the elevated role of a ruler.

To finance a professional army, Tughril adopted the *iqta* system, which was a kind of military land grant. Instead of pay, professional officers were given fixed-term lease agreements, so that they received the taxes and duties associated with the villages and landholdings in question. In exchange, the officers had to equip and maintain a certain number of soldiers and provide horses for the riders. This system lifted a burden from the state treasury, but also deprived it of the income from taxes and duties; in addition, this parcelling out of tax revenue from land removed the state's motivation for constructing transregional irrigation systems. Tughril annulled all the lease agreements issued by the Buyids and transferred all such contracts to his officers.[36] When, under Tughril's successors, the silver shortage which had persisted since the late tenth century intensified, Vizier Nizam al-Mulk extended the *iqta* to professional horse warriors, so that, as the historian al-Nishapuri reported, up to 50,000 riders possessed such land tax grants.[37] This made it possible for the vizier to provide sultans Alp Arslan and Malik Shah with a superbly equipped army which was available at any time. But after a few decades the fixed-term *iqta* had become a lifetime right and later even a form of land ownership that could be inherited, so that by the twelfth century it became extraordinarily difficult to remove the *iqta* from its owners, unless they could be charged with an offence.[38] This created a hereditary feudal military aristocracy, which in the western half of the Seljuk Empire rapidly led to political fragmentation between dynasties of provincial *atabegs* (tutors of the sons of Seljuk sultans and princes, who often became local rulers themselves).

When Tughril returned to Baghdad in 1057/58, Caliph al-Qa'im bestowed on him the honorific titles of 'Pillar of the State', 'Partner of the Commander of the Faithful' and 'King of the East and West'.[39] All three of these titles claimed by Tughril are remarkable, for in the first one the caliph recognised the sultan's supremacy in matters of national policy, and in the second he confirmed that the Turkic sultan was on the same level as himself. The third title, which was unusual in the Islamic world, is reminiscent of the old title of the Xiongnu – that of a ruler whose domain extends from the place where the sun rises to the place where it sets. This title was also intended to express Tughril's precedence over his brother Chagri Beg in Khorasan. Tughril soon found an opportunity to assume his role as pillar of the state, for in his absence both his half-brother Ibrahim Yinal and the Turkic army commander of Baghdad Basasiri, who had captured Caliph al-Qa'im, rebelled. Basasiri had changed sides and recognised the supremacy of the Ismailite Fatimid dynasty of Egypt, which had met with an enthusiastic response from Baghdad's large Shi'ite community. Tughril first defeated Ibrahim Yinal and had him strangled with his bowstring – among many Turkic peoples of Central Asia, as was also the case later with the Mongols, there was a taboo against spilling the blood of a prince; princes condemned to death were strangled or trampled to death. Then, in early 1060, Tughril defeated the rebel Basasiri, who had occupied Baghdad for a year.[40] By this act he destroyed the Fatimids' efforts to restore the unity of the Islamic world under Shi'ite leadership.

Although Tughril's motivation for his march on Baghdad was to take power over the prosperous but crisis-ridden caliphate, he could with some justification be celebrated as the saviour of Sunni orthodoxy. He had ended the supremacy of the Buyids and thwarted Fatimid ambitions, and thus breathed an additional 200 years of life into the Abbasid caliphate, which was to be toppled in 1258 by the Mongol Hülegü. But Tughril had no wish to restore to the caliphate any of the political power that it had lost since the end of the ninth century. On the contrary, he continued the model of a dual administration which had been introduced by the Buyids: the sultan had political and military power, while religious leadership was reserved for the caliph, as long as it did not impinge on politics. Under the Seljuks the caliphate lost all political authority and even had to commit itself to tribute payments to the sultan; the caliph could, however, keep the income from his personal estates.[41] The authority of the Seljuk state was not based on religion but on law and justice, or, as Nizam al-Mulk put it: 'Kingship remains with the unbeliever but not with injustice.'[42]

When Tughril died childless in 1063, he was succeeded by Chagri's son **Muhammad ibn Dawud Chagri Alp Arslan** (r. 1063–72); the honorific name Alp Arslan means 'brave lion'. Alp Arslan ruled Khorasan from the death of his father Chagri in about 1060. In 1063 he had first to eliminate his brother Suleyman and an uncle, after which, as sultan, he combined in his own person the two halves of the empire, which extended from the Oxus to the Tigris.[43] Alp Arslan's assumption of power was actively supported by his adviser and administrator Abu Ali Hasan ibn Ali Tusi (1018–92), known as **Nizam al-Mulk**. Abu Ali, who grew up in Tus, was in the service of the Ghaznavids until in 1040 he fled to Ghazna after the battle of Dandankan. He spent three or four years in Ghazna and Balkh, then returned to Khorasan to join Chagri and Alp Arslan, encouraging them to take over the existing Iranian administrative structures. When, on Tughril's death, the latter's vizier al-Kunduri favoured the militarily inexperienced Suleyman, Nizam al-Mulk gave his support to Alp Arslan, who appointed him his vizier. Nizam al-Mulk then had his predecessor, al-Kunduri, executed and rose to become the most powerful man in the Seljuk state, a position that he maintained until 1092, when he was murdered. As vizier, his political aim was to preserve the heritage of Iranian city life and culture, to protect the sedentary population from military despotism and plundering by Turkmen bands, and to consolidate a strong central authority. He achieved this by retaining and strengthening the Iranian administrative structures, promoting Sunni orthodoxy as a counterweight to the propaganda of the Ismailis,[44] who were trying to foment a coup and establish an Ismaili state under the leadership of an imam, and by creating a professional army led by an officer corps loyal only to the sultan. Nizam al-Mulk governed the empire, which enabled Alp Arslan to develop his great military strengths in an aggressive external policy. Thanks to the Khorasan-born vizier, Tughril's successors were able to consolidate the rule of the Seljuks, so that for the first time a Central Asian dynasty founded by nomadic equestrian warriors came to rule over the whole of the Middle East. Unlike the Scythians (Saka) and Huns, who also came from Central Asia, and who advanced even further west than the 32nd degree of longitude (where the capital of the Rum-Seljuks lay), the Seljuks understood how to graft their rule on to the existing political structures. The time of the Seljuks was also a period of far-reaching Islamisation for Khorasan and Mawarannahr, although new Turkic groups from the steppes made frequent incursions. From the twelfth century, some Sufi masters such as Ahmed Yasawi (d. 1166) began to spread Islam via popular mysticism on the margins of the Seljuk and Karakhanid steppes.[45] Timur-e Lang (Tamerlane), who greatly admired Yasawi, had a monumental mausoleum built above his tomb in Yasi (Turkestan) in the 1390s (figs. 57, 220).

Nizam al-Mulk was very well aware of his importance for the Seljuks, as is clear from the famous answer he sent to his master, **Malik Shah I** (r. 1072–92) in 1092, when the latter complained that he was exceeding his authority. According to Al-Athir, he wrote: 'Tell the Sultan: "If you have not already realized that I am your co-equal in the work of ruling, then know that you have only attained to this power through my statesmanship and judgement." Does he not remember when his father [Alp Arslan] was killed, and I assumed responsibility for the conduct of affairs and crushed the rebels . . .? Tell him that the stability of that [Malik Shah's] regal cap is bound up with this [Nizam's] vizierial inkstand, and that the harmony of these two interests is the means of securing all objects sought after and the ultimate cause of all objects gained. If ever I close up this inkstand, that royal power will topple.'[46] Nizam was proved right. A few weeks after his self-confident reply he fell victim to a plot which contemporary observers ascribed to the following people, who all pursued different aims: Malik Shah himself, dissatisfied courtiers, the Ismailis of Alamut and Malik Shah's wife, Terken Khatun.[47] Malik Shah longed to rule independently at last, and apparently he even planned to depose Caliph al-Muqtadi and replace him with his five-year-old grandson Ja'far, thus uniting temporal and spiritual power in one authority.[48] The courtiers for their part wanted to destroy Nizam's supremacy; the Ismailis saw the vizier as their worst enemy; and Terken Khatun wanted to rid herself of both the vizier and her own husband, in order to place her four-year-old son Mahmud on the throne, and to make herself regent. Al-Athir succinctly summarised what happened next: 'Thirty-five days after this the sultan died [probably poisoned by his wife Terken Khatun], the empire collapsed and the sword [of civil war lasting 13 years] was unsheathed.'[49]

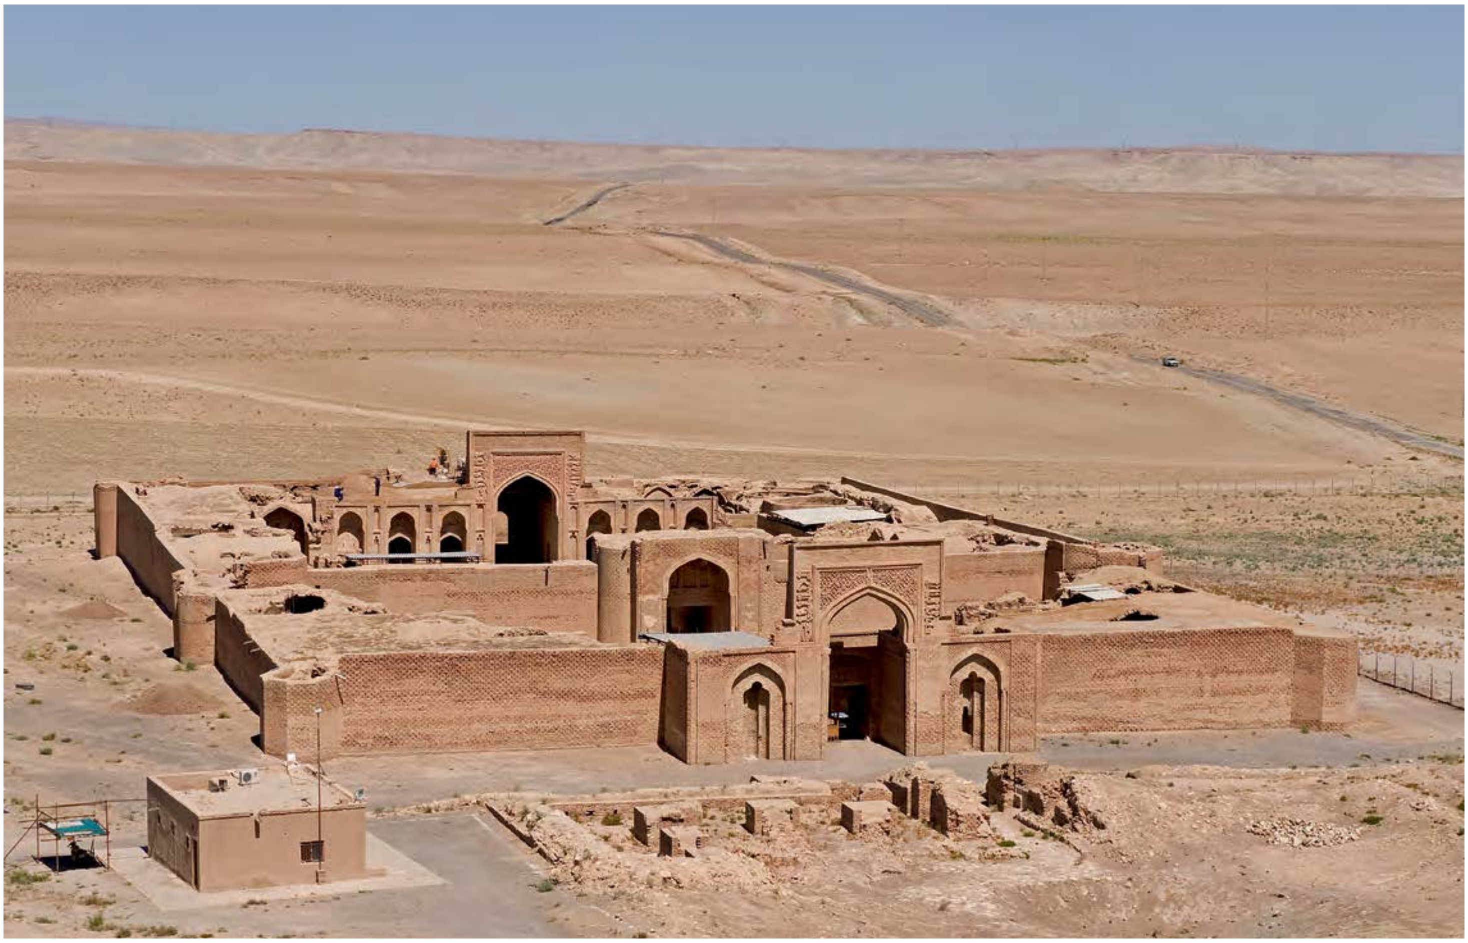
Alp Arslan and Malik Shah continued Tughril's policy of conquest, skilfully deploying the restive Turkmen bands, while Malik Shah was unable to prevent the foundation of Seljuk princedoms in Syria and Anatolia, which were de facto independent.[50] The preferred target of Turkmen military campaigns was the fertile pastureland in the plains and valleys of Azerbaijan, Georgia, the Armenian princedoms and the Byzantine east of Anatolia. Alp Arslan launched several campaigns there in his dual role as conquering sultan and traditional tribal leader. Tughril had already taken Tabriz, and in 1057/58 captured the important city of Mosul.[51] Then in 1064 and 1068 Alp Arslan followed in his tracks and led two destructive campaigns in Georgia, in 1064 capturing the Armenian city of Ani in the north-east of Anatolia, which had belonged to Byzantium since 1045, and massacring its Christian population.[52] This was not a typical campaign of conquest, as can be seen from the fact that Alp Arslan and Malik Shah maintained a unit of 'fire-throwers', *naffatun*, who systematically burnt down settlements and vineyards; at the same time, the Georgian farmers were either massacred or abducted as slaves.[53] The two sultans wanted to eradicate crop farming – and crop farmers – from what would become pastureland for their followers, a strategy also used later by the Mongols.[54] After an expedition into Yangikent, 2,000 kilometres away, to pacify marauding Oghuz,[55] in 1071 Alp Arslan crossed the inadequately fortified eastern border of the Byzantine Empire, whose depopulated region around Lake Van had for

57. Dome of the mausoleum of Ahmed Yasawi (1094–1166) in Turkestan, Kazakhstan, built in 1396–97. Photo: 2005.

decades been suffering from Turkmen invasions. At Manzikert he destroyed the army of Emperor Romanos IV (r. 1068–71) and took him prisoner. The sultan released Romanos in exchange for ransom, but the luckless emperor was soon afterwards toppled and tortured by his political opponents and died of his injuries. Since his successor Michael VII Doukas (r. 1071–78) annulled the peace treaty with Alp Arslan, Seljuk and Turkmen warriors overran most of Anatolia and around 1078 got as far as Nicaea,[56] today's Iznik, a mere 100 kilometres south-east of Constantinople. From these forays there emerged the independent sultanate of the Rum-Seljuks (1077–1307, from 1243 an Il-Khanid vassal).[57] Georgia remained as the only more or less independent Christian power in the southern Caucasus,[58] and when, in 1121 and 1123, King David IV repelled two Seljuk invasions and finally drove off the Turkmen horse nomads, Turkmen pressure on Anatolia increased.[59]

Malik Shah continued his attacks to the west and south-west, in particular on the Ismaili Fatimids of Egypt. In 1071 the Seljuks captured both Jerusalem and Ramla, and in 1076 took Damascus. The attack on Cairo of 1076/77 failed, but the expedition personally led by Malik Shah to Syria of 1084–87 ended with the capture of Aleppo, Edessa and the port of Antioch, an important hub of transcontinental trade routes – a great prize.[60] In Antioch the sultan rode his horse down to the shore of the Mediterranean to celebrate the extension of his empire. But the Seljuks did not have long to enjoy their conquests on the Mediterranean coasts of Syria and Palestine, for by the end of the eleventh century a new opponent had already emerged, one whose elite warriors were well-trained and experienced fighters: the Crusaders – heavily armoured European knights and warrior monks from the military religious orders. The combination of knights in heavy armour with archers bearing bows and crossbows, fighting on foot, proved especially effective. At the start of a battle, the archers protected both the infantry, armed with lances, and the armoured riders, who lay in wait for the right moment when they would mount a concerted attack.[61] The Crusaders' greatest weaknesses were the low numbers of knights and their lack of knowledge of the steppe riders' military tactics. These included feigning flight to draw attacking armoured riders into a trap and exhaust their horses, as well as manoeuvres during which opponents were lured into places where they had no access to water.

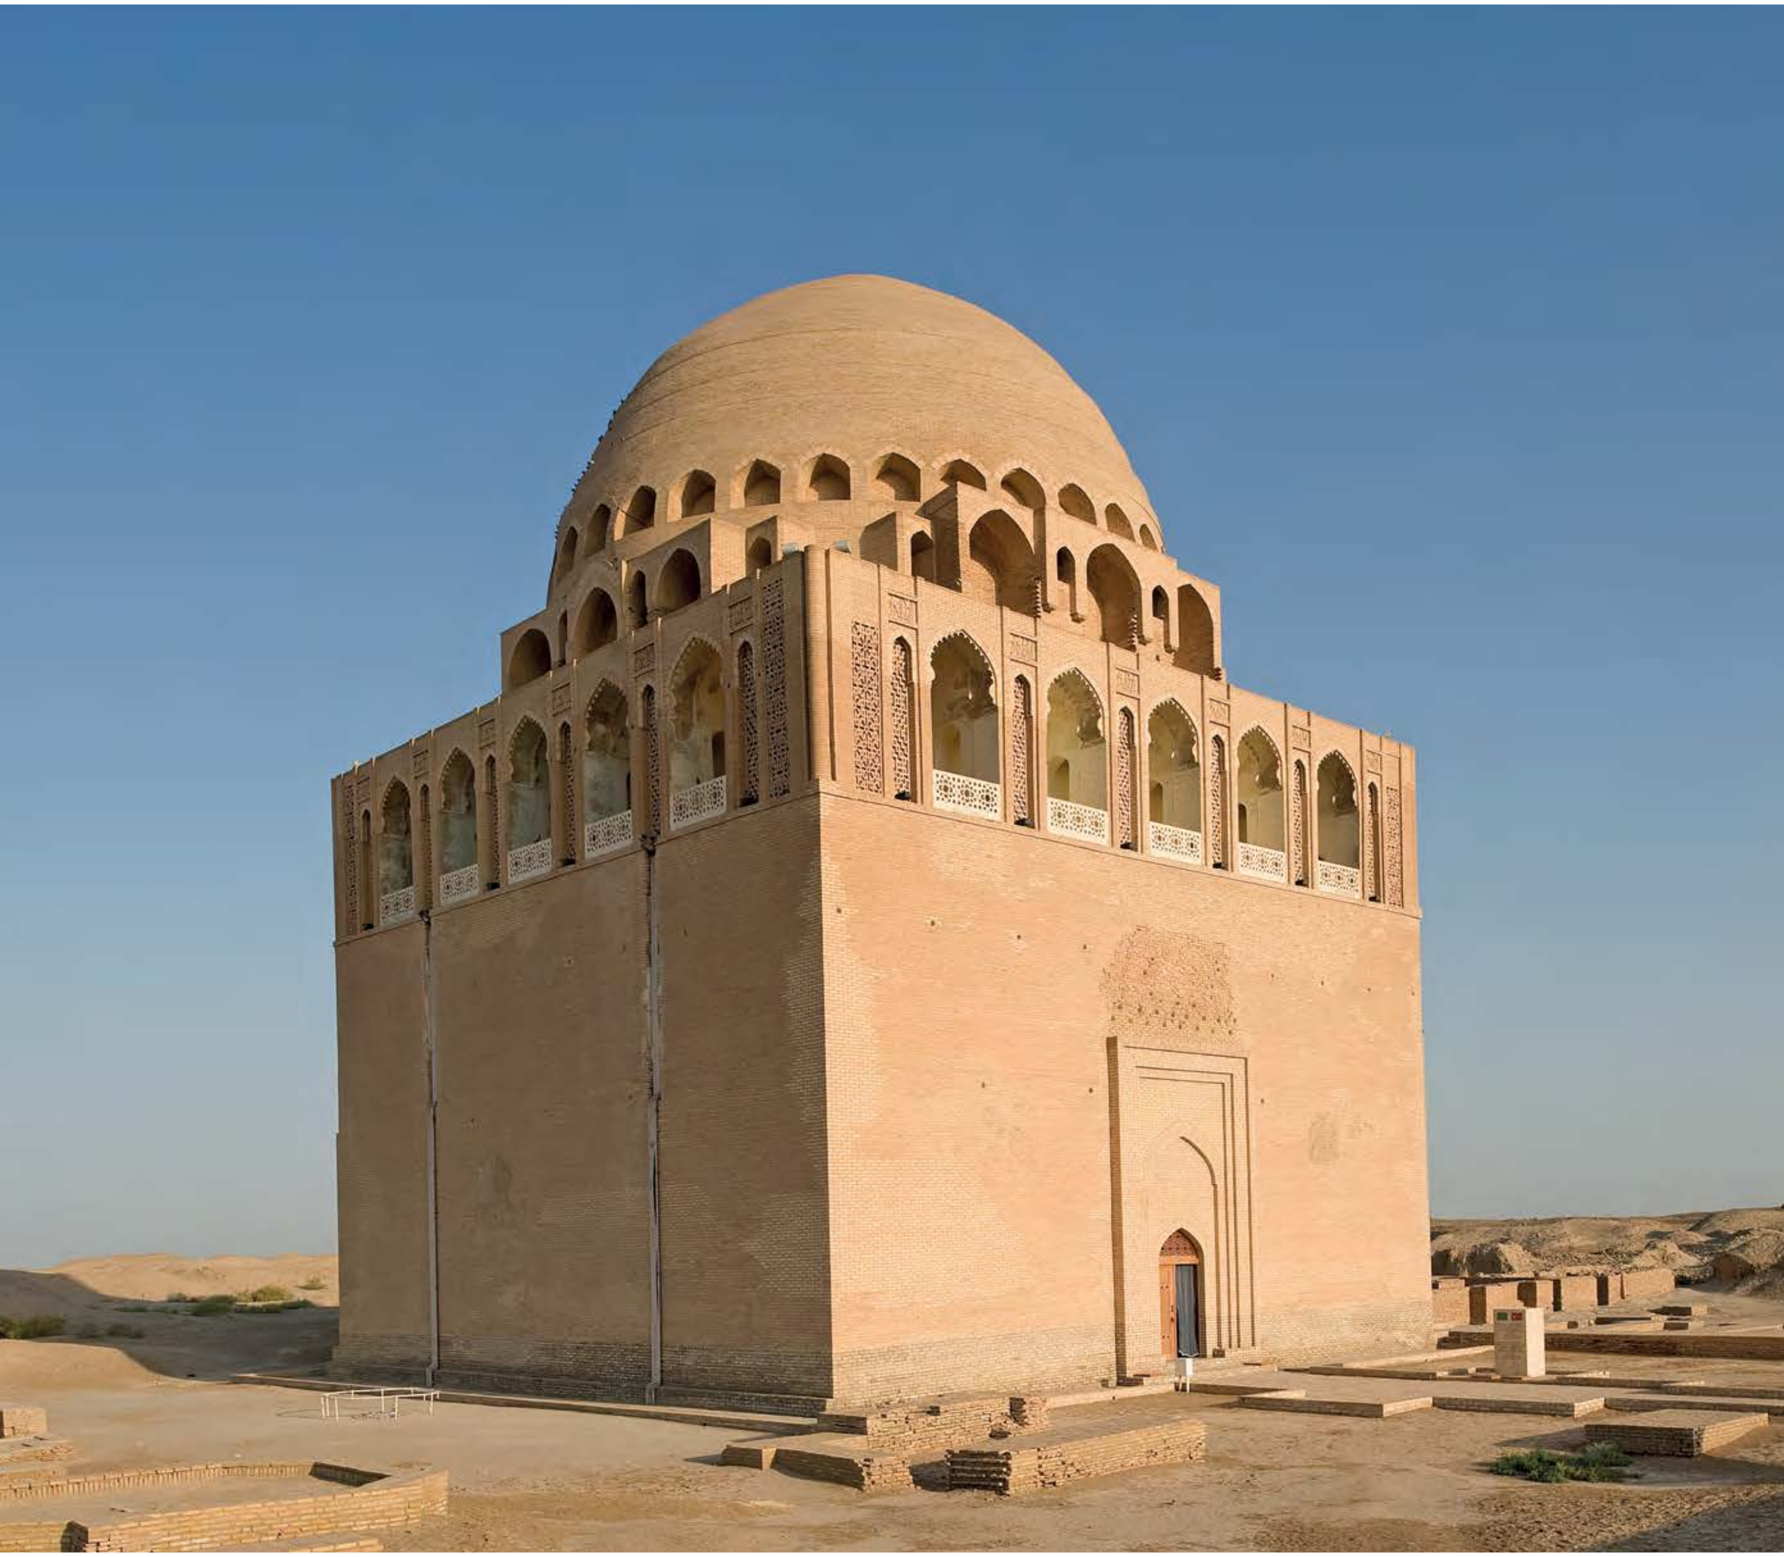
58. Modern statues of the Seljuk sultans Alp Arslan (seated, r. 1063–72) and Malik Shah I (r. 1072–92). Independence Monument in Ashgabat, Turkmenistan. In the background modern luxury places of residence. Photo: 2014.



59. **The Ribat-e Sharif caravanserai dates from the Seljuk era. Situated some 130 kilometres east of Mashhad, Iran, it was built by Sultan Sanjar in 1114/15. The Sultan then commissioned an extension in the early 1150s. Photo: 2014.**

The loss of almost the whole of Anatolia to the Seljuks, and the Pecheneg threat, moved the Byzantine emperor Alexios I Komnenos (r. 1081–1118) to seek military help from the Pope and offer in exchange the union of the Orthodox Church of the Byzantine Empire and the Roman Catholic Church. Additional reports of Christian pilgrims being hindered from visiting the holy places of Palestine, and the vision of Pope Urban II (in office 1088–99) in rallying the feuding European princes around him in a common project, led in 1095 to the announcement of the First Crusade. The Seljuks, preoccupied with internal power struggles, were ill-prepared for this, and the Crusade culminated in 1099 in the storming of Jerusalem, which had been regained by the Seljuks only a year earlier from the Fatimids. The result was the creation of the Kingdom of Jerusalem (1099), the principality of Antioch (1098) and the counties of Edessa (1098) and Tripoli (1102).

After the conquest of Syria and Palestine, Malik Shah turned his attention increasingly to the east. Previously, at the beginning of a campaign in late 1072, Alp Arslan had crossed the Oxus, capturing a number of fortresses on his way. The Karakhanid commander of one of them was taken prisoner and condemned to death, but in a struggle just before his execution he stabbed Alp Arslan who died of the wound four days later. The Karakhanid ruler of Samarkand, Shams al-Mulk Nasr I ibn Ibrahim (r. 1068/69–79/80), seized this opportunity and occupied Termez, but two years later Malik Shah won it back and marched on Samarkand, where Nasr I ibn Ibrahim submitted to him.[62] In 1088/89 or 1089/90 Malik Shah again set off for Khorasan and Mawarannahr. His army wrested Bukhara and Samarkand from the Karakhanids, whereupon he marched on to Uzgend, 50 kilometres east of today's Osh in south-western Kyrgyzstan. The Karakhanids of Fergana recognised his suzerainty, and Malik Shah ordered the eastern Karakhanid ruler of Kashgar and Balasaghun to submit to him as well. In view of the superior power of the Seljuks, Khan Hasan ibn Sulayman hastened to Uzgend and promised allegiance to Malik Shah.[63] Thus both the western and eastern Karakhanids became vassals of the Seljuks. Now the *khutba* was proclaimed in the name of Malik Shah



60. Built in Merv, Turkmenistan between 1140 and 1152, the so-called mausoleum of Sultan Sanjar (r. 1118–53, d. 1157), was originally part of a palace and probably served as an audience hall rather than a mausoleum. The hall with its double-shell dome was restored in 2002–2004. Photo: 2014.

from Kashgar to Antioch and Jerusalem and as far as the holy places Mecca and Medina,[64] a distance of 4,000 kilometres; the empire of the Central Asian Seljuks now dominated large parts of the Islamic world. Yet it was by no means homogeneous, but rather resembled a leopard's coat – with provinces directly subject to the central government, local dynasties, vassal states and mutually hostile Islamic denominations.[65] The cornerstones of the empire were Nizam al-Mulk's administrative system and bureaucracy, and the *iqta*, as long as the individual land grants to the military were not hereditary and were subject to the control of the central government. For all these reasons the 30-year viziership of Nizam al-Mulk is considered the golden age of the Seljuks.

Nizam al-Mulk's cultural achievements include the introduction of madrasas in Iran and Mesopotamia, the construction of caravanserais along the major trade routes and the development of a new architectural typology, the four-*iwan* mosque (see below). When the vizier decided to support Sunni orthodoxy by introducing Nizamiyyas[66] which taught Shafi'ite law and Ash'arite theology, he adopted the Samanid ground plan for madrasas, which itself was probably modelled on Buddhist monasteries.[67] Nizam al-Mulk's most important madrasas were in Baghdad, Isfahan, Basra, Tus, Nishapur, Herat and Balkh.[68] To support trade throughout the vast Seljuk Empire, the vizier built caravanserais, at that time called *ribat* or *khan*, along the principal trade roads at intervals of a day's march of about 40 kilometres. These fortified caravanserais offered accommodation and protection from robbers, and provided access to water and animal fodder.[69] One of the best-preserved Seljuk caravanserais is Ribat-e Sharif, built around 1114/15 by the viceroy Ahmad Sanjar, the future Sultan Sanjar. It lay on the main road between Nishapur and Merv and had its own mosque (fig. 59).

The greatest architectural legacy of Nizam al-Mulk is the Friday mosque, *Masjid-e Jami'e*, the Great Mosque of Isfahan, which covers an area of 17,000 square metres and is among Iran's largest mosques (fig. 56). After Tughril's conquest of Isfahan in 1051, religiously motivated unrest had inflicted great damage on the mosque, and Nizam al-Mulk decided to rebuild it. The mosque has a large inner courtyard, surrounded by four *iwans* (vaulted hallways). The monumental domed chamber, which serves as the main prayer space, rises behind the main *iwan*, which faces the *qibla*, the prescribed direction of prayer to Mecca. The dome is supported by twelve massive piers, with trilobed squinches enabling the transition from the brick cube to the dome. Two minarets rise above the *qibla iwan*. An inscription of 1086/87 around the drum of the dome identifies Sultan Malik Shah and Vizier Nizam al-Mulk as founders of the complex. The Masjid-e Jami'e of Isfahan became the prototype for further Friday mosques in Iran and replaced the Abbasid hypostyle type, where the forest of columns obscured the view of the preacher for many of the faithful.[70]

Another important Seljuk monument which exerted a strong influence on later tomb architecture is the so-called mausoleum of Sultan Sanjar (r. 1118–53, d. 1157) in Merv, Turkmenistan, which was built between 1140 and 1152 by two architects from Sarakhs in Khorasan (fig. 60). According to the geographer Yaqut al-Hamawi (1179–1229), who studied for two years in the nine public libraries in Merv, the 38-metre-high, turquoise-tiled dome of the monumental building was already visible to the traveller when still a day's journey away. At that time the cupola hall was not a freestanding structure as it is today but part of an enormous palatial complex. It probably served not as a tomb, but as an audience hall for the sultan. Its dome possessed a very early example of a double-shell construction, with light filling masonry and possibly arches on the inner shell supporting the outer shell. A double-shell dome construction allowed for reducing weight and was more resistant to earthquakes than a thick, rigid single shell. Furthermore, this technique made it possible to build discontinuous double-shell domes with an inner and outer cupola of different curvatures. As a result, the outer cupola often had a steeper gradient angle than the inner flatter one. The concept of the double-shell dome was later adopted in the huge octagonal mausoleum of the Il-Khanid ruler Oljeitu in Soltaniyeh (built 1305–*ca*. 1314 , fig. 183) and further developed by Filippo Brunelleschi in the dome of Florence Cathedral (completed in 1436). Later, in the sixteenth and seventeenth centuries, these monumental structures served as models for the mausoleums of the Mughal emperors Humayun and Akbar.[71]

For the design of the façades of monumental buildings, the Seljuks continued the tradition of Samanid ornamentation, which does not differentiate between the masonry and the external decoration.[72] Alternating horizontal and vertical patterns of the bricks, with distinct projecting elements, create an intricate play of light and shade, so that from a distance the façade gives an impression of wickerwork or a carpet with geometric designs. Moulded and carved gypsum stucco and insets of terracotta tile panels were also used to decorate façades. But in the second half of the eleventh century architects cautiously began to introduce coloured glazed brick mosaics in mainly light and dark blue tones, later supplemented with brown and black.[73]

61. The ruins of the fortress can be seen on either side of the mountain crest. Photo: 1976/78.

The Ismailis of Alamut in the Seljuk Empire

The only political opponents whom Nizam al-Mulk could not subdue were the Ismailis of Alamut, who operated in a decentralised but coordinated manner.[74] Like all Shi'ites, the Ismailis believed that only one direct descendant of the family of the Prophet was authorised as imam to lead the community of all the Muslim believers. In the second half of the eighth century, the Ismailis split away from the Shi'ite majority. They recognised Ismail ibn Ja'afar, the second son of the sixth imam Ja'afar al-Sadiq, and his son Mohammad ibn Ismail, as the legitimate line of imams. But since Ismail had died in 760, about five years before his father Ja'far, the Shi'ite majority recognised Ismail's half-brother Musa, who was 25 years younger than Ismail, as the seventh imam and his descendants as the legitimate line. Holding fast to Ismail as the seventh imam, the Ismailis rejected Musa and split away from the Twelver Shi'ites. The Ismailis also believed that Islamic teaching should be interpreted only by someone who was divinely inspired, because Islam itself was introduced by the granting of the divine mandate to the Prophet. The highest authorities were the imam and the leading teachers, called *da'i*, appointed by him, to whom specific lands and regions were assigned. Ismaili teaching had an authoritarian character, for in contrast to the Sunni schools of law and theology, the Ismailis were not allowed to seek truth through theological interpretation and jurisprudence. The faithful were bound to believe and obey the statements of the imams appointed by God and the teachers nominated by them.

For Ismailis throughout the Muslim world, the foundation of the Fatimid caliphate (909–1171) and the subsequent conquests in Syria and Arabia had a signal effect. It seemed as though the dream of an Imamate led by a direct descendant of Ali was about to become reality, especially after the coup by General Basasiri in Baghdad of 1058/59. But Tughril rapidly restored the status quo in Baghdad and presented himself as the saviour of Sunni orthodoxy. At the same time Egypt was undergoing a crisis, and the centre of power shifted from the caliph to the vizier and army commander. Since those

Ismailis who lived in the Seljuk Empire could no longer expect liberation by Egypt, in the 1080s they began, in secret and with a strictly hierarchical organisation, to prepare for a decentralised uprising. Thanks to the historian Ata-Malik Juvaini (1226–83) from south-eastern Khorasan, we know a great deal about the history of the Ismailis of Alamut. When, in 1256, the Mongol conqueror Hülegü captured Alamut, the main stronghold of the Iranian Ismailis, he allowed Juvaini to examine the well-stocked library and archive and take away the valuable books before he had the fortress destroyed. Among the precious manuscripts there was a biography of Hasan-e Sabah, the founder of the Ismaili state of Alamut, which covered the period right up to Juvaini's own time.[75]

One of the most important leaders of the Ismaili uprising was the *da'i* of the northern Iranian province of Dailam, **Hasan-e Sabah** (d. 1124). In 1090 the Iranian Ismailis emerged from the clandestinity of the *taqiya* to attack fortresses and towns, in particular in the province of Rudbar in the Elburz mountains, and in Kuhistan, which formed the southern part of Khorasan. Their uprising was successful: the Ismailis occupied several smaller cities in Kuhistan, which broke away from the central Seljuk government. Hasan-e Sabah captured the mighty fortress of Alamut, built in 860/61, whose name means 'eagle's nest',[76] which he was never to leave again until his death. Hasan immediately extended Alamut, secured a source of fresh water, and laid in provisions so that at the beginning of 1092 he was able to resist the siege directed by Nizam al-Mulk.[77] A few months later, an Ismaili murdered the vizier. The unrest that broke out after the death of the sultan at the end of 1092 enabled the Ismailis to occupy dozens more mountain fortresses, whether by infiltration or by bribing their commanders or local military leaders. Among the most important fortresses were Lammasar and Maimundiz in Rudbar, Shahdiz and Khalinjan in the Isfahan region, others in Luristan and Kuhistan as well as the impregnable stronghold of Girdkuh (fig. 61), which held out from 1253 to 1271 against an 18-year uninterrupted siege by the Mongols.[78] The Ismailis now formed an actual state with territorial centres in Rudbar, Luristan, Isfahan and Kuhistan, which led to a stand-off between the insurgents and the ruling powers. The Ismailis could not topple the Seljuks, but could only murder individual dignitaries, while for the Seljuks themselves and the Chorasm-shahs who ruled from 1194 onwards, besieging and storming of dozens of mountain fortresses would have involved an enormous effort.

Four years after the beginning of the uprising, the Ismailis suffered an internal schism. On the death of the Fatimid Caliph al-Mustansir in 1094, the vizier bypassed Nizar, the son whom the late caliph had designated as his successor, and installed one of his younger brothers as the new caliph. The rebellious Nizar was executed, but the Iranian Ismailis seized the opportunity to break with Cairo and appointed Hasan-e Sabah as *hujja*, the living 'proof' of the imam, that is his representative, who was now in charge of the Ismailis of Alamut, also called Nizaris.[79] Since the Nizari warriors were stationed in the many fortresses, and there were in any case too few of them to challenge the Seljuks in open battle, they chose assassination as their military tactic.[80] Politicians and commanders hostile to the Nizaris were stabbed to death in public places, in order to demonstrate the omnipresent danger that the Ismailis represented. Among their most prominent victims in Iran were Nizam al-Mulk and the two Abbasid caliphs al-Mustarshid (d. 1135) and al-Rashid (d. 1136), while in Palestine they killed Count Raymond II of Tripoli (d. 1152) and the Crusader king Conrad of Monferrat (d. 1192). Their two attempts on the life of Saladin failed.[81] Sometimes the potential victim was warned, when a *fida'i*, a partisan, who had infiltrated in the guise of a domestic servant or bodyguard, would lay a dagger with a note attached, at night beside the sleeping victim. According to Juvaini, this was how Hasan-e Sabah persuaded Sultan Sanjar to adhere to an armistice with the Nizaris for several years. Hasan sent to a bribed eunuch of Sanjar 'a dagger, which was stuck in the ground beside the Sultan's bed one night when he lay in drunken sleep. [. . .] Hasan-i Sabbah then sent a messenger with the following message: "Did I not wish the Sultan well, that dagger which was struck into the hard ground would have been planted in his soft breast." The Sultan took fright and from then on inclined towards peace with them. [. . .] I [Juvaini] saw several of Sanjar's *firmans* [royal decrees] which had been preserved in their library [at Alamut] and in which he conciliated and flattered them.'[82] Later the Nizaris also loaned out assassins for payment to friendly non-Ismaili rulers.

In 1164 the fourth *hujja*, **Hasan II** (r. 1162–66) announced that the advent of the Last Judgement and of spiritual resurrection was imminent, and that accordingly the *taqiya* was over and *sharia*, in particular the rules of conduct formulated in it, had lost their validity. From that day, all the faithful would understand the hidden meaning of God's message, 'and as a consequence hereof men have been relieved of the duties imposed by the Shari'at because in this period of the Resurrection they must turn in every sense towards God and abandon the rites of religious laws and established habits of worship'.[83] With this, the Nizaris confirmed the opinion of the Sunnis that they were no longer Muslims but apostates. At the same time the leader of the Syrian Ismailis, Rashid al-Din Sinan (d. 1192), known in European chronicles as 'the Old Man of the Mountain', was pursuing an opportunistic see-saw policy between Saladin's Muslim Ayyubids and the Crusaders; the Syrian Nizaris regularly paid tributes to the Christian orders of the Templars and of St John.[84] When the Last Judgement still had not come even 50 years after it had been announced, the sixth *hujja*, **Hasan III** (r. 1210–21), made a further about-turn by abjuring Ismaili beliefs and introducing the Sunni *sharia*, which brought him recognition as a regional Sunni emir. The Ismailis came to terms with this ideological capitulation on the part of their ruler by interpreting it as a radical reintroduction of the *taqiya*. As one of his last official acts, Hasan III submitted to the Mongols as soon as they crossed the Oxus.[85]

Under Hasan's successor **Muhammad III** (r. 1221–55) the Ismailis remained Sunnis in a purely formal sense, but in practice turned ever further away from Sunni orthodoxy. From the 1230s, the Mongols' anger over the Ismailis' aspiration to follow an independent path rapidly mounted,[86] which increasingly isolated the Nizaris. When envoys from Alamut came to pay their respects at the enthronement of Great Khan Güyük in Mongolia, Güyük treated them with contempt and replied to their letters with very harsh words. He then ordered his military commander Eljigidei, who was leaving for Persia, to deploy a fifth of his army in combat against the Nizaris.[87] Finally, in 1252, Great Khan Möngke decided to destroy once and for all the only two Muslim powers in the Near East that were still independent, the Ismailis of Alamut and the caliphate, and charged his brother Hülegü with this task. As Rubruck reported in 1254, Möngke's anger was further fuelled when he learned that 400 Ismaili assassins were on the way to Karakorum to stab him to death.[88] The Mongolian advance guard under General Ked Buqa failed in the siege of Girdkuh which began as early as May 1253, but Hülegü and Ked Buqa subdued Kuhistan, destroyed almost 70 Nizari outposts[89] and were approaching Rudbar. But before the Mongols entered Rudbar, some leading officers of Mohammad III had him murdered because of his increasingly irrational behaviour and they appointed his son **Khur-Shah Rukh al-Din** (r. 1255–56) as his successor.[90] Khur-Shah pursued delaying tactics, offering Hülegü a conditional surrender, but at the same time seeking the help of neighbouring Sunni princes. Presumably he hoped to stall Hülegü until the coming of winter, which would have made a longer siege impossible.

Hülegü however demanded unconditional capitulation and the destruction of all the fortresses, and on 8 November 1256, with the entire Mongolian army, took the vacillating Khur-Shah by surprise in the virtually impregnable fortress of Maimundiz. Hülegü, who had a 1,000-strong unit of Chinese experts in ballistics and units of 'naphtha-throwers', had mangonels (powerful siege engines) set up and bombarded the fortress with boulders and inflammable projectiles (such as containers filled with naphtha). Hülegü probably also used catapults with counterweights, similar to the European trebuchets. The trebuchet could fire a projectile weighing around 130 kilograms a distance of 300 metres, thus putting it virtually out of range of the defenders' deadly arrows. In addition, the besiegers also put in position a gigantic Chinese crossbow, which had a range of about 2,000 metres and fired off spears which were also filled with naphtha.[91] Khur-Shah lost his nerve and surrendered on 19 or 20 November, whereupon he, on Hülegü's orders, told all the Ismaili fortress commanders to capitulate immediately. In return he was granted safe conduct. Apart from Lammasar,[92] they all obeyed the command, and the Mongols were able in a very short time, and without suffering any losses themselves, to destroy some 35 castles stone by stone, and massacre a great number of Ismailis.[93] The example of Girdkuh, however, which did not surrender until 1271, shows that many of these mountain fortresses could have resisted a year-long siege if they had been adequately run – a view which was implicitly shared by the two Il-Khanid historians Juvaini and al-Rashid.[94]

After the destruction of the fortresses in the province of Rudbar, Khur-Shah was of no further use, but Hülegü did not have him killed immediately, since, as the historian Rashid al-Din pointedly remarked, he might still have been of help in persuading Ismaili fortresses in Syria to capitulate.[95] Hülegü therefore got rid of him by sending him to Möngke in Karakorum. Möngke refused to receive Khur-Shah, and via an envoy reproached him with the continuing resistance of the fortresses of Lammasar and Girdkuh. According to al-Rashid, Möngke expressed himself bluntly: 'Why are they bringing him and tiring a horse uselessly?' At Möngke's command, Khur-Shah was murdered in 1257 on his homeward march.[96] With the destruction of the Alamut Ismailis, Hülegü was doing a service to Sunni orthodoxy in the short term by eliminating their dangerous arch-enemy.[97] But a year later he forfeited Sunni goodwill when he destroyed Baghdad, and on 20 February 1258 had Caliph al-Mustasim Billah executed, thus putting an end to the Abbasid caliphate.[98]

Descendants of the Alamut Nizaris survived in Badakhshan, in the south of Tajikistan and in northern India, and have preserved their heritage.[99] The dissemination of the Ismaili branch of Shia Islam in Badakhshan is attributed to the traveller,[100] poet and Ismaili missionary Nasir Khusraw (1004–88).[101] Many centuries later, towards the end of the eighteenth century, Nizari leaders became public figures in Iran, and in 1818 the Shah of Persia bestowed the title of Aga Khan on the 46th imam Hasan Ali Shah, a title which was confirmed by a British-Indian court in 1866 after the imam had fled to Bombay.[102] The current, fourth, Aga Khan has reigned as the 49th Imam of an estimated 15 million Nizaris since 1957.[103]

The deaths of Nizam al-Mulk and Malik Shah within a few weeks plunged the Seljuk Empire into a thirteen-year period of unrest and internal power struggles, which ended only with the enthronement of Sultan Muhammad Tapar (r. 1105–18). First, Terken Khatun, who probably had participated in the murders of the vizier and of her husband, seized power and appointed her four-year-old son **Mahmud I** (r. 1092–94) as sultan, while discontented followers of Nizam al-Mulk rallied round Mahmud's half-brother **Berkyaruq** (r. 1092–1105). The dispute between the two child sultans and their respective regents ended with the victory of Berkyaruq, after which, in 1095, he defeated a further challenger, Tutush, his uncle, who was the Emir of Damascus. In a further step, in 1097 Berkyaruq appointed his half-brother **Abu'l Harith Ahmad Sanjar** (r. as governor 1097–1118, as sultan 1118–53, d. 1157), who was about twelve years old, viceroy of Khorasan and placed an atabeg (tutor) and a vizier at his disposal. Berkyaruq spent the next five years of his reign in disputes with his stepbrother **Muhammad I Tapar** (r. as counter-sultan 1099–1105, as legitimate sultan

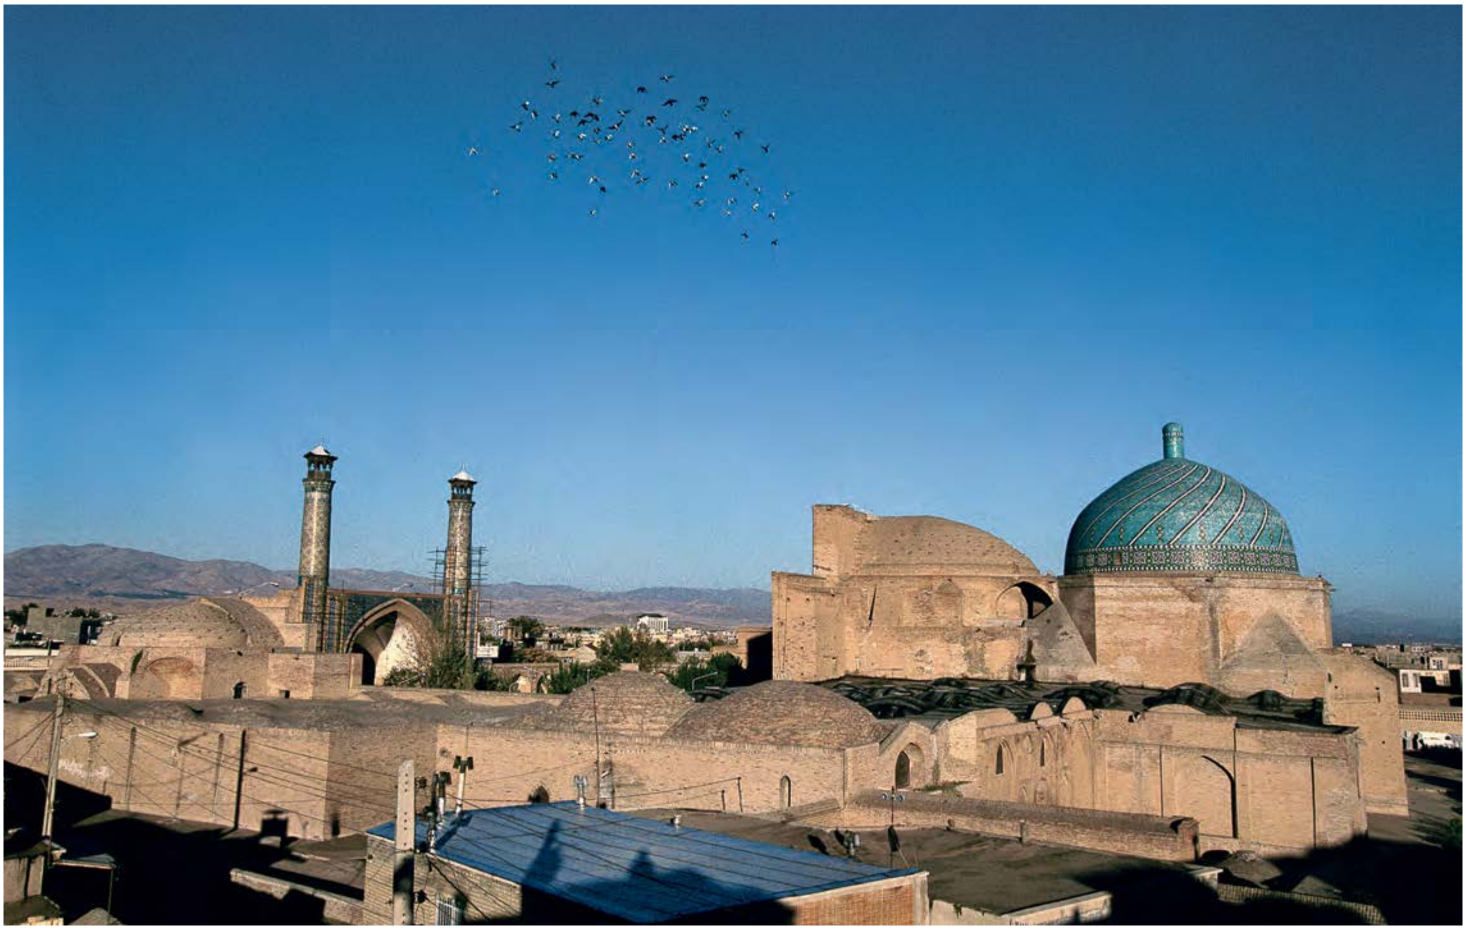
1105–18). In 1100, Berkyaruq suffered a defeat at the hands of Muhammad Tapar and set off eastward to attack Sanjar in his base, the distant city of Balkh. But Sanjar repulsed his attack and then moved his capital to Merv, in the centre of Khorasan.[104] In 1004 the three adversaries reached a compromise: Muhammad ruled the west, Berkyaruq the centre, and Sanjar retained the eastern part of the empire.

On Berkyaruq's death in 1105, another child sultan, his son **Malik Shah II** (r. 1105), was whisked onto the throne, but Muhammad Tapar had him deposed and killed, and declared himself sole ruler.[105] As soon as he took power as sultan Muhammad resolved to stamp out the Nizari 'state within a state' and to eliminate its fortresses one by one. Earlier, Berkyaruq and Sanjar had already succeeded in damping down the Nizari firestorm. Now Muhammad purged the Isfahan region of Nizaris by destroying in 1107 the fortresses of Shahdiz and Khalinjan; then he drove the Nizaris out of the province of Fars. But the attack on the Ismaili stronghold of Alamut failed, so that the sultan instructed the provincial governor Anush Tegin

Shirgir to continue the assault. Shirgir realised that it was impossible to take Alamut in one assault, so instead over the course of eight years he devastated Rudbar and laid siege to individual fortresses. In April 1118, when he was finally on the verge of definitive victory over the Nizaris, Muhammad died, whereupon the Seljuk soldiers mutinied and fled. The governor had to abandon the siege, and the Nizaris were saved from collapse.[106] On the death of Muhammad, whose nominal authority had been recognised by Sanjar, four or five young sons of Muhammad and their atabegs contended for the leadership. **Mahmud II** (r. 1118–31) emerged as victor from this dispute. But when he demanded a payment of tribute from his uncle Sanjar, the latter marched on Rayy and Baghdad and forced Mahmud to recognise him, the clan chief, as Great Sultan. In addition, Mahmud had to renounce the status symbols associated with the office, as well as Rayy and the territories belonging to it. So he was degraded to the position of a vassal of his uncle.[107]

Throughout his reign, Sanjar was preoccupied with his northern and eastern borders; above all, he had to reassert the supremacy over the western Karakhanids which had been achieved by his father, Malik Shah. In 1102, while Sanjar was away in Baghdad, the Karakhanid Qadïr Khan Jibrail of Balasaghun and Talas crossed Mawarannahr and invaded Khorasan. Sanjar hurriedly returned and defeated the intruder at Termez. He then installed the Karakhanid Muhammed II Arslan Khan in Samarkand, who reigned peacefully until 1130 and built a number of magnificent buildings in Bukhara. When, towards the end of his rule, there were disputes about the succession, Sanjar intervened and had parts of Samarkand looted. After two provisional rulers, Sanjar appointed his nephew Mahmud II Khan as ruler in Samarkand. Later in Sanjar's life, Mahmud Khan twice played a significant role: first in 1041, when Mahmud asked him for help against the Karluks, and Sanjar then suffered a crushing defeat in battle with them and the Qara Khitai, and in 1154–56, when he ruled as acting sultan during Sanjar's imprisonment.[108]

Sanjar then extended the Seljuk sphere of influence to the ailing Ghaznavid Empire. First, in 1107/8, he forced Ghur, a vassal kingdom of the Ghaznavids, which lay between Kabul and Herat, to recognise his supremacy. Juzjani, the historian of the



64. Dating from the Seljuk era, the Friday mosque of Qazvin in Iran was built between 1113 and 1120. Photo: 2001.

Ghurids, reports that the rulers of Ghur paid annual tribute to Sanjar in the form of arms, armour and fighting dogs. When, in 1151/52, the Ghurid Ala al-Din Husayn (r. 1149–61) tried to cast off Sanjar's supremacy, Sanjar captured him at Herat, releasing him only on payment of a large ransom.[109] In 1116, a struggle for succession between the two Ghaznavid princes Arslan Shah and Bahram Shah offered Sanjar a welcome opportunity to intervene in Ghazna. When the defeated Bahram Shah asked him for help, Sanjar attacked in 1117, defeated Arslan Shah, plundered the capital, Ghazna, and carried off the treasures collected by Arslan Shah's predecessors. Bahram Shah, once installed as sultan, had to commit himself to annual payments of tribute and to have the *khutba* read in Sanjar's name. In 1135 Bahram Shah felt strong enough to cast off Sanjar's supremacy and stop paying tribute, but Sanjar immediately led a surprise winter expedition to Ghazna and forced Bahram to subject himself to him again.[110] With his Ghazna campaign of 1117, Sanjar further extended Seljuk supremacy, for now the Karakhanids of Samarkand and Bukhara, the shahs of Chorasmia, the Ghurids and most recently the Ghaznavids were all obliged to pay him tribute.

Chorasmia, to the north of Khorasan, was of great strategic importance to the Seljuks, for it acted as a buffer to the troublesome Oghuz on the lower Syr Darya, a role played too by the western Karakhanids of Samarkand. Gurganj, the capital of Chorasmia, was also an important hub on the trade route to Atil, Bolghar and Rus. For this reason, Malik Shah had chosen the experienced slave officer Anush Tegin Garchai (in office 1077–97) as governor of Chorasmia. On his death, Sultan Berkyaruq appointed the Kipchak Ekinchi ibn Qochqar (r. 1097) as new governor, and the latter adopted the title of shah of Chorasmia. However, a few months later Ekinchi fell in a battle, and Berkyaruq installed a son of Anush Tegin, Qutb al-Din Muhammad (r. 1097–1127/28), as his successor.[111] While Qutb al-Din always remained loyal to Sanjar, Qutb's son Atsïz ibn Muhammad (1127/28–56) considerably strengthened the Chorasmian army and tried to cut himself off from Sanjar. In 1138 Atsïz dared to launch an uprising and as Sanjar approached, flooded the land in the central valley of the Oxus, south-east of Gurganj. But this did not prevent the sultan from defeating the Chorasmian army, killing Atsïz's son and occupying the capital, where he installed his nephew Suleiman Shah. Sanjar had hardly left Chorasmia when Atsïz drove out the Seljuks, and in the following year he conquered Bukhara. When in 1141 Sanjar suffered a severe defeat at the hands of the Qara Khitai, Atsïz, in the hope of being able to retake Khorasan, advanced via Merv to Sarakhs and Nishapur. But Sanjar rallied, gathered his scattered forces again, occupied Gurganj in 1143/44, and forced Atsïz to submit once more. Now Atsïz hired Nizari *fida'in* to murder Sanjar. But that plan failed too, and in 1147 Sanjar again occupied Gurganj, forcing Atsïz to continue paying tribute.[112]

Sultan Sanjar possessed just about enough resources and military strength to keep sedentary enemies at bay, but not to subdue steppe warriors. Two such groups of different origins began to harass him from about 1137: the Turkic semi-nomadic Oghuz and the Mongolian Buddhist Qara Khitai. The Qara Khitai set in motion what was to prove a fatal development for Sanjar. They were a group of Mongolian refugees who had belonged to the ruling elite of the Liao state in the north-east of China and in Mongolia, which had fallen in 1125. Like the Uyghurs in the mid-ninth century,[113] the Qara Khitai, led by Yelü Dashi (1087–1143), fled westward, first to the Uyghurs of Kocho, from where, in about 1131/34, they captured Balasaghun, the residence of the Karakhanid Ibrahim ibn Ahmad. Numbering some 40,000 tents, the Qara Khitai now rapidly spread throughout Semirechie and displaced the Karluks, Oghuz and Kangli-Kipchaks, seizing their lands and driving them south, to Mawarannahr and the upper course of the Oxus. Still expanding, in 1137 under Yelü Dashi, who had proclaimed himself Gür-Khan, or universal Khan, they inflicted a heavy defeat at Khujand on Sanjar's nephew and vassal, Mahmud Khan of Samarkand. Four years later, Mahmud asked Sanjar for help against the Karluks, who had invaded the Samarkand region and taken over arable land for their herds. When Sanjar rushed to help his vassal, as both al-Nishapuri and the *Liao Shi*, the Chinese chronicle of the Liao, report, Yelü Dashi intervened on the Karluk side and on 9 September 1141 devastatingly defeated Sanjar on the steppe of Qatwan, not far from Samarkand: 'Eventually he [Yelü Dashi] reached Hsin-ssü-kan [Qatwan] where he met an army of 100,000, comprised of soldiers from various western countries under the command of Hu-erh-shan [Khorasan]. Ta-shih arranged his army in three parts and attacked the enemy. The western troops were completely defeated; their corpses covered the ground for 10 li [4,200 metres]. The Moslem kings surrendered and offered tribute.'[114] Thanks to this outstanding victory, the Qara Khitai, who were occupying Bukhara, extended their sphere of power as far as the Oxus; Mawarannahr and Chorasmia became their tribute-paying vassals.[115]

The spectacular defeat of the hitherto virtually invincible sultan had a huge impact. For one thing, Sanjar's reputation suffered irreparable damage: not only did he lose all his sovereign power beyond the Oxus, but for the very first time an important part of the Muslim community had fallen under the sway of 'infidels'. On the other hand, the news of the Seljuk sultan's disastrous defeat travelled as far as the Crusaders and Western European rulers, and this contributed decisively to the legend of a victorious Christian priest-king known as Prester John (Lat. *Presbyter Ioannes*), who would soon speed to the aid of the hard-pressed Crusaders.[116]

The displacement of the Oghuz by the Qara Khitai was an indirect cause of Sanjar's fall and the end of the Seljuk sultanate in Central Asia. Bloody conflicts between the Oghuz in the upper Oxus regions and Sanjar's officials in Balkh provoked the sultan into refusing reparations offered by the Oghuz and, in 1153, into taking military action against them, but Sanjar lost two battles in succession and was finally taken prisoner. Humiliated and ill-treated, Sanjar was forced to accompany the Oghuz as they looted and pillaged their way through Khorasan. According to al-Juvaini, he was locked in an iron cage every night.[117] Merv and Nishapur suffered badly, as al-Nishapuri describes: 'When [in a plundered city] nothing remained on the surface of the ground, they tortured the prisoners and stuffed dirt with salt into their mouths until they showed buried goods. [. . .] After two years, Nishapur with such ornament and expanse was so ruined and deserted that [. . .] [its places] became pastures for sheep and hiding places for beasts, birds and serpents.'[118] Meanwhile Mahmud Khan of Samarkand, whom Sanjar's remaining officials had put in place as interim ruler, tried to preserve the Seljuk rump government. In 1156 Sanjar managed to escape to Termez and then to Merv, where he died in 1157. Although he confirmed the appointment of Mahmud Khan on his deathbed, Mahmud was unable to assert his claim; in 1160 he was blinded,[119] and his power in Khorasan was divided between several commanders. Around 1163 a dam burst near Merv, which severely damaged agriculture and hastened the economic decline of northern Khorasan.[120] The tripartite struggle for Khorasan that loomed in the 1170s between the Ghurids, the Qara Khitai and the aspiring Shah of Chorasmia put an end to the rule of the Seljuk warlords.

While the empire of the Seljuks neared its end in the east with the capture of Sanjar in 1153, it was able to maintain itself in the west in a weakened form up to 1194. After the death of Mahmud II in 1131, three developments determined political history in western Iran and in Mesopotamia. The Turkic army commanders and atabegs were growing increasingly powerful and began to establish regional centres of power with a system of hereditary succession. As a result, the sultans lost their authority. And, finally, the Abbasid caliphs were gradually able to regain some political influence. In 1194 the last Seljuk sultan, Tughril III, fell in battle near Rayy against Tekish, the Shah of Chorasmia. As al-Nishapuri noted, 'the dynasty of the Seljuqs was first founded by Tughril and with Tughril it was ended'.[121]

2. The Karakhanids

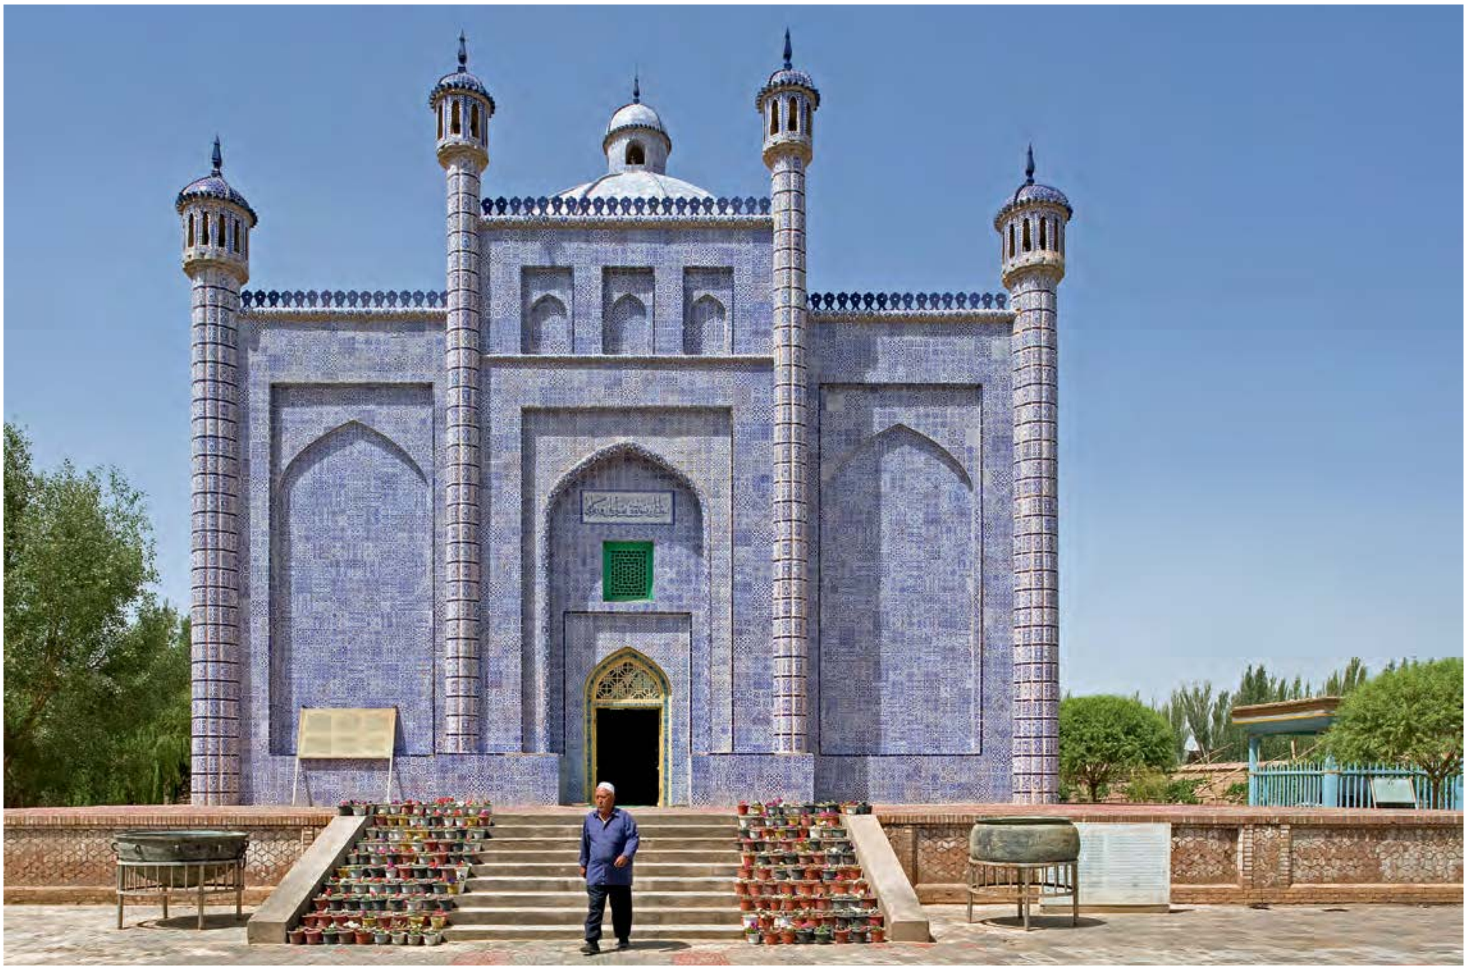
In the second half of the tenth century, the tribal confederation of the Turkic Karakhanids entered history. Unlike, for example, the Ghaznavids and Seljuks, they did not form a centrally structured state led by a military elite, but were a loose group of tribes with three transregional centres, Semirechie/Kashgaria, Mawarannahr and Fergana, which in turn were divided into individual princedoms. The Karakhanids emerged from the merger of the elites of the Turkic Karluks, Chigil and Yagma; whether the Chigil and Yagma also belonged to the Karluk group remains in dispute.[122] It seems that the Chigil formed the nucleus of the originally unified Karakhanid army.[123] The name 'Karakhanids' and the older name 'Ilek-Khanids' are in fact the creations of European Orientalists, who used these two titles to identify the dynasty. Contemporary Arabic sources call it *al-Khaqaniyya*, and Persian ones *Ahl-e Afrasiyab*, 'family of Afrasiyab', the legendary king of Transoxania.[124]

The ruling Karakhanid dynasty was organised in a similar way to that of the Göktürk Ashina clan and was based on a dual system, in which each of the two functional strands included the name of an animal which corresponded to a tribal totem. The eastern khagan, who was nominally higher in rank, was called *Arslan Kara Khagan*, which means 'lion, black, Great Khan'. His winter camps were at Balasaghun (east of Bishkek) and Kashgar; the lion was the totem animal of the Chigil. The western khagan, who was nominally of lower rank, was called *Bughra Khagan*, 'male-camel-Khagan', and his winter camp was first in Taraz, and from 999 in Samarkand; the male camel was the totem animal of the Yagma. Below the two khagans were two subordinate rulers with the functional titles of Ilek and Tegin, so they were Arslan Ilek and Arslan Tegin, Bughra Ilek and Bughra Tegin. In addition there were further governors with the titles of *Böri* (wolf), *Yagan* (elephant) and *Tughril*, *Chagri* and *Paygu* (birds of prey).[125] Since each function was linked to a special title, a prince's title would change with his status, as, for example, when an Arslan Ilek rose to become Bughra Kara Khagan, or Bughra Khagan was appointed Arslan (Kara) Khagan. The only unchangeable name, after conversion to Islam, was the personal Islamic name, but the same prince could in the course of his career also acquire several Muslim honorific names, so-called *Laqab*. Thus if the Islamic personal name is missing from a Karakhanid name, the dignitary cannot be identified with total certainty.[126]

2.1 The Unified Khaganate

It seems that the pre-Karakhanid Karluks of the region around the city of Taraz (in today's southern Kazakhstan) were driven out of their local pasturelands in 893, when the Samanid Ismail ibn Ahmad conquered the city. As a result of this defeat, the Karluks turned towards the east, to Kashgaria, where Satuk (d. 955/56) became the first Karakhanid prince to convert to Islam. According to Pritsak, Satuk was a nephew of the Great Khan Ogulchak Khan, who lived in Kashgar, having been driven out of Taraz in 893.[127] As the historian Jamal Qarshi, who lived in the thirteenth century in Kashgar, describes, Satuk, who lived in Artuj (Artush), east of Kashgar, was converted to Islam before 946 by a Samanid nobleman who was exiled there, and took the name Abd al-Karim.[128] Satuk then had a legal pronouncement issued, a *fatwa*, which stated that he was permitted to kill his heathen uncle, Ogulchak. Soon after 946 he marched with his followers on Kashgar, where he seized power and gave himself the name **Abd al-Karim Satuk Bughra Khan** (r. *ca.* 946–55/56). Satuk was succeeded by his son **Musa ibn al-Karim Baytash** (r. 955/56–?), while his brother Sulayman (father of the man who would later capture Bukhara, Bughra Khan ibn Sulayman), was given the title of Ilek.[129] Although Musa's attacks on the Buddhist kingdom of Khotan failed – Khotan did not fall until 1006, to the Karakhanid Yusuf Qadïr Khan – those to the west were successful. Musa conquered Taraz and appointed himself the new Arslan Khagan, and in around 960 persuaded the '200,000 tents' of Karakhanid families to convert to Islam.[130]

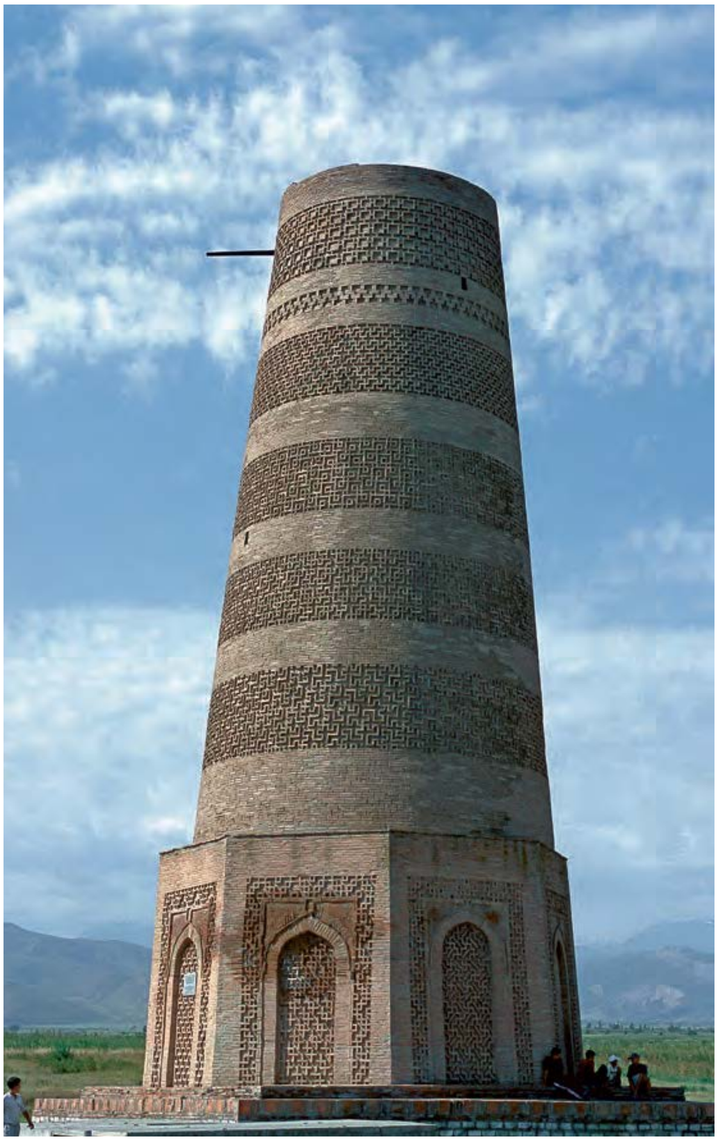
At the same time, to the west of Lake Issyk Kul, Musa founded the new capital of Balasaghun (near today's small town of Burana), also called Kara Ordu or Quz Ordu; the former Karluk city of Suyab (Ak Beshim), only a few kilometres away, became derelict over time. In Balasaghun, Musa had a victory tower built of fired brick, originally 40 to 50 metres high (fig. 66). According to the archaeologist Valentina Gorâčeva, the entrance portal was 5 metres above the octagonal base, and no traces of a mosque were found, which suggests that the tower was not a minaret belonging to a mosque but a visual expression of the triumph of the Muslim



65. The mausoleum of Abd al-Karim Satuk Bughra Khan (r. *ca.* 946–55/56), founder of the Karakhanid dynasty, in Artush, Xinjiang, China. Repeatedly destroyed by earthquakes, the mausoleum was restored in 1995. Photo: 2009.

Karakhanids and the success of their efforts at Islamisation. The victory of Islam over the religious beliefs of the Karluks, who had until recently been 'infidels', was expressed symbolically by the placing here of a Göktürk stone figure which had been removed from a kurgan and buried at a depth of 5 metres in the foundations of the tower.[131] The tower at Balasaghun is the oldest victory tower in Central Asia; further tower-like, cylindrical minarets are still standing today in Vabkent (fig. 68) and Bukhara (fig. 67), both in Uzbekistan, in Jam (fig. 78) and Ghazna (fig. 75), both in Afghanistan, and in Gurganj, in Turkmenistan (fig. 83).

The power struggles convulsing the neighbouring Samanid Empire made it a tempting target for attack by the Karakhanids. Musa's successor **Bughra Khan Hasan (Harun) ibn Sulayman** (r. ?–992)[132] conquered Isfijab in 990 and Bukhara two years later. But he died on the march back to Taraz; his successor as Arslan Khagan was his son **Ali ibn Musa** (r. 992–98), who in turn was succeeded by **Ahmad ibn Ali Arslan Khan** (r. 998–1015/16 or until 1017/18). Under the supreme rule of Ahmad, the rump Samanid state was shattered when Ali ibn Musa's son Arslan Ilek Abu'l Hasan Nasr ibn Ali (d. 1013), advancing from Uzgend, conquered Čač (Tashkent) in 997 and Bukhara in 999, almost without a struggle. At the same time the Ghaznavid sultan Mahmud occupied Khorasan, whereupon the two victors defined their common border at the Oxus. Al-Gardizi reports: 'The two rulers came to a solemn agreement that Transoxiana should be held by the Khan (i.e. the Ilig Nasr), whilst Amir Mahmud should have the lands south of the Oxus.'[133] The Karakhanid family dynasty now ruled from the Oxus to the Tarim basin, while the spheres of influence of the individual khagans, ileks and tegins were only imprecisely defined. At any rate, Ilek Nasr expressed dissatisfaction with his share of the booty, and when, in 1006, Sultan Mahmud was in northern India, near Multan, two Karakhanid armies attacked Balkh and Nishapur, whereupon Mahmud returned in a forced march and chased the intruders to the other side of the Oxus. Only a year later, Ilek Nasr again attacked near Balkh, where in early 1008 he suffered a heavy defeat. In the words of Gardizi, Mahmud 'gave orders that all the elephants should be enraged and sent forward in an attack. The Turks were immediately defeated, and Amir Mahmud's army killed large numbers of them and took many captives. Those who fled were drowned in the Oxus.'[134]

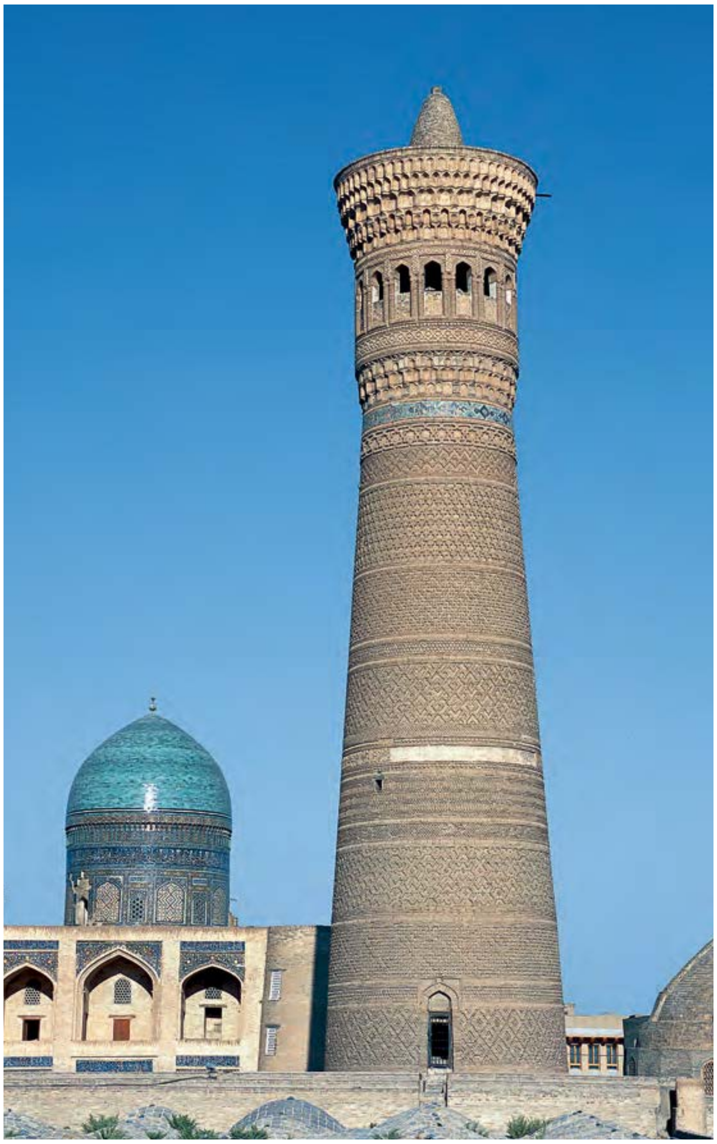


66. The early Karakhanid victory tower at Balasaghun, Kyrgyzstan, was originally between 40 and 50 metres high but has been damaged by earthquakes. It was built sometime between the late tenth or early eleventh century.[16] Photo: 2004.

This, apart from minor skirmishes, was the Karakhanids' last attempt to gain a foothold south of the Oxus. It failed not least because Sultan Mahmud made adroit use of the inter-Karakhanid disputes to drive a wedge between the hostile parties. A clear indication of inter-Karakhanid tensions is the conquest of Balasaghun in 1015/16 by Ilek **Mansur ibn Ali** (r. 1015/16 or 1017/18–24/25), who immediately had himself proclaimed Arslan Khagan. In the war against Ahmad ibn Ali, Mansur also captured Ali Tegin Ali ibn Hasan (r. 1014/15 or 1020/21–34/35). But in 1019/20 Ali Tegin succeeded in escaping, and with the help of the Seljuk Israïl ibn Seljuk he conquered Bukhara, thus becoming the most dangerous opponent of Mahmud of Ghazna. The latter therefore formed an alliance with Yusuf Qadïr Khan of Khotan and Kashgar, the later **Qadïr Arslan Khagan** (r. *ca.* 1025/26–31/32). As Gardizi relates, Mahmud crossed the Oxus on a pontoon bridge and met Qadïr Khan near Samarkand. At a magnificent feast, where choice gifts were exchanged, the two rulers decided to drive out Ali Tegin and his Seljuks.[135] Ali Tegin fled from Mahmud, who captured Israïl ibn Seljuk in 1025 or 1026 and abducted him to India, whereupon Ali Tegin returned to Bukhara, proclaimed himself first Arslan Ilek, and in 1031 Arslan Khan, and ruled Mawarannahr independently, predetermining the splitting of the Karakhanid Empire.[136] Qadïr's successor **Arslan Kara Khagan Sulayman ibn Yusuf** (r. 1031/32–40) and the Ghaznavid Masud continued the alliance against Ali Tegin; a campaign of Masud's ended in an indecisive battle against Ali Tegin and his Seljuk allies as well as in the death of the Ghaznavid vassal Altun Tash Chorasm-shah. Soon after Ali Tegin's death, his son and successor Yusuf ibn Ali (r. 1034/35–40) drove the Seljuks out of Bukhara; they initially headed for Chorasmia, where they were defeated by Shah Malik and driven off again, this time to Khorasan.[137] Even if the forced departure of the Seljuk horsemen weakened Bukhara, Yusuf ibn Ali succeeded in driving the unpredictable Seljukid Oghuz out of the Karakhanid Empire and directing their energies to Khorasan and further into Iran.

2.2 The Western Khaganate

In 1038/39 the two sons of Arslan Ilek Abu'l Hasan Nasr (d. 1013), Böri Tegin Ibrahim ibn Nasr and Muhammad ibn Nasr, occupied the Chaganiyan region, from where they attacked Yusuf ibn Ali and conquered most of Transoxania. Böri Tegin took the title of Tamghach Bughra Khagan in 1039/40. **Ibrahim I ibn Nasr Tamghach Bughra Khagan** (r. 1040–68/69) then designated Samarkand as his capital, thus completing the division of the formerly unified kingdom, whose border ran more or less along the Syr Darya. In parallel with the division of the realm, two ruling dynasties emerged: in the west, the descendants of Ali ibn Musa, the 'Alids', and in the east those of Hasan (Harun) Bughra Khan, the 'Hasanids'.[138] Contemporary sources praise Ibrahim Tamghach, who in 1059/60 incorporated Fergana into his territory, as a strict and just ruler, who introduced currency reform and had public buildings such as hospitals and caravanserais built. However, his successors **Shams al-Mulk Nasr ibn Ibrahim** (co-regent 1067/68–68/69, r. 1068/69–79/80)[139] and **Khidr ibn Ibrahim** (r. 1079/80–86/87) found themselves increasingly exposed to Seljuk pressure from the south-west, which around 1089 culminated in the conquest of Samarkand by Malik Shah. From now on until 1141 the western Karakhanids were vassals of the Seljuks, who appointed and deposed the Karakhanid Khans almost at will. For a short time, the eastern Karakhanids and Fergana also recognised the supremacy of the Seljuks. In 1095 the Sudur, the elite of the legal scholars and imams of Samarkand and Bukhara, together with army officers, organised a coup against the popular **Ahmad ibn Khidr** (r. 1086/87–89, 1092–95), whom they accused of Shi'ite heresy and had him strangled.[140] In the words of Barthold, 'this event must be regarded as the greatest of the successes gained by the priesthood in alliance with the military classes over the government and the mass of citizens'.[141] After the brief reigns of four further khans, Sultan Sanjar drove the eastern Karakhanid **Qadïr Khan Jibrail ibn Umar** (r. *ca.* 1099–1102) out of Mawarannahr; he then installed **Muhammad II ibn Sulayman** (r. *ca.* 1102–30) as Arslan Khan of Samarkand. Just under 30 years later, Sanjar once more intervened as a result of renewed tensions with the Sudur and problems of succession, and finally installed his nephew, **Mahmud II Khan ibn Muhammad** (r. 1132/33–41).[142]



67. The 46.5-metre-high Kalyan minaret, built in 1127 in Bukhara, Uzbekistan and topped by a lantern, was originally a religious Karakhanid victory tower. Until 1884, criminals condemned to death were sewn into a sack and thrown from the top of the tower. Photo taken from the roof of the Kalyan Mosque: 2004.

68. The Vabkent victory tower in the oasis of Bukhara, Uzbekistan, 39 metres high and brick-built, was erected in 1141. Photo: 2004.

After the defeat of Mahmud in 1137 and that of Sanjar in 1141 by the Qara Khitai, the western Karakhanids were forced to recognise the supremacy of the Qara Khitai, who allowed their vassals a high degree of autonomy as long as they paid tribute.[143] The new governor of Samarkand was **Ibrahim III ibn Muhammad Khan** (r. 1141–56). In this period of turmoil between 1137 and 1141, the third Karakhanid khaganate of Uzgend was formed in Fergana. While the 1150s and early 1160s were marked by conflicts with the invading Karluks, who killed Ibrahim ibn Muhammad Khan,[144] towards the end of the twelfth and in the early thirteenth century the western Karakhanid khans increasingly came under the influence of the religious caste of the Sudur. At the same time they were confronted with the aspiring military power of their western neighbours, the Chorasm-shahs, who were also vassals of the Qara Khitai. The Qara Khitai for their part were hard pressed by the nomadic equestrian warriors of the Naiman under Prince Küchlüg, who had to flee to the west from Genghis Khan. In this difficult situation the last western Karakhanid ruler, **Sultan Uthman** (r. 1202/3–12), was able to hold his ground for another decade thanks to a skilful see-saw policy between the Chorasm-shahs and the Qara Khitai. But Sultan Uthman's sphere of power was restricted to the Samarkand region, for the Sudur ruled despotically in Bukhara. When, in 1207, the oppressed population rebelled, the Chorasm-shah Ala al-Din Muhammad ibn Tekish (r. 1200–20) made use of the opportunity to intervene. He crushed the people's uprising, broke the domination of the Sudur and took over Bukhara. In contrast to the Qara Khitai, who in 1208/9 once again briefly established their supremacy over Samarkand but spared the city, in 1212 Chorasm-shah Muhammad had Samarkand's population massacred; Sultan Uthman, who had rebelled against him a year earlier, was executed.[145]

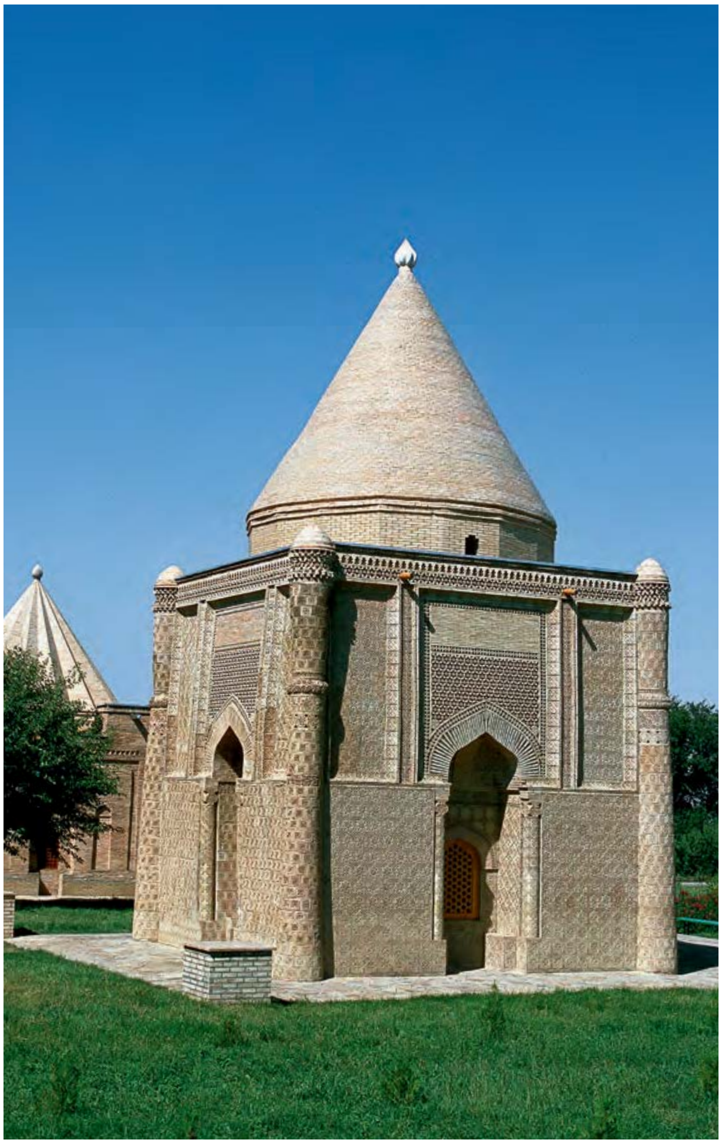
That decade, and even more so the one that followed, brought Central Asia the most painful and brutal upheavals it had ever experienced. In 1211 the Naimans put an end to the dynasty of the eastern Karakhanids; in 1212 the Chorasm-shahs and the Naimans divided up the remaining territory of the independent Qara Khitai, and Chorasm-Shah Muhammad ibn Tekish defeated the western Karakhanids. But by 1218 the Mongols had already destroyed the Naiman ruler Küchlüg,[146] and by 1221 the formerly flourishing and wealthy cities of the Chorasm-shahs such as Samarkand, Bukhara, Gurganj, Herat, Balkh, Merv, Nishapur and Tus were for the most part uninhabited piles of rubble.

2.3 The Eastern Khaganate

After the defection of Ibrahim Tamghach Bughra Khagan, the khagan of the formally unified Karakhanid Empire, **Sulayman ibn Yusuf**, became the first Arslan Khagan of the eastern Karakhanids (r. in the unified khaganate 1031/32–40, in the eastern khaganate *ca.* 1040–56, d. 1057). Arslan Khagan Sulayman ibn Yusuf retained the two capitals, Balasaghun and Kashgar, but had to concede Taraz and Isfijab to his brother **Bughra Khan Muhammad ibn Yusuf** (r. as Arslan Khan 1056–57). In 1056 the latter took over as Arslan Khan, but reigned for only a year; he was followed by **Ibrahim ibn Muhammad** (r. 1057–62), who lost control of Kashgar to a rival relative. At the beginning of the rule of his successor **Tughril Kara Khagan Yusuf ibn Sulayman** (r. *ca.* 1062–*ca.* 1083/85) Balasaghun was subject to the western Karakhanids, so that his territory was restricted to Kashgaria. Around 1068/69 or shortly afterwards, Tughril succeeded in driving the western Karakhanids out of Balasaghun and in restoring the eastern Khaganate. He was followed by his brother **Bughra Khan (Harun) Hasan ibn Sulayman** (r. post-1083/85–before 1098/99), who had already ruled Kashgar and Khotan since *ca.* 1068. In about 1089/90 Hasan ibn Sulayman had to temporarily acknowledge the supremacy of the Seljuk Malik Shah, but on the other hand he extended the Karakhanid influence eastward as far as Kucha.[147] A Karakhanid legacy is found in the language spoken today in Xinjiang by the native Uyghurs. This vernacular has not developed from the ancient Uyghur language, but from the Karakhanid, which belongs to the eastern group of Middle Turkic languages, as does the later Chaghatai, from which the Uzbek language developed.[148]

The end of eastern Karakhanid supremacy was brought about by their incompetence in dealing with rebellious horse nomads. When the Khitan Liao dynasty, which ruled in north-east China and Mongolia, was toppled by the Jurchen between 1114 and 1125, a group of the ruling Khitan of around 20,000 horsemen under their leader Yelü Dashi fled to central Mongolia. Here they were joined by several Turkic tribes, so that their numbers had doubled to 40,000 when they moved westward, to the Uyghurs of Kocho.[149] Between 1128 and 1130 Yelü Dashi mounted an attack on Kashgaria, but was driven back to Kocho in a fierce battle by Hasan ibn Sulayman's son **Ahmad ibn Hasan** (r. 1103–post-1128). Soon afterwards Ahmad ibn Hasan's successor **Ibrahim ibn Ahmad** (r. post-1128–31/34, as Ilek Türkmen until 1157/58) found himself unable to deal with a revolt by Karluks and Kangli-Kipchaks, and asked Yelü Dashi and his Qara Khitai, also called Kara-Khitan, for help. Yelü Dashi immediately led his mounted warriors to Kara Ordu (Balasaghun), which he occupied without meeting resistance between 1131 and 1134, and, in Juvaini's words, 'ascended the throne that had cost him nothing'.[150] He retained Ibrahim as a powerless vassal, downgrading him to *Ilek Türkmen*, after already having had himself declared *Gür-Khan*, the universal ruler.[151] In Balasaghun, 10,000 further Khitans strengthened the army of Yelü Dashi – warriors who, as former mercenaries of the western Karakhanid Muhammad II ibn Sulayman (r. 1102–30), had deserted to Balasaghun.[152] As Juvaini describes, Yelü Dashi then conquered Taraz, Otrar, Kashgar, Khotan and even the Uyghur Besh Baliq,[153] which served the Uyghurs of Kocho as a summer residence. The supremacy of the Qara Khitai was initially easy to endure for the Uyghurs of Kocho, since they kept their autonomy, and the Qara Khitai were Buddhists like them. Yelü Dashi then marched to Fergana and at Khujand defeated Mahmud Khan of Samarkand. With this campaign, the sovereignty of the eastern Karakhanids came to an end. At the same time, al-Husayn ibn al-Hasan (r. c. 1137–56) proclaimed himself Khagan of Fergana as vassal of the Qara Khitai. From 1211/12, Kashgar, Khotan, Balasaghun and Fergana were ruled by the Naiman Küchlüg.

The era of the Karakhanids, whether as supreme rulers or as vassals, was a golden age for the south of Central Asia. As is shown by the example of the fall of Ibrahim ibn Ahmad, the precondition for political and social stability lay in the control of

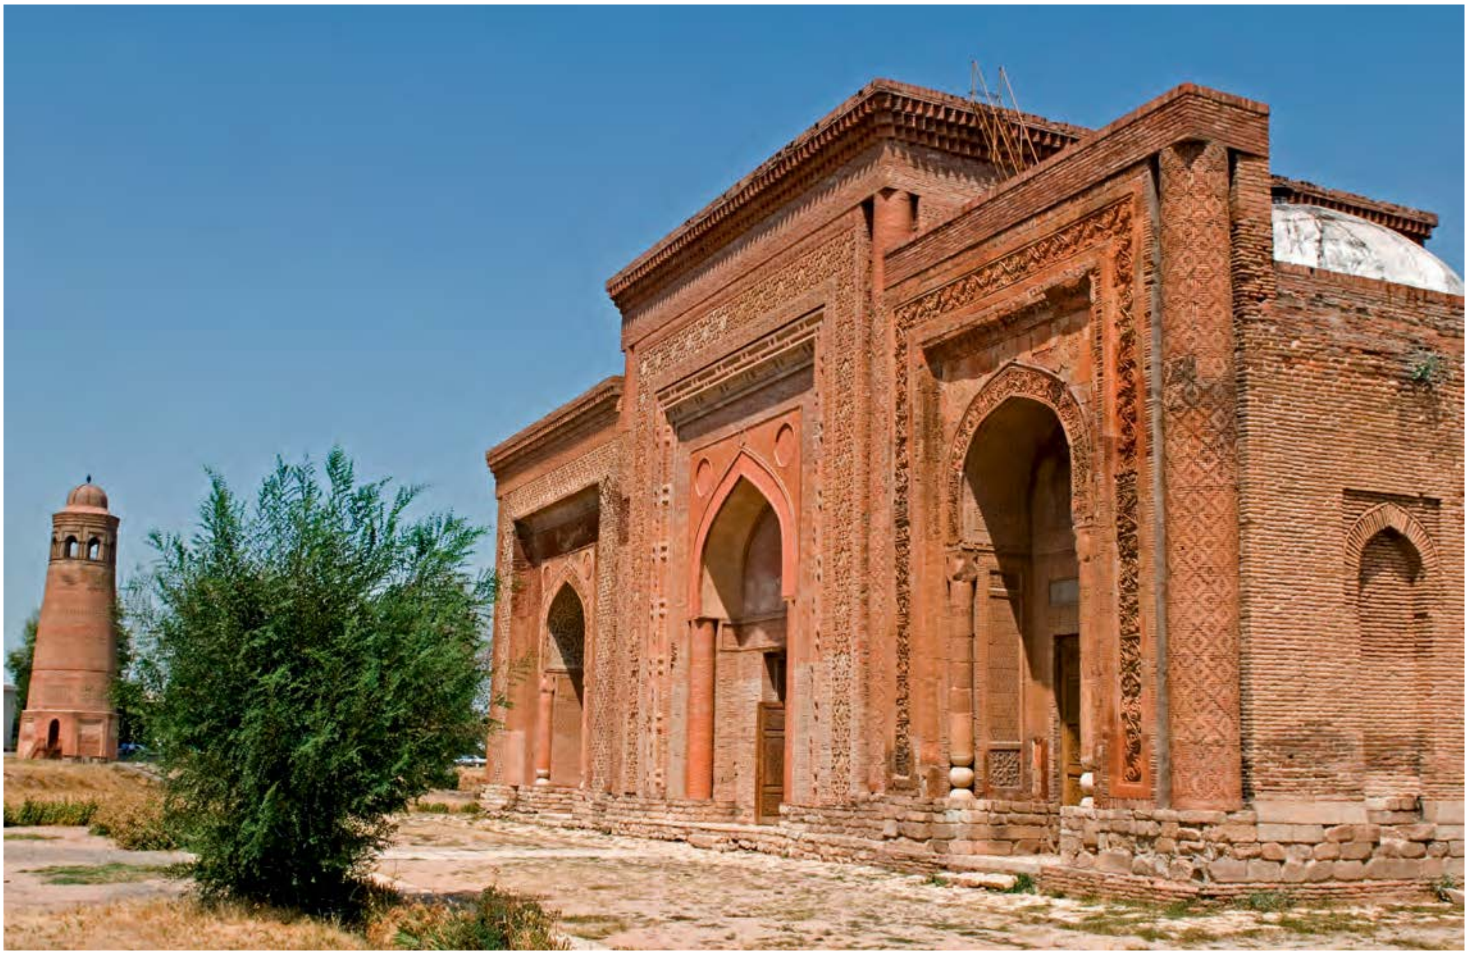


69. The Karakhanid mausoleums built in the late eleventh or early twelfth centuries for Aisha Bibi and her nurse Babazda Khatun. Situated to the west of Taraz, Kazakhstan, they are modelled on the Samanid mausoleum in Bukhara. (fig. 15) They were restored in 2002. According to legend, Aisha, daughter of a prince of Samarkand, or in some versions a Sufi poet, wanted to marry a young ruler of Taraz but her father refused his permission. When she fled in secret to Taraz, her father put a curse on her and she was bitten to death by a snake. Photo: 2005.

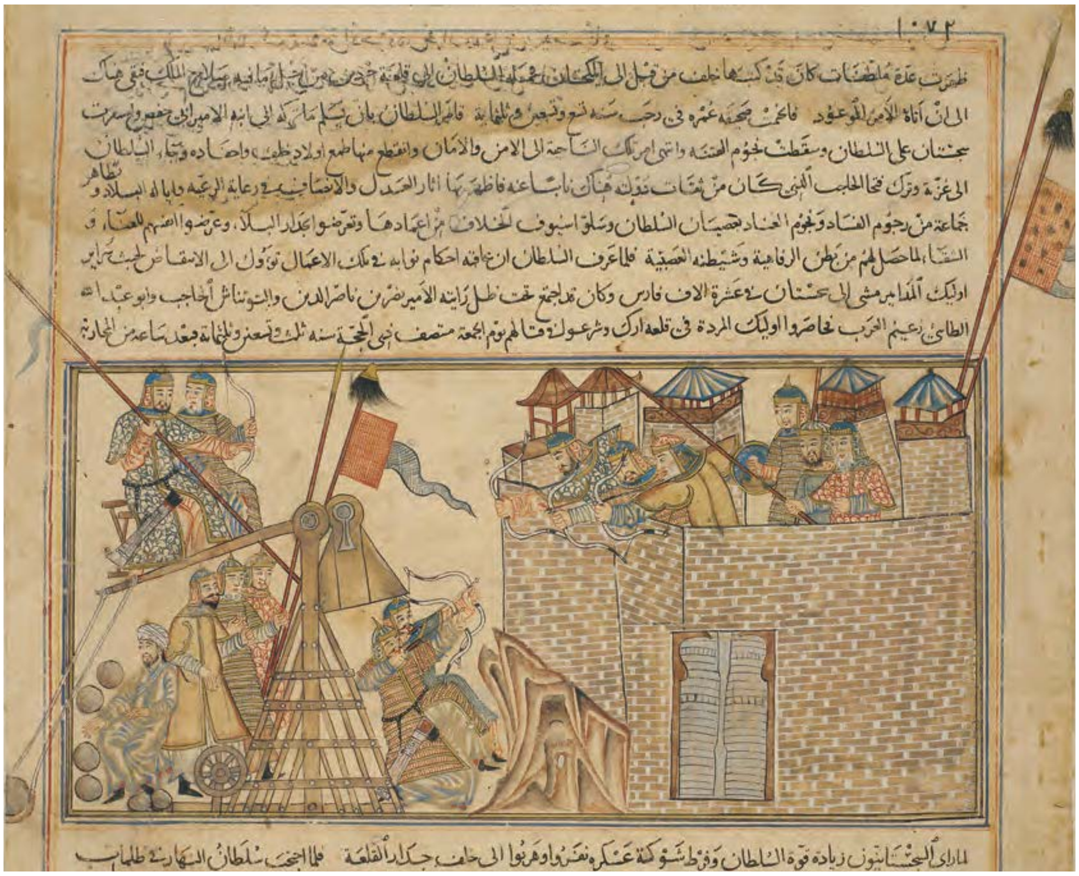
the semi-nomadic steppe warriors such as the Oghuz, Karluks and Kangli. For a long time the Karakhanids realised that they either had to incorporate the potentially dangerous tribes into their own troops, or restrict their freedom of movement in their search for pastureland, or even occasionally force them to adopt a sedentary lifestyle. As a further option, they could sell the young men from such tribes as slaves. It also seems to have been an objective for the Karakhanid rulers to keep their cities clean. It was forbidden to throw litter in the streets or public places.[154] Archaeological research in, for example, Vardana near Bukhara,[155] Novopokrovka II near Bishkek[156] and Otrar has shown that deep shafts were dug in public places, palaces, private houses and courtyards, which served as refuse pits, and could be closed off with wooden or ceramic covers. The cities also had a sewer system with ceramic water pipes, and the houses of the upper classes had small glass windows.

3. The Ghaznavids

The Ghaznavids, descended from Turkic slave soldiers, were the first Turkic dynasty to expand their power over the Iranian-speaking south-west of Central Asia. The foundations of Ghaznavid rule were laid by **Alp Tegin** (r. 962–63), the commander-in-chief of the Samanid army. In late 961, Alp Tegin, who had backed the losing candidate in the succession struggle after the death of Emir Abd al-Malik, fled from Nishapur eastwards with his personal force of 700 slave soldiers and some other warriors.[157] As C. E. Bosworth suggests, Alp Tegin was probably following the example of one of his predecessors, the Turkic general Kara Tegin Isfijabi (d. 929), who had left the empire of the Samanids and founded an autonomous principality in Bust (today's Lashgar Gah in southern Afghanistan), which was only nominally under



70. Three Karakhanid mausoleums and a Karakhanid minaret in Uzgend, Tajikistan. The dates of their construction can be ascertained from the inscriptions on each portal. The one in the middle dates from 1012/13, the one to the north, seen on the left, from 1152/53 and the southern mausoleum, on the right, from 1186/87. Here, a military commander who died in 1185 is buried, while the mausoleum of the north side contains the body of al-Husayn ibn al Hasan (r. *ca.* 1137–56), who died in 1156. It may be that Arslan Ilek Abu'l Hasan Nasr ibn Ali (d. 1013), the conqueror of Bukhara, was laid to rest in the mausoleum in the centre,[17] which underwent thorough restoration at the end of the twentieth century. Photo: 2008.



71. The Ghaznavid sultan Mahmud ibn Sebük Tegin attacks the fortress of Zarang in Sistan in the year 1003. University of Edinburgh, Edinburgh, Oriental Manuscript Collection, 20f.124v.

Samanid control.[158] On his way south, Alp Tegin defeated the local prince of Bamiyan and the Hindu-Shahi ruler of Kabul and eventually took the small town of Ghazna from the local ruler Abu Ali Lawik (or possibly called Anuk[159]). It seems that Alp Tegin was then confirmed as governor of the region around Ghazna. His son and successor **Abu Ishaq Ibrahim** (r. 963–66) recognised the suzerainty of the Samanids since he needed their military support against the local Lawik dynasty that his father had driven out. After Abu Ishaq's death, the Turkic officers of Ghazna chose the commander **Bilge Tegin** (966–74/75) as their leader, which angered Alp Tegin's former arch-enemy General Fa'iq Khassa in Bukhara so much that he sent an army to Ghazna, only for it to be crushed by Bilge Tegin. His successor **Böri Tegin** (r. 974/75–77) proved to be such an ineffectual and tyrannical ruler that the population of Ghazna revolted, and the Turkic military deposed him and installed **Sebük Tegin** in his place (r. 977–97).[160]

Sebük Tegin was the true founder of the Ghaznavid dynasty. A military slave of Karluk origin, he had been Alp Tegin's closest confidant, accompanying him on his flight in 961/2. During the two decades of his rule, he pursued numerous campaigns in almost all directions to expand his sphere of influence. He first conquered Zabulistan and quickly eliminated Turkic competition in Bust, then led his army to Gardez, Kabul and further east to Laghman.[161] The lower Kabul valley was the gateway to the wealthy and densely populated princedoms of the plains of northern India, which promised infinitely richer booty than plundering sprees towards the north or north-west. For Sebük Tegin and his successors Mahmud and Mas'ud, the opportunity to extort huge ransoms from rich princes and towns, plunder Hindu temples full of golden statues, and carry off innumerable young men and women as slaves, always proved irresistible. Male slaves were either taken to Ghazna and used as forced labour, or they were sold or integrated into the military – something which in the long run undermined its effectiveness. At the same time forays into a *Dar al-Kufr* ('land of unbelief') could be justified as God-pleasing enterprises. Ghaznavid foreign policy, which like that of the Eastern European Huns was based on an economy of looting, remained unchanged until the end of the dynasty in 1186. It was directed towards India and its treasures, while the northern border of the empire formed a bulwark against foreign horse warriors. Sebük Tegin's victory against the Hindu-Shahi Rajah Jaipal in Laghman in 986/87 opened the gates to Peshawar.[162] Despite his military strength, Sebük

Tegin demonstrated his nominal loyalty to the Samanid regime by ensuring that on coins the emir's name always appeared before his own. In 994 he added Khorasan to the Ghaznavid dominion when he supported the Samanid emir Nuh II against the rebel Fa'iq Khassa. At the end of this successful campaign, he installed his son Mahmud as governor of Khorasan and occupied Balkh, Bamiyan, Ghur and Garchistan (Badghis), east of Herat.

After Sebük Tegin's death, his ineffectual son **Ismail** (r. 997–98) succeeded him on the throne. The latter's battle-hardened brother, **Mahmud**, governor of Khorasan (r. 998–1030), refused to accept this and seized power from Ismail. During the 32-year reign of Mahmud, which resembled a permanent military campaign of Napoleonic dimensions, the empire reached its greatest extent, stretching from the borders of Azerbaijan and Kurdistan in the west to the gates of Delhi in the east, and from Chorasmia in the north to the Indian Ocean in the south. Mahmud's Ghaznavid state was organised as a military dictatorship, in which all power was held by the Turkic slave army and its officer corps loyal to the sultan. Bosworth called them 'an army with a state'.[163] To manage the administration and, especially, the finances of the empire, Mahmud adopted the methods and systems of the Sassanids, and he employed administrators of Iranian origin. Unlike the Seljuks, the Ghaznavids did not finance their expensive army through the *iqta*,[164] but paid the wages of their troops in cash and also paid for their equipment and upkeep. One way in which the sultans raised the money for this was by extortionate taxation of the wealthy province of Khorasan – which later had the consequence that the province's impoverished and demoralised inhabitants offered little resistance to the invading Seljuks. The standing army was also financed by regular winter raids in India. The Ghaznavids also controlled several gold and silver mines so that they were able to mint high-quality gold and silver coins, which would not depreciate in value over time. The troops of voluntary irregular soldiers, who also went to India, were paid in booty.

In 999, Sultan Mahmud ceased to support the moribund Samanid dynasty and found a new ally in the Karakhanid leader, Arslan Ilek Abu'l Hasan Nasr. The two victors divided the Samanid rump dominion, declaring the Oxus the boundary between the two parts. When in 1006 and 1008 Nasr crossed the Oxus to try to take control over areas to the south, Mahmud repulsed both invasions, driving the Karakhanids back across the river. In the second battle, at Balkh, Mahmud used armour-plated Indian war elephants,[165] which spread panic in the Karakhanid army.[166] The Ghaznavid army combined infantry with a mixture of light and relatively heavy cavalry, as well as an important division of elephants, which

72. Late Ghaznavid polychrome human figure holding a sword, twelfth century, Afghanistan. This stucco figure was presumably used as a wall decoration. The Metropolitan Museum of Art, New York. Inv. no. 57.51.18

carried archers in tower-like wooden structures on their backs. It was a huge and awe-inspiring force but also a very cumbersome one, almost impossible to manoeuvre in battle and dependent on a large contingent of camp followers. There was also the danger that cornered elephants would turn around to flee, causing great disorder in the troops at their rear. As the defeat of Dandankan in 1040 would show, in comparison to lightly armoured mounted archers, the Ghaznavid army had a disadvantage in a terrain of arid steppe and desert.

Mahmud's most dangerous adversaries were the Karakhanids of Bukhara, which is why he did his utmost to keep them at bay. An excellent opportunity for this arose in 1017 when his brother-in-law, Chorasm-shah Abu 'l-Abbas Ma'mun II (r. 1009–17), whose over-conciliatory attitude towards Mahmud had infuriated the patrician class, was murdered in a coup. Seizing his chance, Mahmud invaded Chorasmia, had the members of the Ma'munid family murdered and installed the military slave Altuh Tash (r. 1017–32) as new governor.[167] Now the Karakhanids, who until the death of Chorasm-shah Abu 'l-Hasan Ali (r. 997–1008/9), had proclaimed themselves to be military protectors of Chorasmia, could no longer use the area as a deployment zone for attacks against Khorasan. At the same time, Mahmud deported the great scholar al-Biruni to Ghazna. Now the whole of south-west Central Asia was in the hands of two dynasties of Turkic steppe warriors, and in the long run this changed the way the land was used since the expansion of pastoralism put pressure on agriculture, and large areas of arable land were turned into pastures.

Despite Sultan Mahmud's intervention in Chorasmia, the Karakhanid ruler Ali Tegin (r. *ca*. 1014/15 or 1020/21–34/35), who could count on the support of the Oghuz-Seljuk cavalry led by Israïl ibn Seljuk, remained a considerable threat. Around 1025/26, Mahmud, in alliance with Ali Tegin's Karakhanid rival, Yusuf Qadïr Khan, forced Ali Tegin to retreat into the steppe, and he also captured Israïl ibn Seljuk, but as soon as Mahmud turned towards India, Ali Tegin returned to Bukhara and consolidated his position. After his limited success against Ali Tegin and his Seljuks, Mahmud made the grave mistake of allowing the leaderless Turkmen followers of Israïl ibn Seljuk to cross the Oxus and settle in Khorasan, in spite of warnings from his general Arslan al-Jadhib. And by 1028, Mahmud was indeed forced to use his troops to drive back the Turkmen, who were now plundering the region.[168] When the emir of Rayy, the Buyid emir Majd al-Daula (r. nominally 997–1028, de facto 1028–29), rather rashly asked Mahmud to help against mutinous troops, the latter seized the welcome opportunity to demonstrate his role as champion of Sunni orthodoxy. He seized Rayy without a fight, deposed Majd al-Daula, plundered the city and slaughtered the 'adherents of the Batiniyya [Ismailites] and Qarmathians'.[169] Mahmud then made his son Mas'ud governor of Rayy and commissioned him with prosecuting the war in Iran.

The only areas where Mahmud suffered serious defeats were the two mountainous 'pagan' regions of Ghur and Kafiristan, where it was difficult for his unwieldy army to deploy.[170] Mahmud ordered two campaigns to the Ghur region north-west of Ghazna, some 2,250 metres above sea level, in 1011 and 1020. In spite of some victories, the Ghaznavids never gained full control of Ghur, nor did they succeed in spreading the Islamic faith. Even less successful was Mahmud's campaign of 1020 to Kafiristan,[171] today's Nuristan, north-east of Kabul and Laghman, where the inhabitants held on to their animistic beliefs, even though Mahmud's aim, according to Gardizi, had been 'to impose Islam upon the people by the sword'.[172] It was not until the late nineteenth century, between 1893 and 1896, that the mountain-dwellers of Kafiristan were forcibly converted to Islam.[173] The 20 raids that Mahmud led to India, on the other hand, leaving aside the aborted sieges of the forts of Loharkot (1021/22) and Gwalior (1022/23),[174] were a military and – thanks to valuable booty – economic success. In 1001, he subdued the Hindu-Shahi Rajah Jaipal, whom his father Sebük Tegin had previously defeated in 986/87, and then in 1009 Jaipal's son Anandpal, whose residence was in Lahore.[175] In 1024 Mahmud attacked the Rajah of Bhatinda south of Lahore, who committed suicide after his defeat; Mahmud took home a booty of 280 war elephants 'and ordered that all the infidel [prisoners of war] should be put to the sword'.[176]

Mahmud's next target was the wealthy city of Multan on the Jhelum (or Chenab) river in the province of Sindh. Multan's population had been forcibly islamised as early as 709–11 by the Umayyad general Muhammad ibn Wasim al-Thaqafi (d. 715) but in the tenth century had converted to Shi'a Ismailism, giving Mahmud a pretext to wage war against the 'heretics'. At first Mahmud exacted an enormous ransom from Multan in 1006, then he returned in 1010/11 and had the Ismailis massacred.[177] The famous description of Timur-e Lang could equally be applied to Mahmud: 'He killed the unbelievers because they were not Muslims, and he massacred the Muslims because they were bad Muslims.' Further targets of Ghaznavid raids were the rich Hindu temples, lavishly decorated with gold and precious stones, like those of Thanesar in Daob (1014), of Mathura, the legendary birthplace of Krishna (1018/19) and of Somnath (1025/26). Every time that a temple was plundered, young men were enslaved, and large numbers of 'non-believers' were killed. In 1026, warriors of the Jats, the indigenous population

73. The Ghaznavid sultan Mahmud defeats the ruler of Bahatiyah (India). From *Jamia al-Tawarikh,* a history of the world by Rashid al-Din Hamdani (1247–1318), produced in 1307 in Tabriz, Iran, Vellum. University of Edinburgh, Edinburgh, Oriental Manuscript Collection, 20 f. 126v.

of Sindh, inflicted heavy losses on Mahmud's army when he retreated from Somnath to Multan. Mahmud returned a year later to take revenge on the Jats, who had been stubbornly resisting forced Islamisation since the eighth century. As the contemporary writer Gardizi reports, Mahmud had 1,400 boats built; each boat was to carry 20 archers and be equipped with special projectiles that could be filled with naphtha. Mahmud's fleet sailed down the Jhelum and then the Indus, until it met the Jat fleet. Although the Jats had far more boats than Mahmud, their fleet was set ablaze and destroyed.[178] Further proof that the sultan had little else in mind than booty during his Indian campaigns is provided by the fact that he made no real effort to establish a civil administration in northern India.

The situation after Mahmud's death was the same as after Sebük Tegin's: Mahmud had chosen as his successor not his son Mas'ud, who was popular with the army, but his other, rather lacklustre son **Muhammad** (r. 1030, 1040–41). But just like his father 32 years before, **Mas'ud I** (r. 1030–40, d. 1041) did not accept this decision and incarcerated his brother, who had no support in the army. Mas'ud was a brave warrior but he was also suspicious and vengeful; and he lacked the strategic vision that would have been necessary to hold together such a vast and heterogeneous empire with only weak administrative structures. He made his first mistake as soon as he took power by purging the officer corps and higher administration of confidants of his father. He also failed in his attempt to extend Ghaznavid control in Iran by adding the province of Kerman to Khorasan and Rayy. The inhabitants of Kerman, who were ruthlessly exploited by Mas'ud's tax collectors, rose in revolt and drove out the Ghaznavid occupiers in 1034. Mas'ud had already made mortal enemies of Turkmen leaders in Khorasan when his general Tash Farrash had murdered 50 of them at a banquet.

Worse still was the loss of Chorasmia, which had a strong army and provided a counterweight to the Karakhanids. Mas'ud, suspicious and resentful of the Chorasm-shah Altun Tash, ordered the latter's murder in 1031 but the plot failed. Nonetheless, Altun Tash remained loyal and fell in a battle against Ali Tegin of Bukhara in 1032. But Altun Tash's son and successor Harun (r. 1032–35) changed sides and formed an alliance with Ali Tegin, whereupon Mas'ud had him murdered. This in turn made Harun's brother Ismail Khandan into Mas'ud's arch-enemy. Although Mas'ud's ally Shah Malik of Yangikent later controlled parts of Chorasmia, Mas'ud, through his ill-considered policies, deprived himself of the support of Chorasmia in the conflict against the Turkmen led by Tughril and Chagri, which soon intensified. In northern India, Mas'ud was more successful: in 1033 he crushed the rebellion of his commander Ahmad Inal Tegin, and in 1036/37 he captured the fort of Hansi north-west of Delhi; but at the same time the situation in Iran and Khorasan deteriorated.[179] In 1038, Turkmen drove the Ghaznavids out of Rayy, and in 1039 Mas'ud's unwieldy army, made even slower by its large contingent of camp followers, failed to inflict a decisive victory over the highly mobile Turkmen cavalry. Tughril and Chagri, using a strategy of 'burnt earth' and poisoned wells, waited until the enemy was drained and exhausted. They then attacked in May 1040 near Dandankan, at a location of their own choosing, and annihilated Mas'ud's forces. Instead of assembling a new army in his power base of Ghazna to prepare the defence of the heartland, Mas'ud, against the recommendations of his advisers, fled to India in a panic, laden with all his treasures.

Mas'ud's secretary, the historian Abu' Fadhl Beyhaqi (995–1077), who had participated in the battle of Dandankan, described the desperate attempts to dissuade Sultan Mas'ud from his planned flight. When Mas'ud sent a letter to his vizier, who was successfully resisting a Turkmen siege in Balkh, informing him that he was about to leave Ghazna and flee to northern India, Beyhaqi sent a secret message to the vizier asking him to try and change the sultan's mind. The vizier's warning to his master was clear: 'If the lord is on the move because our enemies are fighting at the gates of Balkh, he should know that they haven't dared to enter the town and our troops have the upper hand. [. . .] Why does the lord have to reside in India? Let him pass the winter in Ghazni. [. . .] The lord must know for sure that, if he goes to India, and takes all the royal womenfolk and treasuries to there, and this news becomes generally known, reaching friend and foe alike, the prestige of this great empire will be dissipated and everyone will become increasingly avid to get a share of it. [. . .] Moreover, what reliance can one place on the gholams [slave-soldiers] when the lords' treasuries will have to be laid open to them while travelling in the open country?'[180] But in his panic, Mas'ud ignored the warnings and set off to India.

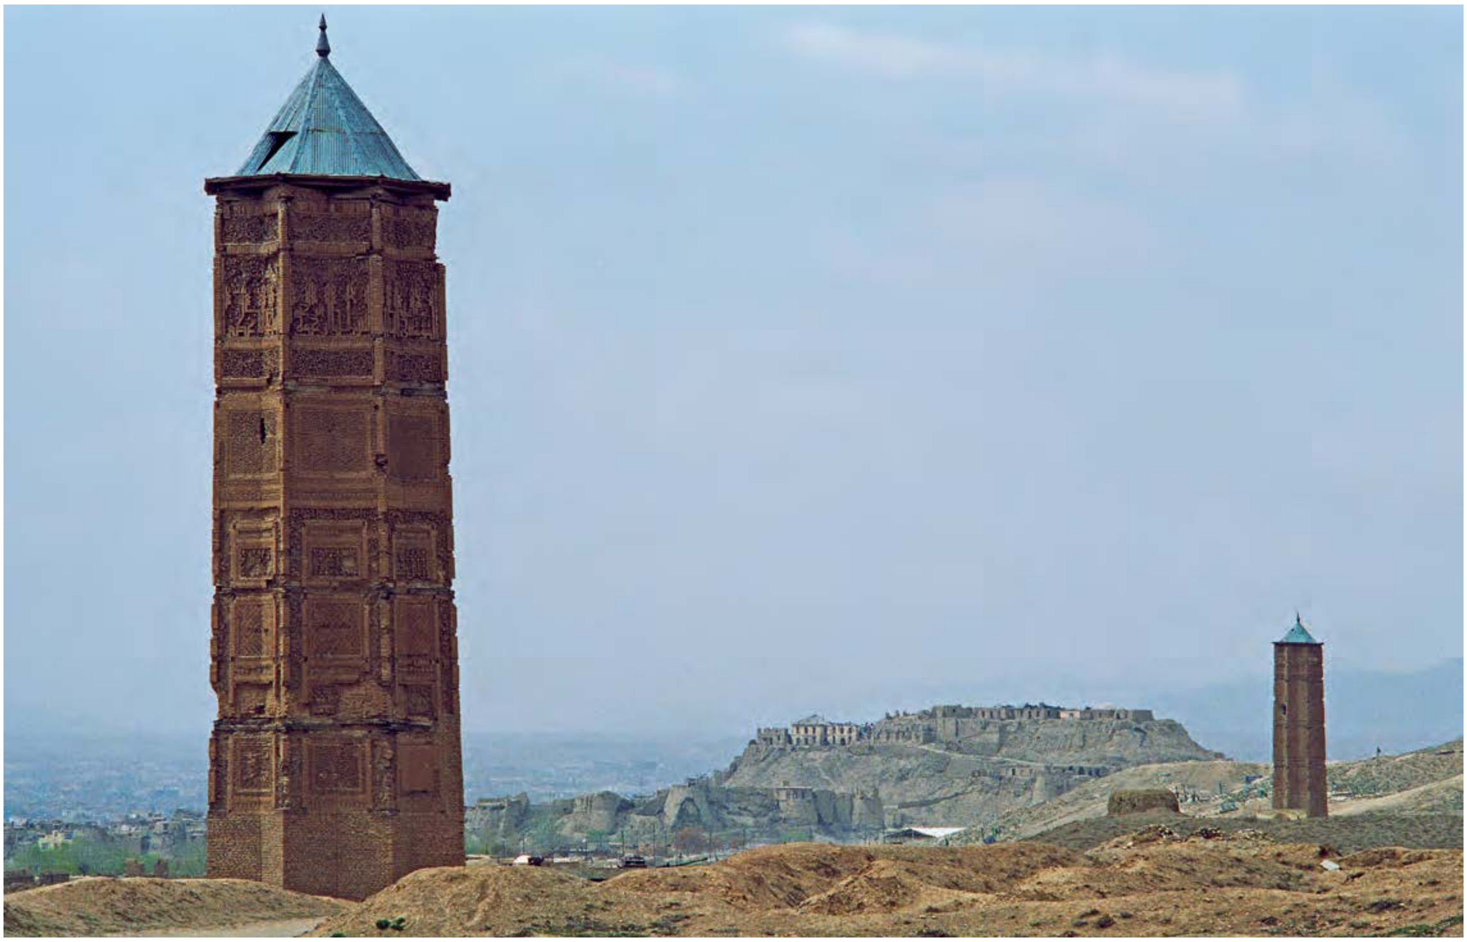
In mid-December, the troops accompanying him revolted near Taxila, having lost all respect for their sultan. They plundered his treasures, made his blinded brother Muhammad the new sultan and killed the luckless Mas'ud on 17 January 1041.[181] With this defeat and Mas'ud's flight, the Ghaznavids lost their western territories, and their dominion shrank to the regions of eastern Afghanistan, Baluchistan and Punjab, with the two centres of power Ghazna and Lahore.

The cultural achievements of the early Ghaznavids, unlike those of the Abbasid and Samanid rulers, were not the result of any genuine interest that Mahmud and Mas'ud had in scholarship, poetry or the visual arts. The two sultans' principal ambition was to be acclaimed by poets and immortalised in monumental architecture. Famous scholars such as al-Biruni were kept at the court like trophies, while the court poets broadly felt into two categories: mere flatterers and true artists of the word. The most famous among the latter was Hakim Abu 'l-Qasim Ferdowsi (940–1020) from Tus. In 977, the Samanid court commissioned him to continue the work that the poet Abu Mansur Daqiqi had begun writing in prose. The initiative to collect pre-Islamic histories and myths written in Middle Persian (Pahlavi) and translate them into New Persian came from the governor of Tus, Abu Mansur Muhammad (d. 962 or 963), who had delegated this task to his minister Abu Mansur Mamari. The work, to which the poet Abu Mansur Daqiqi made a major contribution, was called *Shahnameh-i Abu Mansur*, the 'Book of the Kings of Abu Mansur'. Abu Mansur Daqiqi had been murdered in 977 at the behest of orthodox Islamic legal scholars, who condemned his efforts to revive the Old Iranian heritage.[182] Ferdowsi completed his epic *Shahnameh* in some 50,000 verses in 1010. There had already been a first version in 994 but the overthrow of the Samanid dynasty by the Ghaznavids led the poet to develop the epic further and complement some sections concerning contemporary history with praise of the Ghaznavid sultan Mahmud. Like earlier 'books of kings' from the time of the



75. The two victory towers at Ghazna, Afghanistan, where the Ghaznavids had their summer palaces, with the citadel in the background. To the left in the foreground is the tower, commissioned by Sultan Mas'ud III ibn Ibrahim (r. 1099–1115). Now measuring 20 metres, it was formerly 24 metres taller. The upper half collapsed during an earthquake in 1902. The patron's name appears on a scroll in interlaced Kufic script just below the top of the tower. The second tower in the background was built on the orders of Bahram Shah (r. 1117–*ca*. 1157).[18] Photo: 2010/11.

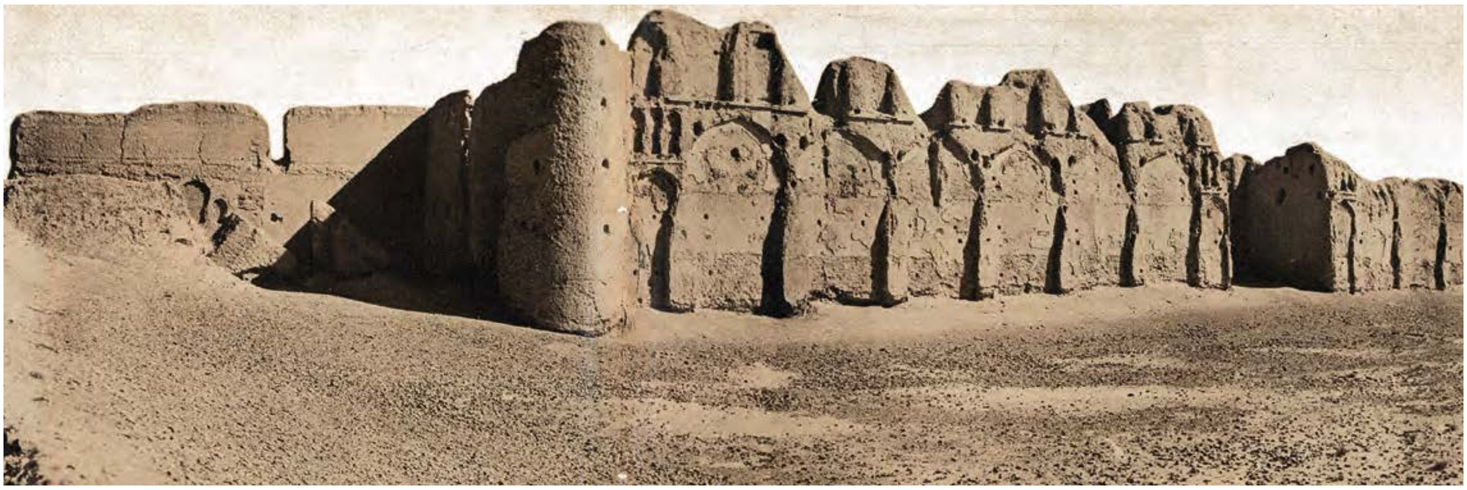
Sassanids, Ferdowsi's epic was a mythological history from creation to the present. Its main theme concerned the conflicts between Iran in the west and Turan in the east. Contrary to a view already widespread in Ferdowsi's time, that the Turanians were the ancestors of the Turkic peoples, in older sources both adversaries speak Iranian. They tell of the epic struggle between the sedentary Iranians and the horse nomads of Iranian origin beyond the Oxus and in Sistan, such as the Massagetae, Saka[183] and Kangju-Alans, that is the Turanians. But by the eleventh century, some groups among the Karakhanids and the Seljuks had come to believe that their ancestors were related to the Turanians.[184]

The two sultans Mahmud and Mas'ud celebrated their powerful position in the south-west of Central Asia in the monumental architecture of their two residences, Ghazna, which was the capital and summer residence, and Lashkari Bazar, 450 kilometres south-west and 7 kilometres north of Bust (figs. 80a–b), which was the winter residence. In Ghazna, Mahmud built administrative residences, a large Friday mosque and a grand palace whose walls were covered with geometric and zoomorphic terracotta decorations. In Laskhari Bazar, Mahmud is said to have personally designed and supervised the construction of the *al-Askar*, a palace complex whose name meant 'the military camp' (fig. 77). The audience hall of the sumptuous southern palace, which was completed in 1036, had rich relief decoration on the walls, above friezes that depicted, among other things, Mas'ud's bodyguards in full life size and dressed in splendid clothes. A canal ran through the audience hall and surrounding rooms and provided running water for the palace.[185] Later Mas'ud's grandson, Mas'ud III (r. 1099–1115) built a 44-metre victory tower in Ghazna, made of fired brick, with star-shaped ground plan, and decorated with knotted Kufic inscriptions. Unfortunately the upper half was destroyed by an earthquake in 1902. Not far from Mas'ud's tower, his son Bahram Shah (r. 1117–*ca.* 1157) built another, similar tower (fig. 75).[186] With this the two sultans followed the example of the Ghaznavid Sultan Mahmud, who had built the 62 metre-high, so-called Kutlugh-Timur minaret in Gurganj (fig. 83).[187] The Karakhanids, Seljuks, Ghaznavids, Ghurids and Chorasm-shahs left a total of 70 such minarets, which symbolised the presence of Islam.[188] The palaces of Ghazna and Lashkari were plundered and destroyed in 1150/51 by the Ghurids; Ghazna was plundered a second time in 1160/61 by bands of Oghuz. When the Ghurids drove out the Oghuz in 1173/74, the palace of Ghazna was rebuilt with a less lavish interior. Ghazna was finally razed to the ground in 1221 by the Mongols.[189]

The history of the later Ghaznavids, after their defeat at Dandankan, was shaped by their increasing focus on the Indian subcontinent, a cautious or even obsequious relationship with the Seljuks, and failed attempts to keep the troublesome Ghurids at bay. After Mas'ud's death, the second term in office of **Muhammad ibn Mahmud** (r. 1040–41), whom the mutinous soldiers had put on the throne on 21 December 1040, turned out to be very short: in the spring of 1041, Mas'ud's son **Maudud** (r. 1041–48) defeated him and, to avenge the death of his father, had Mohammad ibn Mahmud and his family executed.[190] In the heartland, Maudud managed to restore some stability to the Ghazna region, but Balkh and Herat fell to the Seljuks.[191] Over the following eleven years, four sultans quickly succeeded one another. Notable events in this time were the putsch of the Turkic slave officer and commander-in-chief **Tughril** in 1052, the bloodbath that he initiated among the Ghaznavid ruling family, and a failed assault of the Seljuk Chagri Beg on Ghazna.[192] Apart from an abortive attack on Balkh in early 1073, **Ibrahim ibn Mas'ud** (r. 1059–99), after this turbulent decade,



77. **The main entrance in the southern façade of the southern palace of Lashkari Bazar 7 kilometres north of Qala-i Bust, Afghanistan. The River Helmand flows past the palace on the left of the picture. The name is derived from the Persian Lashkar Gah meaning 'soldiers' caserne'. The palace was built on the orders, first of Ghaznavid Sultan Mahmud (r. 998–1030) and then of his successor Mas'ud (r. 1030–40). Lashkari Bazar was destroyed by Genghis Khan in 1221, then laid to waste by Timur-e Lang at the end of the fourteenth century. *The Illustrated London News*, 25 March, 1950. Photo: 1930s.**

finally made peace with the Seljuks and revived the empire's economy.[193] Sultan Ibrahim was succeeded by his son **Mas'ud III ibn Ibrahim** (r. 1099–1115), who built one of the two victory towers of Ghazna (fig. 75). During his reign, which is only documented in fragments, neighbouring Ghur fell under the suzerainty of the mighty Seljuk Sanjar Shah, which represented a danger for Ghazna's sovereignty.[194]

Mas'ud III was succeeded by his son **Shirzad** (r. 1115–16), who after only one year in office was deposed and killed by his brother **Malik Arslan** (Arslan Shah) (r. 1116–17, d. 1118). Malik Arslan ordered the blinding or arrest of all his brothers, but one, Bahram Shah, escaped with a single companion and fled to Sanjar Shah in Merv. According to one anecdote, the fugitives' horses were shod with shoes that were turned backwards, to confuse pursuers.[195] This conflict gave Sanjar the chance to extend Seljuk suzerainty to Ghazna; he defeated Malik Arslan in 1117 near Ghazna, had the city thoroughly and brutally plundered and put **Bahram Shah** (r. 1117–*ca.* 1157) on the throne as his tributary vassal. Malik Arslan's attempt to win back Ghazna after Sanjar's retreat ended in his defeat and death in 1118. When Bahram Shah stopped his tribute payments in 1135, Sanjar surprised him with a sudden attack, and he had to flee to Lahore. After Ghazna was ransacked again, Bahram confirmed his submission, and Sanjar returned to Balkh and Bahram to Ghazna.[196]

Although Bahram Shah, as Sanjar's vassal, could count on Sanjar's support in the case of an extreme threat, the situation was less clear when it came to pressure from expansionist princes of the Ghurids, who were also Sanjar's vassals. In the late 1140s, the Ghurid territory was divided among seven brothers; among these Sayf al-Din Suri (r. 1146–49) ruled in Istiya, and Qutb al-Din Muhammad (r. 1146–47), who called himself *Malik al-Jibal*, 'King of the mountains', founded the later summer residence Firuzkuh (Jam) in central Afghanistan.[197] After falling out with Suri, Qutb sought refuge with Bahram Shah in Ghazna, but the latter suspected Qutb of being a spy and had him poisoned. Suri decided to avenge his murdered brother and in 1148 marched with his infantry – the Ghurids were mountain-dwellers and traditionally fought on foot – and an additional division of cavalry to Ghazna, which he took by storm. As the historian Minhaj al-Din Juzjani from Firuzkuh (1193–after 1265/66), who was part of the extensive ruling family of the Ghurids, reports in great detail, the victorious Suri gave Ghur and Firuzkuh to his brother Baha al-Din Sam (r. 1149) and stayed with only a few troops in Ghazna. But he had underestimated Bahram Shah, who put together a new army in the Punjab and returned in 1149. He caught up with Suri while he was fleeing to Ghur and had him crucified.

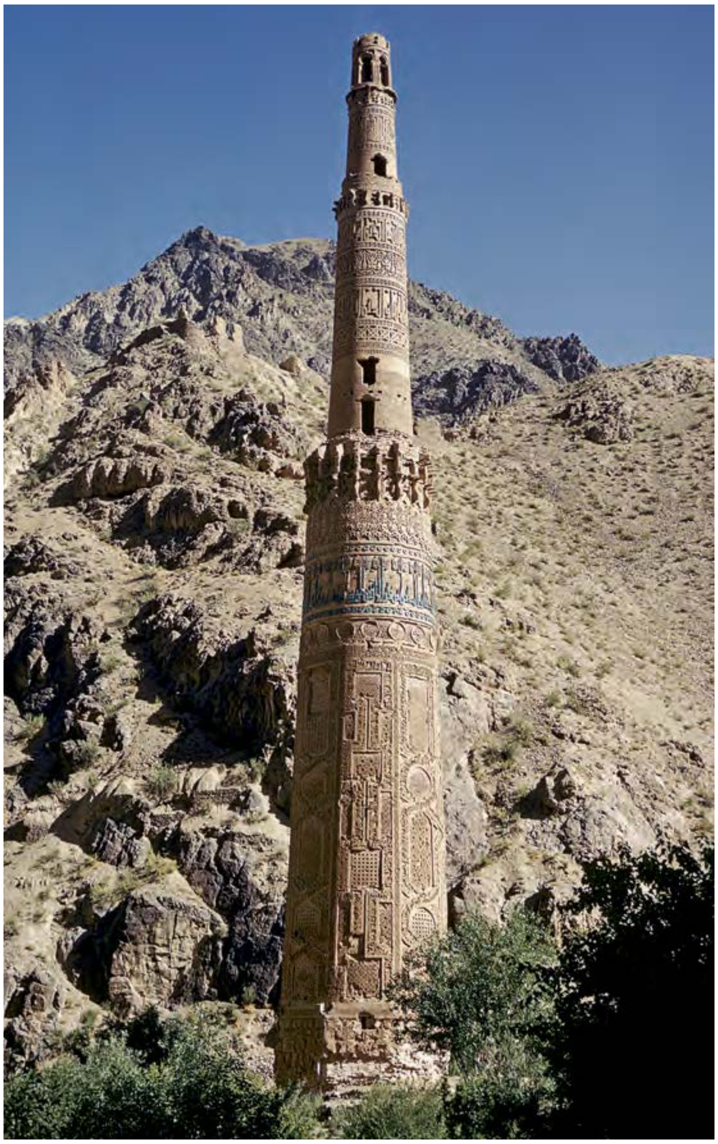
This provoked the wrath of another brother of Saif al-Din Suri and Qutb, Ala al-Din Husayn (r. 1149–61), who swore revenge. In 1150, he marched to Ghazna and defeated Bahram Shah and his elephants three times in a row. The Ghurid infantry protected itself from the enemy's volleys of arrows with the *karwah*, a pavise-like framework of bullock hides stuffed with cotton. 'When the foot-soldiers of Ghur place this [screen] upon their shoulders, they are completely covered from head to foot by it; and when they close their ranks, they appear like unto a wall, and no missile or arms can take any effect on it, on account of the quantity of cotton with which it is stuffed.'[198] This battle formation was somewhat similar to the Roman *testudo* or tortoise, in which the first row of a compact standing division of legionaries held their rectangular shields forward, and the following rows held them over their heads in such a way that they also covered the following rows, as the shields overlapped.[199]

Bahram Shah fled, and Ala al-Din Husayn and his soldiers embarked on a seven-day orgy of violence and destruction. 'During these seven days, the air, from the blackness of the smoke, continued as black as night; and those nights, from the flames raging in the burning city, were lighted up as light as day.'[200] All the splendid mosques, madrasas and palaces went up in flames, and so did Ibn Sina's unique library, which had been brought from Isfahan to Ghazna in 1034. The Ghurid conquerors also had no scruples about desecrating tombs: they exhumed and burned the bones of all but three Ghaznavid sultans. The destruction of Ghazna and the murder of some 60,000 male inhabitants gained Ala al-Din the epithet *Jahan-Suz*, 'the world burner'. On the march back to Ghur, Ala al-Din also put the palaces of Lashkari Bazar to the torch and carried out yet another atrocity. He had all the high-ranking citizens rounded up in Ghazna. Then 'bags were filled with earth of Ghaznîn, and placed upon their backs, and [they were] brought along with him [over hundreds of kilometres] to Fîruz-koh, the capital; and, on reaching it, the Sayyids [the nobles] were put to death, and their blood was mixed with the earth which had been brought from Ghaznîn, and from it several towers were erected on the hills of Firuz-koh.'[201]

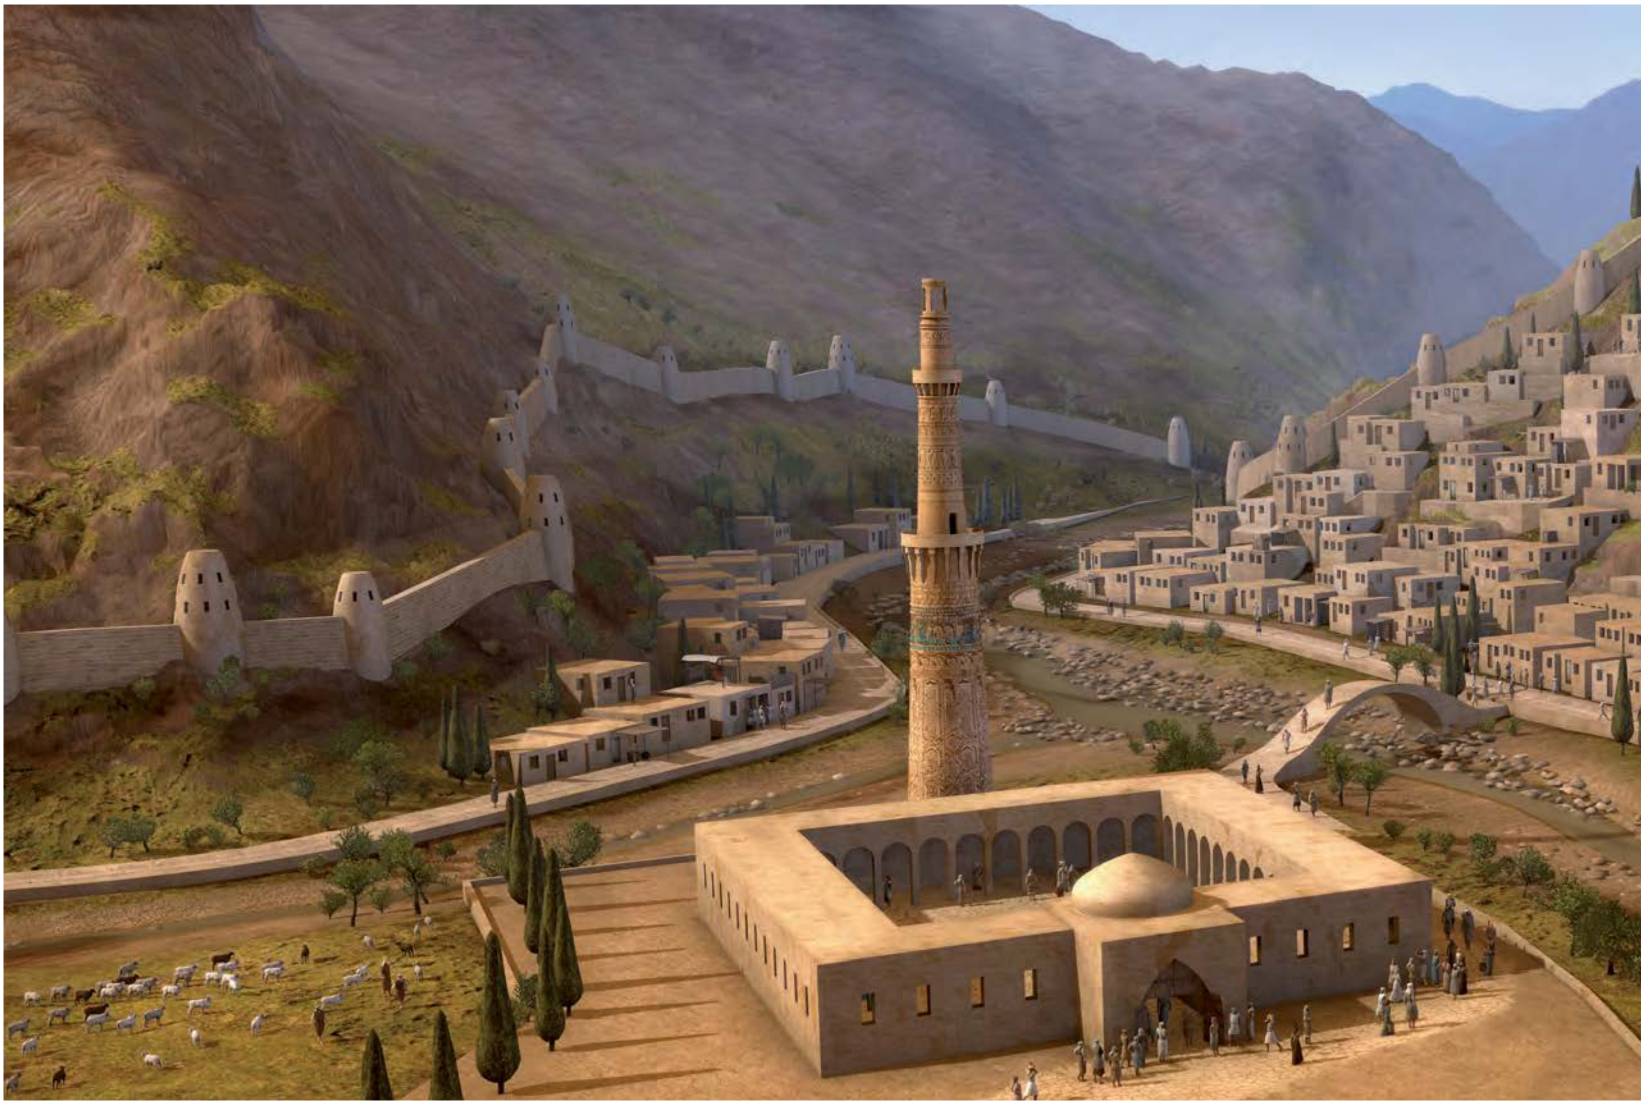
After the retreat of the Ghurids, Bahram Shah returned to Ghazna, where he probably died in 1157. His son and successor **Khusrau Shah** (r. 1157–60) soon had to face another attack by Ala al-Din Husayn, who finally annexed the region of Bust. Then, as a result of the capture of Sanjar and the collapse of Seljuk authority in Central Asia, another enemy appeared on the scene – one who threatened both Ala al-Din's successor Sayf ad-Din Muhammad (r. 1161–63) and the last Ghaznavid **Khusrau Malik** (r. 1160–86, d. 1191). After Khusrau Malik had fled from Ghazna, bands of Oghuz started attacking the city in 1160/61 and in 1163 advanced into Ghur, where they killed Sayf al-Din Muhammad in battle. The Oghuz seized Ghazna, until they were driven out in 1173/74 by the Ghurids. Khusrau Malik managed to hang on in Lahore for another quarter century, until the Ghurid Mu'izz al-Din Muhammad conquered the city in 1186 and captured him; five years later Mu'izz al-Din had Khusrau Malik and his son Bahram Shah killed.[202] This was the end of the Ghaznavid dynasty, and the Ghurids inherited their territories in the Punjab.

4. The Ghurids

The history of the short-lived military state of the Ghurids in central Afghanistan was shaped to a large extent by the geography of its heartland. The region east of Herat is very rugged, with fertile valleys between steep mountain ranges over which few paths led. The valley of the Hari-Rud, with the cities of Chaghcharan, Firuzkuh and Chisht, formed the heartland of Ghur. Later, Herat in the Hari-Rud valley and Bamiyan and Ghazna were added; the last two were autonomously governed by parallel dynastic branches of the Ghurids. Neither the mountain-dwellers of Ghur nor the



78. The minaret or victory tower of Jam, Afghanistan. The 62-metre-high minaret, built in the second half of the twelfth century, stands at Firuzkuh, the Ghurid summer capital. Photo: 1971.



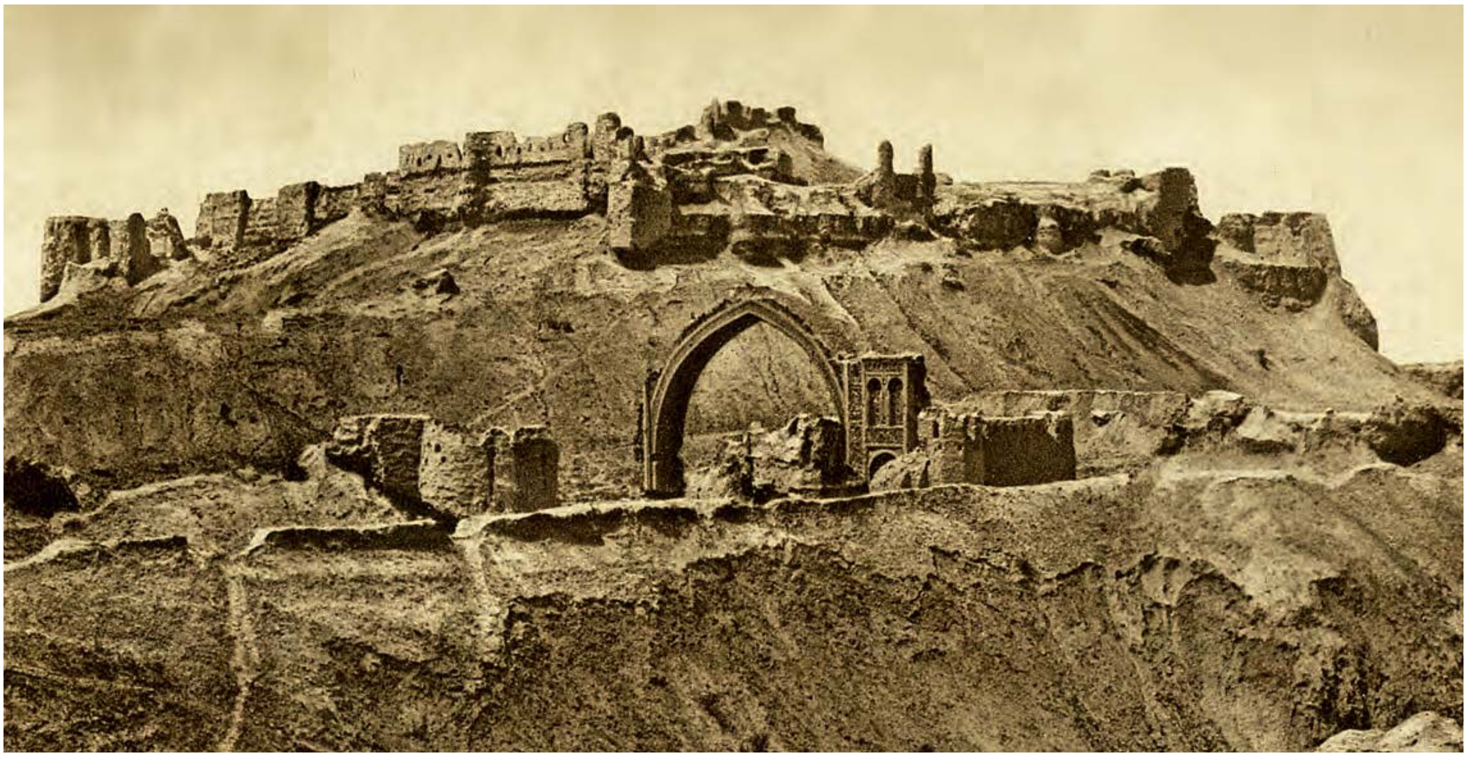
79. Illustration, based on archaeological data, of the Ghurid summer capital at Firuzkuh in central Afghanistan, situated in the narrow valley of the Hari Rud river. Presumably there was a mosque close to the victory tower built in 1174/75 or, from 1193/94 onwards. Sometime after 1215/16 the city was massively reinforced by the addition of fortifications, which is why it was able to withstand the first Mongol siege of 1220/21 and only submitted in 1222/23 when the Mongols deployed siege catapults.

ruling family of the Shansabani, whose name probably derives from the Middle Persian *Wišnasp*, were Turkic, and were most probably eastern Iranian Tajiks.[203] That the Shansabani were linked to Iranian culture was also demonstrated by the fact that their sultans were generous patrons of Persian literature, something that led to the strong influence of Persian culture on Muslim northern India.

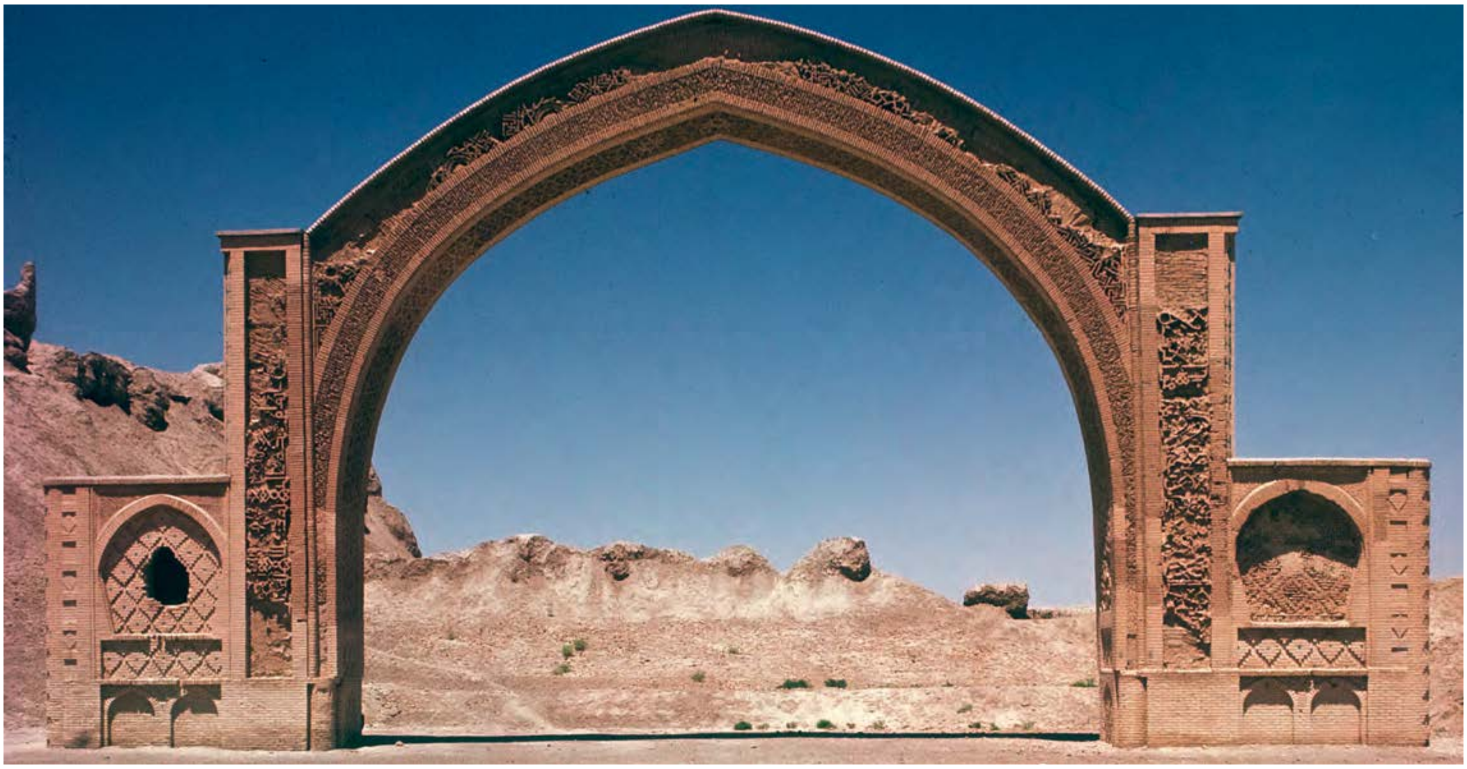
The first ruler mentioned by Juzjani is **Suri ibn Muhammad** (r. *ca.* second half of the ninth century). He was attacked by the Saffarid Yaqub ibn al-Layth al-Saffar (r. 861–79) but managed to escape into one of the many mountain fortresses. Juzjani adds that Suri was only one of several chieftains, who were constantly at war with each other, and that the people of Ghur remained to some extent non-Muslims.[204] After a few attacks by Sebük Tegin towards the end of the tenth century, the Ghaznavid Mahmud and his son Mas'ud launched two campaigns (1011 and 1020) to bring Ghur under their control. They installed the Shansabani **Abu Ali ibn Muhammad** (r. *ca.* 1011–*ca.* 1035) as king. The next ruler was **Abbas ibn Shith** (r. *ca.* 1035–*ca.* 1060), who deposed his uncle Muhammad. When some unhappy leaders complained to Ibrahim ibn Mas'ud of Ghazna about Abbas, Ibrahim replaced him with his son **Muhammad ibn Abbas** (r. *ca.* 1060–*ca.* 1080?).[205] It seems that Ghur descended into chaos under Muhammad's successor **Qutb al-Din Hasan** (r. *ca.* 1080–1110); the sultan of Ghazna probably considered it too insignificant to warrant another intervention.

With Malik **Izz al-Din Husayn ibn Hasan** (r. 1100–46), peace and stability returned to Ghur, even though in 1107/8 he had to

accept the suzerainty of the Seljuk Sanjar.[206] The fact that Sanjar asked for fighting dogs, weapons and armour as tribute, suggests that the Ghurids were good swordsmiths, who possessed large deposits of iron ore. The next generation of Ghurid rulers consisted of the seven sons of Izz al-Din Husayn, and it ushered in a phase of expansion. Izz al-Din's successor was **Sayf al-Din Suri** (r. 1146–49), who according to tribal law had to divide power with his six brothers, including Qutb al-Din Muhammad (r. 1146–47), who founded the summer residence Firuzkuh in the Hari-Rud valley (fig. 79). As described above,[207] Qutb fled to Ghazna after a quarrel with Suri, where he was poisoned by Bahram Shah in 1147. After Bahram Shah had also captured Qutb's brother Malik Suri and had him crucified, another brother, **Baha al-Din Sam I** (r. 1149), got involved. Baha equipped an army and marched to Ghazna but because he died on the way – a natural death, it seems – the fourth brother, Sultan **Ala al-Din Husayn** (r. 1149–61) took on the leadership and set fire to Ghazna in 1150 and to Lashkari Bazar near Bust in 1150/51.[208] But his triumph over Ghazna made Ala al-Din overreach himself. Setting off from Firuzkuh, he followed the Hari-Rud downstream and threatened the rich trading city of Herat, which belonged to the Seljuk Empire, but its sultan Sanjar inflicted a crushing defeat on him, took him prisoner and demanded a high ransom for his release.[209] After his return to Ghur, Ala al-Din welcomed Ismaili missionaries from Alamut and divided the empire into three regions: he kept the heartland of Ghur, the north and the west for himself, gave the east to Fakhr



80a. The free-standing arch below the Qala-i Bust citadel in Afghanistan. The citadel is close to the confluence of the rivers Helmand and Arghandab and was already mentioned by the first-century Greco-Roman geographer Isidore of Charax, by Pliny the Elder (*ca.* 50 CE) and the Persian scholar al-Tabari.[19] *Hudud al-Alam*, a tenth-century work by an unknown author, described Bust, the city situated between Herat and Kandahar, as 'The Gate of Hindustan'.[20] The photo was taken in 1915–16 by Oskar von Niedermayer, a German army officer who led a delegation of German and Indian diplomatic representatives to Kabul in 1915–16 , or by the Austrian refugee Emil Rybitschka in the same period. The reported aim of the German led expedition was to persuade the Afghan emir Habibullah to enter the war on the side of the German-Turkish alliance and to launch an attack on British India. Oskar von Niedermayer, *Afghanistan* (Leipzig, 1924), pl. 137.



80b. The Qala-i Bust Arch south of the Ghaznavid winter palace, Lashkari Bazar, Afghanistan. The free-standing triumphal arch dates from the Ghurid period in the second half of the twelfth century. The slightly pointed archway has a span of 25 metres and is flanked by two supporting pillars with carved scroll motifs. Photo: 1975.

al-Din Masud (r. 1146–63) based in Bamiyan, and a third line of the dynasty received the south with Ghazna at its centre, which served as a springboard for further conquests in northern India. Towards the end of his reign, Ala al-Din seized the city of Bust from the Ghaznavids and immediately had it rebuilt (fig. 80a).

The famous minaret of Jam (fig. 78), in an almost inaccessible region of western Afghanistan, probably derives its name from the Persian *masjed-e jameh*, 'congregational mosque'. Together with the monumental arch of Bust (fig. 80b) and the Friday mosque of Herat (fig. 212), it is one of the few surviving architectural monuments of the Ghurids. Built of fired brick, the minaret, 215 kilometres east of Herat, was explored for the first time in 1957 by André Maricq, who identified the location in the narrow valley of the Hari-Rud – today little more than a hamlet – as Firuzkuh, the former capital and summer residence of the Ghurids.[210] Firuzkuh, with its harsh winters and heavy snowfall, served the sultans mostly as a summer residence; the winter residence, Zamin-i Dawar, was further south.[211] When Qutb al-Din Muhammad made Firuzkuh (which means 'the turquoise mountain' or 'mountain of victory') his capital in 1146, the city was already a seasonal centre of trade, as the 58 Perso-Jewish tombstones that have been discovered there document. These tombstones bear inscriptions in New Persian and Hebrew and date from 1115 and 1215 – the earlier stones were erected before the foundation of the royal residence. It is very probable that there was a Jewish trade settlement in Firuzkuh, as in Ghazna, Balkh and Merv.[212] As archaeological research shows, Firuzkuh possessed two or more large forts or fortified palaces as well as several watchtowers. The city covered an area of at least 9.5 hectares, possibly twice as much (fig. 79).[213]

The reign of Sultan Ghiyath al-Din Muhammad (r. 1163–1202) marked the zenith of the empire, and a 62-metre tower minaret was erected in his honour,[214] as the inscription in ornate Kufic script[215] tells us. The tower was built either in 570 AH (1174/75 CE) and celebrated the reconquest of Ghazna from the Oghuz, or, if the date was 590 AH (1193/94 CE), it celebrated the victory of Sultan Ghiyath al-Din's brother Mu'izz al-Din Muhammad over the Rajput king Prithviraj in the second Battle of Tara'in in 1192, a victory which led to the conquest of Delhi.[216] The decline of Firuzkuh started at the end of the twelfth century. As Juzjani reports, floodwater from the Harid-Rud destroyed the main mosque of the city.[217] Soon after this, in 1199, revolts started when Sultan Ghiyath switched his support away from the pietistic sect of the Karrammiyya towards the established Shafi'i school of Sunni Islam, transferring the government to Herat at the same time. Archaeological research in 1960, 2003 and 2005 suggests that very close to the tower, which stands alone today, there was once a large building, perhaps the mosque mentioned by Juzjani.[218] In this case, the tower served not only as a monument celebrating military success but also as a minaret. After Firuzkuh fell to Chorasmia in 1215/16, its fortifications were strengthened, so the city was able to withstand a first siege by the Mongols in 1220/21. During the second siege, Genghis Khan's son Ögödei used trebuchets (siege catapults), and the city fell in 1222/23.[219]

After only two years, **Sayf al-Din Muhammad** (r. 1161–63), a staunchly orthodox Sunni who had Ismaili missionaries killed, fell in battle against the Oghuz.[220] He was succeeded by the brothers Sultan **Ghiyath al-Din Muhammad** (r. 1163–1202) and **Mu'izz al-Din Muhammad** (r. 1202–6), who rather than fighting each other chose to collaborate. After driving the Oghuz out of Ghazna in 1173/74, Ghiyath al-Din left Ghazna and the southern regions to his brother and returned to Firuzkuh. In 1175, he conquered Herat and gradually expanded the empire north-westwards; having captured Kerman, he set out to conquer Khorasan, which brought him in conflict with Chorasmia. At that time, Chorasmia was suffering from the effects of a fratricidal struggle between Chorasm-shah Ala' al-Din Tekish (r. 1172–1200) and Sultan Shah (r. as counter-shah 1172–93), in which both brothers entered swiftly changing alliances with the Ghurids and the Qara Khitai. In 1190, Sultan Ghiyath defeated Sultan Shah, the Chorasmian pretendant to the throne, near Merv and wrested some areas of Khorasan from him.[221] When in 1198 the Ghurid Baha al-Din Sam II of Bamiyan (1192–1205/6) conquered the city of Balkh, which was a vassal of the Qara Khitai, a large army of the Qara Khitai and of Chorasm-shah Ala' al-Din Tekish launched a counter-attack on Ghur. But the two brothers, Sultan Ghiyath and Mu'izz, carried off a great victory on the Oxus, and after the death of Tekish two years later, they captured Sarakhs, Nishapur and Merv – expanding the Ghurid Empire to its greatest extent.[222]

The Ghurids also quickly enlarged their territory to the south. In 1178, Mu'izz conquered Multan and Uch, in 1179/80 Peshawar and in 1186 Lahore, where he captured the last Ghaznavid sultan, Khusrau Malik. Five years later, he suffered a crushing defeat at the hands of the Rajput king Prithviraj of Ajmer and Delhi and only just managed to escape to Ghazna, but he returned in 1192, and this time, in the second battle of Tara'in, he had a great victory. After this, the Turkic general of the Ghurids, Qutb al-Din Aybak (d. 1210), seized Delhi, and in the following years Ghurid armies conquered Gwalior, Malwa, Bihar and even parts of Bengal.[223] One of the most significant casualties of the Ghurid eastern campaign under the Turkic general Ikhtiyar al-Din Khilji was the Buddhist monastery

81. **The victory tower in Delhi, India, standing 72.5 metres high, was built on the orders of the Ghurid military leader Qutb al-Din Aybak in 1199. Following the death of his master Sultan Mu'izz al-Din Muhammad in 1206, Aybak, formerly the sultan's slave, appointed himself autonomous ruler of Delhi (r. 1206–10) and founded the Slave dynasty, also called Ghulam dynasty (1206–90). Photo: 1971.**

and centre of learning Nalanda in Bihar. Nalanda could receive up to 10,000 students, and it was here that the Chinese monk, scholar and translator Xuanzang stayed in the late 630s. General Khilji sacked the monastery in 1193, and ordered the slaughter of all the monks and students. When some Ghurids enquired about the content of the vast monastery library, it turned out that not a single person able to read had survived the mass killing.[224] When Ikhtiyar al-Din Muhammad Bakhtiyar Khalji also tried in 1206 to launch an attack on Tibet from Bengal, he suffered a terrible defeat in Assam.[225] After the murder of Sultan Mu'izz al-Din Muhammad (r. 1202–6) Qutb al-Din Aybak declared himself *Malik*, King of Delhi. He thus founded the Mamluk dynasty of Delhi, sometimes referred to as the Slave Dynasty (1206–90), the first of five sultanates of Delhi.[226] Aybak died in 1210 after an accident while he was playing polo and was succeeded by the incompetent Aram Shah (r. 1210–11), who was deposed by Shams al-Din Iltutmish (r. 1211–36) after a year. In the 1220s, Sultan Iltutmish was able to prevent attacks by the Mongols, not least because he refused to enter into an alliance with Genghis Khan's enemy Jalal al-Din Manguberdi of Chorasmia.[227]

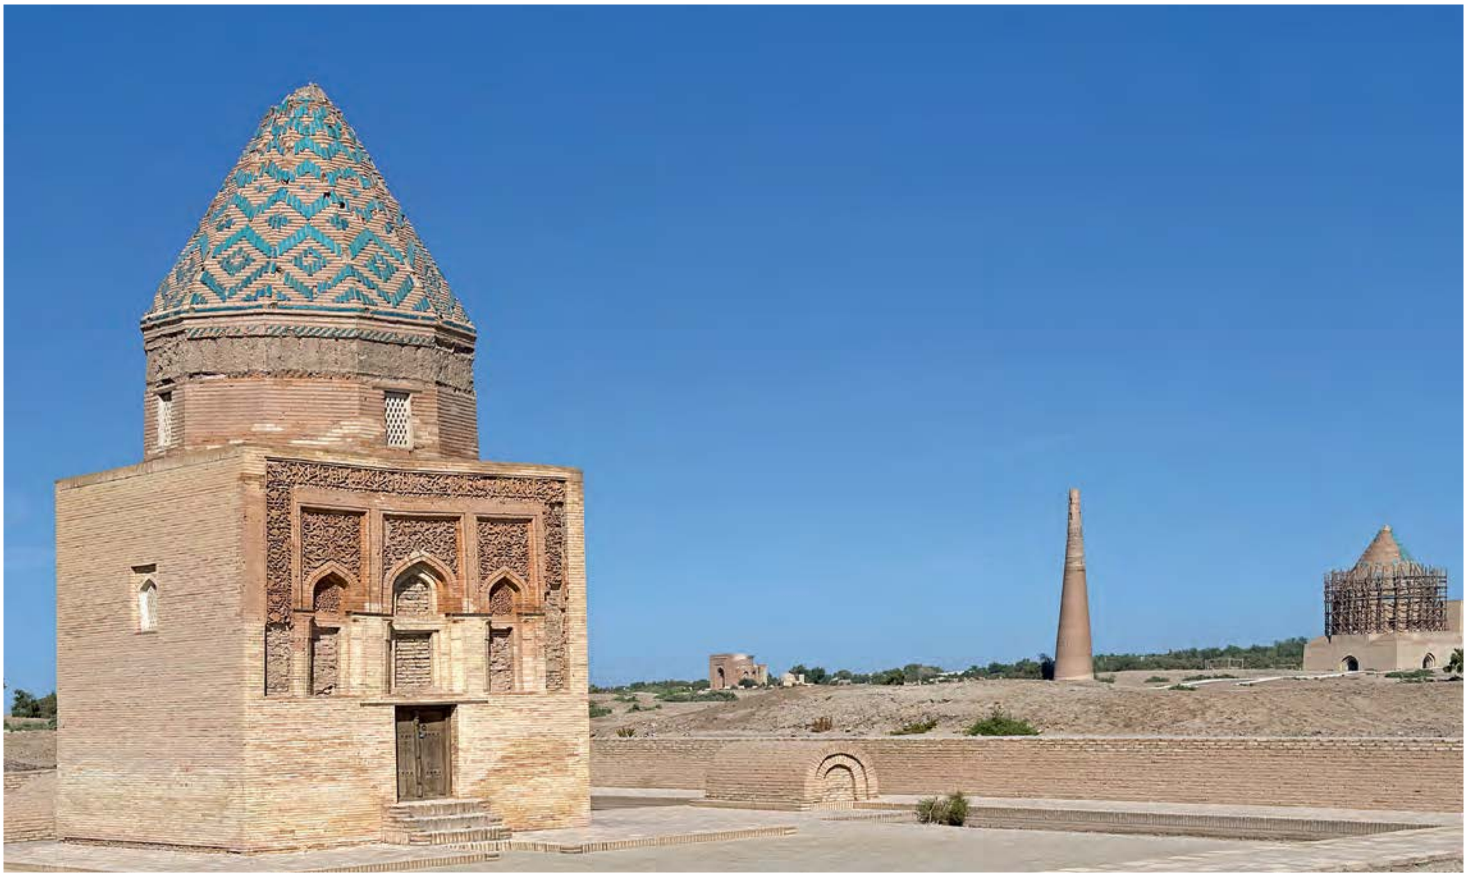
The most important part of the architectural legacy of Aybak is no doubt Quwwat-ul-Islam ('Might of Islam'), a mosque whose construction was started in 1193 and completed in 1229 by Iltutmish. To make way for it, 27 Hindu and Jain temples had been destroyed, and their spoils were used in the construction. Richly decorated columns from the temples can still be seen today in the arcades of the central courtyard. The most prominent feature of the complex is Qutb Minar, the 72.5-metre minaret that Aybak started to build in 1199 and which was only completed in 1368. As André Maricq, the first to research the minaret of Jam, understood, Qutb Minar was made from four superimposed, tapering cylindrical shafts and surrounded by projecting balconies and resembled the minaret of Jam.[228]

The Ghurids' successes in Khorasan turned out to be short-lived. Sultan Ghiyath was succeeded by his brother Sultan **Mu'izz al-Din Muhammad**, also known as Shihab al-Din (r. 1202–6), who in 1204 attacked the Chorasmian capital Gurganj. Chorasm-shah Muhammad ibn Tekish (r. 1200–20) responded by flooding the narrow strip of land between the Oxus and the Kara Kum Desert and asked Zhilugu, the Gür-Khan (ruler) of the Qara Khitai (r. 1177/78–1211) for military support. The alliance of the Qara Khitai, led by their commander-in-chief Tayangu, with Uthman ibn Ibrahim of Samarkand and Sultan Muhammad ibn Tekish, inflicted a crushing defeat on Sultan Mu'izz near Andhkud on the Oxus. Mu'izz immediately made peace and relinquished all of Khorasan except Herat; but on his return from an Indian campaign he was murdered.[229] After his death, the empire rapidly disintegrated because the generals who were running military operations in northern India declared their independence and at the same time conflicts erupted not only within the Shansabani clan but also between Ghurid and Turkic slave officers. The Ghurid commanders favoured Baha al-Din Sam of Bamiyan, and after his death in 1205/06 his sons Ala al-Din and Jalal al-Din, whereas the Turkic troops preferred **Ghiyath al-Din Mahmud** (r. 1206–12) and their wishes prevailed. As so often in the Islamic Middle Ages, it was Turkic military slaves who at a specific moment determined the succession of their nominal overlords.

Chorasm-shah Muhammad recognised the weakness of the new sultan, who had failed to establish his authority in northern India and in Ghazna. After a thirteen-month siege of Herat, he marched upstream along the Hari-Rud and captured Ghiyath al-Din Mahmud in 1208/9. Ghiyath al-Din Mahmud remained on the throne of Firuzkuh as the Chorasm-shah's vassal, but around 1212 he was assassinated. His successor **Baha al-Din Sam II** (r. 1212–13) was kidnapped by Muhammad, and the next sultan, **Ala al-Din Atsïz** (r. 1213–14), was killed by Taj al-Din Yildiz, a Turkic warlord who ruled over Ghazna, and who then installed **Ala al-Din Muhammad ibn Ali** (r. 1214–15/16) as puppet sultan. Chorasm-shah Muhammad reacted to the possible threat that came from Yildiz by occupying Firuzkuh in 1215/16, capturing the last Ghurid sultan and driving Yildiz out of Ghazna; Yildiz fled to Lahore. The victorious Muhammad then appointed his son Jalal al-Din (d. 1231) as governor of Ghazna, putting an end to the dynasty of the Ghurids.[230] But Chorasmian rule over Ghur, Ghazna and Herat had ended already in 1220/21 after the first Mongol attack.

5. The Ma'munids, Altuntashids and Anushteginids of Chorasmia

Around the end of the tenth century, Chorasmia, which according to al-Biruni had been governed by the Afrighid dynasty since 305,[231] was divided into two. In the eastern half resided the Afrighids in their capital Kath, on the right bank of the Oxus. The western half of Chorasmia was governed by princes whose names are unknown; they may already have belonged to the Ma'munid dynasty. Their capital was Gurganj, on the left bank of the Oxus. Both halves were vassals of the Samanids. As the anonymous geographical work *Hudud al-Alam* published in 982–83 noted, 'the town [Gurganj] abounds in wealth, and is the gate to Turkestan and resort of merchants'.[232] The city owed its wealth to its position at the end of a trade route, which linked Mawarannahr with the cities on the lower Volga and those of the Rus'. This economic success was the reason for the rivalry with Kath and the secession from the Afrighids. In 995, **Abu Ali Ma'mun I ibn Muhammad** (r. 992–97)



82. The city of Gurganj, Chorasmia, Turkmenistan, twice destroyed by Tolui Khan and Timur-e Lang. From left to right, the mausoleum of Sultan Il-Arslan ibn Atsïz (r. 1156–72), the fourteenth-century mausoleum attributed to Turabeg Khanum, the so-called Qutlugh Timur minaret built between the eleventh and twelfth centuries and the so-called Mausoleum of Sultan Ala al-Din Tekish (r. 1172–1200). Like Sultan Sanjar's audience hall in Merv, the latter was neither free-standing nor a mausoleum, but an audience hall and throne room.[21] Photo: 2014.

conquered Kath and had the last Afrighid ruler, Abu Abdallah Muhammad (r. 967–95), executed. At the same time he assumed the title of Chorasm-shah and founded the short-lived **dynasty of the Ma'munids** (992–1017). The Samanids were far too weak to prevent the reunification of Chorasmia. It seems that Abu Ali Ma'mun was murdered by his own bodyguards in 997. He was succeeded by his son **Abu 'l-Hasan Ali** (r. 997–1008/9), who was keen to establish friendly relations with his powerful neighbour Mahmud of Ghazna and married his sister. At the same time, the Chorasm-shah filled his capital with grand public buildings and invited the most famous scientists such as al-Biruni and Ibn Sina to his court.

But the splendour of Gurganj, with all its illustrious scholars, and the honorary titles bestowed by the caliphs, provoked the envy of the Ghaznavid Mahmud, and this would soon lead to the downfall of Abu 'l-Hasan's successor **Abu 'l-Abbas Ma'mun II ibn Ma'mun** (r. 1009–17). Mahmud demanded formal submission from the new Chorasm-shah as well as large tribute payments and the handing over of all scholars. Ma'mun II was unable to find any military allies so he submitted, but the army rose up in revolt. Ma'mun was killed in March 1017 and replaced by his young nephew **Abu 'l-Harith Muhammad** (r. 1017). The murder of Ma'mun II, who according to levirate custom had married the widow of his deceased brother Abu 'l-Hasan, gave Sultan Mahmud a fitting reason to go to war. Under the pretext of avenging his murdered brother-in-law, he besieged Chorasmia in July 1017, deposed Abu 'l-Harith and had the ringleaders of the rebellion executed. He then incorporated Chorasmia into the Ghaznavid Empire and appointed his military slave **Altun Tash** (r. as governor 1017–32) as governor of Chorasmia with the title of a Chorasm-shah. Thus the **Altuntashid dynasty** (1017–41) succeeded the Ma'munids.[233]

83. The Karakhanid victory tower in Gurganj, 62 metres high and dated between the eleventh and twelfth centuries, was restored by the governor of the Golden Horde, Qutlugh Timur (in office 1321–36), which is why it bears his name. Konye Urgench, Chorasmia, Turkmenistan. Photo: 2014.

Altun Tash, who had begun his military career under the Ghaznavid Sebük Tegin, proved to be a successful commander in the battle of Balkh against the Kharakanid ruler Ilek Nasr in 1008, and from 1010/11 was an able governor of Herat. He protected Chorasmia against the various Oghuz bands at a time when Oghuz were pushing neighbouring Khorasan into chaos. At the same time, Altun Tash hired Oghuz steppe warriors and established a guard loyal to him, which Sultan Mahmud and his successor Mas'ud saw as a threat. Both sultans tried in vain to lure their vassal to Ghazna but Altun Tash knew exactly what awaited him there. In 1032 Sultan Mas'ud gave Altun Tash the order to attack the Kharakanid prince Ali Tegin of Bukhara. Altun Tash obeyed and suffered fatal injuries in the inconclusive battle of Dabusiya near Bukhara.[234] His son and successor **Harun ibn Altun Tash** (r. 1032–35) was reluctantly confirmed by Sultan Mas'ud but demoted to deputy of the nominal Chorasm-shah; the title of the latter was given to his own son Said ibn Mas'ud.[235]

Two years later Harun rebelled, adopted the title of Chorasm-shah and formed an alliance with his arch-enemy Ali Tegin. Although Ali Tegin died a few months later, Harun continued his campaign and threatened the city of Merv in early 1035, but Sultan Mas'ud bribed some members of Harun's bodyguard, who murdered him during the siege of the city.[236] Harun's murder enraged his brother and successor **Ismail Khandan** (r. 1035–41). Since Ismail Khandan had formed an alliance with the Seljuks, who were gradually wresting control over Khorasan from Mas'ud, the latter allied himself with the Seljuks' principal foe, Shah Malik ibn Ali of Jand. He confirmed Shah Malik as the future ruler of Chorasmia once it was subdued. In the winter of 1040/41 **Shah**

84. The main gate of the ruined city of Izmukshir, south-east of Gurganj, Chorasmia, Turkmenistan, which prospered between the ninth and twelfth centuries. Photo: 2014.

Malik (r. 1041–42/43) conquered Chorasmia and moved to Gurganj as the new Chorasm-shah. Ismail Khandan fled to the Seljuks, who had just beaten Mas'ud in the battle of Dandankan. Without his Ghaznavid ally, Shah Malik was unable to withstand the Seljuk attack of 1042 and 1043. Chorasmia became a Seljuk province with frequently changing governors.[237]

The governor appointed by the Seljuk ruler of Chorasmia, Malik Shah I, was the military slave **Anush Tegin Garchai** (in office *ca.* 1077–*ca.* 1097), a Kangli-Kipchak, who probably came from Garchistan in northern Afghanistan.[238] Anush Tegin founded the dynasty of the **Anushteginids** (*ca.* 1077–1220/21), whose rule over Chorasmia was only interrupted for a few months by the military slave **Ekinchi ibn Qochqar** (r. 1097) appointed by Sultan Berkyaruq. When Ekinchi died in the same year, Berkyaruq installed the son of the founder of the dynasty, **Qutb al-Din Muhammad I ibn Anush Tegin** (r. 1097–1127/28), as new governor, again with the title of Chorasm-shah.[239] Qutb al-Din was able to consolidate his power and was succeeded by his son **Atsïz ibn Muhammad** (r. 1127/28–56). In the first decade of his rule, the new Chorasm-shah expanded his territory, but remained loyal to Sanjar Shah and accompanied him on some campaigns. At the same time, he secured his northern and north-eastern borders, constantly threatened by marauding Oghuz, by annexing the Mangyshlak Peninsula and the whole Ustyurt plateau and by conquering the important trade city of Jand in 1133, from where he penetrated deep into the Kipchak steppe.[240] As described above, the three attempts by Atsïz in 1138, 1143/44 and 1147 to shrug off Sultan Sanjar's overlordship failed, as did his plan to have the sultan murdered by two hired Ismailis from Alamut.[241] Although Sanjar was furious about his disloyal vassal, he accepted his third submission in 1148 and left him in his office as Chorasm-shah; Sanjar probably valued a strong and stable Chorasmia, which served as a buffer to the Oghuz, more highly than Atsïz's disloyalty.

Atsïz also suffered a setback through an invasion by the Qara Khitai. Whether he was initially a secret ally of the Qara Khitai, in order to avenge the execution of his son by Sanjar, as al-Athir assumed, remains uncertain.[242] At any rate, after the Battle of Qatwan, Erbüz, the commander-in-chief of the Qara Khitai, invaded Chorasmia in 1142 and caused much devastation, forcing Atsïz to agree to pay a yearly tribute of 3,000 gold dinars.[243] Despite

85. A 150-kilometre stretch of the River Oxus, which extends from Gaz Achak almost to the Dayahatin caravanserai, forms the frontier between Turkmenistan and Uzbekistan. Photo taken from Turkmenistan: 2014.

this defeat and the military supremacy of the Qara Khitai, who left their vassals a relatively free hand as long as they received tribute, in 1152 Atsïz attacked Jand, which in the early 1140s had regained its independence from Chorasmia. Although Kamal al-Din, the Karakhanid ruler of Jand, was also a vassal of the Qara Khitai, Atsïz was able to take back Jand practically without a fight.[244] Atsïz's son and successor **Il-Arslan ibn Atsïz** (r. 1156–72) remained subordinate to the Qara Khitai but otherwise ruled independently from the western Seljuks. He undertook a few forays into Khorasan, and in 1158 supported Karluk divisions when they asked for help against the Karakhanid khan of Samarkand. Since the Qara Khitai refused to intervene in the conflict and offer military aid to their vassal in Samarkand, the latter had to give in and agree to pay reparations to Il-Arslan and the Karluks.[245] In 1171, Il-Arslan was dragged into another war by the Karluks, which ended with a defeat at the hands of the Qara Khitai, to whom he had refused the yearly tribute.[246]

After Il-Arslan's death in 1172, a 20-year civil war broke out in Chorasmia, as well as a long struggle for supremacy in south-west Central Asia between the Qara Khitai, Chorasmians and Ghurids, which in the end Chorasmia won. Immediately after the death of Il-Arslan, the queen Terken Khatun[247] installed her young son, the crown prince **Sultan Shah** (r. as counter-shah 1172–93) on the throne and acted as regent. But the older half-brother **Ala al-Din Tekish** (r. 1172–1200), who ruled in Jand as governor, refused to return to Gurganj and sought refuge with Chengtian, the empress of the Qara Khitai (Yelü Pusuwan, r. 1164–77). Tekish offered a large part of Chorasmia's treasures to the empress, as well as a yearly tribute in return for her military help. The empress sent her husband Xiao Duolubu, the *fuma* of Muslim sources,[248] to Chorasmia with a large army. Realising they were outnumbered, Sultan Shah and his mother fled, and Tekish was enthroned on 11 December 1172. The two fugitives asked their Seljuk vassal of Nishapur, al-Mu'ayyid, for help, and he launched an attack in 1174. But Tekish was well prepared and annihilated the enemy army as it marched through the desert south of Gurganj. He captured al-Mu'ayyid and had him executed. Sultan Shah managed to flee to the Ghurids, but his mother was captured and killed by the pursuers.[249]

In the second half of the 1170s, Tekish felt strong enough to shrug off the overlordship of the Qara Khitai and had one of their tribute collectors killed. The Qara Khitai offered military support to Sultan Shah, who was exiled in Ghur, and an army led by the *fuma* marched to Gurganj. In preparing his defences, Tekish chose a method that his predecessors had used already: he opened the dykes of the Oxus and flooded the road to Gurganj. Xiao Duolubu broke off the offensive but gave Sultan Shah a troop contingent with which the latter defeated some local rulers of Khorasan, gaining control over Sarakhs, Merv, Abiward and Tus.[250] Meanwhile, Chorasm-shah Tekish was facing problems not only on his southern border but also in the north, where the Chorasmian town of Jand stood on the frontier with the Kipchak steppe and its belligerent horse warriors. To secure this northern border, Tekish married the daughter of Khan Akran of the Kangli or the tribe of the Baya'ut, which belonged to the federation of the Yemek.[251] This marriage also had the advantage that Tekish could easily hire Kipchak steppe warriors for his army and that thanks to her position his wife disposed of troops herself. But this alliance proved to be a two-edged sword, since the Kipchak warriors in the service of Chorasmia were excessively brutal and cruel, which made Chorasmian rule bitterly unpopular. And since the Kangli-Kipchaks put loyalty to their tribe above that to their lords, these horse warriors and their commanders were a security risk. As Tekish's son and successor Ala al-Din Muhammad (r. 1200–20/21) soon found out, the Kipchak officers were bound by the will of his mother Terken Khatun, who was hostile to him, something that during the conflict with Genghis Khan would have catastrophic consequences. Despite the alliance with the Kangli or Yemek, Tekish had to undertake a punitive expedition to Jand and Signak against Qadïr Buku Khan in the winter of 1194/95. It nearly ended in a defeat since parts of his Kipchak troops deserted to the enemy during the battle.[252]

The defeat of his rival Sultan Shah by the Ghurids near Merv in 1190[253] and his death in 1193 opened the path to the south-west for Tekish. In 1192 he intervened in the conflict between the Seljuk sultan Tughril III and the Atabeg ruler Qutlugh Inanch of Rayy on the side of the latter. He went to Rayy and demanded that his name should be proclaimed directly after that of the caliph in the *khutba*. Then he returned to Khorasan, leaving a garrison in Rayy. Tughril used the absence of the Chorasm-shah to drive out the Chorasmian garrison in 1193, but Tekish marched back to Rayy in 1194 and killed the last sultan of the Great Seljuks in battle. In the following years Tekish conquered the whole of northern Iran, Hamadan and Isfahan so that Caliph al-Nasir (r. 1180–1225) reluctantly had to send him an investiture patent confirming him as ruler of Iran and Turkestan in 1199.[254]

The year 1198 saw a swift change of alliances, typical enough for the time. At first, a large army of the Qara Khitai and Chorasmians attacked Ghur, but this ended in a defeat and many losses for the Qara-Khitai. Then Gür-Khan Zhilugu (r. 1177/78–1211) blamed the Chorasm-shah for the disaster and demanded enormous compensation. He emphasised his demand by sending an army led by the *fuma*. Seeing no way out, Tekish quickly made peace with the Ghurid sultan Ghyath and fended off the Qara Khitai attack. When Tekish died in 1200, after a 28-year reign full of wars and conflicts, the Ghurids besieged important cities in Khorasan,[255] and at the same time the northern Iranians rose up in revolt and massacred all the Chorasmians that they could lay their hands on.[256]

Because of the internal political weakness of the Qara Khitai and the Ghurids, Sultan Tekish's son and successor **Ala al-Din Muhammad II ibn Tekish** (r. 1200–20/21) was able to expand his rule further. But his empire was a colossus built on sand for it lacked a homogeneous administration and an ideology that could provide any sense of collective identity. His control over the army, especially the Kipchak divisions, was limited, and the commanders, with the exception of his son Jalal al-Din, were incompetent. In these adverse conditions, Sultan Muhammad acted without courage or concept. Unlike him, his main adversary Genghis Khan ruled over a newly established nation with a strong structure and a clear ideological vision. He had rid himself of all competitors, his rule was undisputed, and the Mongol army was unconditionally loyal. What was more, thanks to an officer corps which he had put together solely according to principles of performance and loyalty, Genghis Khan disposed of excellent, trustworthy commanders. These commanders, such as Mukali in northern China or Sübotai and Jebe in Central Asia, Russia and in the Caucasus, were some-times more than his match when it came to the art of war, and they independently pursued and achieved the aims of war given to them, however far away, over many years. Genghis Khan himself, through a more than 20-year struggle that also led him through bitter defeats and a humiliating capture, had become a leader with unswerving self-confidence. The khan commanded one of the best war machines in history. Sultan Muhammad on the other hand led a motley army, whose elite troops were loyal not to him but to his hostile mother.

When Muhammad II ascended the throne in Chorasmia, his nephew Hindu Khan ibn Malik Shah also declared a claim to the crown. The challenger enjoyed the support of the Ghurids, who in turn were goaded by Caliph al-Nasir (r. 1180–1225) to attack Chorasmia. The Ghurids took some important cities in Khorasan and installed Hindu Khan in Merv as their puppet Chorasm-shah.

But Muhammad swiftly reconquered Khorasan, and Hindu Khan fled to Ghur.[257] As explained above, the attack of the Ghurid Mu'izz al-Din Muhammad on Gurganj failed, and his painful defeat near Andhkud during his retreat forced him to relinquish Khorasan, with the exception of Herat. Since Muhammad wanted to prevent the Qara Khitai from capturing Mu'izz al-Din Muhammad, who was besieged in the fort of Andkhud, and from seizing Ghur, which he wanted to annex himself, he sent him a secret message: 'For the honour of Islam I should not like a Moslem Sultan to fall into the snare of unbelievers and be slain at their hands. It is therefore advisable for thee to offer as ransom for thy person all that you hast.'[258] Mui'zz paid a huge ransom, and four years later, Muhammad conquered Herat and made the subdued Ghyath al-Din Mahmud his vassal.[259] By 1215/16 Muhammad had conquered Ghurid territories outside of India.

After the victory of Andhkud and the murder of Mu'izz al-Din, which started the decline of the Ghurids, Sultan Muhammad felt strong enough to intervene in Transoxiana, which was under Qara Khitai control. In 1207, when the son of a manufacturer of shields named Sanjar organised a popular uprising in Bukhara against the ruling caste of Islamic legal scholars, Muhammad intervened and crushed the revolt. But when in early 1208 he was trying to meet Sultan Uthman of Samarkand, with whom he had forged a secret alliance against the Qara Khitai, a Qara Khitai army blocked his path. The battle ended in a draw and Muhammad was captured. It seems that he escaped thanks to a ruse. He swapped his clothes with a servant who pretended to be Muhammad; now Muhammad disguised as a servant persuaded the Qara Khitai to let him go so that he could get a ransom for the Chorasm-shah.[260] Muhammad returned to Gurganj, and, while the Qara Khitai were besieging Samarkand, he undertook a successful campaign against the Kangli-Kipchaks to secure his northern border.

Genghis Khan's violent unification of the different Turkic and Mongolic peoples and tribes of Mongolia into a new Mongol nation had enormous consequences for the history of Central Asia from 1208 onwards. After Genghis Khan's victory over the Merkit ruler Toqto'a and his ally, the Naiman prince Küchlüg at the beginning of 1208, two vassals of the Qara Khitai rebelled and voluntarily subjugated themselves to Genghis Khan: the idiqut of the Uyghurs (1209) and the khan of the Karluks, Arslan (1211). This weakened the Qara Khitai,[261] and to make matters worse for them, more and more Merkit and Naiman horse warriors fled into their realm and to the Kipchaks; their leaders could not expect any mercy from Genghis Khan even if they capitulated. As can be seen from the example of the Naiman prince Küchlüg, these fugitives represented a danger for the states of Central Asia in more than one respect: not only were they experienced warriors but a country that received them also risked becoming a target of a Mongol attack. In late 1208, Küchlüg and his followers fled to Gür-Khan Zhilugu, who welcomed the refugees because he hoped to integrate them in his army. But Küchlüg noticed that the ageing Gür-Khan was weak and that the Chorasm-shah Muhammad was eager for power. Pretending he was doing this to help the Gür-Khan, Küchlüg returned to western Mongolia in 1209 and gathered the many dispersed groups of the Naiman to create a new army. As the historian Rashid al-Din noted, Küchlüg now forged an offensive alliance with Ala al-Din Muhammad, whose aim was the destruction of the Qara Khitai: 'It was decided that the sultan [Muhammad] would head toward Gür-Khan from the west while Güshlüg came from the east, and together they would catch the Gür-Khan in the middle and eliminate him.'[262] With this military pact Muhammad ignored the advice that Tekish had given once, 'never to quarrel with the Gür-Khan, for he was, they [Muhammad's forefathers] said, a "mighty dam behind which loom powerful opponents", that is Mongols, Naimans, and other Turks who merited concern.'[263] Indeed Muhammad Shah, by helping to eliminate the buffer state of the Qara Khitai, became a direct neighbour of the Mongols, whose military power he initially underestimated.

In 606 AH (1209/10 CE), Muhammad and Küchlüg put their plan into practice. Küchlüg invaded the empire of the Qara Khitai and began plundering their cities so that Zhilugu had to recall the garrison stationed in Samarkand. Sultan Muhammad immediately occupied the city, whereupon the united forces of Muhammad and Sultan Uthman marched northwards and in the late summer of 1210 faced the commander-in-chief of the Qara Khitai, Tayangu, near Taraz. The battle ended in a draw but Sultan Muhammad managed to capture Tayangu. Almost at the same time, probably at the beginning of 1211, Zhilugu defeated Küchlüg, who fled eastwards. The Gür-Khan's victory persuaded the Karakhanid Uthman of Samarkand to change sides, and he offered his renewed submission. But when Tayangu's plundering troops returned from Taraz to Balasaghun, the inhabitants closed the city's gates as they were hoping the Chorasmians would liberate them. A few days later, the Gür-Khan reached his rebellious capital, seized it and, according to Juvaini, had 47,000 inhabitants massacred.[264] But the victorious Gür-Khan thoroughly misunderstood the situation: he left his army in the autumn of 1211 and went hunting near Kashgar, where he was surprised and captured by Küchlüg, who had reorganised his troops. Küchlüg had thus usurped power.[265] In the meantime Sultan Muhammad took advantage of the conflict between Zhilugu and

86. **The mighty Narikala Fortress in Tbilisi, Georgia could not prevent the massacre of all the city's Christians by the Chorasmian Shah Jalal al-Din in 1226. Photo: 2013.**

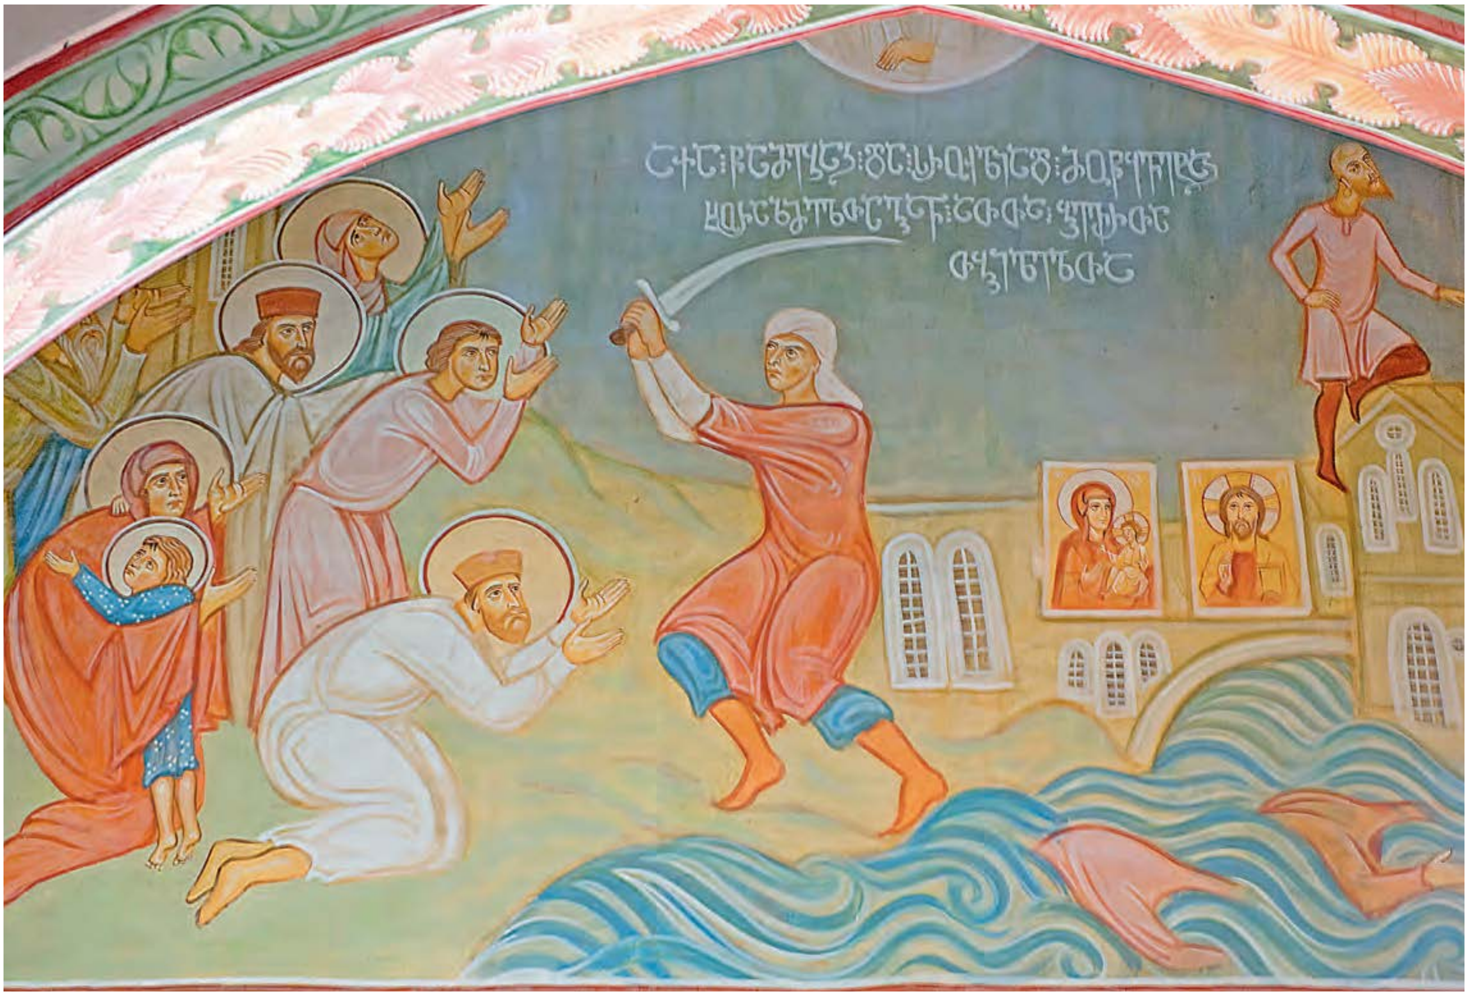
Küchlüg to consolidate his rule over Transoxiana and to seize areas east of the Syr Darya. In 1210–12 he seized Fergana and Otrar and reconquered the rebellious city of Samarkand, whose population he massacred.[266] But when Muhammad demanded that his former ally Küchlüg hand over the captured Gür-Khan and a part of the state treasury of the Qara Khitai, the latter initially used delaying tactics, and then, in 1213/14, suggested that the dispute be decided in single combat. Muhammad panicked and relinquished the areas around Isfijab, Tashkent and Fergana.[267]

Since Ghur had been conquered by 1215/16, and Muhammad could not expand his empire further eastwards, he turned westwards against the Abbasid caliph al-Nasir. Correspondence found in Ghur between al-Nasir and the rulers of Ghur had shown that the caliph had incited the Ghurids several times against him and had even sent Ismaili assassins to kill him, which intensified Muhammad's fury.[268] To legitimate the attack on al-Nasir he now planned, he took a Shi'ite position according to which the Abbasids had usurped the caliphate from Ali's family, the only rightful heirs, and asked legal scholars whom he had commissioned to appoint a Sayyid, a descendant of al-Husain, called Ala al-Mulk, as counter-caliph. He then marched against Baghdad, but in the winter of 1217/18 heavy snowfall west of Hamadan forced him to turn back. Most of his soldiers perished in the cold.[269] While he was waiting in Iran for an opportunity to launch a new attack he received the news that a large Mongol trade caravan had appeared in Otrar. Muhammad immediately returned to Chorasmia and made his son Rukn al-Din Ghur-Sanji (d. *ca*. 1221/22) ruler of Iran.[270]

The dates of the first diplomatic contacts and the first military conflict between Chorasmia and the Mongols are disputed. According to Juzjani, Sultan Muhammad seized the initiative as early as 1215, sending an embassy to Genghis Khan when he was besieging Zhongdu, today's Beijing, to assess the Mongol military strength. When the envoys reached Zhongdu, which had just been conquered, they got a first impression of the brutality of Mongol warfare: 'When we arrived . . . [we saw] from a considerable distance a high white mound. . . . [The guides explained]: "The whole of it is the bones of men slain".'[271] Directly before the destroyed city, they also passed a huge pyramid of human bones, which came from 60,000 women who had jumped from the city walls, preferring suicide to rape or slavery. Genghis Khan welcomed the Chorasmians, gave them precious gifts and in a message to Muhammad emphasised that he was ready to enter into a friendly relationship with them and valued free trade: 'Say ye unto the Khwarezmians that I am the sovereign of the sun-rise, and [he is] the sovereign of the sun-set. Let there be between us a firm treaty of friendship, amity and peace, and let trades and caravans on both sides come and go.'[272] Whether Genghis Khan was honest about wanting to conclude a long-term peace treaty with the Chorasmians or whether he simply wanted to complete the conquests of northern China first before choosing a new target is not known. The second hypothesis is supported by the fact that by early 1216 he returned to Mongolia although the northern Chinese dynasty of the Jin (1115–1234) was by no means defeated yet, and that in 1217 he appointed his commander Mukali (in office 1217–23) as viceroy of northern China.[273] At any rate, Genghis Khan and his successors always avoided waging war against two enemies at the same time; at first they allied themselves with one of the two enemies or won their compliance with reassuring words; when they had annihilated the first adversary they attacked the supposed ally.

According to Jalal al-Din's biographer al-Nasawi (d. *ca.* 1250) and Juvaini, it was Genghis Khan who took the initiative for diplomatic relations. Al-Nasawi reports that Genghis Khan sent an embassy to Muhammad Shah before 1218, which included the Chorasmian Mohammad Yalavach, the later governor of the cities of Transoxiana and Turkestan (in office 1229–39). The Mongol khan expressed his desire for peace and free trade but compared Muhammad with 'the dearest and most loved of my sons',[274] which put the latter into a subordinate position and humiliated him deeply. When Muhammad angrily questioned the Chorasmian Yalavach about the military strength of Genghis Khan, Yalavach, fearing for his life, mollified the shah with the answer that his army was incomparably stronger than the Mongol one.[275] This lie was to prove fatal for Muhammad, since it was probably then that he decided to go to war against the khan.

Juvaini's version is similar to that of Nasawi but it makes a direct connection with the infamous massacre of Otrar which provoked the destruction of most cities in Central Asia. According to Juvaini, three Chorasmian traders went on a private trade



87. Contemporary mural in the Church of St Nicolas in the Narikala Fortress in Tbilisi, Georgia, showing the mass execution of Tbilisi's Christians ordered by the Chorasmian warlord Jalal al-Din in 1226. Only those who instantly accepted the Muslim faith were spared. Photo: 2013.

mission to Genghis Khan, who gave them a message for Sultan Muhammad: 'Human wisdom so requires it; that the duties of friendship should be observed; [. . .] that we should keep open the paths of security, frequented and deserted, so that merchants may ply to and fro in safety and without restraint.'[276] Then the khan organised a large trade caravan, which included 450 Muslim traders and which carried very precious goods looted in northern China, which were meant to be traded in Chorasmia.[277] The Mongol delegation reached the city of Otrar in 1218. The city's governor Inalchuq, a cousin of Muhammad's mother Terken Khatun, desired the treasures that the Mongol traders had brought, and under the pretext that they were spies, he planned to confiscate the goods and to murder the traders and envoys. He had them arrested and sent a messenger to Muhammad Shah, who at that time was in Iran. Convinced of his military superiority, Muhammad endorsed the crime: 'Without pausing to think the Sultan sanctioned the shedding of blood and deemed the seizure of their goods to be lawful, not knowing that his own life would become unlawful. [. . .] Ghayir-Khan [Inalchuq] in executing his command deprived these men of their lives and possessions, nay, rather he desolated and laid waste a whole world and rendered a whole creation without home, property or leaders. For every drop of their blood there flowed a whole Oxus' of the blood of the people killed by the Mongols in retaliation.[278] Despite his outrage over the murder, Genghis Khan gave Sultan Muhammad a last chance to prevent a war. He sent three envoys to the sultan and demanded that he deliver Inalchuk. But Muhammad had probably already made up his mind to go to war and also did not have the authority to hand over a cousin of his mother to the enemy, which is why he murdered the three envoys as well.[279] The execution of foreign envoys was a clear reason for war, and Genghis Khan began planning and organising his campaign to the west, during which Mongol divisions would reach the Caucasus and the Indus within three years.

The dating of the first battle between Chorasmia and the Mongols that was provoked by the sultan is controversial: P. D. Buell[280] and Timothy May[281] suggest 1209/10, Michal Biran[282] 1216, Richard Gabriel[283] 1217/18, Paul Rachnevsky[284] states it is 'probably' 1218. The medieval authors Juzjani,[285] Juvaini[286] and al-Rashid,[287] on the other hand, as well as A. Boyle,[288] date this first battle to after the massacre of Otrar; that is, to 1218. If one considers what paralysing terror this first encounter with a smaller Mongol army caused in Sultan Muhammad it is inconceivable that the battle took place before 1218 and that the sultan despite it had Mongol visitors and envoys killed twice afterwards. The current author thinks that Genghis Khan had to secure the flanks of his route of march before his attack on Chorasmia, which started in 1219, which is why in 1218 he sent two small armies westwards with 20,000 men each. General Jebe attacked Küchlüg, who fled, was captured in the Pamirs of Badakhshan and executed.[289] General Sübotai and Genghis Khan's oldest son attacked the Merkits, who had lived on the upper Ienissei river since around 1205/6 when they had settled there after a defeat. The Merkits fled to the region of Jand, where Sübotai caught up with them and massacred them. When Sultan Muhammad learned of the Mongol advance, he assembled a large army and marched northwards. Then 'he came upon a battle-field, where he beheld great piles of dead and fresh blood. Amongst the fallen a wounded man was discovered and questioned. It being ascertained that the Mongols had been the victors [. . .] the Sultan [. . .] hurried after them.' When Muhammed was in sight of the Mongols and prepared for battle, he received the following message from Sübotai and Jochi: 'We have no authority from Chingiz-Khan to fight with thee.'[290] But Muhammad, confident that his army outnumbered the enemy troops, attacked. It was a fierce battle, and Jalal al-Din had to intervene to save his father from capture. The Mongols retreated under cover of night, and in the morning Sultan Muhammad fell into a state of paralysing panic given the high losses that the relatively small troop of Sübotai had inflicted on his large army. In al-Rashid's words: 'So overwhelmed was he [Muhammad] by fear that the doors of clear thought were closed to him.'[291]

Juvaini and Nusawi are both of the opinion that Sultan Muhammad had caused the catastrophe which now befell the Muslim part of Central Asia in three different ways: firstly by destroying the buffer state of the Qara Khitai, secondly by the murder of the two Mongol embassies and thirdly by his cowardly behaviour afterwards. Instead of defending Mawarannahr with his numerically superior forces, he abandoned his empire and fled westwards without a fight. And Genghis Khan understood how to foment Muhammad's fears through psychological warfare. Via Chorasmian deserters, he sent forged letters purporting to be from Chorasmian commanders to Terken Khatun and Muhammad, with the result that Muhammad's faith in his Kangli troops decreased further while Terken Khatun relinquished Chorasmia without a fight in early 1219 and had all hostages from subjected states who lived at the court murdered.[292] And when the Mongols attacked Mawarannahr in four separate columns simultaneously in the winter of 1219/20,[293] Muhammad fell into a blind panic and decided to flee without a fight, although his son Jalal al-Din Manguberdi asked him for permission to lead the Chorasmian army against the Mongols. In Juvaini's florid prose: 'Sultan Muhammad

[. . .] was seeking a hole in the ground or a ladder to the heavens in order to place him out of reach of the boundless army and to tread heavily upon the stirrups of flight before their onrush.'[294] His last order, to divide his powerful army between the garrison of the numerous cities of Mawarannahr and Khorasan, turned out to be a catastrophic mistake. With this, he deprived the Chorasmians of their numerical advantage, and the Mongol horse warriors, who possessed special units of Chinese siege engineers, were able to seize even well-fortified cities in a short time one by one. Jalal al-Din protested vehemently: 'To scatter the armies through the lands and turn tail before an enemy whom one has not encountered [. . .] is the mark of a craven wretch, not the path of a mighty lord. If the sultan does not decide to advance, and do battle, and charge, and fight at close quarters, but persists in his decision to flee, let him entrust the command of the valiant troops to me, so that we may set our faces towards the warding off [these] events.'[295] But Sultan Muhammad could not be persuaded to give up his plans for flight and his unwillingness to entrust Jalal al-Din with the army. His empire quickly descended into chaos; he himself was driven like a hunted deer by Sübotai and Jebe through Transoxiana, Khorasan and Iran, and in December 1220 or January 1221 he died a lonely man on an island in the south-western Caspian Sea.[296] As al-Nasawi reports, Genghis Khan ordered the execution of the avaricious governor Inalchuq after his conquest of Otrar: 'He made Inal Khan appear before him and ordered that the molten gold [he had stolen] be poured into his ears and eyes.'[297]

It is not clear which of his two sons, Uzlaq Shah and Jalal al-Din, Muhammad Shah designated as successor,[298] but at any rate both brothers, who had accompanied their father until his death, returned to Chorasmia. When **Jalal al-Din Manguberdi** (r. in western Iran 1224–31) learned that his brother Uzlaq Shah, together with some of his commanders, planned to murder him, he fled to his city of Ghazna, where he was governor.[299] From here he started a counter-offensive with a rather ragtag army of Ghurids, Kangli and Khalaj and defeated a Mongol division that was besieging a fort in north-eastern Afghanistan. Genghis Khan then sent his adoptive son and commander Shigi Khuthuku with 30,000 men. In the ensuing battle of Parwan in 1221, Jalal al-Din ordered his soldiers to fight on foot but to keep their saddled horses ready. When the attacking Mongols withdrew on the second day of battle to reform, Jalal's warriors mounted their fresh horses, attacked in full force and inflicted a decisive defeat on Shigi Khuthuku. This was the only significant defeat that the Mongols suffered during their western campaign of 1219–23. Immediately after the victory, Jalal's army started quarrelling over their portions of the spoils and split up so that he returned to Ghazna. When Genghis Khan heard of Shigi Khutukhu's defeat, he immediately marched southwards and in the late summer of 1221 defeated the numerically superior Chorasmian prince south-west of Rawalpindi near Dinkot on the Indus. Jalal al-Din managed to escape across the Indus, but because the Sultan of Delhi, Iltutmish, fearing Genghis Khan's revenge, refused to give him refuge, he and his followers fled to Isfahan, which he made his capital.[300]

After Genghis Khan had returned to Mongolia in 1123 and Sübotai and Jebe had also left Iran, Jalal al-Din was relatively safe in the western part of the Chorasmian Empire. Instead of trying to reconquer the now devastated and depopulated areas of Chorasmia and Mawarannahr, which would have provoked a new Mongol campaign, he turned to the north-west against the Christians of Georgia whom he hated. In 1225 he defeated the Georgians, whose army had already been decimated by Sübotai and Jebe,[301] and in 1226 massacred all the Christians in Tbilisi who did not immediately convert to Islam. In the following year the Georgians took Tbilisi back, but Jalal al-Din defeated them again in 1229, because the Kipchak contingent of 20,000 men deserted to him on the battlefield of Bolnisi.[302] But from 1227 small Mongol divisions began invading Iran, trying to capture Jalal. In August 1228 they were victorious before the gates of Isfahan, but suffered such heavy losses that they returned to Mawarannahr.[303] Two years later, the Chorasmian army suffered a heavy defeat at the hands of the Rum-Seljuk Kai-Qubad and the Ayyubid al-Ashraf.[304] Soon after this, Jalal al-Din learned that Genghis Khan's son and successor Ögödei had sent General Chormaghun to Iran with a 30,000-strong army, intent on destroying what was left of Chorasmia. Jalal fled immediately and was murdered in 1231 in Kurdistan.[305] But the odyssey of the Chorasmian horse warriors did not end with the death of their sultan. They hired themselves out in northern Mesopotamia and Anatolia and were held in high regard as mercenaries there until the Mongol general Baiju succeeded Chormaghun in 1241 and defeated the Rum-Seljuk sultan Kai Khosrow II in 1243.[306] Fearing the Mongols, the Chorasmians entered the service of the Egyptian sultan Malik al-Salih Ayyub. In the summer of 1244 they wrested Jerusalem from the Crusaders, massacred the Christian population, and in the autumn of the same year they crushingly defeated the last great Crusader army in Gaza near al-Harbiyya. Two years later Ayyub rid himself of the unruly and all too powerful Chorasmians, by having their leader killed.[307] In Chorasmia and most of Khorasan, urban life practically came to a standstill after Genghis Khan's western campaign, and some regions of Chorasmia became desolate forever.

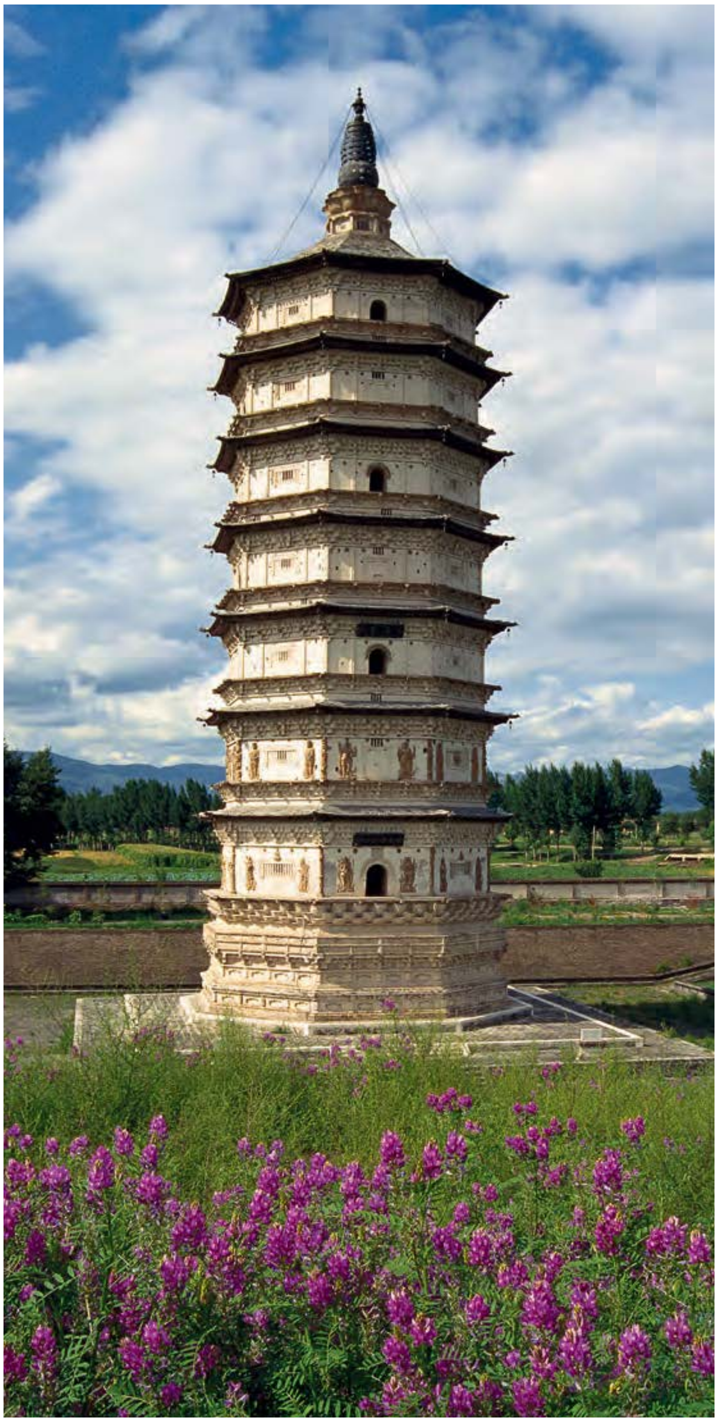
Buddhist States of the Liao, Qara Khitai and Tanguts

'A settled life is to an explorer what a cage is to a bird.'

The Russian explorer **PYOTR KOZLOV** shortly before his discovery of the Tangut city of Khara-Khoto on 19 March 1908.[1]



88. The octagonal Pagoda of the Complete Huayan Sutra, popularly known as Bei Ta, White Pagoda, built during the Liao dynasty between 983 and 1031 near Hohhot, Inner Mongolia, China. Both the Liao and the Tanguts were followers of Esoteric Buddhism, in which the figures of specific groups of buddhas and bodhisattvas, arranged in the shape of a mandala, played an important role. One such arrangement, a special favourite with the Liao, consisted of a central statue of Vairocana, the Supreme or Universal Buddha, surrounded by eight bodhisattvas. It was this that inspired the Liao to introduce the pagoda on an octagonal ground plan, which went on to supplant the rectangular design favoured by the Tang dynasty.[22] In the twelfth and thirteenth centuries, Hohhot belonged to the Kingdom of the Onguts, some of whose rulers were Nestorian Christians, which explains why there are several Nestorian inscriptions inside the pagoda. Photo: 1995.

The period between the twelfth and fourteenth centuries saw huge upheavals in Central Asia and northern China, including ethnic and linguistic ones. Between the sixth century and the first half of the twelfth century the history of Central Asia had been shaped by the waves of migration of Turkic peoples to the west. From the tenth century these peoples adopted Islam as soon as they entered Islamised territory, and some Turkic dynasties became champions and protectors of Sunni orthodoxy after their conversion, unlike the Qara Khitai and the first three generations of Mongol conquerors, who refused to adopt the religion of their conquered subjects.[2] But the Battle of Qatwan in 1141 rang in a new chapter of Eurasian history of migration: Mongol peoples pushed westwards, and they were either Buddhists, like the Qara Khitai, or, as was the case with Genghis Khan's Mongols, they remained followers of a folk religion and were not concerned about the religion of the peoples they subjugated as long as they recognised the supremacy of the Great Khan. As we have seen before, the expanding eastern Mongol people of the Khitan pushed the Turkic Kipchaks and Oghuz to the west.[3] And unlike the Turkic peoples, who focused almost exclusively on the west and only sought to dominate northern China once, during the Turkic-Sogdian rebellion led by An Lushan (755–63), the Mongolic, Manchurian and Mongol conquerors also pushed southwards. Thus the dynasty of the Liao (907–1125) brought a period of foreign dominance by Mongol and Manchurian peoples to northern China, which would last for nearly 500 years, until 1368.

1. The Liao Dynasty

The Qara Khitai, also known as Kara Khitan,[4] made forays into Uyghuristan and Semirechie from 1128. The Qara Khitai were Mongolic refugees, who had been driven out of their homeland in northern China and Mongolia by the Manchurian Jurchens between 1117 and 1125.[5] Their language was related to the proto-Mongolian languages with Tungusic loan words and originated from the Yuwen branch of the Xianbei. Around 406 they became tributaries of the Northern Wei, who were related to them. After 479, under pressure from the Rouran, the Khitan left their central Mongolian homelands and went south-eastward, settling in the upper valley of the Liao in today's province of Liaoning. During the following four centuries their history was shaped by conflicts with the Chinese dynasties of the Sui (581–618) and Tang (618–907); in most cases they had to accept the suzerainty of their stronger neighbours. In 751, for example, they managed to drive off an attack by An Lushan, a Turkic-Sogdian general in Chinese service, but four years later they were defeated by him and degraded to Chinese vassals once more. When An Lushan's rebellion collapsed in 763, the Khitan became vassals of the victorious Uyghurs but still had to pay tribute to the Tang. The end of the Uyghur khaganate in 840 changed little for the Khitan, who had to recognise Chinese suzerainty from 842.[6]

The eight tribes of the Khitan made the decisive step from a loose confederation of semi-nomadic pastoralists to the empire of the **Liao** (907–1125) when in 907 they elected **Ambagyan** (Chinese **Abaoji**) as their new khagan. Abaoji (r. as elected leader 907–16, as emperor 916–26) was an energetic military commander who cleverly used the collapse of the Chinese Tang dynasty to expand his territories westwards towards Mongolia and south-westwards into the areas of Chinese vassals. Having already liquidated several leaders of rival tribes, he staged a putsch in 916. Since the tribal rules of the Khitan demanded that an elected khagan had to be confirmed in his office by the tribal leaders every three years, Ambagyan would have had to undergo a third confirmation. He declared himself emperor instead and thus founded a new dynasty, which in 947 adopted the name of his homeland's river, the Liao. To give stability to his new empire, Abaoji ordered the construction of the Supreme Capital, Shangjing, 190 kilometres north of the (now Inner Mongolian) city Chifeng, in 918. With its palaces, administrative and merchant quarters and Buddhist temples, the city was modelled on Chinese capitals.[7] Abaoji also introduced a dual administration, which was fully implemented in 947. The northern administration was responsible for the semi-nomadic pastoralist tribes and their grasslands, the southern administration for the sedentary peoples and the crop farmers, especially the Han Chinese population. The northern administration consisted entirely of Khitan, whereas in the southern administration junior posts could also be held by the Chinese.[8]

To further consolidate the national identity of the Khitan, Abaoji introduced his own script. The so-called 'large' script, inspired by Chinese characters, was introduced in 920. The script consisted of logograms, each of which represented a word. As mentioned by the *Liao Shi* (the chronicle of the Liao), a second 'small' script, was introduced four years later; some researchers have claimed this was modelled on the Uyghur script, but the characters also have visual similarities with Chinese ones. The characters were phonograms, combinations of letters representing speech sounds, and each word was made up of between two and seven of these characters.[9] Both scripts were written vertically from top to bottom, with the first line on the right-hand side.[10] To date, neither of them has been fully deciphered. In 924 Abaoji penetrated deep into Mongolia, which had been infiltrated by the Khitan for decades, and occupied the former capital of the Uyghurs, Ordu Baliq (Karabalgasun). The *Liao Shi* reports: 'The emperor arrived in the old Uigur city. He ordered that the old stone tablet of Bilgä Khaghan be erased and reinscribed in Ch'i-tan, Turkic and Chinese to commemorate his meritorious deeds.'[11] Immediately after the conquest of Central Mongolia Abaoji offered to let the

Uyghurs of Gansu return to their original homelands.[12] Their refusal to take up this offer had far-reaching consequences for the ethnic composition of Mongolia as it allowed Mongolic tribes, above all the semi-nomadic Khitan, to spread unhindered in the sparsely populated area. The Mongolisation of Mongolia, which until then had been mostly Turkic, was now irreversible. To keep the unruly Mongol horse nomads under better control, the Khitan built fortified cities such as Khermen Denzh, Ulaan Kherem, Chintolgai Balgas and Khar Bukyn Balgas (fig. 96) in the river basins of the Kerulen and Tola.[13]

The death of Abaoji (temple name:[14] Taizu) in 926 revealed the fundamental problem of the new dynasty, which would plague it to the last; that is, the failure to accept primogeniture as the governing principle of the imperial succession. Leading members of the Yelü disputed the crown prince's accession to the throne over and over again. Abaoji's eldest son Prince Bei (d. 937) failed to sustain his claim, defeated by the resistance of his mother Shulü Ping (posthumous name: Chunqin, d. 953), who favoured her younger son **Deguang** (r. 927–47) with herself as regent. At Abaoji's burial, Shulü Ping broke with a well-established custom of the Khitan: although more than 300 humans were sacrificed in honour of the deceased emperor, she herself refused to follow her husband to the grave. Instead, she cut off her right hand and laid it on the coffin.

She survived the amputation, forced Prince Bei to abdicate, for fear of his life, and Deguang (temple name: Taizong) ascended the throne.[15] Like later Liao empresses, Shulü Ping was a highly influential politician and commanded a powerful army.[16] Deguang himself was a skilful military leader who continued the expansionist policy of his father, who not long before his death had subjugated the southern Manchurian kingdom of Bohai. In 936, Emperor Deguang had the chance to annex a substantial part of northern China when Shi Jingtang, governor of the Later Tang dynasty (923–36), rose in rebellion and asked the Khitan for military assistance. Emperor Deguang defeated the Later Tang army at Taiyuan in Shanxi province and installed the rebel as the first ruler of the new dynasty of the Later Jin (936–47), who would be puppets of the Khitan. In exchange, in 938 the Later Jin had to cede to the victorious Khitan the so-called Sixteen Prefectures that lay along the border, from Pingcheng in Shanxi to the shore of the Bohai Sea east of Beijing. The Liao Empire was now divided into five 'circuits' or regional administrations, each with its own capital: the Supreme Capital Shangjing in the north, the Western Capital Pingcheng (renamed Datong, 'Great Unity' in 1048), the Southern Capital at today's Beijing, the Eastern Capital Liaoyang in the province of Liaoning and the Central Capital Zhongjing near what is now

Ningcheng south of Chifeng in Inner Mongolia.[17] Deguang launched an attack on the city of Kaifeng, but this failed and he was forced to withdraw some months later in the face of Chinese resistance.

The late 970s saw the Han Chinese Song dynasty (960–1279) emerge as a serious adversary of the Liao. In 979 the Song attacked the latter's vassals, the Northern Han (951–79), defeated a Khitan army sent to their assistance, and took Taiyuan. But the Song emperor Taizong overestimated the victory he had won. He marched on Beijing with the intention of conquering the Sixteen Provinces, only to suffer a serious defeat on the Gaoliang river south of the city, which forced the Song to adopt a more defensive posture toward the Liao. After a more than 20-year stalemate, the two sides made peace, as the Song were unable to take the Sixteen Prefectures while the Liao could not consolidate their incursions into the densely populated Song Empire, though these attacks did harm the Song economy. Concluded in 1005 (or 1004), the Treaty of Shanyuan confirmed the territorial status quo and imposed on the Song the payment of an annual tribute of 100,000 silver taels and 200,000 bales of silk. When in 1042 the Song suffered a devastating defeat at the hands of the Tanguts of Minyak, the Liao raised the tribute payable to 200,000 taels and 300,000 bales of silk.[18] While the payment of tribute might at first sight seem highly demeaning for the Song, it was economically most advantageous, for it was significantly cheaper for the Song to pay tribute than to wage war. What is more, the Song enjoyed an enormous surplus in their trade with the Liao, which the Liao counterbalanced in silver. And since the Liao used more than half the Chinese silver tribute to purchase Chinese products such as silk, weapons, tea and gold jewellery, the tribute paid by the Song also supported the Chinese economy. As Eric Trombert remarks, the Song's payments of tribute to the Liao and the Tanguts show that silver was becoming a serious competitor to silk as a form of international currency from the eleventh century on.[19]

Towards the end of the tenth century the Khitan found themselves faced with an ambitious power on their south-eastern frontier as well: in 936 the Korean Koryo dynasty (Goryeo, 918–1392) had united the Korean Peninsula under their rule and begun gradually to extend their territory northward, making a clash with the Liao inevitable. After the Khitan's first Korean campaign of 992–93, the Koryo had to admit that their alliance with the Song was worthless, and they chose to recognise the nominal overlordship of the Liao. Two more costly invasions by the Khitan in 1011–12 and 1018–19 ended in military stalemate: the Koryo remained the nominal vassals of the Liao, who were not, however, able to prevent the Koreans from fortifying the whole length of their northern border with a wall of stone.[20] During the early eleventh century the Liao's external conflicts shifted to the south-western frontier, as the Khitan undertook four campaigns between 1006 and 1027 in a vain attempt to conquer the Gansu Uyghur kingdom. The actual beneficiaries of these efforts were the Tanguts of Minyak, who between 1028 and 1036 succeeded in taking the great cities of Gansu and advancing as far as Shazhou (Dunhuang).[21] The rising power of Minyak also put the Khitan in their place when the Tanguts defeated an attempted Liao invasion in 1044. Following Liao's second, more successful campaign in 1050, Minyak agreed to recognise Liao supremacy and to pay formal tribute.[22] In the mid-eleventh century the boundaries between the five kingdoms of Liao, Song, Koryo, Minyak and Kocho stabilised. The Liao Empire had too few warriors to allow further territorial expansion; on the other hand, the Khitan's highly mobile cavalry, which enjoyed an almost inexhaustible supply of horses from their Mongolian pasturelands, were so dangerous that no neighbour dared launch a frontal attack on the Liao. As the *Liao Shi* graphically put it, 'surrounded on the four sides by militant peoples, [Liao] crouched in their midst like a tiger whom no one dared to challenge'.[23]

Part of the Khitan elite became Buddhist by 902 at the latest, when their first Buddhist temple was built. When in 916 Abaoji asked his courtiers and counsellors what should be declared the state religion, they all said Buddhism, even though the emperor and crown Prince Bei favoured Confucianism.[24] In fact, the Khitans' Buddhism also incorporated elements of Confucianism, Daoism and traditional belief: 'The Liao rulers [. . .] remained emotionally tied to the ideas of their nomadic tribesmen. They were eager to clothe their new imperial experience in the garments of a new "imperial" religion; and this new religion had to be compatible with their old tribal beliefs which they did not intend to discard.'[25] Unlike Confucianism with its strictly hierarchical conceptions and its conviction of the superiority of sedentary cultures over those of nomadic barbarians, Buddhism was in this respect neutral and prepared to accept alien gods and spirits into its pantheon. The Liao not only built magnificent temples and stupas and sponsored the production of fire-gilt bronze figures of high quality, but also published a critical edition of the *Tripitaka*, the Buddhist canon, which was an improvement on earlier editions such as that of the Song. Unfortunately, this work, carved into 579 woodblock volumes, has not survived. The Liao were also anxious to preserve the Buddhist canon for posterity by inscribing it in some durable material, for they believed that the year 1052 would mark the beginning of the degenerate age of the *mofa* or 'Latter Day of the Law', when Buddhist teaching would perish from men's minds. The Liao thus continued a project already begun at the Yunjusi (also known as the Cloud Dwelling Monastery) near Beijing under the Sui dynasty, between 605 and 618. Between around 1020 and 1095 they had the Khitan Buddhist codex carved on 4,260 stone tablets, which in 1118 were buried on the temple lands. Older stone texts were walled up in nearby mountain caves.[26]

During the second half of the eleventh century the Liao Empire encountered more and more difficulties. In 1063 there was a rebellion during which a grandson of **Emperor Shengzong** (r. 982–1031) ambushed **Emperor Daozong** (r. 1055–1101) while he was out hunting. The wounded emperor was able to escape, and his mother Ren Yi took charge of the imperial guard to drive off the attackers. Two years after this, the chancellor and military leader Yelü Yixin, a member of the ruling clan, rose to power by establishing an ascendancy over Emperor Daozong. Yixin consolidated his rule through lies and intrigues, persuading the emperor to order his loyal and faithful wife to commit suicide (on the spurious grounds that she had had a sexual liaison with one of her entourage) and then to exile his eldest son, whom Yixin then had killed. Only in 1081, when the chancellor was planning an attack on the new young

heir did Daozong recognise the danger. He banished Yixin from the court and had him executed not long after. The anti-Chinese laws that Yixin introduced, however, had devastating effects on the cohesion of ethnically mixed Liao society. Among other activities, these prohibited hunting, dealing in copper, the production of patterned satins, and the private publication of books. The ethnic Khitan themselves, who lived as pastoralists, suffered terribly because of an exceptionally heavy snowfall in the winter of 1082–83, which killed most of their livestock and horses. And at the same time, two major tribes started to challenge the authority of the Liao: these were the Zubu in Central Mongolia, probably a Tatar tribe, and the Tungusic Jurchens in eastern Manchuria.[27]

The last Liao emperor **Tianzuo** (r. 1101–25) was too passive to re-establish the dynasty's authority and its control over the still-powerful army. The fall of the Liao began with the rebellion of the Jurchens under their ruler Aguda (r. 1113–23), who in 1115 declared himself emperor of the new Jin dynasty (1115–1234), whose name means 'gold'. When he began his attacks on the Liao in 1114, other subject peoples also rebelled, and in 1117 a huge Liao army scattered without putting up a fight. When the Jurchens captured the Supreme Capital in 1120 and the Central Capital in 1122, the Song hoped to take advantage of the Khitan collapse by retaking the Sixteen Provinces. Yet when the Song forces sought to capture the Southern Capital they came up against the commander Yelü Dashi (b. *ca.* 1087), a member of the Liao ruling clan, who quickly put them to flight. Two years later, though, the Liao's prospects were so dim that Yelü Dashi – who had fallen into the hands of the Jurchens in 1123 but had managed to escape a few months later – abandoned his emperor Tianzuo, proclaiming himself king of the remaining Khitan in 1124. The Jurchens brought the Liao dynasty to an end in 1125 when they captured Tianzuo,[28] and by early 1127 they had conquered not only the whole territory of the Liao, but also all of north-east China, including the city of Kaifeng.[29]

2. The Qara Khitai, Central Asian Successors of the Liao

Yelü Dashi (r. 1124–43), founder of the **Qara Khitai dynasty** (1124–1213/18), escaped to the north-west, reaching the Khitan garrison town of Khedun, also called Zhenzhou, in 1124.[30] There he succeeded in winning over the 20,000 horsemen of the garrison, as well as a number of Turkic tribal groups, so that he eventually stood at the head of an army of some 40,000 mounted men. But he was still far too weak to mount an attack on the Jurchens, who by 1127 were even stronger than they had been in 1124, when Yelü Dashi had had to flee from them: they now had armies of more than 100,000 men. His forces did, however, have the military advantage over east Central Asian states such as the Uyghur kingdom of Kocho and the weakening Karakhanids, not least because they had an almost inexhaustible supply of horses. And he may well have hoped, too, that the Khitan, who served the Karakhanids as mercenaries in Central Asia, would join him. Wealthy from international trade, the cities of east Central Asia were certainly a tempting prize, and in 1128 or 1129 Yelü Dashi set out south-west to arrive at Besh Baliq, the summer capital of the Uyghurs of Kocho.[31] Yelü Dashi's first attack on Kashgaria miscarried when he was defeated by the Karakhanid Ahmad ibn Hasan (r. 1103–after 1128) and had to withdraw to Kocho. Not long afterwards, though, Ahmad's successor Ibrahim bin Ahmad made the mistake of asking Yelü Dashi (who had proclaimed himself Gür-Khan, or 'universal ruler') for military assistance against the rebellious Karluks and Kangli. The homeless Khitan seized on the opportunity, taking Ibrahim's capital Balasaghun without a fight between 1131 and 1134 and demoting the ill-advised khagan to *Ilek Türkmen*.[32] The Khitan thereupon expelled the Karluks, Kangli and Oghuz from their long-established pasturelands between the Issyk Kul and Otrar, while

they compelled Kashgaria, Khotan and the Uyghurs of Kocho and Besh Baliq to recognise their supremacy; but the attempt in 1134 to resurrect the fallen Liao Empire by sending an expeditionary force to the east was a miserable failure.[33] The destruction of the Liao Empire and the withdrawal of Yelü Dashi's followers from Mongolia led, however, to a power vacuum, for the Jurchens were concentrating on the extension of their territory in China. In the north, they pursued a 'classically Chinese' static defence strategy, neither attacking Mongolia nor maintaining garrisons there. They simply established an armed line of defence in the southern steppe and contented themselves with playing Mongol and Turkic tribes off against each other. It was this power vacuum that allowed the meteoric rise of Genghis Khan.

The Qara Khitai then pushed south, to the lush grasslands of Fergana, where in 1137 they defeated Mahmud Khan of Samarkand, Seljuq vassal of Sultan Sanjar. Driven out of Fergana and Semirechie, the Karluks flooded into the agricultural region around Samarkand, where they caused great damage. When Mahmud Khan begged Sultan Sanjar for assistance, Yelü Dashi took advantage of the opportunity to extend his rule over Transoxiana and went to the aid of his earlier opponents, the Karluks he had expelled from their lands. In the autumn of 1141 the steppe-warrior cavalry of the Qara Khitai and the Karluks defeated the Persian cavalry of the Seljuqs on the Qatwan steppe north of Samarkand. As the Muslim historian Ibn Khaldun (1332–1406) aptly remarked: 'If the two groups [armies] are equal in number and strength [weaponry], those who are the best suited for nomadic life will prevail.'[34] Sultan Sanjar had to withdraw beyond the Oxus and the Qara Khitai conquered all of Transoxiana and Chorasmia, making the local rulers their vassals.[35] After the conquest of Balkh south of the Oxus, the territories of the Qara Khitai extended from Balkh, Khotan and Hami in the south to the Kyrgyz on the Ienissei and the Upper Irtysh in the north, and from the Caspian and the Oxus in the west to the Altai and the Uyghurs of Kocho in the east.

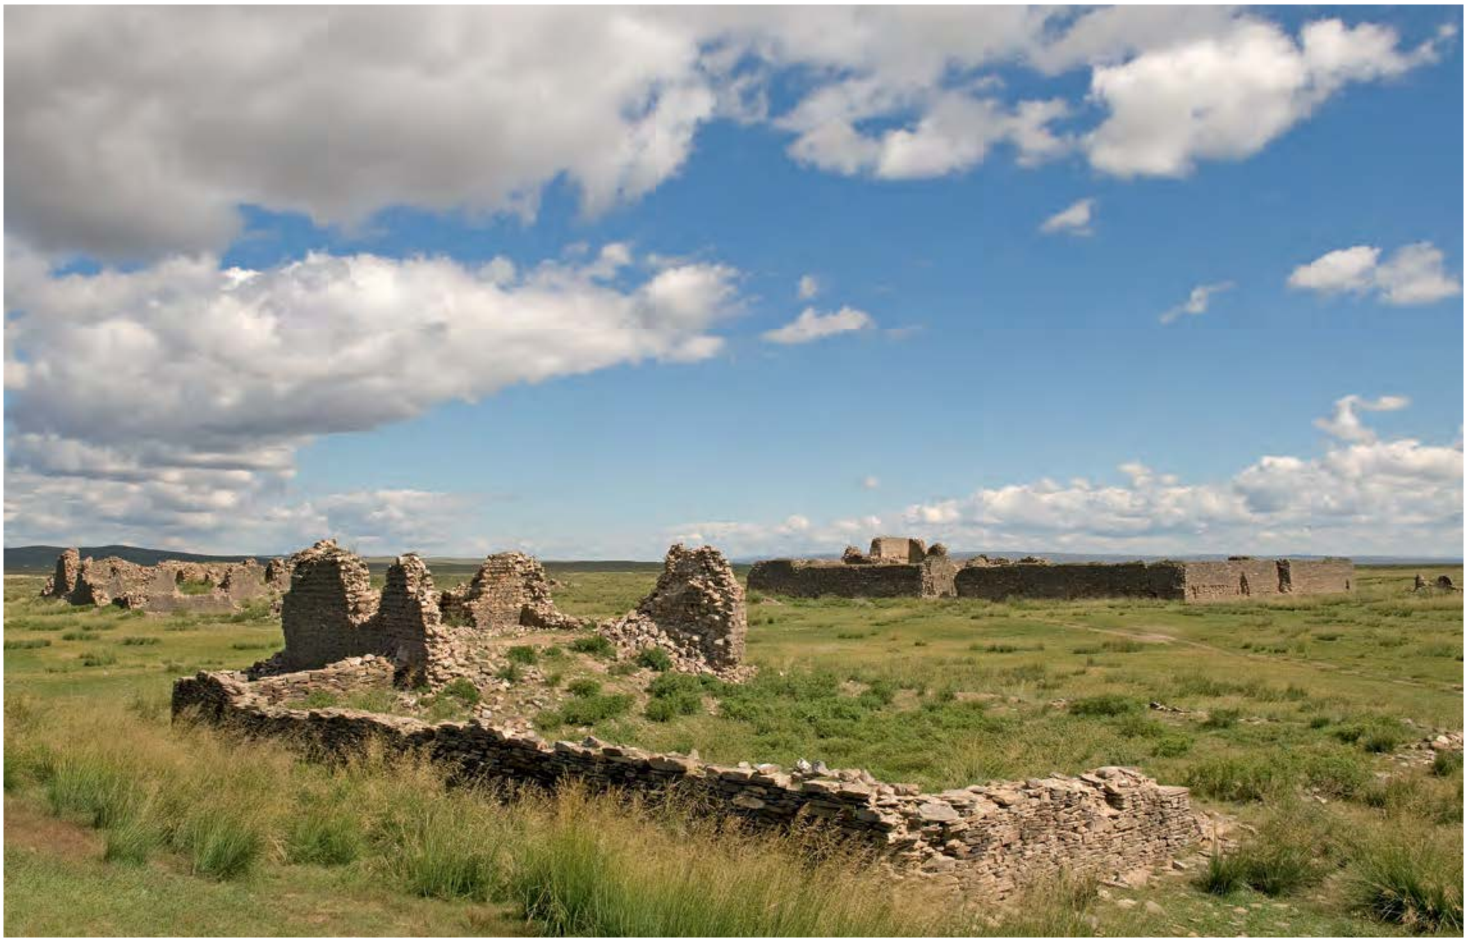
As mentioned earlier,[36] these two victories over the Seljuk Empire by a non-Muslim ruler caused quite a stir among the Crusaders and in Europe more generally. A year after the loss of the Christian County of Edessa to the Emir of Mosul in 1144, the bishop and historian Otto von Freising reported that a pious Christian king called John had won a victory in Asia against a Muslim ruler. In 1157, von Freising confirmed his 'report' to Emperor Frederick I, known as Barbarossa, after which, some time

95. **Yin Shan Ta Lin, or the Silver Mountain Pagoda Forest, 50 km north-east of Beijing, China. The pagodas stand on what was once the site of the Fahua Temple, built under the Tang dynasty (618–907), restored under the Jin (the empire of the Jurchen, 1115–1234) and extended by the Yuan. The Pagoda Forest was burnt down during the Japanese invasion of 1940. The picture shows the five Jin pagodas, arranged in a mandala-like pattern. Photo: 2015.**

between 1160 and 1165, the imperial chancellor Rainald von Dassel forged a supposed letter from this 'presbyter John' to Emperor Manuel I Komnenos of Byzantium.[37] Later, in 1221, Cardinal Jacques de Vitry would describe Küchlüg, the last ruler of the Qara Khitai, who had successfully held his ground against Mohammad Shah of Chorasmia, as King David, son of Prester John.[38]

For the civilian population, the Qara Khitai conquest of Transoxiana passed without bloodshed or any great destruction, bearing no resemblance to the pillage and massacres they had endured at the hands of the Mongols scarcely 80 years earlier, so that trade and the wider economy suffered little. The Qara Khitai were content, too, with indirect rule. They certainly had a powerful army and plenty of horses, allowing them to intervene rapidly if need be, but within their empire they represented a minuscule minority. They therefore developed a model of indirect rule that the Mongols would later adopt, though the latter applied it in a much more ruthless fashion. The Qara Khitai required that their vassals recognised their overlordship and punctually paid the taxes imposed on them. To this end, they appointed to each vassal an official called a *shihna*[39] who oversaw the collection and remittance of taxes, much like the Mongol *darughachi* or *basqaq*. It seems that the Qara Khitai also ensured that their vassal's cities were not over-taxed. When, for example, Alp Tegin,[40] whom Yelü Dashi had made governor of Bukhara, began to prey upon the people of that city after his ruler had returned to Balasaghun, the contemporary author Nizami-e Aruzi reports that in 1143 he received the warning: 'Let Alp Tegin know that, although wide distance separates us, our approval and displeasure are near at hand.'[41] The Qara Khitai refrained, however, from military intervention in conflicts between their vassals, except when their own interests required it. For a semi-nomadic horse people who shunned cities, the Qara Khitai were unusually sensitive to the needs of urban populations. They lived peacefully with their herds on the grassy plains around Balasaghun, Uzgend, Qayaliq, Almalyq and Kashgar.[42] To avoid any danger of losing control over the officer corps, the Gür-Khans abandoned the *iqta* system of rewarding military service through land tenure and, like the Ghaznavids, paid the army in cash. Furthermore, soldiers were strictly forbidden to pillage within the confines of the empire.

The Qara Khitai were careful to preserve their ethnic and cultural identity. They retained the Chinese court ceremonial of the Liao, confirmed the ranks of their vassals with seals and silver tablets inscribed in Chinese,[43] used both Chinese and Khitan languages in the administration and issued coinage of a Chinese type.[44] They avoided incorporating Muslim forces into their standing army, with its traditional decimal organisation, which was composed exclusively of steppe horsemen; the Muslim auxiliaries provided by their vassals remained in separate units.[45] The Qara Khitai also retained their religion, a Buddhism infused with traditional tribal and cosmological conceptions that included the veneration of the divinities of sky, earth and fire, to whom they offered animal sacrifices – a religion that may be characterised as a tribal Buddhism. As semi-nomads and high-ranking horse warriors, the Qara Khitai elite lived in yurts and left no distinctive religious architecture. The Qara Khitai never contemplated turning to Islam: their divinities had brought them victories against many Muslim rulers, so they had no reason to adopt the religion of their defeated vassals. Like steppe peoples generally, the Qara Khitai were tolerant in matters of religion. They took it that any religion that met minimum ethical requirements might serve as an acceptable way of connecting the people of a given society to the divine and the supernatural. They destroyed neither mosques nor minarets, for example allowing the construction in 1196–99 of the 39-metre-high minaret of Vabkent (fig.68). The Nestorian Church of the East also flourished in their territories, with its two metropolitan sees of Samarkand and Kashgar and Nawakat near Balasaghun. Testimony to the existence of these Christian communities are the gravestones discovered in Semirechie; these have an incised cross and most bear an inscription in the Syriac, Karakhanid

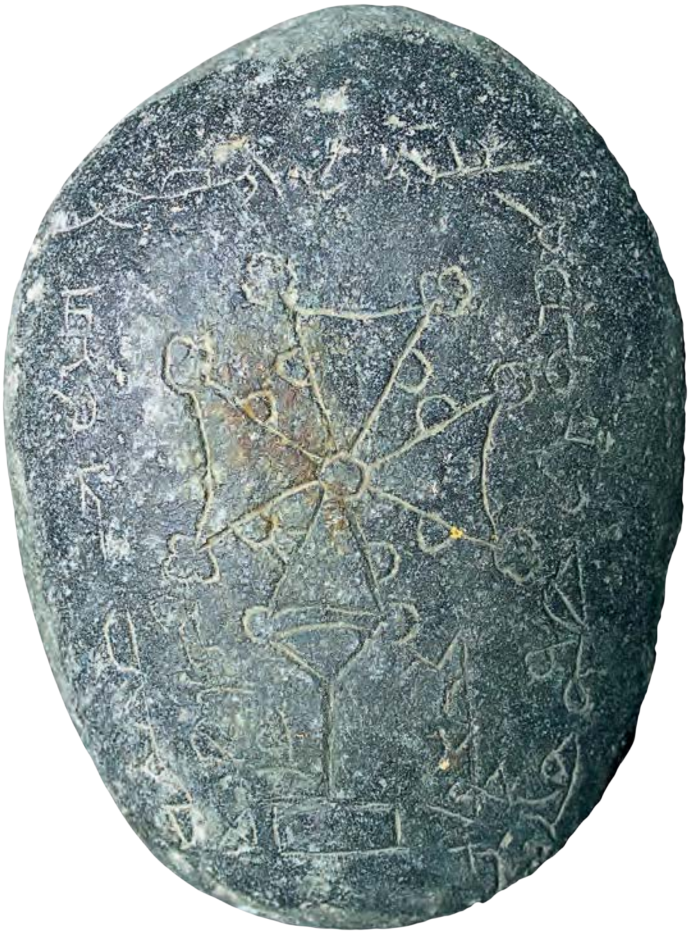


96. **The ruined city of Khar Bukhyn Balgas, Mongolia. *Balgas* means 'ruins', while *Khar Bukhyn* translates as 'black bull'. Built in stone by the Khitan, it was surrounded by ramparts and a moat. The Buddhist stupa outside the north-eastern corner of the city (not visible in the photo) was built in the seventeenth century. Photo: 2012.**

Turkic or Chagataiid Turkic languages rendered in the Estrangela Syriac script of the Nestorian Church. The earliest gravestones date from the years 1095 to 1115, the last from 1345.[46]

On taking power after Yelü Dashi's sudden death his widow **Xiao Tabuyan** (r. 1143–50) was immediately confronted by a series of problems. In 1143/44 Sanjar raised a challenge to the Qara Khitai overlordship of Chorasmia by taking Gurganj and forcing Atsïz to pay tribute not only to the Qara Khitai but to him as well. In early 1144, Karluk bands plundered the city of Bukhara, and were only driven out again in around 1148/49.[47] In 1146, a Jurchen envoy came to Xiao Tabuyan and found her hunting on horseback. Refusing to dismount, seeing himself as the representative of a superior power, he demanded that the empress herself should do so, to receive in an attitude of proper submission the commands of the Son of Heaven. Enraged, she had the envoy executed on the spot.[48] Xiao Tabuyan was succeeded by Yelü Dashi's son **Yelü Yilie** (r. 1151–63), who took a somewhat passive attitude to the military activities of Atsïz and Il-Arslan ibn Atsïz of Chorasmia, and made no attempt either to take advantage of the imprisonment of Sultan Sanjar in 1153. When Yelü Yilie died, he was succeeded by his sister **Yelü Pusuwan** (r. 1164–77) – again underlining the great standing of noblewomen among the Qara Khitai, as earlier among the Liao. Called 'Empress Chengtian' in the chronicles, Yelü Pusuwan pursued a more active foreign policy than her brother had done. In 1168, her forces occupied Balkh, and three years later she sent an army to Chorasmia when Shah Il-Arslan failed to pay the annual tribute.[49] In 1172, she actively intervened in the struggle for the succession that broke out on Il-Arslan's death that year, between his sons Sultan Shah[50] and Ala al-Din Tekish. In exchange for a promise of greater tribute, she sent a large army under her husband Xiao Duolubu to Chorasmia and set Tekish on the throne after Sultan Shah had fled.[51] In 1177, however, the imperial court was shaken by scandal, as the *Liao Shi* reports: 'Empress Ch'ên-t'ien was married to Hsiao To-lu-pu [Duolubu] but maintained illicit relations with his younger brother [. . .] Hsiao P'u-ku-chih. After making her husband Prince of Tung-p'ing, she had him murdered. The father [of the brothers], Hsiao Wo-li-la, put troops around the palace, and both the empress and her lover were shot to death.'[52] It was presumably the meritorious General Wolila, who had commanded the left wing at the Battle of Qatwan, who arranged the succession, setting Yelü Yilie's younger son **Yelü Zhilugu** (r. 1177/78–1211, d. 1213) on the throne as the fifth and last Gür-Khan.

During his long reign, Gür-Khan Zhilugu faced three challenges that in the end he was unable to overcome. Firstly, his collectors of tribute became ever more greedy and ruthless in their exploitation of local rulers and their peoples, making those vassals increasingly receptive to the offers of other, newly emergent powers. In 1209, for example, the Uyghurs of Kocho ended up killing Zhilugu's representative and recognising the supremacy of Genghis Khan,[53] just as the Karluks would do two years later. The same went for the cities of Transoxiana: 'All [the cities of Transoxiana and especially Uthman of Samarkand] were tired of the long rule of the gür-khan and had come to detest his revenue officials [. . .] and local administrators [. . .] who, contrary to their former practice, had begun to conduct themselves in a lawless and oppressive manner.'[54] The Gür-Khan had lost control of his high officials. The second danger was the rising military power of Chorasmia, the third the steadily growing stream of refugees from Mongolia, who were escaping the struggle for power that



97. **Nestorian gravestone for a woman, made from a large pebble. The inscription in the Estrangela script appears to include the words *qustans*, a Syriac loan-word from Sogdian, meaning teacher, and *emeh d-ispah-salar*, 'mother of the ispahsalar', the latter being Persian for 'military commander'. The stone is dated 1573 on the Seleucian calendar, corresponding with 1262 CE. The earliest similar gravestone to show a date is from 1095 CE.[23] Historical Museum of Tashkent, Uzbekistan.**

raged there, and more especially Genghis Khan's attempt to subjugate all its tribes. Zhilugu maintained Yelü Pusuwan's involvement in Chorasmia, and between 1178 and 1181 put troops at Sultan Shah's disposal to assist him in conquering cities in Khorasan after Sultan Tekish had killed a Qara Khitai tax collector.[55] Though Kipchak raids on the Middle Syr Darya were no threat to Zhilugu, around 1194/95 Toghril, the ruler of the large Keraïte tribe, arrived at his court seeking refuge and military assistance. Toghril had seized power by killing his brother and had been driven out of Central Mongolia by an uncle or younger brother named Erke Kara, who had formed an alliance with the powerful Naiman tribe. Toghril fled to the Gür-Khan, who was willing to offer him shelter but prudently declined to lend him any troops. A year later, Toghril fell out with Zhilugu and returned to Mongolia, where he sought help from his earlier ally Genghis Khan.[56]

Towards the end of the twelfth century, Zhilugu had to start focusing his attention on his southern border and to the threat represented by the Ghurids. In 1198 the Ghurid Baha al-Din Sam of Bamiyan occupied the city of Balkh. In response, the Gür-Khan dispatched a large army, but it was crushingly defeated by the forces of the brothers Sultan Ghiyath and Mu'izz. Six years later, in alliance with Shah Muhammad of Chorasmia, the Qara Khitai would have their revenge on the Ghurids at the Battle of Andkhudh, though Muhammad managed to rob the Qara Khitai of the fruits of their victory by concluding a separate peace with the Ghurid Mu'izz al-Din.[57] Although the Qara Khitai had won a victory, they were in reality the losers, for Muhammad Shah gained more power and the Ghurids would go on to take Termez from them in 1205. As explained earlier,[58] Zhilugu's lack of foresight when he took in the Naiman prince Küchlüg and his followers in late 1208 proved fatal. Küchlüg allied himself with Shah Muhammad of Chorasmia to embroil the Gür-Khan in a war on two fronts. While Zhilugu was able to defeat Küchlüg, Tayangu, his supreme commander in the west, was captured by Muhammad Shah. The Gür-Khan finally underestimated the defeated Küchlüg when in autumn 1211 he went out hunting in Kashgaria without sufficient protection. **Küchlüg** (r. 1211–18) took him prisoner, deposed him and awarded him a meaningless title. The usurper Küchlüg, an enemy of Genghis Khan's, was ousted and killed by the Mongol General Jebe in 1218. Zhilugu's death in 1213 marked the end of the Qara Khitai Empire, as the *Liao Shi* records,[59] and the Qara Khitai lost their distinctive national identity. They had incurred heavy losses between 1208 and 1211 – Juzjani mentions another severe defeat at the hands of Muhammad Shah in 1211[60] – and the surviving warriors were incorporated either into the Chorasmian or, after 1219/20, the Mongol army. While the Qara Khitai in Muhammad's service were excellent warriors, their loyalty was doubtful. When in 1220 the sultan retreated from Transoxiana to Balkh with an army composed of Qara Khitai and Kipchak fighters, conspirators among the Qara Khitai planned to take him prisoner and deliver him to Genghis Khan to gain the latter's favour. But one of the plotters warned the sultan, who escaped by night, and the Qara Khitai joined Genghis Khan's army.[61]

Genghis Khan not only absorbed the Qara Khitai warriors into his army, he also called on the services of the educated official class. Many of his counsellors and administrators came from the former imperial house, as can be seen from the fact they bore the name of Yelü. The most renowned of these was Yelü Chucai (1189–1243), whom Genghis Khan took as one of his most valued advisers after his conquest of Zhongdu (Beijing) in 1215. Genghis Khan's successors also used his services. The year after Genghis died in 1227, his youngest son, Regent Tului, charged Yelü Chucai with ending the banditry that plagued northern China, a task he speedily accomplished. Then, in 1229, he took part in the discussions initiated by Great Khan Ögödei (r. 1229–41), on the use to be made of northern China. Traditionalist military leaders like Sübotai and Begter proposed the systematic extermination of the region's agrarian population so that the depopulated farmlands could be converted to horse pasture, as only the large-scale extension of the Mongolian steppe to the south would make it possible to conquer the Southern Song Empire. Adopted by Mongols and Seljuqs elsewhere, such a strategy might strike us as shocking, but 'Chinese peasant production, the basis of Chinese economy, was belittled by the nomads who considered peasants to be no more a part of a political universe than were the domestic animals of the steppe'.[62] Yelü Chucai, on the other hand, argued vehemently for a more intelligent, long-term approach to the exploitation of northern China, emphasising the tax revenue that might be extracted from the existing economic structure. Yelü Chucai convinced Ögödei, who asked him to create a new taxation system for the region.[63] By his intervention, Yelü Chucai saved northern China from a genocide of frightful proportions and also the destruction of most of its flora and fauna.

Qara Khitai in Mongol service introduced their new masters to the *Yam* (*örtöö*) messenger system that had already been used by the Liao. Because the Mongol Empire with its vassal territories extended over vast distances, from the Yellow Sea to Anatolia and the Vistula, and Mongol troops were highly mobile, a system was needed that could transmit orders and reports even faster. This

Mongol postal system consisted of a network of relay stations some 30 to 50 kilometres apart, each supplied with water and fodder, and which kept messengers and fresh mounts at the ready day and night.[64] According to Marco Polo, in an emergency – on the outbreak of rebellion, for example – this allowed a courier or rather the message to travel more than 500 kilometres a day.[65] To prevent misuse, every messenger carried an official pass, an inscribed tablet called a *paiza* (*gerege*), which allowed the bearer to call on the services of the civilian-run post stations. Until the system was reformed by Great Khan Möngke (r. 1251–59),[66] foreign merchants too could make use of the services of the post stations and claim free accommodation, the *paiza* in this case acting as a kind of passport. The Mongol messenger system also served the purposes of military intelligence and played an essential role in keeping the empire together. Finally, for the administration of urban areas, the Mongols adopted from the Qara Khitai the office of the resident receiver of taxes known as the *shihna*; each city had a Mongol *darugha,* the plenipotentiary representative of the Great Khan, with a *basqaq* beneath him who collected the taxes.[67]

In south-eastern Iran the regional dynasty of the **Qara Khitai of Kerman** (1222/23–1305/6) survived into the early fourteenth century as vassals of the Mongols.[68] They were the descendants of the Qara Khitai **Baraq Hajib** (r. 1222/23–35) who had been sent to Chorasmia as a tax collector and had then been captured by the Chorasm-shah in his battle against Muhammad Shah in 1210. Baraq first served Sultan Muhammad and then his son Ghiyath al-Din as governor of Isfahan, where he converted to Islam. When in 1222 a Mongol expedition under Tolun Cherbi approached Isfahan, he departed for India, together with his followers, only to be attacked by the governor of Kerman on the way. In the words of Juvaini, ‘Between five and six thousand men [of Kirman] set out

regarding them [Baraq's Qara Khitai] as so much quarry, nay considering them a table set for dinner. [. . .] He [Baraq] ordered the women also to put on men's clothes and prepare for battle.'[69] Emerging victorious, Baraq Hajib conquered Kerman and was confirmed in his rule by the caliph, who granted him the title of Qutluq Sultan. Later, as a sign of his submission he sent his son as hostage to the Great Khan Ögödei, who confirmed him in his post as governor. Baraq Hajib's successors ruled as governors of Kerman until 1305/6, when Il-Khan Oljeitu deposed the last of the Qara Khitai for falling behind with the payment of tribute. Marco Polo, who visited Kerman on both his journey out, in early 1272, and his journey home in 1294, was impressed by the quality of the steel weaponry produced from the local iron ore.[70]

3. Minyak, the Tangut Empire

The region of Gansu had served as the crucial link between east Central Asia and China since the second century BCE. On the one hand, its geographical situation lent it great strategic importance, as it controlled the Silk Road's passage through the narrow Hexi Corridor; on the other, it had played a leading role in the development of Buddhist schools of art since the fifth century CE. In the time of the Northern Liang (397–439), Gansu served as a bridgehead into China for Central Asian Buddhist art, markedly influenced by northern India. This can be seen from the early art in the cave temples of Mati Si, Tianti Shan, Wenshu Shan, Jianti Si and Dunhuang. In the following centuries distinctively Chinese forms gained in importance, and they were enriched by influences from Tibet in the eighth and ninth centuries.[71] In the time of the Tangut state of **Minyak** (982–1227) a school of Buddhist painting and sculpture emerged in the region, dominated by Chinese and Tibetan elements in which Central Asian influences were evident for the last time, and during the final phase of Tangut culture that developed in Khara-Khoto under Mongol domination, Nepalese stylistic influences would be added to the mix. The Islamisation of what is today's Xinjiang region and the collapse of Minyak led to the disappearance of Central Asian Buddhist art.

The Tanguts, who called themselves *Minyak* in their own Tibeto-Burman language, were the successors of the East Tibetan Qiang, who lived in today's province of Qinghai and the northwestern part of Sichuan. The Tibetan occupation of the kingdom of Azha between 640 and 663 forced the local elite and their followers, called the Dangxiang in the Chinese chronicles, to flee to Gansu. A century later, around 756/57, the expanding Tibetan Empire drove them even further east, into the Ordos Loop formed by the Yellow River.[72] There the Tanguts lived as pastoralists, deriving part of their wealth from the sale of horses to China. When in 982 the Song dynasty sought to incorporate the Tanguts into their empire, a nobleman named **Li Jiquian** (r. 982–1004) rebelled, declaring his independence, but was then compelled to recognise the supremacy of his powerful neighbours, the Liao. The next ruler of Minyak, which the Chinese called Xi Xia, or Western Xia, was **Li Denming** (r. 1004–32). As Minyak was bordered to the east and south by the regional great powers of Liao and Song, it could expand only to the west. After several successful campaigns against the Uyghurs of Gansu, Li Denming – who made the city of Zhongxing (Yinchuan in Ningxia) his capital in around 1028 – and his successor **Li Yuanhao** (r. 1032–48) between 1028 and 1036/37 took the whole of Gansu and the Koko Nor. Now Minyak controlled the Silk Road through the Hexi Corridor and its southern offshoot through the Koko Nor, which gave an enormous boost to the Tangut economy, for all trade caravans were subject to a transit tax of ten per cent.[73]

Alongside this military and economic expansion, Li Yuanhao took measures to strengthen Tangut identity. Following the example of the Liao, in 1036 he introduced the Tangut script that had been commissioned by his predecessor, which boasted almost 6,000 characters. This predominantly logographic script resembled the Chinese one, but was more complicated, each individual character being composed of many more strokes (fig. 99). The Tangut language and script would continue to be used for some two centuries after the fall of the Tangut Empire in 1227. In 1038, Li Yuanhao commissioned the translation of the Buddhist canon into the Tangut language and encouraged its dissemination by means of woodblock printing. A printed version of the canon in the Tangut language and using the Tangut script was discovered in the early twentieth century at the site of the city of Khara-Khoto, which had been abandoned some five centuries earlier.[74] The texts suggest that Tangut Buddhism had merged influences from the Northern School of China's Chan (Zen) Buddhism, called Huayan Chan, with the veneration of Buddha Amitabha characteristic of the Chinese Pure Land school (*Jingtu Zong*) and with the Tibetan esoteric Buddhism represented by the Karma Kagyupa school.[75] The monastic centre of Wutai Shan played a crucial role in the development of Tangut Buddhism. During the next two centuries the Tanguts built countless Buddhist temples and stupas, octagonal in base or general plan, as well as a 34-metre-long and 5-metre-high Buddha at Zhangye; they also restored or repainted many caves at Mogao and at Yulin in Anxi county.[76] Finally, towards the end of 1038, Li Yuanhao proclaimed himself the Emperor **Jingzong**,[77] so that there were now three 'sons of heaven' in China, the emperors of the Song, Liao and Xi Xia. Li Yuanhao's proclamation was seen as an intolerable provocation by the Song, and led to a war that lasted from 1040 to 1044. While the Tanguts won three spectacular victories, they were unable to conclusively defeat the Song, whose population was much larger. Under the terms of a peace treaty of 1044, Li Yuanhao abandoned the use of the imperial title in international diplomatic communications, while the Song undertook to pay an annual tribute of 153,000 bales of silk, 30,000 catties[78] of tea and 72,000 silver taels. The agreement represented a success for the Minyak, not least because the Song confirmed their common frontier as it stood.

After Li Yuanhao fell victim to a plot in 1048, the clans of two successive imperial widows seized power, so that the emperors **Yizong** (Weiming Liangzuo, r. 1048–67) and **Huizong** (Weiming Bingchang, r. 1067–86) were purely puppets of their mothers and maternal uncles. It was not until 1094 that **Chongzong** (Weiming Qianshun, r. 1086–1139) finally broke the maternal clan's power monopoly and restored the primacy of the imperial house itself. In the second half of Chongzong's reign, Minyak profited from the collapse of the Liao and peaceful relations with the Jurchen, who were absorbed in their battle with the Song. Chongzong's successor **Renzong** (Weiming Renxiao, r. 1139–93) modified the officially promoted national identity when he recognised Confucianism as a second state religion and had Confucian temples built and Confucian texts translated into Tangut. At the same time, he introduced the Chinese system of state examinations for those applying to hold public office. With these measures, Renzong sought to provide imperial rule with a Confucian framework and to improve the quality of public officials, not least in order to limit the power of noble clans and senior military officers, who were notoriously corrupt.

The accession of **Huanzong** (Weiming Chunyou, r. 1193–1206) marks the beginning of Minyak's period of decline, which was shaped by three Mongol invasions. Minyak was less populous and militarily weaker than Jin, the empire of the Jurchens, so that in 1205 it became Genghis Khan's first target outside Mongolia. It is likely that the khan wanted to test the effectiveness of his army against a sedentary state with fortified cities before leading it against the Jin,[79] just as in 1936–39 Hitler and Göring intervened with the Condor Legion in the Spanish Civil War, testing the Luftwaffe and its new Messerschmitt Bf 109 fighter under war conditions. In fact, it was during their second campaign of 1209–10 that the Mongols learned techniques for besieging and storming strongly defended cities and fortresses. During their first campaign in northern Minyak in 1205, which was commanded by the Khitan prince Yelü Ahai, the Mongols captured a number of fortresses and won much booty, especially camels.[80] Following these defeats, Huanzong lost his throne to **Xiangzong** (Weiming Anquan, r. 1206–11). In the autumn of 1209, immediately after the voluntary submission of the Uyghurs of Kocho, Genghis Khan led a second campaign against Minyak. Like the Xiongnu in the days of the Western Han,[81] the Mongols crossed the Etzin Gol delta (Chinese: Heishui Cheng) with its many strongly defended fortresses to reach Minyak, where after a series of victories they laid siege to the fortified city of Volohai. When they found no way of taking the walls by storm, Genghis had recourse to a legendary ruse: he offered to

withdraw if Volohai paid tribute of 1,000 cats and 10,000 swallows. Hardly had these creatures been delivered than he ordered that a tuft of wool be tied to the tails of each, that the tufts be set on fire and the birds and animals set free. The cats rushed back home and the birds returned to their nests, and soon the city was ablaze. While the inhabitants struggled to extinguish the flames, the Mongols climbed over the city walls.[82] When afterwards the Mongols proved equally unable to take the capital, Genghis had the Yellow River diverted in order to try and flood the city. Yet in early 1210 the dyke broke and the water flooded the Mongol camp as well. The city remained impregnable, and Genghis Khan accepted the nominal submission of Xiangzong, who retained control of his state and army despite having to pay heavy tribute and promising to provide the Mongols with military assistance in the event of war.[83] Genghis Khan had not achieved what he set out to do, but he had come to learn (as evidenced by his later attack on Jin in 1211) that fortified cities could not be taken without siege engineers. Xiangzong, though, was deposed, to be replaced by Emperor **Shenzong** (Weiming Zunxu, r. 1211–23).

In 1218, shortly before the start of Genghis Khan's great campaign in the west, a Mongol envoy demanded that Minyak honour Emperor Xiangzong's promise to provide troops when required, only to receive a scornful answer from minister Asha Gambu, the real power in Minyak: 'Since Genghis Khan's forces are incapable of subjugating others [on their own], why did he go so far as becoming khan?'[84] Asha Gambu might well have refused to provide troops for this expedition, but Tanguts and Mongols were allies in the eastern Chinese theatre of war. For Minyak took advantage of the Mongol viceroy Mukali's attacks on Jin and supported him with an army of 50,000 men.[85] But Mukali died in 1223, and not long afterwards Emperor Shenzong abdicated in favour of his son **Xianzong** (Weiming Dewang, r. 1223–26), who immediately withdrew Tangut troops from northern China and made peace with Jin. When Genghis Khan, who was south of the

Hindu Kush, learned of this troop withdrawal and the dangerous shift in alliances, and also of a new counter-offensive by the Jurchen, he immediately returned to Mongolia.[86] In the winter of 1225/26 he set off on his last campaign, but was seriously injured on the way when he fell from his horse while hunting. He refused to turn back, however, believing that the Tanguts would take it as a sign of weakness.[87] In early 1226 his army captured Heishui Cheng, as the Chinese called Khara-Khoto, and slowly fought its way towards the capital Zhongxing, with the Tanguts putting up a fierce resistance. Emperor Xianzong died as the battles went on, and was succeeded on the throne by Emperor **Mozhu** (Weiming Xian, r. 1226–27). With the capital still resisting in the early summer of 1227, Genghis Khan escaped the coming summer heat by withdrawing to the Liupan Mountains, where he died from the consequences of the earlier hunting accident. Not long before his death, Emperor Mozhu, seeing no way out, had offered his surrender, which the dying khan accepted, implicitly promising him and his followers safe passage. Yet his last words to his commanders again testify to the more-than-unreliable character of Mongol promises: 'Do not reveal my death, and absolutely do not wail or moan lest the foe realise what has happened. When the people of Tangut come out on the promised day, annihilate them all.' As Rashid al-Din curtly records: 'The commanders, as ordered, concealed the event until the people came out [in autumn 1227] and slew them all.'[88]

While the Mongols razed the capital to the ground, they did allow the rebuilding of Khara-Khoto, 570 kilometres to the north-west, whose city walls, still standing today, date from the thirteenth and fourteenth centuries. In distant Khara-Khoto, Tangut Buddhist art enjoyed a final flowering, while the rest of the Tangut lands underwent rapid Islamisation in the 1290s. At that time, the region, which corresponds to today's province of Ningxia, was under the

control of Prince Ananda (1270–1307), a grandson of Kublai Khan. Despite his Buddhist name, Ananda was an ardent Muslim who forced the 150,000 men under his command to convert to Islam and ordained the circumcision of Mongol boys.[89] After the collapse of the Mongol Yuan dynasty (1271–1368) Khara-Khoto briefly belonged to the Mongol dynasty of the Northern Yuan (1368–1635). Around 1372 the city was attacked by General Feng Sheng of the Chinese Ming dynasty (1368–1644), who forced it to capitulate by cutting off its water supply, a then common military tactic.[90] The discovery by Pyotr Kozlov of a scroll painting dating from the time of Tögüs Temür (r. 1378–88) of the Northern Yuan shows, however, that Khara-Khoto was definitively abandoned only in the late fourteenth century, probably on account of a water shortage and the fall into disuse of the trade route to the city of Karakorum, which occurred towards the end of that century.[91] Once the city was abandoned, the whole oasis rapidly returned to desert.

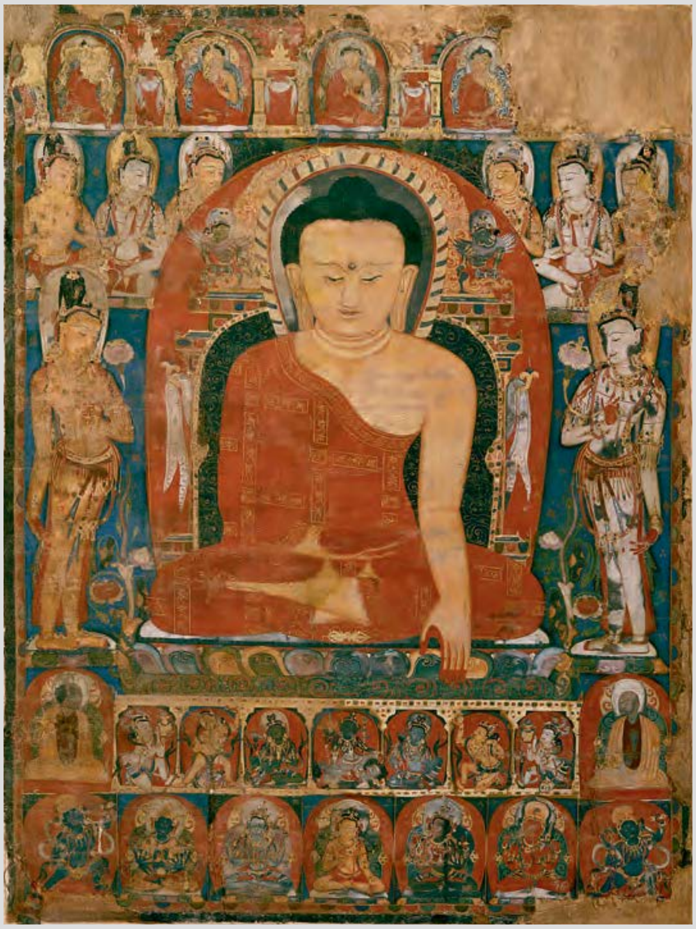
Kozlov's finds in Khara-Khoto in 1909 show that in the latter years of Tangut Buddhism the cult of Buddha Amitabha promoted

by the Chinese *Jingtu Zong* school was widespread. Numerous scroll paintings show Buddha Amitabha and the bodhisattvas Mahasthamaprapta and Avalokiteshvara receiving the soul of the righteous departed at the moment of rebirth into Amitabha's paradise of *Sukhavati*[92] (fig. 100). Very popular, too, were scroll paintings with representations of Vaishravana, one of the Four Heavenly Kings, source of protection and wealth, or of Bodhisattva Avalokiteshvara[93] (fig. 108). The Gyalwa Karmapa, the head of the Kagyüpa school of Tibetan Buddhism, is believed to be an emanation of Avalokiteshvara. The second karmapa, Karma Pakshi (1203/6–83) is not only depicted on a Khara-Khoto scroll painting alongside Medicine Buddha Bhaisajyaguru,[94] but very probably also visited the city on his journey from Gansu to visit the Great Khan Möngke at Karakorum in 1256.[95]

Pyotr Kozlov Discovers Khara-Khoto

The Tangut city of Khara-Khoto was rediscovered by the Russian **Pyotr Kuzmich Kozlov** (1863–1935). While the Russian ethnographer G. N. Potanin had heard native Torguts speak of a ruined city in the sands while journeying along the Etzin Gol in 1886, he had been unable to visit it. In 1892, V. A. Obruchev attempted to find the mysterious city, but the locals refused to tell him anything, just as they did with Kozlov in 1900.[96] Pyotr Kozlov had been nineteen when he met the famed explorer Nikolai M. Przhevalsky (1839–88), and the following year he accompanied him on his fourth Central Asian expedition, which lasted from 1883 to 1885. The expedition's aim was to discover the source of the Yellow River, to solve 'the riddle of the Lop Nor', and finally to make its way to Lhasa. Przhevalsky's dream of reaching the Tibetan capital would remain unfulfilled, since the expedition was forced to turn around when still some 250 kilometres away.[97] Kozlov was also a member of Przhevalsky's fifth expedition of 1888, but the explorer died of typhus on the Issyk Kul lake at the very start of the journey, leaving Mikhail Pevzov to take over the leadership for a new attempt in 1889–90. Kozlov then joined Vsëvolod Roborovsky's expedition of 1893–96, replacing the latter as leader when he was taken ill in 1895. In exploring the dried-up beds of the Konche Darya and the Kum Darya in the north-west of the Lop Nor desert (in the Chinese province of Xinjiang), Kozlov twice missed the opportunity to solve the 'riddle of the Lop Nor'. In the course of his second expedition of 1877, Przhevalsky had discovered a lake on the south-western edge of the Lop Nor desert that he identified as the legendary Lop Nor lake of antiquity. Yet Przhevalsky's lake was a degree further south than was indicated on the Chinese map of 1862, itself based on ancient data; hence geographer Ferdinand von Richthofen's insistence that the ancient lake had been located dozens of kilometres further north.[98] In 1890 Kozlov followed the course of the almost dried-up and rapidly shrinking River Konche Darya, and in 1893 he followed further east the bed of the completely dry Kum Darya, yet he failed to understand what he saw, namely that the legendary Lop Nor lake that had dried up in around 330 CE had lain on the eastern continuation of the Kum Darya. Had Kozlov followed the bed of the Kum Darya even further, he would have discovered the dried-up basin of the former Lop Nor lake. Three years later, Sven Hedin travelled in Kozlov's footsteps and solved the riddle.[99]

Kozlov undertook his first expedition to Mongolia and Tibet on his own account in 1899–1901, discovering one of the sources of the Yellow River and mapping the watershed between the Yellow River and the Yangtse Kiang and that between the Yangtse Kiang and the Mekong.[100] On the Upper Mekong, Kozlov's travelling chests aroused suspicion: '"Is it true," they asked, "that there are great eggs in there, with soldiers hidden inside, who hatch out and fight when need be?"'[101] Kozlov's second expedition took him to Urga (Ulaan Baatar), where he met the thirteenth Dalai Lama who lived in exile there. His third, in 1907–9, took him to north-west Sichuan. On the banks of the Etzin Gol he succeeded this time in obtaining reliable guides, thanks to the generous gifts offered to a Torgut prince. On 19 March 1908, Kozlov's dream came true, as he found himself standing before the mighty ruins of Khara-Khoto, 'the Black City' as the Torguts called it. Unsystematic excavations yielded Buddhist figures and scroll paintings together with Tibetan, Persian and Tangut manuscripts.[102] From the locals Kozlov heard the legend of the city's fall: after the Chinese besiegers had cut off the water supply in or around 1372, the last prince of Khara-Khoto was faced with a choice, capitulate or die of thirst. He and his loyal followers decided upon death. First they killed their women and children and buried their treasures in a still-undiscovered well inside the citadel; then they made a breach in the north wall and charged out to meet their deaths fighting in the besiegers' camp.[103] Kozlov left the Etzin Gol on 30 March, to meet the thirteenth Dalai Lama at the Kumbum



104. Buddha Shakyamuni in the Vajrasana, or 'diamond pose'. He touches the earth with the fingertips of his right hand to call her witness of the truth of his words. monastery. On 27 December 1908, Kozlov received orders from St Petersburg: rather than mapping north-west Sichuan, he was to return to Khara-Khoto and continue excavations.[104]

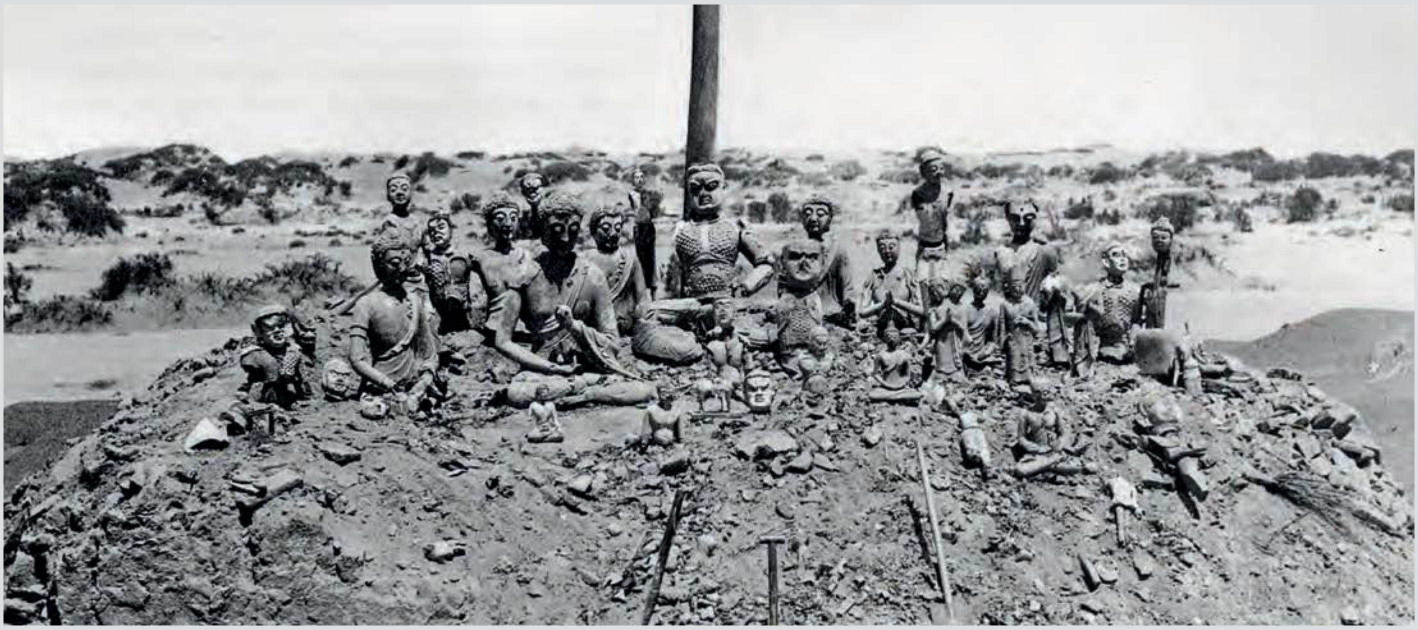
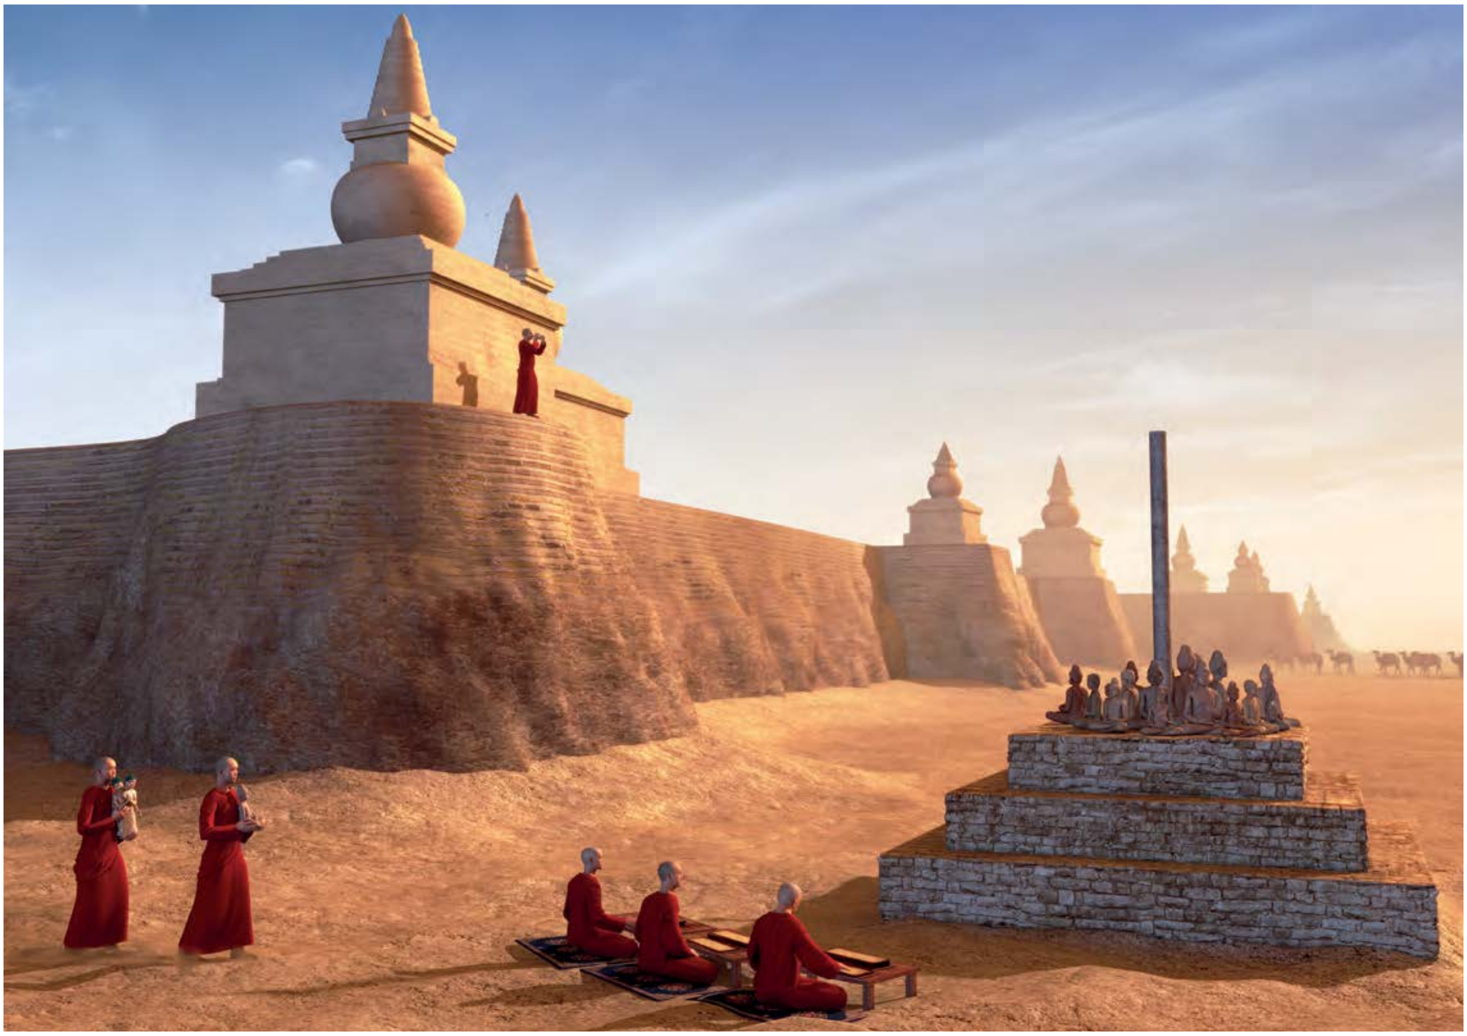
On 22 May 1909 Kozlov arrived back at Khara-Khoto. The city was rectangular in plan, 472 metres by 384, and was protected by a 10-metre-high defensive wall with two gates protected by L-shaped projections. Kozlov first excavated a Buddhist temple with wall paintings and found paper banknotes of the Yuan dynasty (1271–1368). A high point of the dig was the excavation of a stupa (Mongolian: *Ssuburgan*) outside the walls, scarcely 300 metres west of the western gate. As Sir Aurel Stein realised in 1914, based on examination of the surviving foundations and a photograph of Kozlov's, the 10-metre-high stupa had consisted of a three-stepped rectangular base, a circular drum and a cylindrical dome.[105] As one of Kozlov's workers told Stein, the stupa had no visible entrance. Unusual for the area, its form recalled that of stupas in Tibet and in the Tibetan-influenced Pamirs. Inside the stupa, which served as a tomb for a monk buried in a seated position,[106] the first excavators discovered hundreds of manuscripts, Buddhist books printed on imperial-yellow paper, scroll paintings and figures in wood and metal. Kozlov then discovered, in the middle of the stupa, a unique group of figures, arranged in the form of a three-dimensional mandala: 'On the floor of the tomb, round the pole, facing towards the centre, stood as many as twenty [seated], large clay statues of life-size, before which lay large books, just as before lamas reading their services.'[107] These figures were probably a votive offering for the deceased (fig. 107).[108]

One of Kozlov's companions discovered east of Khara-Khoto a second ruined city named Boro-Khoto which the expedition didn't investigate, due to lack of time.[109] Then Kozlov decided to return home. Unfortunately, he was exhausted and lacked the means to take these unique clay figures back to St Petersburg, except for a crowned Buddha[110] and a two-headed standing Buddha (fig. 106). The rest he buried 400 metres south of the stupa. Furthermore, he had neglected to properly document his excavations. On departing from Khara-Khoto he noted: 'The further we travel from the dead city, the more I am overcome by an inexplicable sorrow. It felt as if something had been left behind in those lifeless ruins, something near and dear to me with which my name would henceforth be indissolubly associated, something from which one parted only with a heavy heart. Many, many times I looked back at the fortified walls enveloped in dust, taking my leave as if from an old friend.'[111] In total, Kozlov took back with him to St Petersburg 280 scroll paintings on silk, hemp, linen or paper, twelve fragments of wall painting, figures of clay, wood and metal, *tsa-tsas*,[112] miniature stupas in wood, as well as manuscripts and block-printed documents.[113]

When Kozlov returned to Khara-Khoto in the summer of 1926 to recover the statues, he could not find them. 'Where he [Kozlov] had buried a number of large clay figures, because he had been unable to carry them away, there was nothing but a heap of sand. There could be no mistake, he had marked the spot precisely on his plan. All his searching and digging availed nothing, the statues had disappeared.'[114] What Kozlov did not then know was that Langdon



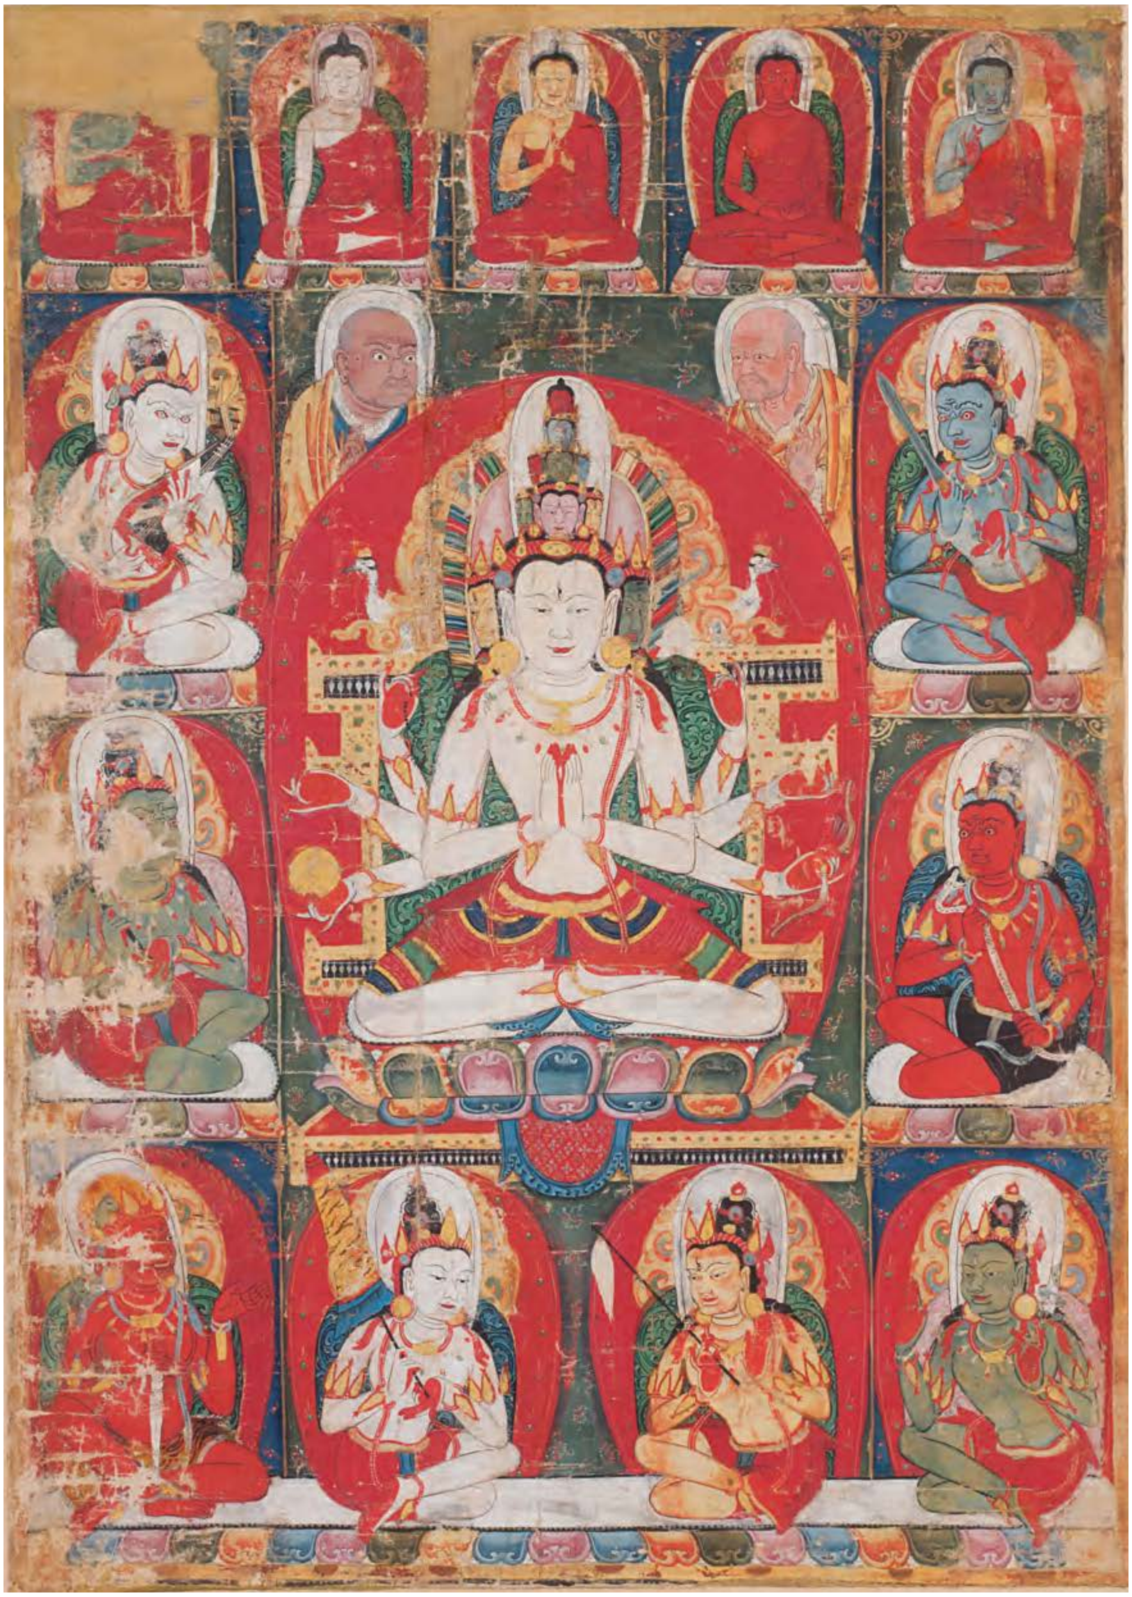
105. The stupa excavated in June 1909 by the Russian explorer Pyotr Kuzmich Kozlov, barely 300 metres from the west gate of the city of Khara-Khoto, Inner Mongolia, China. When Kozlov returned to the site in 1926 to collect the clay statues pictured here, which he had reburied seventeen years before in the sand, he failed to find them. It seems that bounty hunters and the American archaeologist Langdon Warner had dug them up three years before. In the right foreground of the photo we see a smaller standing figure of a two-headed Buddha, which is today kept in the Hermitage Museum, St Peterburg, Russia (see also fig. 106). Photo: June 1909: Pyotr K. Kozlov in *Mongolija i Amdo i mertvij gorod Xara-Xoto* (Moscow, 1923), p. 553.



107. An illustration based on archaeological data on the Khara-Khoto stupa excavated by Pyotr Kuzmich Kozlov in 1909. It contained about two dozen Buddhist figures modelled in clay, arranged in the form of a three-dimensional mandala around a central wooden pole. The picture shows two Buddhist monks bringing clay figures to the unfinished stupa, while three more monks recite from Buddhist scriptures. On the north-western corner of the wall stands a monk blowing a conch. In the background are pagodas placed on top of the western city wall.

Warner (1881–1955) of Harvard's Fogg Museum had visited Khara-Khoto in November 1923 and dug up Kozlov's cache at the western end of the southern wall, taking several of the clay figures with him. A comparison between photographs of Tangut clay figures held by the Fogg Museum, published in 1996, and a photograph of Kozlov's taken in 1909 (fig. 105) indicates that these were without a doubt the same pieces.[115] Warner himself indirectly confessed to having carried off a predecessor's finds: 'Perhaps Stein or Kozlov had left them [the figures] there, hoping some day to come back.'[116] Given the scale of the site, much of it under sand, and the short time that Warner spent in Khara-Khoto, one has to assume that it was one of Kozlov's local labourers who led him to the cache. Aurel Stein had visited Khara-Khoto in 1914, discovering in the western part of the city 230 documents in Chinese, 57 in Tangut and a few in Uyghur, Turkic or Tibetan, as well as a fourteenth-century Persian manuscript dealing with the times of Muslim prayer.[117] Another notable discovery was a Mongol-Chinese banknote circulated by Kublai Khan during his first regnal period (*Nianhao Zhongtong*) of 1260–64.[118] The last archaeologist to work in the Etzin Gol before World War II was the Swede Folke Bergman, who went there in 1927, 1930, 1931 and briefly in 1934.[119] Kozlov himself crowned his career in 1924–25 with the excavation of the Xiongnu necropolis at Noïn Ula in Central Mongolia.[120]

◀ **106.** The 62-centimetre-tall figure of a two-headed buddha, modelled in clay with traces of gilt and paint, which Kozlov unearthed in Khara-Khoto, Inner Mongolia, in 1909 (fig. 105). It was created in the early thirteenth century, the era of the Tangut Xi Xia dynasty (982–1227). The figure illustrates a legend known to date back to the seventh century.[24] Two Buddhist believers had independently ordered a statue of the Buddha from the same sculptor. Because they paid him so little, the sculptor only produced a single statue. When the two disappointed buyers stood before the figure, the Buddha took pity on them and caused it to split in two from the waist upwards.[25] The State Hermitage Museum, St Petersburg, Russia. Inv. no. X-2296.



108. Avalokiteshvara (Guanyin), the Bodhisattva of perfect compassion, seen in his Ekadasamukha, or eleven-headed, form with eight arms. Tangut thanka, distemper on canvas, late twelfth to thirteenth century, Khara-Khoto, Inner Mongolia, China. The State Hermitage Museum, St Petersburg, Russia. Inv. no. XX-2355.

VI

The Rise of the Mongols

‘There is no better place for an enemy of our nation than the grave.’

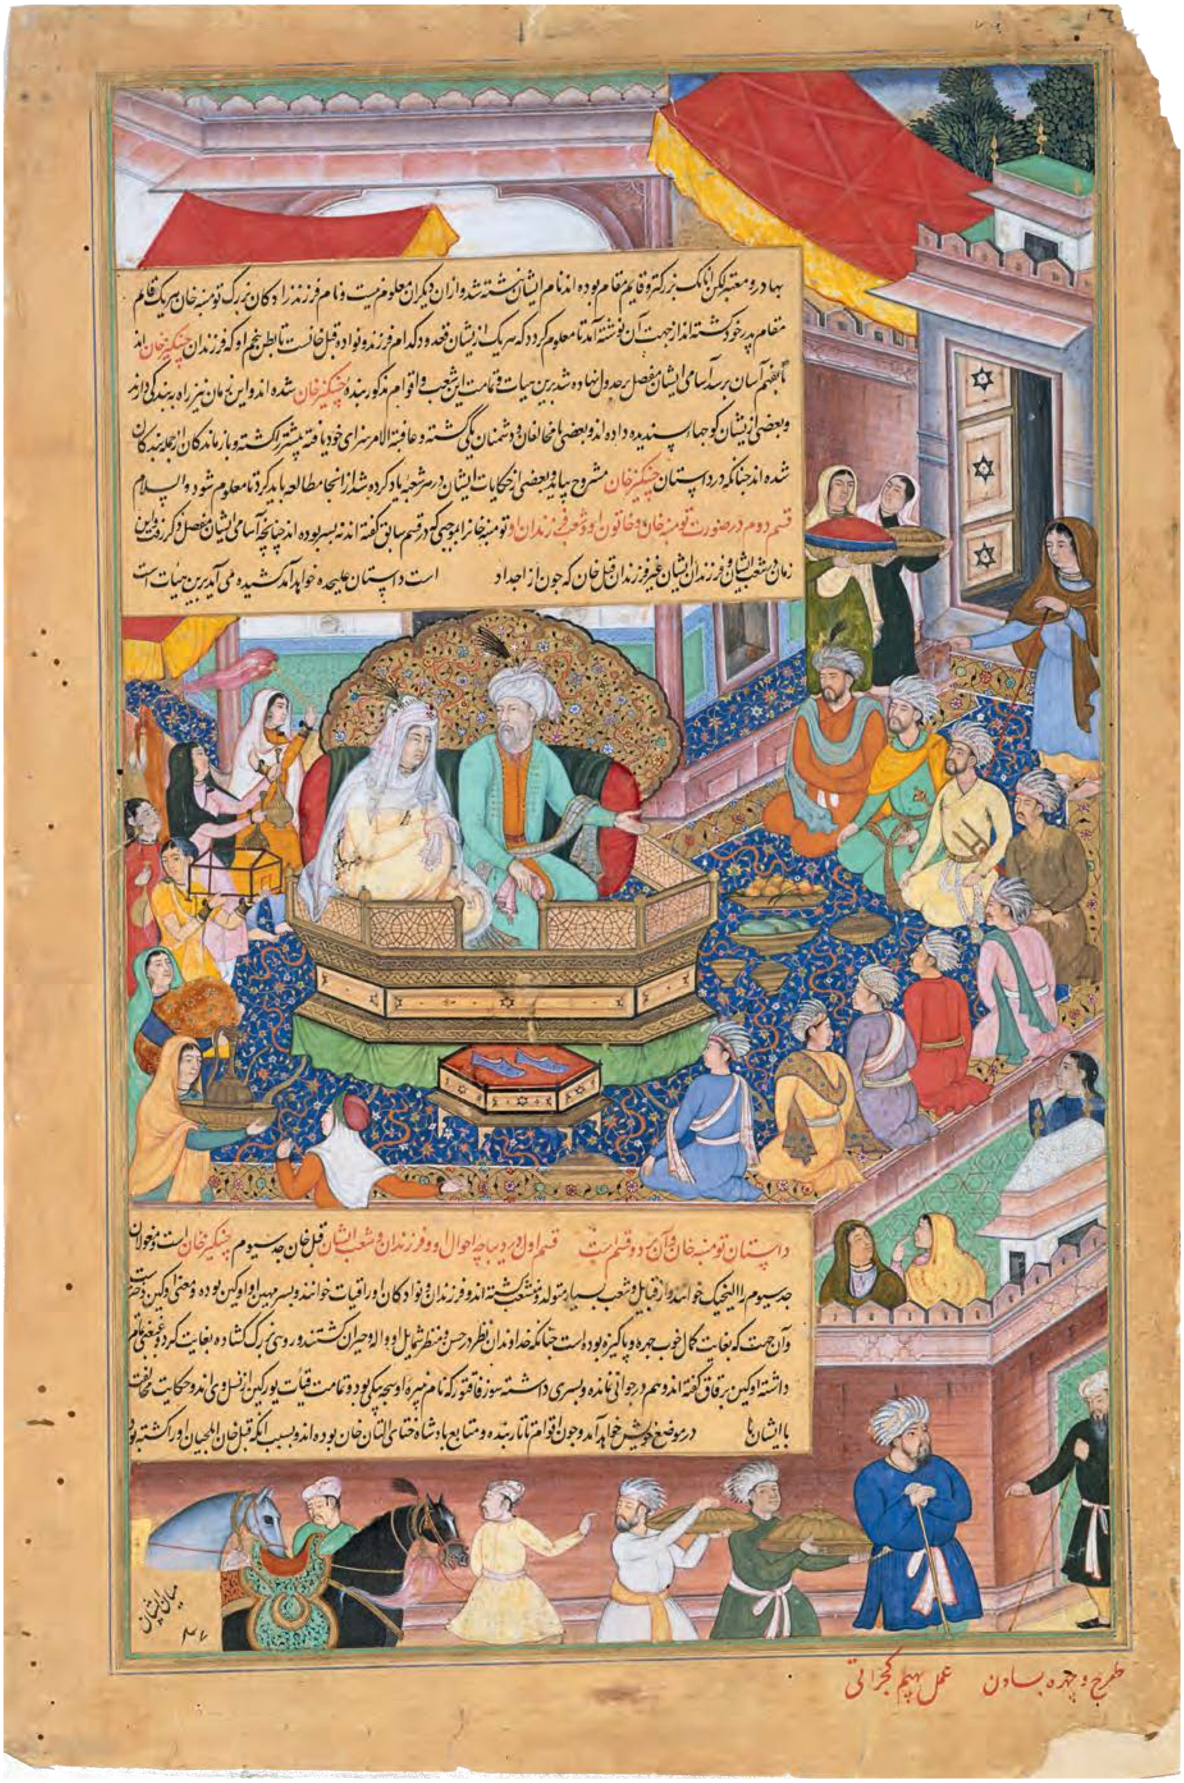
GENGHIS KHAN’s reply to his son Jochi, who was appealing for clemency for a prisoner.[1]

Covering around 33 million square kilometres,[2] the empire founded by Genghis Khan (1162 or 1167–1227) was the largest land empire ever known, more than three times the size of today's USA, and five times as large as the empire of Alexander the Great. While Alexander's empire collapsed immediately on its founder's death, for half a century (1206–60) the Mongol Empire remained united under the leadership of the Great Khans, and then divided into four large khanates and a few smaller hordes. These four khanates lasted until the fourteenth or fifteenth centuries, and the last distant descendants of Genghis Khan, though only nominal rulers, were the last Great Mughal of India (deposed 1857) and the Emir of Bukhara (deposed 1920). The Mongol Empire was also the final major power to be created by a steppe people, not least because the Mongols possessed the overwhelming majority of the horses of Central Asia. With the coming of firearms, and their industrial production, foot-soldiers began to acquire greater power than horse warriors; the people of the steppes lost their great strategic advantage as mounted archers. The rise of the Mongols led by Genghis Khan is all the more astonishing since in the 1170s and 1180s they were among the weakest and most quarrelsome tribes of Mongolia. Yet their attacks on the sedentary states were so fast and devastating that contemporaries compared them to natural disasters or interpreted them as God's curse. As the Armenian historian and eyewitness Kirakos Gandzakets'i wrote: '[The Mongols] spread throughout the plains, mountains and valleys like a multitude of locusts or like torrential rains pouring down on the land [. . .] killing as if enjoying themselves at a wedding or a drinking-bout. The whole country filled up with the corpses of the dead yet there was no one to bury them.'[3] Muslim and Latin chroniclers for their part interpreted the Mongol attacks as God's punishment for the sins of mankind, the Latin ones adding the advent of the Antichrist and the beginning of the Apocalypse.[4] The Mongols, on the other hand, venerate Genghis Khan to this day as the godlike founder of their nation and protector of their homeland.

Unlike Alexander's Macedonians or the Muslim armies of Arab conquerors, the Mongols propagated neither a worldview nor a form of civilisation. A good indication of their meagre cultural footprint is the fact that the use of the Mongolian language remained restricted to the Mongols themselves – in China, indigenous people were for a time even forbidden to learn it.[5] Mongolian remained the vernacular of the Mongols and the official language of the higher administration of the empire. The contrast with the triumphal progress of Arabic is all the more striking since the tribes of the Arabian Peninsula in Muhammad's times were no larger than those of the Mongols; in addition the army of the first caliphs was significantly smaller than Genghis Khan's, which was 129,000 strong by 1227. The fundamental difference between Mongols and Arabs was that the Arabs possessed in Islam a clearly codified, comprehensive and easily understandable religion, but the Mongols had no equivalent. Put simply, the leader of the Arabs was a prophet, while the leader of the Mongols was a warrior.[6] Even though Mongolian Great Khans were convinced that the all-powerful god Tengri had charged them with subjugating the whole world, they had no religious message which would have been relevant outside Genghis Khan's clan. They sought not to win converts to their religion, but to translate their heavenly mandate of authority into political reality. And in contrast to the Muslim rulers, who saw themselves ideally as custodians of the *Dar al-Islam*, the 'house of Islam', Mongol leaders saw their empire as a family possession. In the Mongol vision of the world, there was therefore no community of the faithful; rather, the only justification for the existence of non-Mongol people lay in their economic and military usefulness.

1. Sources for the History of the Mongols

Thanks to a wide variety of sources we are relatively well informed about the history[7] of the Mongols.[8] These sources fall into five groups: chronicles commissioned by Mongol rulers, in Mongolian or Persian; independent Muslim sources; Chinese annals; Armenian and Georgian historians as well as the accounts of Latin ambassadors, missionaries and traders. The Mongols of Genghis Khan were the first steppe people to write or commission their own chronicles, and we know of two important ones written in Mongolian. The first, the ***Altan Debter*** ('Golden Book'), was an unedited collection of unbound sheets. Most Mongols were strictly forbidden to read it – that was a privilege reserved for princes and nobles from the ruling dynasty. The original is lost, and all we have is a Chinese compilation, the *Shengwu qinzhenglu*.[9] But the *Altan Debter* is indirectly preserved insofar as it served as a source for Rashid al-Din Hamdani's *Jamia al-Tawarikh* (see below). The other chronicle, which we know as ***The Secret History of the Mongols***, comes from Genghis Khan's closest circle, and was most probably written or assembled by his adopted son Shigi Khutuku, who accompanied him on his military expeditions. The original version, presented at the imperial gathering (*kuriltai*) in the Year of the Rat (1228), comprises paragraphs 1 to 268 and ends with the death of the founder of the dynasty; it is in the form of an epic, and even



109. Tumanba Khan, a legendary ancestor of Genghis Khan, with his wife and his nine sons. Folio from a *Chingiznama* (*Book of Genghis Khan*), recording the life of the conqueror. This illustrated manuscript on paper was probably produced in Lahore around 1596 for the Mughal Emperor Akbar (r. 1556–1605). The Metropolitan Museum of Art, New York. Inv. no. 48.144.

describes some inglorious episodes in the conqueror's life, such as the murder of his half-brother Bekhter and his painful defeats. In the course of the thirteenth century, paragraphs 269 to 281 were added and some amendments were made to the original version. The original is lost and preserved only in a phonetic transcription in Chinese characters.[10]

Two highly important works were created under the Mongol Il-Khanids (1259/60–1335): Juvaini's *Tarikh-e Jahan-gusha* and Rashid al-Din's *Jamia al-Tawarikh*; both historians were among the leading politicians of the Il-Khanate. **Ala al-Din Ata Malik Juvaini** (1226–83) was the brother of Shams al-Din Juvaini (d. 1284),[11] a grand vizier and finance minister to three Il-Khans. Ata Malik first belonged to the staff of Emir Arghun Aqa, the governor of Iraq and Iran.[12] He accompanied the founder of the dynasty, Hülegü, on his campaign against the Ismailis, and was appointed governor of Baghdad in 1259. The Juvaini brothers were also significantly involved in shaping the ideological direction of the Il-Khanate along pre-Islamic lines; they gave the new state the official name 'Iran' and had the former Sassanid temple complex Takht-e Suleyman restored and expanded into a ruler's palace (fig. 174).[13] Juvaini's *Tarikh-e Jahan-gusha* ('The History of the World-Conqueror') relates how the Mongols conquered the Muslim part of Central Asia, Iran and Mesopotamia, up to 1260. Surprisingly, Juvaini did not shy away from mentioning the massacre of entire city populations. Thanks to his position he would probably have access to secret documents, but in 1246 and 1252–53 he also spent time in Karakorum at the court of the Great Khan, where he began to write his history.[14]

Rashid al-Din Hamdani (1247–1318) served the Il-Khans Ghazan (r. 1295–1304) and Oljeitu (r. 1304–16) as vizier; in 1318, he was falsely accused of having poisoned Il-Khan Oljeitu and executed, just as Shams al-Din Juvaini had previously been. Rashid was very cultured and made efforts to reform the understanding of Islam and to put into perspective the uncompromising claim of the *jihad*, the battle against 'infidels'. He resisted the doctrine, prevalent at the time, of abrogation, *naskh*, according to which 400 earlier moderate verses were arbitrarily abrogated in favour of later intolerant *surahs*: 'If we [. . .] claim that the "sword verses" abolish all other divine commandments [which express tolerance] we approve of blind butchering, which is against God's will.'[15] It was Il-Khan Ghazan who commissioned Rashid to write a history of the Mongols, after which Oljeitu ordered its extension into a universal history which would also cover China, India (including a short life of Buddha[16]) and the Franks (Western European Christians). The outstanding value of the *Jamia al-Tawarikh* derived from Rashid's sources: his work was based not only on Juvaini's *Tarikh-e Jahan-gusha*, but also on the *Altan Debter*, to which Ghazan had granted him access. In addition, both the Il-Khan Ghazan, who was considered very cultured, and Kublai Khan's permanent envoy to the Il-Khanid court, Bolad (*ca*. 1240/41–1313), provided valuable information. Bolad made Rashid familiar with the rule and conquests of Kublai Khan and with the Chinese style of painting (figs. 162, 175). Rashid wrote his work in Persian and had it translated into Arabic and copied at his scriptorium in Tabriz. Of the 24 known illustrated original copies, only two are preserved; the others were destroyed when the scriptorium was plundered on Rashid's death, or went missing in other ways.[17]

Among the chronicles and histories not commissioned by Mongols, the most significant Muslim text is the *Tabakat-i Nasiri* of **Minhaj al-Din Juzjani**;[18] the most important Chinese source is the ***Yüan Shi***, completed in the 1370s, which covers the period from the birth of Genghis Khan to the end of the Yüan dynasty (1271–1368).[19] Another valuable Chinese account is the *Xiyuji*, written by the Daoist monk **Li Zhichang** and translated into English in 1931 as *The Travels of an Alchemist*.[20] In the *Xiyuji,* Li describes the journey of his master Changchun from Khanbaliq to Afghanistan, where he met Genghis Khan several times between 1222 and 1223. On the Near East, two Armenian sources are of importance: **Kirakos Gandzakets'i**'s *History of the Armenians*, whose theme is the history of Armenia and the Near East up to 1267,[21] and *La Flor des Estoires d'Orient* (*The Flower of Histories of the East*) written in France by the Armenian prince **He'tum**, also known as He'tum [or Hayton] of Corycus, or simply He'tum the Armenian (1230/45–*ca*. 1314).[22] He was a nephew of King He'tum I of Cilician Armenia (r. 1226–69) and initially an army commander. As a result of his opposition to King Het'um II (r. with interruptions 1289–1307) he went into exile and joined the order of Premonstratensians. In 1307, Pope Clement V commissioned him to write a history of the Orient; the third of its four volumes is a history of the Mongols.[23] A special position in the sources is occupied by the account of the Nestorian monk and diplomat **Rabban Bar Sauma** (*ca*. 1225–94). A member of the Nestorian Ongut tribe, he was an ambassador first for Kublai Khan and later for Il-Khan Arghun; he was the only person of his time to record a journey all the way from

◀ **110. Kazakh eagle hunters in Bayan Ölgii Province in north-western Mongolia. Every year the Golden Eagle Festival in mid-October marks the beginning of the hunting season. Photo: 2011.**

Khanbaliq (Beijing) as far as Rome, Genoa, Bordeaux and Paris. His chronicle, published in English translation in 1928 under the title *The Monks of Kublai Khan*,[24] not only gives a fascinating account of his travels, but also offers a description of medieval Europe from the point of view of a cultured Mongol.[25]

The fifth group of sources includes the reports of Latin diplomats, missionaries and traders who undertook journeys to Mongol territory.[26] Among the most important are the works of two Franciscan monks.[27] **Giovanni da Pian del Carpine** was the first Latin chronicler to visit Great Khan Güyük in Mongolia. His account of his journey, written in 1247, includes a throrough analysis of Mongol military tactics and some carefully considered recommendations for conducting war against the Mongols.[28] A little later, **William of Rubruck** travelled to meet Great Khan Möngke, and has left us a comprehensive description of the Mongol Empire (written in 1255).[29] At the same time, two Dominican delegations travelled to the Mongol Il-Khanids: **Simon de Saint-Quentin** reported after 1248 on the ill-fated mission of Ascelin di Cremona to General Baiju,[30] while **André de Longjumeau**'s account of his visit to Iraq is preserved only as a summary in Matthew Paris's *Chronica majora* (written in 1259).[31] Also in the thirteenth century, **Marco Polo** wrote his famous record of his travels in Asia from 1271 to 1295 with his father Niccolò and uncle Maffeo.[32] In the fourteenth century (1330/31), **Odorico da Pordenone**[33] described his journeys as a missionary to India and China from 1317 to 1330; however, it is not clear whether Odorico himself visited all the places he wrote about. One source which concentrates on transcontinental commerce is **Francesco Balducci Pegolotti**'s manual on every aspect of trade between the Italian republics, the Near East, Central Asia and China (completed 1343).[34] Finally, two diaries from the time of Timur-e Lang (r. 1370–1405) provide a lot of valuable information. In 1404 the Castilian envoy **Ruy Gonzáles de Clavijo** was in Samarkand; in his journal *Embajada a Tamorlán* (English translation: *Narrative of the Embassy of Ruy González de Clavijo to the Court of Timour at Samarcand*),[35] published in 1582, he described courtly life in Timur's capital. The second account is the personal narrative and description of Asia from the perspective of a slave warrior, the Bavarian knight **Johannes Schiltberger**. In 1396 he was captured in battle and forced into military service by the Ottomans and then, in 1402, became a prisoner of the Mongols; from then until his escape in 1426, he served various Timurid princes. Schiltberger's manuscript is lost; the first printed edition was published in 1460.[36]

2. Mongol Tribes in the Mid-twelfth Century and the Ancestors of Genghis Khan

In the mid-twelfth century the territory of Mongolia was split into several tribes, who were in continual conflict with each other. Political instability was exacerbated by the fact that these tribes were not united social entities, whose internal cohesion was secured by a common ancestor. Rather, they were loose communities based on self-interest. The nomadic pastoralists joined whichever regional leader they believed could best fulfil their expectations. For those who were discontented there were two options for formalising their move to a different tribe. They could renounce their previous tribal affiliation, declare themselves to be followers, *nökers*, of their chosen new leader, and join him with their families and herds. A closer, much more selective connection with a new leader or a leading member of a foreign tribe was the institution of blood brotherhood, *anda*, in which two men swore eternal loyalty to each other and pledged mutual support.[37] In peacetime, such transfers to another clan or tribe had no major implications, as long as the renegades were not forcefully prevented from defecting by their previous leader. In times of war, though, they had obvious consequences; in peacetime a tribal leader had little authority over the members of his tribe apart from penal matters, but in the event of war he demanded unconditional obedience. The formation of new clans and tribes was made easier by the fact that although leaders had to come from a noble family, birth alone was no guarantee of rank. Lack of leadership skills, above all in war, in itself meant disqualification and removal from power. It was thanks to these rules that Genghis Khan, who came from a noble but totally impoverished family, was able to form a new warrior elite practically out of nothing, and could either unite or destroy the mutually hostile tribes.

At this time, north-western Mongolia was ruled by the **Naimans** (map 8, p. 181). In the preceding two centuries they had driven away the Kyrgyz to the north and the Keraites to the east. The Naiman elite used a Turkic language, but as a result of their regular contacts with Qara Khitai who spoke a Mongolic language, the Naimans also adopted many Mongolic words and customs. The Naimans were predominantly Buddhists, though an important minority (including figures such as Prince Küchlüg) adopted Nestorian Christianity. Nonetheless, profession of faith among steppe-dwellers by no means excluded traditional beliefs or shamanistic practices. The horse

111. A camel caravan crosses one of the Khongoryn Els sand dunes in the Gobi Desert in southern Mongolia. Together, these cover an area around 100 kilometres long and 12 kilometres wide and, in places, reaching a height of up to 300 metres. Photo: 2001.

nomads hardly ever adopted an entire system of faith, but selected only individual aspects – from Christianity, for example, they chose the cross as a symbol of resurrection and omnipotence, expressed by the four points of the compass, and the appearance of Jesus as a miraculous healer. William of Rubruck was struck by the highly syncretistic faith of the Mongols: 'I saw a man recently dead for whom they had hung up between high poles sixteen horses' hides, four towards each quarter of the earth, and they had laid down *comos* [fermented mare's milk] and meat for him to drink – and for all that they were claiming that he had been baptised.'[38] During the rise of Temujin (Genghis Khan), the rivalry between the Naimans and the Keraites dominated the Mongolian steppes. Inanch Bilge Bögü, the khan of the Naimans, supported Temujin's rival Jamuka, as soon as Temujin had contracted blood brotherhood with Toghril, the Keraite khan. When, after 1195, Inanch Khan died, his power devolved to his sons Buiruk and Tayang, who were hostile to each other. Temujin made use of the enmity between the brothers by eliminating both in separate campaigns, Tayang Khan in 1204 and Buiruk Khan in 1206; only Tayang's son Küchlüg was able to escape from the massacres.[39]

To the north of the Naimans, the **Kyrgyz** led a nomadic life by the Upper River Ienissei. In 840 they had broken up the Uyghur Empire, but had not formed a stable successor state, and were thus finally driven out of central Mongolia by the Khitan around 924. In 1207 and 1217 the Kyrgyz submitted to the Mongols.[40] South-east of the Kyrgyz were the Mongolian-speaking **Oirats**, one of the so-called 'forest peoples'; at the same time as the Kyrgyz, they, too, acknowledged Genghis Khan's supremacy without a struggle.[41] East of the Oirats, that is south-east of Lake Baikal, lived the **Merkits**, on the lower course of the River Selenga. They spoke a Mongolic language, and their economy was based on pastoralism, fishing, hunting and trading in furs. No love was lost between the warlike Merkits and Temujin, mainly because of the abductions of two women. Temujin's father, Yesügei, had once abducted Hoelun, the bride of the Merkit Chiledu, who became Temujin's mother. A troop of Merkits led by Toghto'a Beki took their revenge 20 years later, around 1183/84, with an attack on Temujin's camp. Temujin managed to escape, but left behind his wife Börte, who was carried off by Toghto'a Beki and given in marriage to the brother of the deceased Chiledu, Chilger. With the help of Toghril, the khan of the Keraites, Temujin was able to rescue his wife. But since Börte gave birth to her first son Jochi (the name means 'stranger' or 'guest') soon after her liberation, it is quite likely that Chilger, not Temujin, was Jochi's biological father. Although Genghis Khan recognised Jochi as his firstborn son, the suspicion of illegitimacy stood in the way of all Jochi's claims to be Genghis Khan's successor. In a number of battles in 1204, 1206, 1208 and 1218 the Mongols crushed or enslaved the Merkit warriors.[42]

South of the Merkits lived the **Keraites**, whose territory extended as far as the Gobi Desert. The Keraite elite were of Turkic origin, but by the twelfth century they were bilingual or spoke mostly Mongolian. The Keraites were Nestorians. According to the polymath Bar Hebraeus, in 1007 a khan and his people were converted to the Nestorian Church of the East; it is most likely that these were the Keraites.[43] Indeed, names of the ancestors of Toghril Khan (r. with interruptions 1165/71–1203) were often Christian ones. Toghril's grandfather was called Marghuz (Marcus); he was captured by the Tatars and delivered to the Jin emperor, who had him nailed to a wooden donkey. Marghuz was succeeded by Toghril's father Qurjakuz (Cyriacus). Immediately upon his father's death, between 1165 and 1171, Toghril murdered two of his half-brothers and made himself khan. When his uncle, the Gür-Khan (a title), toppled him, Toghril turned to Yesügei, who again placed him on the throne. Around 1183/84 the young Temujin, whose father Yesügei had been poisoned by Tatars around 1174/75, reminded Toghril that he owed the throne to Yesügei, and Toghril then adopted him as his own son. When Toghril, in 1194 at the latest, was deposed for a second time, Temujin again helped him to regain the throne, in 1196. In the same year, Temujin inflicted a heavy defeat on their common enemy, the Tatars.[44]

But their brotherhood in arms would end some six years later, when Temujin proposed an alliance by marriage to Toghril, according to which his son Jochi would marry Toghril's daughter. This proposal represented Temujin's claim to become the successor to Toghril, the ageing khan of the Keraites, and it was indignantly challenged by the latter's son, Nilka-Senggum. Toghril's answer was similarly contemptuous: 'Does he [Genghis Khan] not recognise that I am his liege and he is my vassal? Go back and tell him that I would rather burn my daughter than give her to his family in marriage.'[45] Following this provocative affront, Toghril and Nilka-Senggum prepared for war. After an initial victory by the Keraites over Temujin's Mongols, they were then decisively defeated and the fleeing Toghril was killed by a Naiman. In contrast to the Tatar elite, whom Temujin had exterminated without exception in 1202, he integrated the Keraites into his army and married off Toghril's Nestorian nieces. He himself took Ibaka Beki as a wife. He gave Bektumish Beki to Jochi, and the youngest of the three sisters, Sorkaktani Beki (d. 1252), to his youngest son, Tolui.[46] Sorkaktani became the most influential princess of the Mongols – she was the mother of the future Great Khans Möngke (r. 1251–59) and Kublai (r. 1260–94), and of Il-Khan Hülegü (r. 1259/60–65). After the death of Great Khan Güyük in 1248 she mounted a successful palace coup, when her line, that of Tolui, who died in 1232, ousted that of Ögödei, whose line had produced the first two Great Khans.[47] Tolui was also given Toghril's granddaughter Dokuz Khatun as his wife, and after his death, according to the custom of levirate marriage, she married his son Hülegü.[48]

113. **The city walls of Olon Süme-in Tor, Inner Mongolia, China. It was the capital of the Ongut tribe, whose ruling family belonged to the (Nestorian) Church of the East. In the 1930s and 1940s archaeologists found many Nestorian gravestones in and around the city, as well as the badly decayed ruins of Bishop Giovanni da Montecorvino's Catholic church built *ca.* 1295. Photo: 1998.**

East of the Keraites, the Mongols led a nomadic existence, as did the Mongolic-speaking **Tatars** even further east, who consisted of six groups, each with its own military leader. In the twelfth century, the quarrelsome Tatars served the Jin of northern China as auxiliary troops to fight against their enemies, such as the Keraites and Mongols. As they had done with the Keraite khan Marghuz in the mid-1150s, Tatars kidnapped Khan Hambaghai, a Mongol ruler, and handed him over to the Jurchen. 'The Altan Khan [of Jin] ordered, as was their custom, that he be nailed on a wooden donkey until he died.'[49] At the behest of the Jin, around 1260/61 the Tatars attacked Hambaghai's successor Kutula and destroyed the Mongol tribal elite.[50] Since a little later Temujin's own father Yesügei was poisoned by Tatars, he swore to take vengeance on a grand scale. In 1202 he crushed the Tatars in battle, gave their wives and children as slaves to his warriors, and slaughtered the men: 'We shall measure the Tatars against the linchpin of a cart, and kill them to the last one.'[51] One of the Tatar boys who escaped the massacre was the later military commander and supreme judge Shigi Khutuku, whom Temujin took into his family as his adoptive son.[52] It was part of Temujin's strategy, in order to break down tribal boundaries and form a united nation, to distribute the wives of defeated tribes among his Mongol warriors. His ambition was not for his Mongol tribe or clan to dominate the others – it was for the tribes to be united in one single Mongol nation.

South of the Tatars lived the Mongolian-speaking **Qonggirat** in the region of the Greater Khingan mountains. At an early date, their leaders became related by marriage to the Mongols, for Temujin's ancestor Khabul Khan (r. pre-1125–*ca.* 1147) took a Qonggirat princess as his chief wife.[53] Their alliance with the Mongols was further strengthened when Temujin took the Qonggirat Börte as his own chief wife. In 1201, after Temujin's brother Kasar, without Temujin's agreement, had attacked and plundered the Qonggirat, they changed sides and joined Temujin's rival Jamuka. Two years later, when Temujin had suffered an initial defeat at the hands of Toghril and was in a dangerous situation after many of his followers had deserted him, the Qonggirat returned to his side. Thanks to the support of their warriors, Temujin decisively defeated Toghril.[54] From now on the Qonggirat enjoyed a privileged position with the Mongols and the Yuan dynasty.

South of the Gobi Desert lived the Turkic tribe of the **Onguts**, descendants of the Shatuo, who in the tenth century had founded the short-lived dynasties of the Later Tang (923–36), the Later Jin (936–47) and Later Han (947–50).[55] They had been charged by the Jin with the task of guarding a section of the Great Wall, so that the Mongols called them Ongut, the name deriving from *öngüt* ('wall').[56] Their alliance with Temujin began in 1204 when their khan, Alakush Teginkuri, warned him of an impending attack by the Naiman Tayang Khan. Seven years later, when Genghis Khan undertook his first attack on the Jin, Alakush Khan opened the gates of the Great Wall to him. In gratitude, Genghis Khan gave his daughter Alaqai Beki in marriage to Alakush's son.[57] When, soon after, some nobles on the side of the Jin murdered Alakush and his son, Alaqai Beki ruled the Onguts as regent until 1246. The familial bonds between the descendants of Genghis Khan and the Onguts remained close, as is clear from the example of King Körgüz (d. 1298). Kublai Khan gave him two granddaughters as his wives, and he served Kublai as a successful army commander; in 1298 he was captured and executed by the Chagataiid Khan Du'a, the ally of Kublai's arch-enemy Qaidu.[58] Since the Onguts were Nestorians, Marco Polo mentioned King Körgüz ('King George') as 'the sixth in descent from Prester John'.[59] The most prominent Onguts were the two Nestorians Rabban Sauma and his companion Markos, who in 1281 was appointed as Patriarch Mar Yahballahah III (in office 1281–1317) of the Church of the East.[60] Shortly after 1294, the Catholic Bishop Giovanni da Montecorvino (in office 1294–1328) succeeded in 'converting' King Körgüz to Catholicism, and he had a Catholic church built in his northern capital of Olon Süme (fig. 113), which already possessed a Nestorian church. After Körgüz's death, the Ongut converts returned to the Eastern Church.[61]

The home of the **Mongols**, a tribe which in the twelfth century lived between Keraites and Tatars by the Rivers Onon and Kherlen, originally lay further to the north-east, within the northern loop of the River Amur. The annals of the Tang call them *Mengwu* and describe them as a member of the Shiwei group of peoples; it is said they lived as hunters and fishers, and made their breastplates out of fish scales. In the tenth century the Mengwu slowly began to migrate to the south-west, to the Onon and Kherlen regions. Their migration is symbolically hinted at in the myth of their origin, according to which the Mongols are descended from a blue wolf and a white fallow doe, two creatures of the forest. They crossed a great water (Lake Baikal?), and reached the mountain of Burkhan Khaldun, where their son Batachikhan was born. Nine generations later the descendant of the wolf and doe, Dobun Mergen, married the young Alan Qoa, and they had two sons. However, after the death of Dobun, Alan Qoa bore three more sons, said to have been conceived supernaturally, one of them being Bodunchar, the ancestor of the lineage of the Borjigin, from which Temujin also emerged. Remarkably, the official lineage here passes through Alan Qoa, a fact which indicates the high position of noblewomen among the Mongols. Bodunchar's grandson Dutun Menen married Monolun (called Nomolun in the *Secret History*), who was very rich and owned horses and sheep, which suggests that the Mongols had meanwhile become successful herdsmen.[62]

The first historically identifiable figure is Dutum Menen's son **Qaidu Khan** (r. ?–pre-1125), who took revenge for the murder of his mother Monolun by the Mongol tribe of the Jalaïr and laid the foundation stone for the *Qamugh Mongghol Ulus*, the 'state of all the Mongols'. Qaidu's successor **Khabul Khan** (r. pre-1125–*ca*. 1147), the great-grandfather of Genghis Khan, seems to have expanded his power base: the *Secret History* reports that 'Qabul Qa'an ruled over all the Mongols'.[63] Khabul undertook a number of raiding expeditions against the northern border of the Jin, whose expeditionary army he repelled shortly before his death.[64] After this defeat, the Jin assigned the task of weakening the emergent

Mongols to the Tatars. In the mid-1150s they abducted **Khan Hambaghai** (r. *ca.* 1147–mid-1150s), who came from the Tayichiud sub-clan, and handed him over to the Jin, who, as explained above, nailed him to a wooden donkey. Khabul's eldest son Ökin Barqaq met the same fate.[65] Hambaghai's successor was Khabul Khan's son **Kutula Khan** (r. *ca.* mid-1150s–60/61) of the Kiyad sub-clan.[66] In spite of thirteen campaigns against the Tatars, Kutula was unable to break their power, and around 1260/61 they defeated him so decisively that the first *Qamugh Mongghol Ulus* collapsed.[67] After Kutula's death the scattered clans could not agree on a successor; only a few clans of the Tayichiud and Kiyad declared themselves followers of **Yesügei Ba'atur** (d. *ca.* 1174/75), a grandson of Khabul Khan. Yesügei did not rule all Mongols and was also never chosen as khan. He fought a running battle with Tatar tribes, and when, between 1162 and 1167[68] he returned home from a successful battle with one of them to learn that his chief wife Hoelun had given birth to her first son, he named the child after the Tatar chieftain he had just killed, Temujin, 'blacksmith'.[69]

115. A Mongol horsehead fiddle. One of the legends attached to this two-string instrument is as follows: Once upon a time a fairy fell in love with a married man and gave him a magic horse that would bring him to her every night. She made her lover promise always to rub the horse dry before reaching home, so that no one would notice how hard the animal had been working. Once the man forgot to take this necessary precaution. His wife noticed that the horse was soaked with sweat and became so angry that she killed it. Without the horse, the man could no longer reach his beloved, so he consoled himself by making a bowed string instrument with a horse's head to accompany his sad songs about his lost love. Museum of Fine Arts, Ulaan Baatar, Mongolia.

3. Genghis Khan and the Creation of a Mongol Nation

The rise of **Genghis Khan** (r. *ca.* 1184–87/90, *ca.* 1195–1227) to become the ruler of all of Central Asia was not a linear one, but was punctuated by a number of setbacks.[70] The first serious blow came around 1174/75, when Tatars poisoned his father Yesügei and first the Tayichiud, who were among his followers, and then the Kiyad left the camp of the widow Hoelun.[71] Why none of Yesügei's brothers married the widow, as was the practice under the law of levirate marriage, is not related by the *Secret History.* The family of Hoelun, who was left behind with her four sons and two sons-in-law, rapidly became impoverished. In another internal family crisis around 1180, Temujin, together with his younger brother Kasar, shot his older half-brother Bekhter with a bow and arrow.[72] The cause was certainly not a quarrel over hunting spoils, as some have alleged, but a power struggle over the potential leadership of the Kiyad sub-clan. Temujin was the eldest son of Yesügei by his chief wife Hoelun, and as such could lay claim to leadership; but the older Bekhter had the option of levirate marriage, that is of marrying Temujin's mother when he came of age, and demoting Temujin to a son-in-law. But this fratricide was programmatic for Temujin and later for the Mongol conduct of war, insofar as everyone who blocked or resisted him was eliminated. With this murder, Temujin had removed his rival, but his action aroused the mistrust of a Tayichiud leader, who seized him and held him prisoner for about a year.[73]

After a successful escape, Temujin began to gather around him young men of his own age, with whom he undertook small raiding expeditions. He made his decisive bid for power in 1183/84, when he subjected himself to Toghril, the khan of the Keraites, who promised him: 'I shall bring together for you your divided people.'[74] Temujin very soon had occasion to take up Toghril's offer of help, when his bride Börte was abducted by Merkits, to avenge Yesügei's abduction of Hoelun. This and other events convinced Temujin that the nomads of Mongolia would never achieve prosperity and strength until tribal barriers were broken down and the lawlessness of the steppe was brought to an end. Before Temujin asked Toghril for help, he turned to the spirit of the holy mountain Burkhan Khaldun and, bowing nine times to the morning sun, promised to sacrifice to him every day.[75] This action is evidence of Temujin's belief that he could make direct contact with the highest deities, which two or three decades later led to the conviction that the highest god of all, Tengri, had personally chosen him as his instrument for world conquest – whoever opposed him, Genghis Khan, would be a rebel against Tengri's commandment and must be destroyed. For the campaign against the Merkits, Toghril made 20,000 men available, but delegated the command to Temujin's former childhood friend Jamuka, the leader of the Jadaran. After the liberation of Börte, Temujin had lived with Jamuka as his *nöker* (follower or companion), until in 1185 Temujin wanted his independence back and left him, together with his followers.[76] Soon afterwards, either still in 1185 or in 1189,[77] Temujin had himself declared khan of some Mongol clans. This represented a provocation to Jamuka, who gathered a strong army and in 1187 or 1190 decisively defeated Temujin's army at the battle of Dalan Balzhut, about 250 kilometres east of Ulaan Baatar. While Temujin himself escaped, Jamuka inflicted a savage revenge on his enemies: 'Jamuqa had the princes of the Činos [who had allied themselves to Temujin] boiled alive in seventy cauldrons.'[78] This was a way of preventing the survival of their spirits, which might take revenge from beyond the grave.[79]

A gap of several years now appears in the *Secret History*, up to the help given to Toghril and the first victory over the Tatars of 1196; Rashid al-Din also notes laconically that Temujin had to endure some difficult years until God made him strong again.[80] Temujin may have fled to the Jin, who had an interest in keeping a possible adversary of Jamuka's near at hand, should Jamuka become too powerful. In fact, in 1196 Temujin took on the role of ally of the Jin when, together with Toghril, he defeated the Tatars. His next step was to establish a permanent camp at Avraga, at the confluence of the Kherlen and Tsenker rivers.[81] He then liquidated some princes of the Kiyad Mongols and in 1198/99 defeated the Naiman Buiruk Khan. In view of his growing power, in 1201 various tribal princes elected Jamuka as Gür-Khan (universal khan), and his group was quickly joined by factions of the Naimans, Merkits, Oirats and Tayichiud. In solidarity 'they jointly hacked the backs of a stallion and a mare and together swore an oath of friendship'.[82] The killing of large animals not only counted as a sacrifice to the gods, but also symbolised the fate of an oath-breaker. For the last time, Toghril and Temujin took up arms together and defeated Jamuka's coalition at Köyitän, near the River Khalkha, not least because Jamuka's alliance collapsed even before the battle was over. On the first day of the battle an arrow hit a vein in Temujin's neck. He was allegedly saved by Jelme who sucked the blood from the wound, for the archers often used poisoned arrows in battle. By ensuring a continuous flow of blood Jelme strongly reduced the danger that Temujin would die of poison. Temujin quickly recuperated and on the next day crushed the Tayichiud. Taking revenge for past humiliation, he had all the men who could be captured put to death. He spared only the archer who had killed his horse under him with a well-aimed arrow, and named him *Jebe*, 'arrow'; Jebe soon became one of Temujin's closest confidants and, together with the commanders Sübotai, Jelme and Kublai, one of his 'four hunting dogs'.[83]

116. **Current Mongolian banknote with a portrait of Genghis Khan. The note has been slipped inside a knot in a blue *khata*, a Buddhist fabric offering. In Mongolia, the colour blue symbolises the god known as the Eternal Heaven, or *Möngke Tengri*. Photo: 2001.**

In 1202, as the khan made ready for his decisive attack on the Tatars, he issued the following orders to his army: 'If we overcome the enemy, we shall not stop for booty. When the victory is complete, that booty will surely be ours, and we will share it among ourselves. If we are forced by the enemy to retreat, let us turn back to the point where we began the attack. Those men who do not turn back to the point where we began the attack shall be cut down!'[84] The aim of these orders was to teach his equestrian warriors discipline and to transform an assembly of individual warriors into a united, manoeuvrable army. First, Temujin forbade premature looting, since the object of every battle was to destroy the enemy, in particular its officers, so that a victory was achieved only after a successful pursuit. Secondly, the booty belonged to all, and it was the khan's responsibility to distribute it fairly and ensure that the widows and orphans of fallen warriors received a share. Thirdly, in the event of defeat the warriors had to reassemble at a specific place, rather than fleeing in disorder to their homes. Whoever fled would be killed. As mentioned above, Temujin did indeed destroy the Tatars. But at the beginning of 1203 he was unexpectedly attacked by Toghril and put to flight. However, Toghril failed to pursue Temujin, who then reassembled his troops, gained a decisive victory towards the end of 1203 and merged the Keraites with his Mongols.[85] Temujin's last remaining opponents within Mongolia were now Buiruk Khan, Tayang Khan and Jamuka. Tayang Khan fell in the battle in 1204, and in 1205 the fleeing Jamuka was handed over to Temujin, who (according to the taboo against the spilling of princely blood) had him smothered to death, rolled up in a carpet.[86] Buiruk Khan was crushed in 1206. In the previous year, Temujin tested his army against a sedentary adversary, who possessed fortresses and fortified cities, and undertook a campaign against Minyak, the territory of the Western Xia.[87]

Temujin was not only a successful general, but also a far-sighted statesman and outstanding judge of character. He realised that it was only by destroying their social structures that he could weld together the many subordinate tribes into a Mongol people, and so he reorganised the warriors and their families according to military principles. At the same time he broke the power of the tribal leaders in favour of his own commanders, whom he chose solely according to merit. And since at that time he was already planning wars of conquest outside Mongolia, he introduced permanent compulsory military service for all healthy men between 15 and 60 years of age,[88] which led to a seamless militarisation of Mongolian society. At the same time the future state needed a central administrative structure, which Temujin modelled on that of the Keraites. To this end, in the year of the Tiger, 1206, Temujin summoned a *kuriltai* (a political and military council) at the upper course of the River Onon. First, Temujin had himself declared Genghis Khan by the highest shaman, Kököchu Teb Tengri, in front of the gathered tribal and clan leaders and officers. 'Kököchu Täb Tängri [. . .] said: "God has given the rulership of the face of the earth to you. [. . .] God has commanded that your title be Genghis Khan."'[89] This enthronement of Temujin by Teb Tengri has parallels in Western European imperial coronations by the pope, which implied a higher authority of religious over worldly power. As for the title 'Genghis Khan', it is interpreted either as 'ocean'; that is, 'universal khan', or 'severe,

fierce khan'. The Arabist François Pétis de la Croix, who died in 1695, and who had access to Persian documents that are lost today, confirms that at his enthronement ceremony Genghis Khan was reminded that in the event of misconduct the god of the heavens (Tengri) would withdraw the authority bestowed upon him.[90]

Next, Genghis Khan gave the million people subjected to him the name of *Qamugh Mongghol Ulus*, 'great nation of the Mongols', and replaced hereditary titles of nobility with the titles of a new military aristocracy. For from now on, every military or civil function was subject neither to a clan nor a lineage, but to the state headed by the Great Khan. Then, following the model of the Xiongnu Modu Chanyu,[91] he divided the army and men fit to bear arms according to the decimal system, into groups of ten, *arban*, of 100, *zagun*, of 1000, *mingan*, and of 10,000, *tümen*.[92] These new units replaced the previous divisions into tribes and clans. Men not fit for war had to perform civilian duties for a certain number of days, for example producing and repairing weapons, making felt, collecting fuel or guarding the officers' herds. Brothers and families were allowed to stay together, but they were forbidden on pain of death to leave their assigned unit, which hugely restricted the nomads' traditional freedom of movement and rendered the practice of blood brotherhood impossible. The introduction of a military aristocracy, whose material usefulness also benefited widows and orphans, as well as the decimal division of the military, laid the foundations for the development of feudalism and the attachment of the previously nomadic livestock breeders to a particular territory.

The higher officers received special gold *paizas* (pendants) as tokens of authority; for commanders of a *tümen* they were engraved with a tiger's head, for an army commander or *örlüg* with a lion under a sun and moon, and for a prince, with a falcon.[93] Each leader for his part was responsible for ensuring that the unit entrusted to him was at all times ready for mobilisation and battle. A decree, *bilig*, of the Khan ordered: 'Commanders of ten thousand, one thousand, one hundred [and ten] should keep their soldiers in such order and in such readiness that whenever a command is given, they should mount without regard to day or night.'[94] Incompetent commanders were punished and demoted. These radical measures transformed what had formerly been mutually hostile tribes and clans into one single standing army; the militarisation of society was complete.

Genghis Khan transferred practically all important military functions to his followers, *nökör*, regardless of their earlier social status, and for the highest administrative tasks he preferred to choose former officials of the Naimans, the Keraites and later the Tanguts. As far as his relatives and clan members are concerned, Genghis Khan had earlier already liquidated most of the leaders of the Borjigin, and he usually transferred nominal or subordinate positions to close family members – that is, his mother, his brothers and sons. In addition to his regular army, Genghis Khan created a personal guard, called *keshik*, which functioned not only as a permanent bodyguard, but also as a training unit for future leaders and for the management of chosen hostages, who had to serve in it. This guard formed a sort of rudimentary elite group. The most important unit of the fighting force was the group of 1000, *mingan*, which was commanded by a *noyan*. At the *kuriltai* of 1206, Genghis Khan appointed 88 *noyan* for his 95 *mingan*,[95] so that the regular army numbered 95,000 men.[96] Added to these were the ten elite *mingan* of the imperial guard, bringing the Mongol fighting forces in 1206 to a total of 105,000 men. Up to 1227 the number of soldiers even increased to 129,000 men.[97] The larger units of the *tümen* were assembled on an ad hoc basis and a *noyan* was appointed as their supreme commander, or *örlüg*.[98] With the beginning of the wars of conquest further military units were added, for example siege engineers and mounted auxiliaries, as well as infantry units consisting of prisoners, who served as 'fodder for arrows' and 'padding' for the bridging of moats. The military aristocracy created by Genghis Khan was based on three pillars: loyalty and career, provision for widows and orphans, and booty. The solidarity of the army, however, demanded that it remained busy and generated rich booty, which meant continual wars of conquest in ever more remote lands.[99] Logically the first major military target was the wealthy realm of the Jin, but the khan first moved against Xi Xia, to try out his new army, to steal horses and secure his right flank. When these economically necessary wars were abandoned a century later on geographical, logistic or ecological grounds, the majority of the Mongolian steppe warriors soon became impoverished, and the capability of the army declined, as becomes clear in the final decades of the Mongol Yuan dynasty.

As part of his administrative and legal reforms, the khan gave the Uyghur Tata Tunga, who had served the Naiman Tayang as seal-bearer, the task of developing a specific Mongolian script. Tata Tunga chose as a model the Uyghur script, which itself was derived from the Sogdian and Aramaic scripts. The Mongolian script, still in use today, runs from top to bottom and column by column from left to right. In addition, all official documents were to be valid only after they had been stamped by Tata Tunga. The khan then appointed his half-brother Belgutai, the brother of the formerly murdered

Bekhter, as minister of state and issued draconian laws to end widespread lawlessness: murder, blood feuds, abduction of women, rape, theft of livestock and stealing in general were now punishable by death. These laws were of course valid only within the Mongol community, not in dealings with foreign peoples. To enforce his new laws universally and preserve them from corruption, Genghis Khan appointed his adoptive son, the Tatar Shigi Khutuku, supreme judge and ordered him to write down all new and future laws in a Blue Book, *köke debter*: 'Execute those who deserve death, punish those who deserve punishment. Furthermore, writing in a blue script [on white paper] register all decisions about the distribution [of booty and appanages] and about the judicial matters of the entire population, make it into a book.'[100] The *köke debter*, the new codex of civil law, which was accessible to all Mongols was not, however, identical with the so-called Great *Yasa* (*jasaq*) of Genghis Khan, for this was intended only for his successors and the most important princes. The *yasa*, now lost, regulated matters such as the mobilisation of the army, the conduct of war, dealings with defeated enemies, foreign policy, the choice of a Great Khan, the ceremonies at a *kuriltai* and religious taboos. So the *yasa* consisted of directives for the rule and conduct of war of the descendants of Genghis Khan, while the *köke debter* was a compendium of judicial precedents.[101]

Since Genghis Khan, at the *kuriltai* of 1206, had left open the question of the relationship between worldly and spiritual power, the conflict between Genghis Khan and Teb Tengri, as well as their respective sons, rumbled on, until around 1210 it came to a head. Teb Tengri, to whose father, Mönglik, Genghis Khan had once given his own mother Hoelun as his wife, attempted to bring under his control the ten *tümen* whom he had assigned in 1206 to his mother, now deceased, and his youngest brother Temuge Otchigin. He also built up a rapidly growing entourage among the former Keraites. It was only after Teb Tengri had intrigued by means of slander against Genghis Khan's brother Kasar and publicly humiliated Temuge Otchigin that the khan took action and had Teb Tengri killed.[102] In this way Genghis Khan not only secured the supremacy of his imperial power over that of the shamans, but also took over Teb Tengri's position as chosen interlocutor of God. From now on, before any important decision, Genghis Khan himself consulted the supreme god known as the Eternal Heaven, *Möngke Tengri*, and asked for his agreement. In this way, before the campaign against the Jin in 1211, he ascended a mountain by the sources of the River Kherlen and called on Tengri for three days. On the fourth day, like Moses, he came down from the mountain and announced: 'Tengri has given me victory. Now we will get ready that we may wreak our vengeance upon the Altan Khan.'[103] From now on, if not before, Genghis Khan and his successors regarded their campaigns of conquest in China and Central Asia, later in the Near East and Eastern Europe, as the fulfilment of the will of God, made manifest to them, whose mandate they possessed.[104] With this in mind, Genghis Khan's successors usually began their letters to foreign rulers: 'By the power of the Eternal Sky, [We] the Oceanic Khan of the whole great people; Our Command. This is an order sent to . . .'[105] In the context of this worldview, which glorified the Great Khan and his people as instruments of the Eternal Heaven, foreign nations and their rulers had no alternative to obedience and voluntary subjection, other than their destruction as atonement for their rebellious disregard of the divine will. Conversely, the Mongols were forbidden to make peace with a nation which refused to be subjected. Accordingly, the Mongols used for 'peace' the Turkic word *il (el)*, which in the twelfth and thirteenth centuries also meant 'submissive' and 'obedient'.[106]

4. Genghis Khan's International Campaigns

After the two campaigns to Xi Xia in 1205 and 1209/10 as well as the voluntary submission of the Uyghur Barchuk in 1209 and the Karluk Arslan in 1211,[107] Genghis had no reason to fear any opponent from the south-west. Instead he could focus on the war against the Jin, ostensibly to avenge his ancestors Hambaghai and Ökin Barqaq. The true aim of his war was to end economic dependence on the Jin and to procure rich booty for his warriors. The planning of the campaign and the coordination of the Mongol armies, as later with the first western campaign of 1218–23 and the Russian campaign of 1236–42, was the responsibility of General Sübotai (1175/76–1248).[108] When the Mongol armies advanced in the spring of 1211, they encountered no resistance. They broke through the outer defence system some distance in front of the Great Wall, which had been constructed at the end of the twelfth century; the local auxiliary Ongut troops promptly defected to their side. In the months that followed, the Mongols inflicted three shattering defeats on the Jin in Shanxi and took possession of the imperial herds of horses, so that the Jin cavalry were robbed of their reserve horses. During the siege of Xijing (Datong), Genghis Khan suffered an arrow wound, and he retreated to the Onguts at Dolon Nor. In 1212 an army leader rebelled in the

118. **Larger than life-size modern statues of a Mongol horse warrior and Genghis Khan at the entrance to the Government Palace in Ulaan Baatar, Mongolia. Photo: 2012.**

north-east of the Jin Empire; he gathered disaffected Khitans around him and subjected himself to Genghis Khan, who in return recognised him as vassal king of the Khitan.[109] In the autumn of 1213 the Mongols invaded again and in the winter of 1213–14 began to besiege the capital, Zhongdu (today's Beijing). Meanwhile, whole armies of the Jin had joined the Mongols, who had developed strategies for taking cities. They first forced the tens of thousands of captured farmers to climb the siege ladders, so that the unfortunate prisoners were shot down by the defending forces and plunged into the city moats; by the end, the moats were completely filled up with corpses. At the same time, Genghis Khan set up special siege troops composed of Jin siege engineers who had defected to him, and who were in possession of catapults and huge crossbows.[110] When in the spring of 1214 an epidemic broke out among the besieging troops, Genghis Khan offered negotiations, at the end of which the Jin emperor paid an enormous tribute of gold, silver, jewellery, silk and young slaves, and recognised the supremacy of Genghis Khan, who then withdrew to the north.

No sooner had the Mongols departed than the Jin emperor moved his capital to Kaifeng in the interior, to gather his forces out of reach of the Mongols' lightning campaigns. The emperor's flight gave Genghis Khan a new ground for war, so that in early 1215 he ordered General Mukali to take Zhongdu. Together with Khitan allies, on 31 May 1215 Mukali captured the city and subjected it to appalling looting, while securing the Jin state treasures for the khan.[111] With the fall of Zhongdu, the destruction of the Jin cavalry and the defection of the north-eastern provinces, the Jin no longer represented a threat to Mongolia. On the other hand, the barely 50-year-old khan had to realise that, in view of the countless fortified cities and the inexhaustible supply of Chinese soldiers, a complete conquest of northern China would take several more years. So in 1216 he returned to Mongolia and in 1217 appointed the *noyan* Mukali plenipotentiary viceroy of northern China, instructing him to hold the Jin in check with 25 *mingan* and auxiliary Khitan and Tangut troops.[112] But it was Sübotai who completed the conquest of the Jin Empire in 1234 with the taking of Kaifeng.

Even before the murder of his ambassador in Otrar in 1218, Genghis Khan planned a western campaign. This is clear from the fact that, either during the war against the Jin or at its end, he instructed his close adviser Chinkai to set up a supply centre for the army between the Khangai Mountains in central Mongolia and the Dzungarian plain. Chinkai (1169–1252), who was a Nestorian and had served the khan since 1202, created the manufacturing and farming site known as *Chinkai Balghasun* in the south-west of today's Mongolia. There he settled 10,000 Chinese and Tangut prisoners of war, craftsmen and farmers, who had to produce weapons, armour and foodstuffs in large quantities, to provide for the army on the planned campaign to the west.[113] That the Mongols precisely planned the routes of their armies and supply lines is also evident from the fact that in 1218 Genghis Khan sent his son Chagatai ahead to build roads and 48 bridges in the Tian Shan mountains between Luntai (Kucha) and Almalik.[114]

After the *noyan* Jebe had destroyed Küchlüg in the autumn of 1218 and thus cleared the Mongol armies' lines of approach of their enemies, Genghis Khan, if the *Secret History* is to be believed, settled the question of his succession, since the Mongols knew no dynastic tradition.[115] Although the eldest son of a leader had a certain claim to the succession, the youngest son would inherit his father's possessions; that is, his camp, wives and herds, so he too could claim the succession. Of the four sons of Genghis Khan by his chief wife,[116] none had the calibre of his father, as we can gather from the khan's own words. He described Jochi (d. 1227) as proficient at hunting, Chagatai (d. 1242) as mindful of tradition and warlike, but arrogant, Ögodei (d. 1242) as gifted and generous, but pleasure-loving, and Tolui (d. 1232) as a victorious military leader, but mean.[117] When Genghis Khan called a family council before leaving for Chorasmia, the discord between the brothers came to the surface. According to Rashid, the khan favoured his youngest son, the successful army commander Tolui,[118] but according to the *Secret History* he preferred his firstborn, Jochi. But the second eldest, Chagatai, abused Jochi as 'bastard offspring of a Merkit',[119] and the two came to blows. Finally the brothers and the khan agreed on Ögödei as crown prince, and Tolui promised to serve him as commander of the army. But the khan was under no illusions about his sons and envisaged future conflicts: 'Why should you two [Jochi and Chagatai] go so far as to cooperate

with each other? Mother Earth is wide: its rivers and waters are many. Extending the camps [grazing grounds] that can be easily divided, We shall make each of you rule over a domain and We shall separate you.'[120] The khan assigned four steppe areas to his sons, where they should set up their main camps: Tolui, as the youngest, received his father's territory; that is, northern and central Mongolia, Ögödei the pastures between Altai, Dzungaria and Lake Balkhash, Chagatai the pastures between Uyghuristan and Syr Darya, and Jochi, in addition to his *ulus* at the Upper Ienissei,[121] the Kipchak steppes west of Kayalik that were still to be conquered. When Genghis Khan died in 1227, Ögödei and Tolui divided the empire between them on a functional basis: Ögödei, as Great Khan, took over the government and administration, and Tolui, who acted as regent up to the enthronement of Ögödei in 1229,[122] was in charge of the armed forces. Under his direct command were 101,000 warriors of pure Mongolian origin out of a total army of 129,000 men; the remaining 28,000 men were divided among Tolui's three brothers and other family members such as Temuge.[123] But Tolui died in early 1233 in mysterious circumstances. The *Secret History* and Rashid both suggest in coded language that Ögödei forced him to drink poison,[124] as a result of which the new Great Khan obtained more control over the armed forces, although *de jure* Tolui's widow Sorkaktani Beki had a claim on three-quarters of the army.[125]

In early 1219 Genghis Khan mobilised his fighting force of a total of 150,000 men, with the aim of attacking Chorasmia. In order to advance as fast as possible while keeping the advantage of surprise, and to dispense with the need for a large baggage train, as well as to confuse Muhammad Shah of Chorasmia, the khan divided his army into four units operating independently of each other, according to the motto 'march divided, fight united'. The Mongol high command conducted war on the principle of *mission-type tactics*: the army commanders were given strategic objectives and a precise time schedule, which was to be strictly observed. But the specific tactics used by them to carry out their task were left to their initiative and judgement of the situation. In the case of the Chorasmian campaign of 1219–20 the southernmost and smallest unit under *noyan* Jebe, who had just killed Küchlüg, crossed the Pamir and the Oxus at Termez, so that it threatened Muhammad's capital Samarkand from the south. When Muhammad Shah sent his last mobile reserves against Jebe, the latter's troops ground them down. The second fighting unit under Jochi conquered the Fergana valley with its capital Khujand.[126] While the third army under Chagatai and Ögödei stormed Otrar after a tough siege and threatened Samarkand from the north, the western army under Genghis Khan, Tolui and the chief of staff Sübotai, unnoticed, moved around the Aral Sea on its western side and crossed the desert of Kyzyl Kum which was believed to be an insurmountable obstacle. Now the main army emerged behind the line of defence of Muhammad Shah at his rear, forming an acute threat to Bukhara.

As if they were taking part in some gigantic battue (*nerge* or *jerge*), the four independently operating armies converged at around the same time on Samarkand and surrounded the Chorasmian troops, causing Muhammad Shah to panic.[127] He had already greatly facilitated the Mongols' advance by spreading out his numerically superior army among the large cities in the east of his empire and at the border fortresses, instead of deploying his forces in a solid group against the Mongols of Chagatai and Ögödei, who were besieging

Otrar, and challenging them to open battle. Instead of fighting, as his son Jalal al-Din repeatedly urged him to do, the sultan fled, pursed by Jebe and Sübotai, first to Balkh, then to Nishapur and then to northern Iran, where he eventually died.[128] The border fortresses in the east proved just as useless as the French Maginot Line in World War II, while the Mongol invasion of Chorasmia anticipated the German western campaign in May and June 1940 in terms of strategy and mobility.[129] Jebe's and Jochi's divisions as well as the main army circumvented the enemy fortress and suddenly emerged at their rear, so that they were able to capture one city after another. The British military historian and theorist Liddell Hart (1895–1970) paid tribute to the brilliant strategy of Genghis Khan and Sübotai, who, with their highly mobile, independently operating advance guards, demoralised and confused the enemy to such an extent that they lost their orientation and initiative: 'The armoured caterpillar car or light tank appears the natural heir of the Mongol horsemen, for the "caterpillars" [tanks] are essentially mechanical cavalry.'[130] As early as the 1920s, at least eight years before the famous book of Heinz Guderian (1888–1954), *Achtung Panzer* (1937), Liddell Hart recommended the use of mobile, independent armoured units that would confuse and cripple the enemy before the main attack.

The Mongols' successes were based on their superior conduct of war. Before battle began, spies would reconnoitre possible lines of approach, sources of water and pastures for horses, and collect information about the enemy armies. Since the Mongols avoided hand-to-hand fighting and at the beginning of a battle sought as far as possible to weaken and disorganise the enemy through superior archery power, their main weapon was the asymmetrical reflex bow. As described by del Carpine, every horseman owned two to three bows with different ranges,[131] three quivers with various types of arrow, and a battle axe. Warriors in the heavy cavalry had in addition a slightly curved sabre, a lance, a helmet and lamellar body armour, which, as Matthew Paris noted, left their backs uncovered; their

121. The Kepter Khana building in Shahriyar Ark, the Seljuk palace quarter of the city of Sultan Kala in Merv, Turkmenistan. Like the rest of the city it was destroyed in 1221 by Genghis Khan's youngest son, Tolui. The name of this long, narrow building with corrugated walls and a ground plan of 22 x 8 metres translates as 'pigeon loft'. It may be that it actually was a pigeon loft; that is, the royal post office, or an archive or library. Photo: 2004.

122. The late-medieval city walls of Balkh, Afghanistan. The city was razed to the ground by Genghis Khan and was not rebuilt until the late 1330s, only to be seized by Timur-e Lang in 1369/70. The walls were repaired with rammed earth in the fifteenth and sixteenth centuries, and when Sultan Abdul Mumin (r. 1598) commissioned their reconstruction he is said to have ordered that work-shy labourers be immured in the walls.[26] Photo: 2010/11.

horses were also armoured.[132] In addition every horseman had two to four replacement horses at his disposal,[133] so that during a protracted battle he could repeatedly mount a new steed. The Mongol army consisted almost exclusively of mounted warriors, of whom 60 per cent were light and 40 per cent heavy cavalry. At the start of a battle, each *tümen* was drawn up in five lines: two lines of heavy cavalry in front and three lines of light cavalry at the rear. The commanders stood behind the lines and gave their orders by means of messengers, coloured pennants and whistling signal arrows. The light cavalry would attack first in several waves, by passing through the gaps in the lines of the heavy cavalry standing in front, and let loose a hail of arrows on the enemy. As soon as the enemy front faltered, the heavy cavalry attacked in a body and mowed down their opponents. But if the enemy advanced, the light horsemen, still firing with their bows, retreated in an orderly fashion, until the enemy encountered the armoured horsemen. If the enemy lines stood their ground despite the hail of arrows, the light horsemen withdrew and attempted to attack them from the sides or even from behind.

But if a Mongol army encountered an army from sedentary states, consisting of infantry and heavily armoured horsemen fighting with lance and sword, the Mongols chose the tactics of simulated flight. A relatively large division of light horsemen were sacrificed as decoys, attacking the enemy directly, only to flee in apparent disorder after suffering losses. These simulated flights, lasting hours or even days, were intended to separate the pursuing heavy cavalry from the slower infantry, to tire the armoured horses and lure the pursuers into an ambush. First the flanks of the dispersed column of pursuers came under intensive fire; next the heavy Mongol cavalry, still fresh, massacred the exhausted and disorganised enemy.[134] Classic examples of this tactic were the victories at the River Khalkha over three Russian armies (1223) and at the Battle of Legnica (Liegnitz) over a north German army (1241). These complicated manoeuvres were practised in winter battues. For example, a sickle-shaped line of horsemen, dozens of kilometres long, first drove the game in front of it, after which the wings advanced faster than the centre and finally closed in on each other,

thus completely enclosing their prey. 'The Mongol army became a huge human amphitheatre with thousands of terrified animals crowded in the arena.'[135] Ultimately, the Mongols were very willing to learn, as can be recognised by their adoption of Chinese and Persian siege techniques. The weaknesses of the Mongol armies lay in the vulnerability of the composite bow in wet weather, the lack of trained elite units and their dependence on horse pastures – problems which led them to retreat from Syria and Hungary on several occasions.

On dealing with enemy urban populations, Genghis Khan gave the following directive: 'All the face of the earth from the going up of the sun to its going down, [has been] given [to me by God]. . . . Whosoever, therefore, shall submit [without resistance], mercy shall be shown unto him and unto his wives and children and household; but whosoever shall not submit, shall perish together with all his wives and children and kinsmen.'[136] If a city surrendered without a fight, the population was usually spared, even though at the next city siege the captured male population were often used as 'arrow fodder'. Nor did Genghis Khan always honour his decree, as the conquest of Balkh in 1221 shows: although the population there surrendered without a struggle, he had them massacred without exception.[137] The same fate was suffered by Ghazna; here he drove the population like hunted animals on to an open field and assigned one or two dozen people to each Mongol soldier, who had to kill them immediately. Massacres such as these often involved more than 100,000 victims per city. If a city or garrison offered resistance, its inhabitants were annihilated as a punishment and deterrent; rebel cities were razed to the ground. The only people spared were craftsmen and technicians, who were carried off to work as slaves in army supply or production centres south of the Gobi desert and north of Beijing; two side effects of this practice were that Islam was propagated in China and that the reconstruction of Transoxania was hindered. As a consequence of this form of warfare, the Muslim urban south of Central Asia suffered large-scale depopulation, while individual regions returned to desert after the systematic destruction of local irrigation channels.

After the fall of Otrar in the autumn of 1219, in early March 1220 Genghis Khan took Bukhara, where, according to Juvaini, he mounted the pulpit in the central mosque and announced to the assembled notables and traders: 'I am the punishment of God. If you had not committed great sins, God would not have sent a punishment like me upon you.' (fig. 120) Because the citadel outside the city offered bitter resistance, the khan 'gave orders for all the quarters of the town to be set on fire [after it had been thoroughly looted]. Then the people of Bokhara were driven against the citadel [as arrow fodder] [. . .]. The moat had been filled with animate and inanimate and raised up with levies and Bokharians [forced to scale the scaling ladders]. [. . .] Of the Qangli [Kipchak] no male was spared who stood higher than the butt of a whip. Of the Khwarazmian the youths and full-grown men that were fit for such service were pressed into a levy for the attack on Samarqand and Dabusiya.'[138] Such events, and even crueller ones, took place over the months that followed at the storming of Samarkand, Gurganj, Balkh, Banakat, Merv, Nisa, Nishapur, Termez, Herat, Bamiyan, Ghazna and Peshawar. In 1220–23 the two *noyans* Sübotai and Jebe also plundered Qazvin, Hamadan, Ardabil, Maragheh, Täbris, Tbilisi, Derbent, Soldaia (Sudak) and Astrakhan. A conservative estimate, based on half the numbers of victims given by Juvaini and Juzjani, still amounts to about three to four million civilians who lost their lives in the Mongol genocide.[139] Genghis Khan's four-year campaign in Muslim Central Asia resembled a war of extermination.

After the fall of Samarkand, the khan divided his assembled forces into three armies. Sübotai and Jebe were given the task of pursuing and killing the fleeing Muhammad Shah, and when the latter died in early 1221, the khan approved Sübotai's new plan to cross the Caucasus and reconnoitre the western Kipchak steppes. The Khan gave Sübotai two years, after which he was to meet Jochi, coming from the west with fresh troops, north of the Caspian Sea by the Volga, and together they were to destroy the Bulgars and northern Kangli.[140] The 9,000-kilometre march of Sübotai and Jebe, lasting three years, is remarkable, not only for the fact that an army consisting of only three *tümen* managed to survive at all in unknown and hostile regions, but also because of the astonishing geographical knowledge demonstrated by the Mongols. Without rudimentary maps it would not have been possible to determine

123. **The Shahr-e Zohak Fortress, built by the Ghurids on the foundations of a Sassanid fort, stands guard over the eastern entrance to Afghanistan's Bamiyan Valley. After his grandson Mutugen fell during the siege of the fortress in 1221, Genghis Khan ordered the slaughter of all living creatures in Bamiyan, human and animal. Photo: 2010/11.**

a meeting point thousands of kilometres away and two years in the future. In the Pontic steppe and the Crimea Sübotai must have acquired additional knowledge about the geography and the political and economic conditions of eastern Europe which moved him, in 1235, to plead fervently at the *kuriltai* of Great Khan Ögödei for a second western campaign.[141] The campaign commanded by him (1236–42) was a military masterpiece, but at the same time, for lack of rich booty, an economic failure.

The second army was handed over to Jochi, Chagatai and Ögödei, with the aim of completing the conquest of Chorasmia. Since the wealthy city of Gurganj was in future to be part of Jochi's apanage, he wanted to spare the city, which was stubbornly defending itself; Chagatai and Ögödei however wanted to plunder it as thoroughly as possible (fig. 27). When Genghis Khan heard of the dispute, he sent Tolui, who sorted out the matter in April 1221 with his usual savagery: he had the city razed to the ground and 'each individual soldier got twenty-four Muslims [to be killed], and the number of Mongol soldiers was in excess of fifty thousand', which makes a total of 1.2 million dead.[142] Shortly before this, the khan had sent Tolui to Khorasan, where he perpetrated similar massacres in Merv and Nishapur – in Nishapur, Tolui had the murdered population beheaded and several pyramids of skulls built with the heads of men, women and children, anticipating the skull pyramids of Timur-e Lang.[143] A tragic high point of Tolui's devastations was the storming of Herat in June 1222, which, according to Juzjani, cost more than two million lives.[144] These massacres of unprecedented dimensions show that for the Mongols of Genghis Khan's generation, a human life which could not be directly used in the context of their steppe civilisation was entirely worthless. In addition, a systematic depopulation of hostile areas made military 'sense' to the extent that it radically reduced the danger of later rebellions.

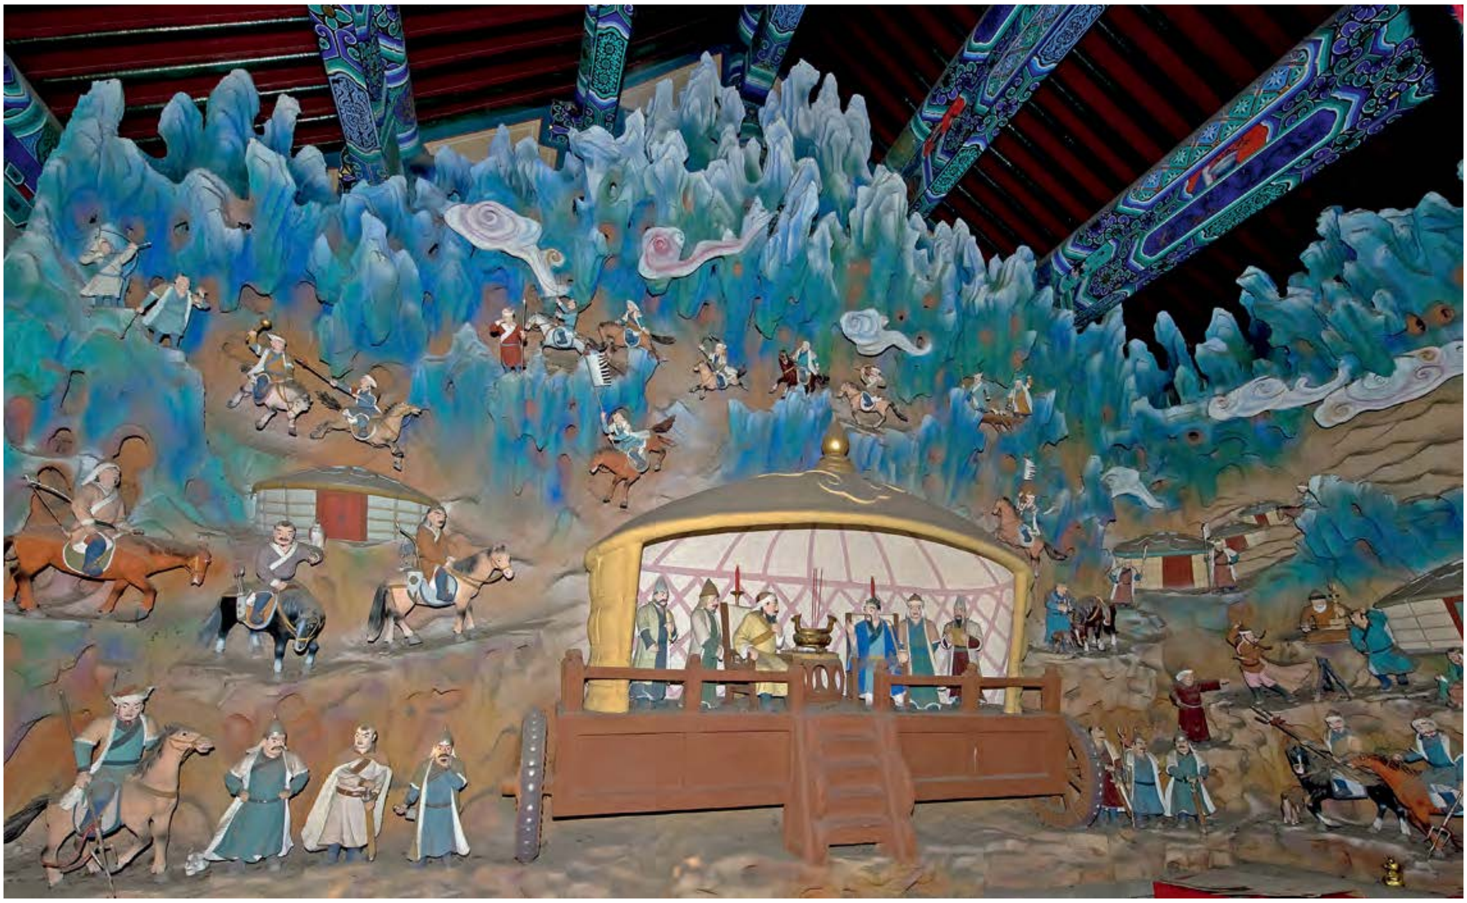
For his part, Genghis Khan took his third army in pursuit of Jalal al-Din, since the latter was preparing a counter-attack in what is today's Afghanistan. Sultan Muhammad's death had by no means weakened the beleaguered Chorasmian Empire; on the contrary, the cowardly sultan was replaced by his skilful and courageous son Jalal al-Din. Genghis Khan more than equalled his son Tolui in ruthless savagery, as is evident from the massacres in Balkh[145] and Bamiyan in 1221. Since Mutugen, a son of

124. The Lao Lu Tang Hall, built in 1228 in the Daoist Temple of the White Cloud, or Baiyun Guan in Beijing, China. Sometime after 1223, Genghis Khan appointed the monk Qiu Chuji, known in the west by his Daoist name Changchun, to take charge of the temple. In 1219, the Daoist master, founder of the Dragon Gate sect, an offshoot of the Quanzhen, or 'Complete Truth' School, was summoned by Genghis Khan to Afghanistan. His hope was that the monk could offer him an elixir of immortality. Although Changchun could not provide such an elixir, he earned the respect and goodwill of the ageing khan, who rewarded him with the stewardship of the Baiyun Temple, also decreeing that the Daoists should be exempt from paying taxes. Changchun's Dragon Gate sect drew also on the precepts of both Buddhism and Confucianism. The hall is dedicated to the Seven Immortals of the Quanzhen School, of which Chang Chun is one. Photo: 2015.

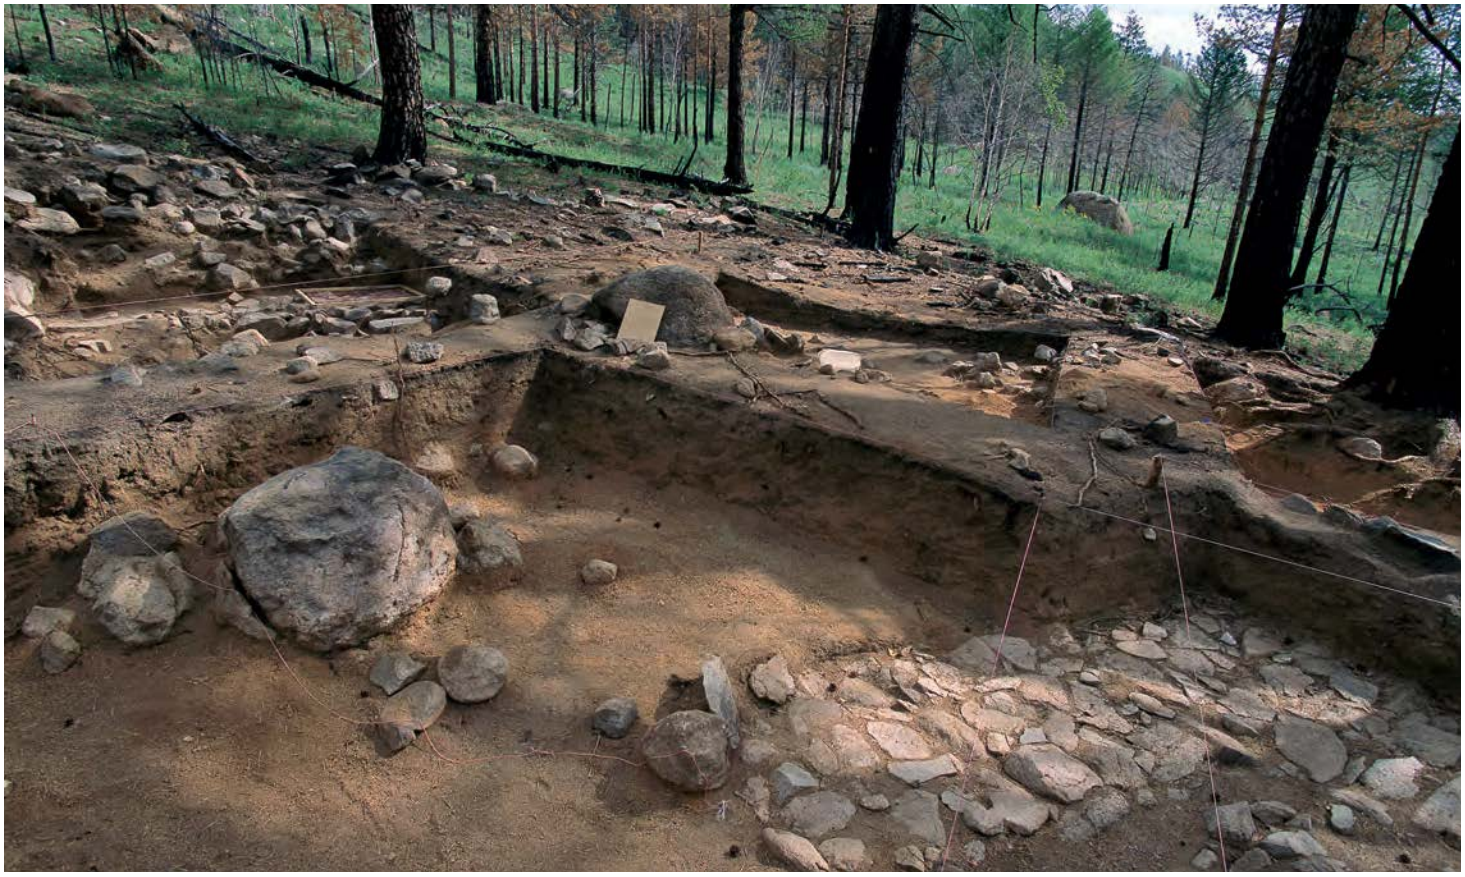
Chagatai's and Genghis Khan's favourite grandson, had fallen at the siege of the Taligan fortress of Bamiyan, the khan ordered that, in revenge, all living creatures in the city, men, women, children, infants, down to dogs and cats, should be killed.[146] After the defeat of Shigi Khutuku near Parwan, the khan defeated Jalal al-Din at the Indus, but he escaped.[147] After this victory, Genghis Khan even considered crossing the Himalayas via northern India and Bengal and attacking Minyak from the south. But since an attack on Multan failed because of rain, which impaired the use of the Mongolian composite bows, the khan decided to return via Afghanistan.[148] Before the departure for Mongolia, Genghis Khan apparently set up a rudimentary form of administration in the conquered territories;[149] at the beginning of 1223 he organised a grand battue, in which all his sons except Jochi took part. Jochi, who was staying in the Kazakh steppe, was angry at the senseless destruction in Transoxania and refused several times to come and join his father. According to Juzjani he even planned to found his own independent domain. Jochi died suddenly in early 1227, and it is not inconceivable that, as Juzjani presumes, his father had him poisoned in order to avoid future conflict with Chagatai.[150]

On the return march to Mongolia in 1223 Genghis Khan was initially accompanied by the Chinese Daoist Changchun, whom he had summoned to Afghanistan a year earlier, hoping to obtain an elixir of immortality from him. When the khan fell from his horse while hunting, and an attacking boar suddenly stopped, instead of injuring him as he lay on the ground, Changchun interpreted the event as a warning from heaven that the ageing khan should give up hunting.[151] But Genghis Khan ignored the warning and actually died following a further hunting accident, during his last Tangut campaign in August 1227.[152] On his deathbed, the khan is said to have commanded his sons Ögödei and Tolui to conquer the world and never live in peace with any people who did not voluntarily submit to them.[153] As the khan had ordered, the commanders concealed his death and killed all the inhabitants of the Tangut capital when they surrendered.[154] Then they returned to Mongolia with the body of their dead ruler. 'Picking up his coffin, they [the commanders] set out upon the return, slaying every creature they encountered along the way until they reached the ordus [of Genghis Khan].'[155] Marco Polo confirmed that during the funeral procession of Genghis Khan as well as that of Möngke, everyone who had the bad luck to come accidentally within eyeshot was killed.[156]

Like the grave of Alexander the Great, that of Genghis Khan has never been found; even Rashid al-Din cites two different places. According to the first version, Genghis Khan chose his own future burial site by the sacred mountain of Burkhan Khaldun. This, too, is where Tolui and his sons Möngke and Arik Böghe are believed to have found their last resting place. In the second version, the khan's body was brought to his home near Deluun Boldog by the River Kherlen, which lay six days' journey east of Burkhan Khaldun. It was here that two years later Great Khan Ögödei sacrificed to the spirit of his father 40 noble, jewel-bedecked virgins and some chosen horses.[157] Various traditions stress the plan of keeping the grave secret: 50 warriors are said to have buried the khan, who were then killed by 50 more warriors, who in turn suffered the same fate; others related that 1,000 horses were led over the grave to obliterate all traces of it.[158] A further difficulty for the identification of the site is that it is uncertain which of the mountains of the Khentii range east of Ulaan Baatar is identical with the Burkhan Khaldun revered in the twelfth and thirteenth centuries. While most scholars have searched around today's Burkhan Khaldun[159] without success, the Mongolian archaeologist Dambyn Bazargur is convinced that the khan was buried near his birthplace of Deluun Boldog, where the *kuriltai* of 1206 also took place. In 2001 and 2002 Bazargur carried out excavations about 100 kilometres east of the official Burkhan Khaldun, on the mountain known as Binder, 1,194 metres above sea level. Here, at a place called Uglugchyn Kherem, he came across a stone enclosure up to 4 metres in height, 3,200 metres in length and with a pentagonal ground plan; within it, he identified more than



125. The Daoist master Changchun and Genghis Khan converse in a yurt in 1222/23. Contemporary relief in the Qiu Chuji Hall of the Baiyun Temple in Beijing, China. Photo: 2015.



126. Excavations were carried out in summer 2002 by a team of Mongolian and American archaeologists searching for the tomb of Genghis Khan on a mountainside at Uglugchyn Kherem near the town of Binder, eastern Mongolia. After some 60 graves were discovered, work had to cease for political reasons and has never been resumed. Photo: 7 July 2002.

60 untouched graves. But the excavations were halted at the end of July 2002 for political reasons, so that it remains open whether the complex dates back to the time of the Khitan or the Mongols.[160] The further traditional version, repeated in the chronicle *Erdeni-yin Tobchi*, written in 1662, according to which only an empty coffin was buried in Mongolia, while the body of Genghis Khan was interred in the Muna mountains between Baotou and Hohhot (Inner Mongolia), is a legend which came into being only in the fifteenth and sixteenth centuries.[161] Its purpose was to promote a cult of Genghis Khan in the Ordos region.[162]

VII

The United Mongol Empire

‘You can conquer an empire on horseback but you cannot rule it from horseback.’

Alleged admonition of YELÜ CHUCAI (1189–1243) to Khan Ögödei.[1]

1. Great Khan Ögödei and the Construction of Karakorum

Genghis Khan is considered to have been the founder of the Mongol nation, but it was **Ögödei** (r. 1229–41), his third son, who established the Mongol state. But even though it is generally accepted that Ögödei had been designated crown prince in 1219,[2] it was Genghis Khan's fourth son **Tolui** (r. as regent 1227–29) who took over military command on his father's death, and for two years managed government affairs. Rashid al-Din reports: 'Tolui Khan mounted the imperial throne in the home yurt, where Genghis Khan's throne and his great ordus were. Most of the time he was in attendance upon Ögödei Qa'an, and he played an important role in his enthronement as qa'an.'[3] Tolui controlled an army of 101,000 Mongol warriors, but he did not dare to declare himself Great Khan. He exercised a considerable influence over the army, but conceded to Ögödei the title of Great Khan and the administration of the conquered territories. When Tolui died in 1233, probably poisoned, his widow Sorkaktani Beki steadfastly refused to marry Ögödei's son Güyük, for this would have placed the army under the direct control of the Great Khan.[4] Ögödei faced a very difficult task: on the one hand the ruling family regarded the conquered territories as their own possessions, but on the other the future empire was already threatened with fragmentation and clearly could not be administered without a central governing structure. Ögödei attempted to square the circle by linking together the two existing models of governance: the traditional rule of the steppe by the dominant clan and the administrative structures of sedentary states. At first Ögödei succeeded in ensuring a functioning equilibrium and reining in the family's aspirations, but in the course of the late 1230s he lost his long-term perspective.

Ögödei followed the lead of Genghis Khan in 1219, when he assigned pastureland to his sons as appanages, but issued no edicts regarding the urban centres. He confirmed the division of the steppes under Tolui, Chagatai, Jochi's sons Orda and Batu, minor princes, and himself, choosing Central Mongolia as his seat of government and conceding his appanages to his son Güyük.[5] He removed the richest and economically most important regions – China, Great Turkestan which consisted of Mawarannahr, Turkestan proper and Uyghuristan,[6] and Iran – from the princes' control and transferred them to the Great Khan, who was to govern them for the use of all descendants of Genghis Khan. This decision applied both to occupied areas and to those still to be conquered. For the princes, this new form of government meant dividing their appanages into two: a prince or princess ruled a specific steppe region, but was not permitted to interfere in the administration of the assigned urban areas, instead receiving only a share of the corresponding centrally raised income. In 1229 Ögödei created two fiscal and administrative bodies, run by civilian officials, one for northern China, the other for Great Turkestan, adding a third, for Iran, two or three years later. All three were subordinate to the chancellor and keeper of the seal, Chinkai, who in turn was subordinate to the Great Khan. With this reform Ögödei laid the foundations for a civil state, not least by withdrawing the governance of China, Great Turkestan and Iran from the local rulers and separating civil from military power. The region of Great Turkestan was governed by the Chorasmian Mahmud Yalavach (d. 1254), northern China by the Khitan Yelü Chucai, and Iran first by the Qara Kitai Chin Temür and after his death in 1235/36 by the Nestorian Uyghur Körgüz (George).[7] These three governors were rather like civilian viceroys. Among their responsibilities were population censuses, raising and collecting taxes, and the rebuilding and maintenance of towns and irrigation systems. For the administration of towns and cities they installed officials called *darughachi*, and for the collection of taxes *basqaqs*. The Mongol word *daru* means both 'to stamp' and 'to oppress'.[8]

Mahmud Yalavach, his son Masud Beg, and Yelü Chucai were especially notable for the valuable rebuilding work they undertook in the regions under their jurisdiction. The Muslim Mahmud Yalavach (the second part of his name is the Turkic word for 'messenger'), governed Great Turkestan with the core region of Mawarannahr from 1229 to 1239. Despite a lack of skilled workmen, he supervised the reconstruction of towns and cities and proper maintenance of irrigation canals. He also introduced a comprehensive tax reform, which abolished the arbitrary special taxes imposed by Mongol princes and revitalised trade. When he refused to sign over land that belonged to the Great Khan to Chagatai, the latter forced his brother Ögödei to dismiss him. The Great Khan then appointed him governor of northern China and installed his son Masud Beg (d. 1289) as new viceroy of Great Turkestan. Masud governed an area stretching from the Aral Sea to Minyak; in the early 1260s he saved Samarkand and Bukhara from raids by the Chagatai khan Alghu (Chagatai's grandson, r. 1260–66). In 1269 Masud prevented a further raid on Samarkand, this time by the Chagatai khan Baraq (r. 1266–71). At the subsequent peace talks between Baraq and his opponent, the Ögödeid[9] Kaidu, Masud extracted from both the promise that they would no longer prey on the cities and peasants: 'They swore an oath on gold and stipulated that henceforth they would dwell in the mountains and plains and

not hang around cities, or graze their animals in cultivated areas, or make exorbitant demands on the peasants.'[10] Without Masud Beg the two Chagatai khans would have looted the two richest cities in Transoxania and also taken tax revenue from them.

During the Mongol war of conquest against the Jin of 1231–34, both sides used fire-lances as well as gunpowder containing saltpetre. This explosive powder was used to propel projectiles and in the manufacture of heavy grenades and firebombs. The latter were launched with catapults against fortresses. The Mongols also used smoke bombs to hide their movements during battles.[11] This made Mongolia the second state, after China, to use firearms. After Yelü Chucai (in office 1229–40, d. 1243), as early as 1229, had strongly argued against the destruction of northern China's sedentary population and opposed the plans of generals like Sübotai to transform the whole region into one vast pasture for their horses, he then undertook a radical reform of the tax system. He introduced universal land tax on a household basis and poll tax on all adults, as well as taxes on luxury goods and commercial transactions. At the same time he abolished the tax exemption granted by Genghis Khan for monks and monasteries, which had caused considerable losses for the state, since it had allowed monks and monasteries to become tax-free landowners and traders. In 1234–36 Yelü Chucai carried out a census of the whole population of northern China. But soon after its completion, Ögödei began giving way to the traditionalist elements in the Mongol hierarchy and, overriding Yelü Chucai's strong opposition, extended the system of princely appanages throughout northern China. In 1239 Ögödei took a further fateful step, disempowering his viceroy and replacing his taxation system with tax farming. He put the Muslim trader Abd al-Rahman in charge of tax collection for northern China, who then installed his own tax farmers. In the tax farming system, the tax farmer agreed a fixed tax sum with the ruler, which was to be paid either in advance or periodically; if the leaseholder collected more tax revenue than was covered by the agreement, he would pocket the surplus himself. From now on, the Chinese population was helplessly at the mercy of the leaseholders' greed, and their tax burden rocketed to unaffordable heights. The leaseholders additionally exploited their plight by taking on the role of moneylenders and giving debtors credit at extortionate interest rates. Countless tax debtors thus fell into irreversible dependence on the leaseholders and were compelled first to sell their property and eventually to sell themselves and their families into slavery. This development, which reached its peak under the regency of Ögödei's widow Töregene (r. as regent 1241–46), was equivalent to a feudalisation of China by exploitative steppe warriors and their henchmen. It was not until some 20 years later that Kublai Khan brought much-needed reforms to the tax system in China.[12]

Ögödei's next measure to consolidate the state, in 1235, was to establish the capital, Karakorum, as permanent seat of government and a centre for the storage of booty, tributes and treasures.[13] According to the *Yüan Shi* (the 'History of Yuan') and a bilingual Mongolian-Chinese inscription of 1346, Genghis Khan determined the site of the future capital: 'In the fifteenth year after Genghis Khan had mounted the great throne [in 1220] he established the capital at Qorum.'[14] The choice of the Orkhon Valley for the future capital was of symbolic importance, for it not only represented a rejection of Genghis Khan's home in the upper valley of the Kherlen river, but also implied a direct line of succession from the mighty steppe kingdoms of the Göktürks and Uyghurs, whose centres of Khöshöö Tsaidam and Karabalgasun lay not far from Karakorum.[15] The Persian historian Juvaini, who twice visited Karakorum, was impressed by the ruins of the Uyghur city of Ordu Baliq (Karabalgasun), 30 kilometres away, where he also saw the famous trilingual stele of 821 and had it deciphered.[16] The new city had a prestigious location, but its geographical position was problematic, since the climatic and ecological conditions made it impossible for the officials, courtiers and troops stationed there to be self-sufficient. In addition the city was outside the trade routes. As Rashid al-Din observed, Karakorum was dependent on constant supplies of foodstuffs: 'He [Ögödei] had commanded that every day five hundred carts loaded with foodstuffs and drink should be delivered there.'[17] The city's vulnerability showed up particularly clearly in the fratricidal struggle between the brothers Arik Böge and Kublai lasting from 1260 until 1264. Since Arik Böge ruled from Karakorum and Kublai controlled northern China, Tangut and Kocho, the latter blocked the supply of food to the Orkhon Valley, causing the capital to starve.[18] Later Arik Böge was forced to capitulate.

Ögödei ordered the building of city walls and a palace in the Chinese style, which was inaugurated as early as 1236.[19] It was only the forced resettlement of Chinese and Tangut architects and labourers that made the building of Karakorum possible. Ögödei then initiated the construction of a Buddhist temple, which was completed by Möngke Khan in 1256; Möngke also had a monumental stupa built.[20] The Buddhist terracotta figures and fragments of paintings brought to light by archaeological excavations bear a great similarity to similar finds from Khara-Khoto, which strongly suggests that the Buddhist buildings and sculptures were created by deported Tanguts.[21] In any case, in the 1230s Buddhism was already enjoying imperial support. From William of Rubruck, who was in Karakorum in 1254, we know that the majority of the city's population was foreign

– Central Asian officials, Chinese labourers and Muslim traders.[22] It possessed twelve Buddhist (and perhaps Daoist) temples, two mosques and a Nestorian church.[23] William also described the silver tree providing drinks mentioned by Rashid,[24] which the Parisian goldsmith Guillaume Bouchier, who had been captured in Belgrade, had made in 1254 for Möngke Khan, and which stood in the audience hall of the palace. 'The large tree made of silver [has] four silver lions at its roots, each one containing a conduit-pipe and spewing forth white mare's milk. There are four conduits leading into the tree, right to the top, with their ends curving downwards, and over each of them lies a gilded serpent. [. . .] One of the pipes discharges wine, a second caracomos [kumys, fermented mare's milk], a third bal [made from honey], and a fourth rice ale. [. . .] Between the four pipes, at the top, he [Bouchier] made an angel holding a trumpet, and beneath the tree a cavity capable of concealing a man. [. . .] So when drink is required, the head butler calls to the angel to sound the trumpet. On hearing this, the man concealed in the cavity then blows strongly on the pipe that leads to the angel, the angel puts the trumpet to its mouth, and the trumpet gives out a very loud blast. When the stewards in the chamber [outside the hall] hear this, each pours his drink into the appropriate pipe, and the pipe spurt[s] it out.'[25]

In excavations carried out in Karakorum since 2000, archaeologists found a seven-nave Buddhist temple with square ground plan, which, as we learn from an inscription of 1346, had been restored between 1342 and 1346. This temple with 8 x 8 columns, at whose bases some 100,000 *tsa-tsas* (small clay offerings) were deposited, was dedicated to Tathagata Buddha Vairocana and designed in the form of a mandala; a ceramic figure of Vairocana, about 5 metres tall, was enthroned in the centre, and a further Tathagata Buddha was placed at each of the four points of the compass.[26] Today, the ruins of Ögödei's palace most probably lie under the monastery of Erdene Zuu, founded in 1585/86; building material from the ruins of the abandoned city of Karakorum was used in the monastery's construction.[27] The discovery in the north-east of the city of small fragments of wall painting with inscriptions closely resembling the Estrangelo script used by the Nestorians suggests that what the archaeologists found here was indeed the Nestorian church

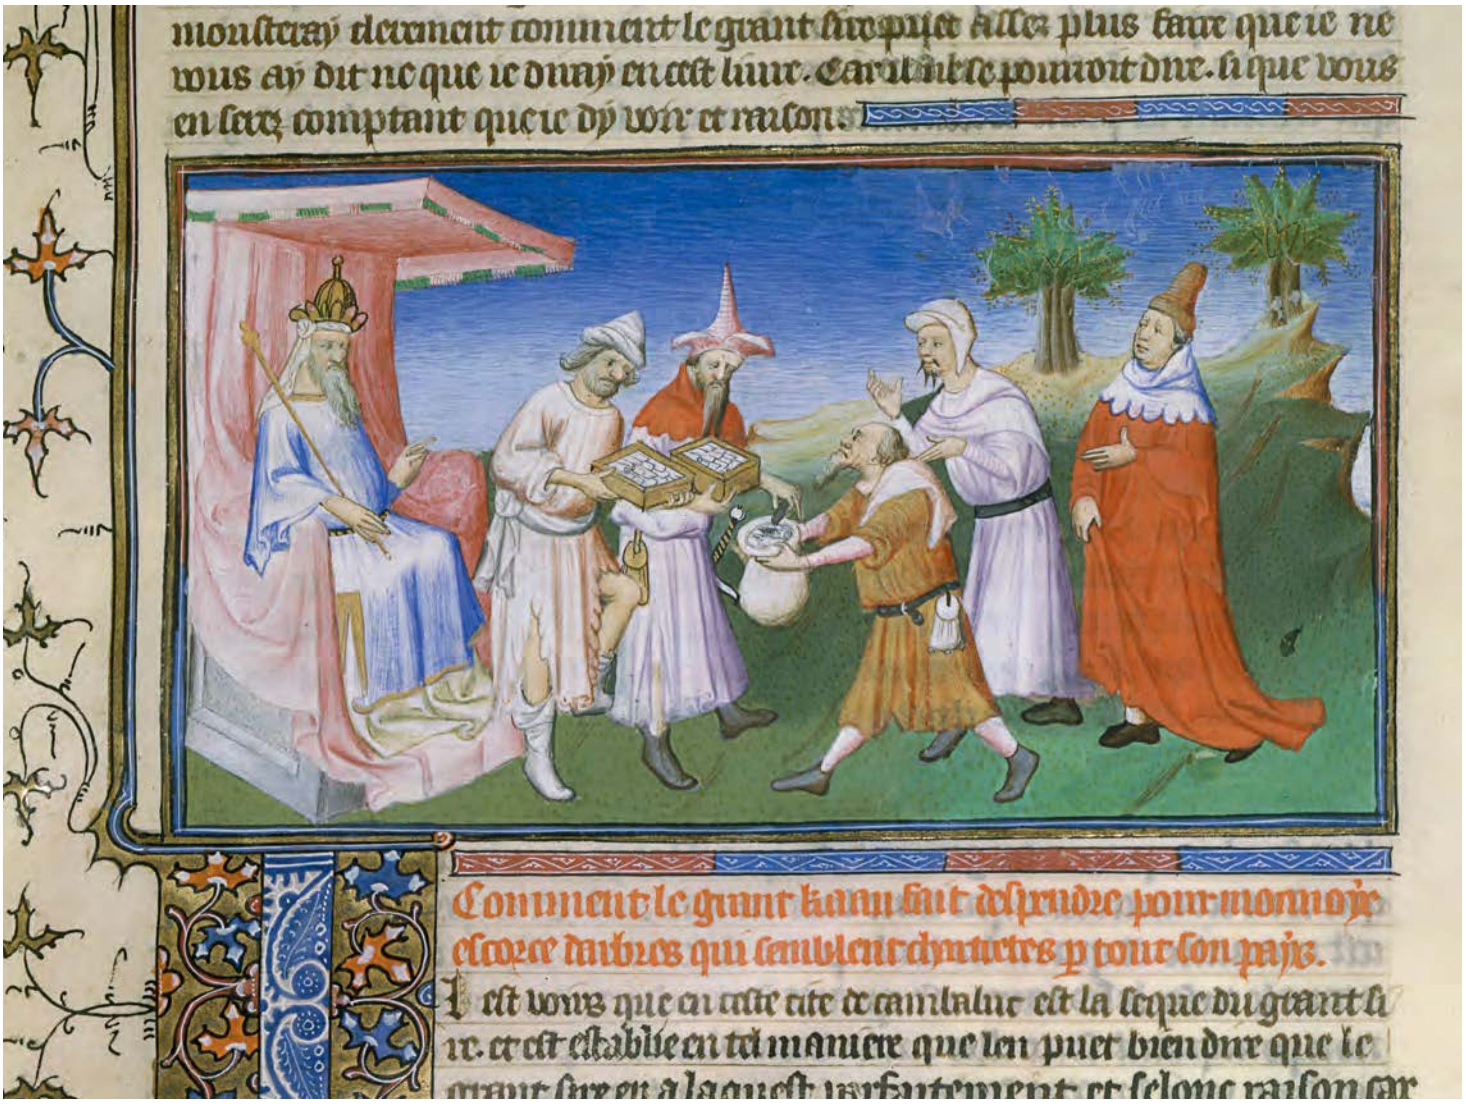
mentioned by William of Rubruck.[28] Whether, as sometimes claimed, the city was destroyed in 1388 by a Chinese army which inflicted a crushing defeat on the Mongols, is uncertain, in the absence any discovery of a burnt layer during excavations.[29]

In 1236 Ögödei introduced an important measure to encourage trade and safeguard reserves of the precious metals gold and silver. The *Yüan Shi* reports: 'An imperial decree was enacted that paper money should be printed and brought into circulation.'[30] Paper money was not a Mongol invention, for the Tang dynasty (618–907) had in 812 already begun to issue *fei qian*, government bonds known as 'flying money'. The first genuine paper money came on to the market around 1000, during the Northern Song period (960–1126), when Sichuan traders issued paper notes, *jiaozi*, backed by metal coin reserves. In 1023/24 the government declared that it had the issuing privilege for paper money, which was backed by reserves in silk yarn, gold and silver to conserve the value of the paper notes. The Jin (1115–1234) and Southern Song (1126–1279) dynasties continued the use of paper money.[31] However, the circulation of paper money under Ögödei and Möngke, recorded by William of Rubruck in 1254,[32] remained confined to individual regions. It was only thanks to Kublai Khan's (r. 1260–94) currency reform of 1261 that paper money became a generally widespread method of payment. The Florentine merchant Francesco Balducci Pegolotti described it as follows: 'Whatever silver the merchants [from Europe] may carry with them as far as Cathay the lord of Cathay will take from them and put into his treasury. And [. . .] they give that paper money of theirs in exchange. This is of yellow paper, stamped with the seal of the lord aforesaid. And this money is called *balishi*; and with this money you can readily buy silk and all other merchandise that you have a desire to buy. And all the people of the country are bound to receive it.'[33] In order to ensure the success of his new paper money, Kublai abolished all other regional paper currencies and made it a punishable offence to refuse to accept paper money as a means of payment. The government issued two types of paper notes: one, *si chao*, was backed by silk yarn reserves, and the other, *zhong tong yüanbao*, which rapidly established itself, by silver reserves. The *zhong tong yüanbao* were accepted for the payment of taxes and were freely convertible to silver.[34] Kublai's generally accepted method of payment was a decisive factor in the economic unification of China, which had been politically divided up to 1276. But when Kublai's successor Temür Khagan (1294–1307) committed himself to the payment of absurdly high subsidies to relatives and nobles, he was forced to sell 80 per cent of the state silver reserves, causing a massive loss of confidence and an inflationary spiral.[35]

132. Glazed terracotta mask, from the great Buddhist Temple in Karakorum. Karakorum Museum, Kharkhorin, Mongolia.

Here it should be mentioned that in ancient and medieval China and Central Asia trade didn't always deal with goods produced by craftsmen, farmers or fur hunters out of their free will in order to obtain a profit, but these goods were often tributes and taxes coerced by states and their elites under threat of force. In Owen Lattimore's words, 'the commodities going by caravan from China to Inner Asia [and further west] consisted in large part of tribute collected by nobles and by the state, before being consigned to the hands of privileged merchants'.[36] This statement applies to the Mongol Empire and its successor khanates as well as previously to the ancient Turkic and Uyghur Khaganates and the Chinese dynasties of Han and Tang.[37]

After subjugating the northern Chinese Jin in 1234, Ögödei needed a new target to keep the army occupied and to acquire new booty, for the Great Khan was profligate in his expenditure of state resources. At a *kuriltai* with the princes and military commanders, it was decided that four campaigns would be launched. While three smaller armies would be sent against Korea and the Southern Song and to the Near East, the majority of Mongol troops would once and for all crush the Kipchaks and Bulgars, conquer Russia and advance into Eastern Europe. For the western campaign, all four ruling lines offered troops and leading members as commanders, namely Tolui's sons Möngke and Böchök, Ögödei's sons Güyük and Kadan, Ögödei's brother Kölgän, Chagatai's sons Büri and Baidar, and Jochi's sons Batu, Orda, Shaiban and Tangqut. Ögödei appointed Batu Khan as nominal supreme commander; but Batu was too inexperienced to lead such a difficult campaign, so he



133. Marco Polo described how foreign merchants trading in China had to exchange their precious metal currency – invalid under Kublai Khan's regime – for banknotes. On the left of the picture, Kublai Khan is seen observing a transaction. Folio from the *Livre des merveilles,* commissioned by John the Fearless, Duke of Burgundy and completed between 1410 and 1413, Bibliothèque nationale de France, Paris, France, Ms. Fr. 2810, fol. 45r.

appointed the veteran Sübotai as chief of general staff and operational field commander.[38] The Mongols attacked in the autumn of 1236, as soon as the rivers began to freeze over. They crushed the Bulgars, who in 1223 and 1229 had still successfully offered resistance, the Ölberi, the Mordvins and the Kipchaks, led by Khan Bachman, whom they either integrated into their own army or sold as slaves to Black Sea traders.[39] The following winter (1237/38), they turned towards the northern Russian princedoms, whose cities they destroyed one by one and whose population they systematically massacred. The Mongols' success was aided by the fact that the northern Russian princes had not taken on board the lesson in the art of war that their southern Russian colleagues had had to learn at Khalkha in 1223 – they were unwilling to combine their forces in order to combat the aggressor with superior numbers. In addition, their cities had no stone walls, only wooden palisades, which could be easily set ablaze with the use of siege catapults. Thus the Mongols in quick succession stormed Riazan (where they either skinned alive the surviving inhabitants or impaled them), Kolomna, Moscow, Vladimir, Suzdal, Rostov, Yaroslavl, Gorodeč, Yuriev, Dimitrov, Wolok, Tver and Torzhok. The northernmost city, Veliky Novgorod, escaped destruction only because the city of Torzhok, south of Novgorod, offered prolonged bitter resistance. When it finally fell, the spring thaw had transformed the frozen plain into an impassable morass of mud as far as Novgorod, and the Mongols pulled back.[40]

Between 1238 and 1240 the Mongols secured their southern flank by first defeating the Kipchaks of the Pontic steppe, who fled with their leader Kotyan Khan to Hungary, where they were warmly welcomed by King Bela IV.[41] They then fought the Alans in the Caucasus, without being able to defeat them, and conquered Derbent. As William of Rubruck reports, in winter 1254/55 the Caucasian Alans and Svans were still independent;[42] they were not subjugated until 1277–78, by Möngke Temür of the Golden Horde (r. 1266/67–80). Being prized warriors, many Christian Alans were forcibly recruited and at the time of the Yuan dynasty (1271–1368) formed the Asud guard, which was stationed around Beijing. These Alans were held in such esteem that in 1336 Emperor Toghon Temür (r. 1333–68/70) allowed them to send their own delegation to Pope Benedict XII (in office 1334–42) to ask for a new archbishop. The new archbishop, John of Marignolli (in office in China 1342–45), was received by the emperor himself in 1342, underlining the importance of the Alan guard.[43] In the summer of 1240 the Mongols, under Möngke, resumed their attacks on Russian cities and destroyed Chernigov, Pereiaslav and, on 6 December, Kiev, the greatest city in Russia. Dozens of smaller towns were also razed to the ground. Despite all these military successes, in 1240 a serious rift occurred between Batu and the princes Güyük and Büri, who accused Batu of military incompetence and arrogance. This shows what a deep chasm existed between the Jochids on the one hand and the Ögödeids and Chagataids on the other. Ögödei then ordered Güyük and Büri back to Karakorum. Most probably they took their own forces with them on their return march in the winter of 1240/41.[44]

The next military target was the wealthy kingdom of Hungary, which also possessed lush pastures. In addition, King Bela IV had to be punished for having had Mongolian ambassadors murdered and granting asylum to Kotyan Khan and his Kipchaks.[45] Although, since Batu's letter to Bela of 1237 at the latest, the Western and Central European powers were forewarned of the impending attack, they offered no assistance to the frontline princes of Hungary, Poland, Silesia and the Teutonic Order. The Holy Roman Emperor Frederick II and Pope Gregory IX waged war against each other for secular supremacy in Italy, while the French king Louis IX was preoccupied with warding off the territorial demands of the English ruler Henry III; no one was prepared to spare soldiers for a common defence of Europe.[46] The Mongol Empire was united, while Europe was a patchwork of mutually hostile states.[47] As he did with all large-scale military operations, Sübotai divided his army into several columns in order to secure the flanks of the main force and prevent enemy armies from combining with each other. While four columns encircled Hungary, the fifth army column under Kadan and Baidar turned north and invaded Poland. After destroying Cracow, they were confronted on 9 April 1241 at Liegnitz (Legnica) by Henry II, Duke of Silesia. Henry was in command of a heterogeneous army of Silesian and Polish knights, poorly armed foot-soldiers and knights of the Teutonic Order. The lack of coordination among the European princes is evident from the fact that Henry had no idea that an army of 50,000 men under King Wenceslas I of Bohemia was hastening to his rescue, and was a mere day's march away. Despite heavy losses, Kadan and Baidar gained an outstanding victory and destroyed the entire northern European army.[48]

Two days later, on 11 April 1241, Sübotai inflicted an equally annihilating defeat on King Bela at Mohi, where about 60,000 Hungarians were killed.[49] At Liegnitz and Mohi the Mongols used firearms, and it is possible that Western Europe adopted the use of gunpowder from the Mongols; at any rate, Roger Bacon was the first, in 1267, to describe a usable formula for the preparation of gunpowder.[50] After Mohi, the Mongols systematically laid waste to and depopulated Hungary – Sübotai probably intended

134. An *obo*, a cairn of religious significance, surrounded by the skulls of sacrificial animals, on a hill above Kharkhorin, Mongolia. Photo: 2012.

to extend the existing horse pastures by transforming arable land. At the same time, Kadan went in pursuit of the fleeing King Bela, reaching Wiener Neustadt (south of Vienna), Zagreb, Udine and Spalato (Split). But he was unable to capture Bela, who had fled to the Adriatic island of Trogir, and he turned back.

In early 1242, Batu and Sübotai received the news that Ögödei had died on 11 December 1241 and that his widow Töregene had taken power as regent. Since a new Great Khan had to be elected and formally confirmed at a *kuriltai* of the princes and top military commanders,[51] Sübotai and the eight remaining princes – Güyük, Büri and Möngke had already returned earlier – abandoned the campaign and returned to Karakorum, speeding up their progress by a mass execution of prisoners of war. Batu Khan too, for lack of enough troops of his own, left Hungary and returned to his camp, Sarai, by the lower Volga, north of Astrakhan. Batu did not take part in the *kuriltai*, since he barely had a claim to become Great Khan and feared the enmity of the Ögödeids. On the other hand, thanks to his supremacy over Russia, he had sufficient resources to found a state of his own, the future Golden Horde, and soon incorporated Kipchaks into his own army.[52] But apart from raids by the Golden Horde in Poland, Lithuania and Hungary, there were no further western campaigns launched by the Great Khan. Ögödei's successors pursued other priorities, and the campaign of 1236–42 had brought in little booty. Central Europe was also lacking in adequate pastureland, and the wooded regions were unsuitable for the Mongol cavalry.

Although, just as with the Mongols, the European armies' greatest weapon was their cavalry, and the European knights were as belligerent and courageous as the steppe riders, the Europeans remained hopelessly inferior to the Mongols. The most important reasons for this were, on the one hand, their almost complete lack of firepower, namely of compact units of soldiers armed with long-range weapons,[53] in particular of mounted archers, and on the other their loss of mobility, the actual strength of all cavalry, because both knights and horses were so heavily encased in armour that they became slow and incapable of manoeuvring, and also tired easily. The European armies also possessed neither proper chains of command, nor logistical organisation, nor communication systems nor intelligence services. Their leaders were hereditary princes, while the Mongol commanders were selected officers or princes who had learned the art of war from experienced generals. With the exception of the disciplined religious orders of knights, their horsemen fought not as a disciplined unit, but as individuals, and the infantry consisted mostly of poorly armed and inexperienced peasants. Nonetheless, even with all their advantages, the Mongols were not invincible, as was shown by the successes of the Mamluks from 1260 onwards.[54]

2. The Regency of Töregene and Great Khan Güyük

Since Ögödei became increasingly dependent on alcohol as he got older,[55] his second wife **Töregene** (r. as regent 1241–46) had filled the power vacuum and taken charge of the affairs of state, so that after his death it was easy for her to continue doing so as regent. Ögödei had disinherited his two eldest sons Güyük and Köden, and appointed his grandson Shiremün crown prince. But Töregene thwarted Shiremün's claim and intrigued to place her son Güyük on the throne. She bought support by dismissing Ögödei's competent ministers and governors and transferring their offices to her own followers. While Chinkai and Mahmud Yalavach fled to Güyük's brother Godan (Köden, d. 1251), who was stationed in Gansu, and Masud Beg to Batu Khan, Körgüz was killed. In northern China, Töregene handed over additional powers to the greedy Abd al-Rahman, who made shameless use of them, and she made the Persian slave Fatima her chief adviser.[56] But Batu Khan, whom Güyük had deeply offended during the western campaign, refused to come to Karakorum to ratify the latter's election, which delayed his enthronement. This eventually took place in 1246, in the presence of countless delegations from subjected lands and neighbouring states, including the father of Alexander Nevsky,[57] Grand Prince Yaroslav II of Vladimir and Suzdal, whom Töregene ordered to be poisoned, and the papal delegate Giovanni da Pian del Carpine.[58]

Güyük (r. 1246–48) rapidly put an end to the corruption that had been rampant under his mother. He ordered the execution of Abd al-Rahman and Fatima and the reinstatement of Chinkai and Masud Beg in their offices.[59] Soon afterwards Töregene died, perhaps poisoned. Güyük then had Genghis Khan's youngest brother, Temuge Otchigin, executed, because he had also laid claim to the throne, and intervened in the succession of his uncle Chagatai, who had died in 1242. Chagatai had appointed his grandson Kara Hülegü (r. 1242–46, 1251) his successor, and the young Kara Hülegü reined in the *ulus* of the Chagatai Khanate, together with his mother Ebuskun. But Güyük wanted to bring this *ulus* under his control, so he deposed Kara Hülegü and replaced him with the incompetent, chronically alcoholic Yesü Möngke (r. 1246/47–52).[60] At the same time he promoted his tutor Qadaq (d. 1251/52), a Nestorian Naiman, to minister of state. In Rashid's judgement, 'he [Güyük] entrusted all the tying and untying and binding and loosing of affairs to Qadaq and Chinkai'.[61] The outstanding positions of the two Nestorians caused del Carpine and

Juvaini to surmise that Güyük had great sympathy for Christianity, though in fact this was very far from true.[62] Finally, Güyük incurred the enmity of Sorkaktani Beki when he withdrew 3,000 soldiers from her control. Sorkaktani, the chief of the Toluid line, remained silent, but sought an alliance with Batu Khan, which in 1251 led to the fall of the ruling line of the Ögödeids.[63]

In the ten years between Ögödei's death and Möngke's enthronement, there were a few, relatively minor, campaigns. In the west, in 1243, General Baiju defeated the Rum Seljuk Sultan Kai-Khosrow II at the Battle of Köse Dağ and made the sultanate a Mongolian vassal.[64] According to the Dominican friar and diplomat Simon de Saint-Quentin, at the beginning of this campaign Mongols took two Latin mercenaries prisoner and immediately forced them to take part in a gladiatorial combat. Facing certain death, the two Franks made a swift agreement and suddenly attacked the Mongol spectators, killing fifteen of them and severely injuring a further 30.[65] The Mongol triumph at Köse Dağ induced King He'tum I of Cilician Armenia (r. 1226–69) to submit to the Mongols, since he hoped for military aid from them. He sent his brother Sampad to Karakorum, and in 1247 Sampad pledged his allegiance to Güyük. In September 1254 King He'tum I had his vassal status confirmed by Möngke in Karakorum.[66] In return, Cilician Armenia, like Georgia, had to place troops at the disposal of the Mongols.[67] And when, in about 1244, Baiju captured Amida (Diyarbakır), Nisibis and Edessa and sent an ultimatum to the Crusader prince Bohemund V of Antioch (r. 1233–52), Bohemond, too, capitulated in 1246.[68]

In 1247 Güyük divided Georgia into two kingdoms,[69] and replaced Baiju with his right-hand man Eljigidei, who in 1248 sent two Nestorian ambassadors to the French king Louis IX in Nicosia. Louis had landed in Cyprus on his way to the Seventh Crusade and received Eljigidei's ambassadors on 20 December 1248. The Mongol supreme commander in Iran and the Near East appeared to offer King Louis a military alliance, proposing that he himself would attack the Caliph in Baghdad and Louis should at the same time land in Egypt and put pressure on the Mamluks in Cairo. A coordinated attack on Baghdad and Cairo would prevent the two Muslim powers from supporting each other. But Eljigidei's real intention was to find out Louis' plans and military strength, for he feared an attack by the French king on the Mongol vassal state of the Rum Seljuks or on northern Syria. As King Louis' contemporary Simon de Saint-Quentin already believed, Eljigidei wanted to lure the Crusader army as far away as possible from Anatolia and Aleppo; his proclaimed sympathy for the Christians, according to Saint-Quentin, was a complete sham.[70] Ten years earlier, Peter des Roches, the Bishop of Winchester, had expressed himself more bluntly when Muslim ambassadors from the Near East proposed an anti-Mongol alliance: 'Let us leave these dogs to devour one another, that they all may be consumed, and perish.'[71]

But King Louis was enthusiastic, all the more so when the Mongol ambassadors claimed that Güyük and Eljigidei had been baptised as Christians. Together with Eljigidei, he imagined he could attack the Mamluks in a pincer movement and drive them out of the Holy Land. He immediately sent his own delegation to the Great Khan, which was led by the Dominican André de Longjumeau (d. after 1253). But both André's journey and Louis' crusade ended in fiasco. In April 1250 Louis was taken prisoner while marching on Cairo, and released only on payment of a huge ransom. And by the time André reached Eljigidei, Güyük was already dead, and the Mongol commander sent him on to the regent, Oghul Qaimish, Güyük's widow. She received the Frankish envoy at the Mongol court near Lake Alakol in eastern Kazakhstan but interpreted his letters and gifts as being an offer of complete submission from the Christian kings of Western Europe. She gave André a letter to take back, in which she demanded that King Louis should come in person bringing a tribute of silver and gold. If Louis did not obey, he and his people would be destroyed.[72] There was no question of the conversion of the Mongol ruling family to Christianity. While André was reporting back to King Louis in 1251, Oghul Qaimish and Eljigidei were both executed by Güyük's successor Möngke.[73]

In the east, Güyük sent out a small army against the Southern Song. A few years earlier, his brother Köden (Godan) had begun the conquest of Tibet, which at that time consisted of a number of religious and secular princedoms. In 1240 Godan sent his general Dorda Darkhan to Tibet to find a suitable prince who would offer him the nominal submission of Tibet. Four years later, a Mongol mounted division sent by Godan demanded that Sakya Pandita Kunga Gyaltsen Pal Zangpo (1182–1251, fig. 137), the spiritual leader of the Buddhist monastic order of Sakya, from the powerful Khon family, should follow it to Lake Kokonor (Qinghai). This invitation was actually an order,[74] and in 1246 Sakya Pandita, accompanied by his nephews Chögyel Phagpa (his later successor) and Chakna, arrived at Kokonor. There, in 1247, Godan appointed the Sakya leader as secular ruler of Tibet and instructed him to write letters to the Tibetan princes and abbots, ordering them to submit to him. In 1264 or 1265 Kublai Khan appointed Chögyel Phagpa Lodrö Gyaltsen nominal viceroy of Tibet[75] and Chakna civil administrator with responsibility for raising taxes and troops; he sent both back to Sakya, accompanied by a troop of horsemen. When, in 1267, Chakna died suddenly, and the rivals of Sakya, the order of the Kagyü-Drigungpa – which presumably already enjoyed the support of Kaidu, Kublai's arch-enemy – were causing unrest, Kublai sent an expeditionary corps and in 1268 brought Tibet under direct Mongol administration. To demonstrate the supremacy of the Sakya order, the new civil administrator had the fortress-like Lhakhang Chenmo, the 'great temple', built near the Sakya

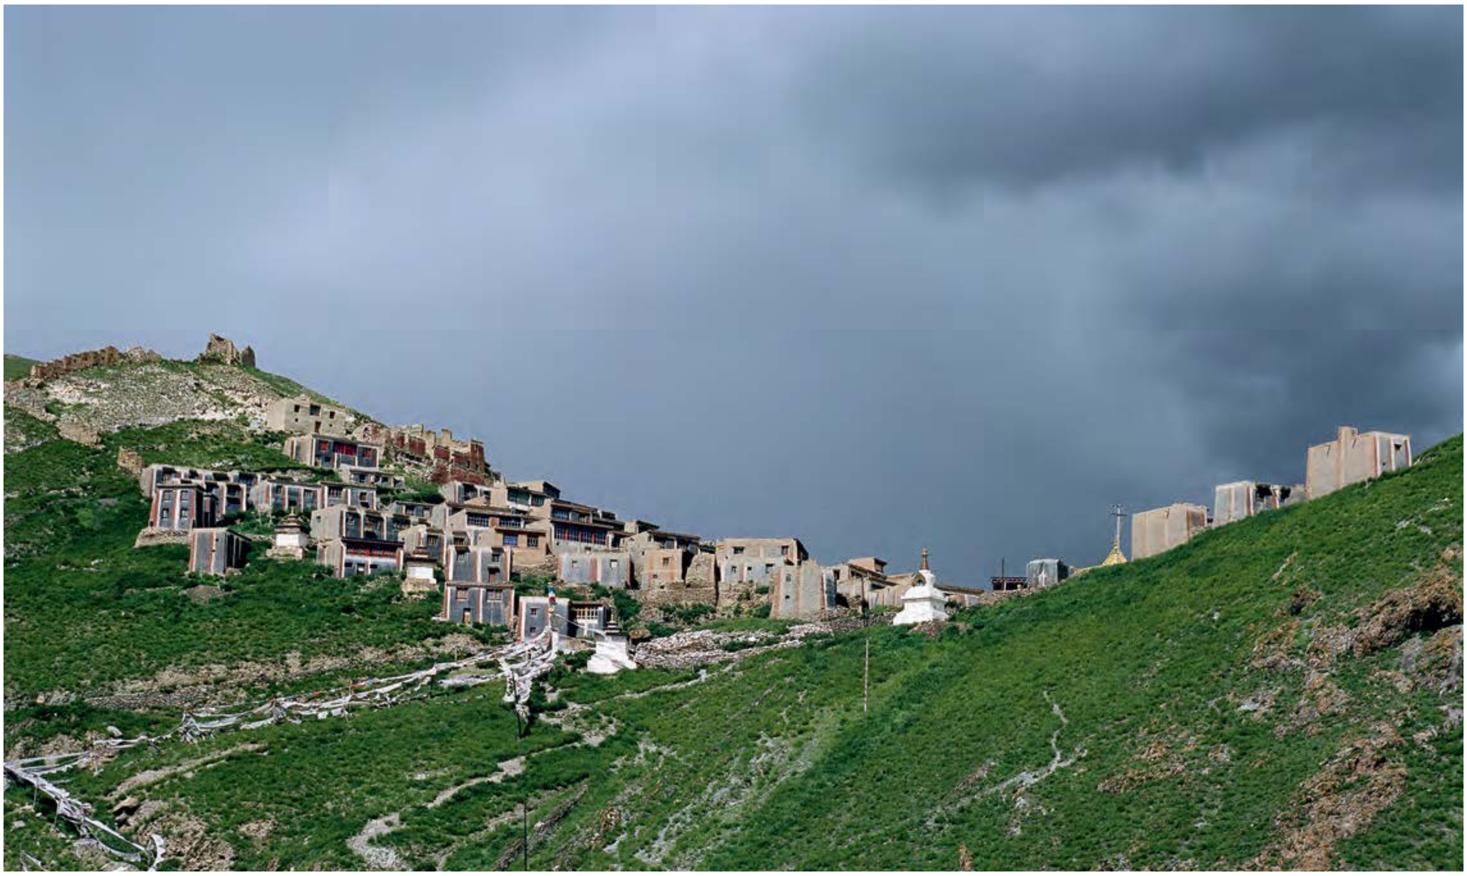
mother-house (fig. 136). But Phagpa was ordered back to China. In 1269 Kublai declared the new Mongolian script, developed by Phagpa and derived from the Tibetan alphabet, to be the national script. This 'square script' as it was known because of its orthogonal shape, had 41 letters and was more precise than the script derived from the Uyghur for rendering the sounds of Mongolian and other languages of the region, but it failed to gain acceptance (fig. 165).[76] Phagpa died in 1280, probably poisoned, and five years later a new revolt of the Drigungpa broke out, when Kaidu had placed troops at their disposal. In 1290 Kublai's army crushed the rebellion and burned down the monastery of Drigung Thil (fig. 139). In 1358 Changchub Gyaltsen of the Phagmo Drupa order put an end to the political supremacy of the Sakya.[77]

The old conflict between Batu Khan and Güyük continued to smoulder, for Batu's refusal to come to Karakorum had meant that he did not recognise the Great Khan. As Giovanni da Pian del Carpine observed, Güyük therefore began to prepare for war in the autumn of 1246 on the pretext that he was planning a new western campaign.[78] A year later he mobilised his guard and moved westward to the appanage of the Ögödeids at the River Ili. He then ordered Batu to come to Ili, where he had assembled a great army. At this moment Sorkaktani Beki thwarted Güyük's plans: she sent a secret envoy to Batu, warning him of Güyük's intentions.[79] Batu now stopped at Almalyk, south of Lake Balkhash, and sent his brother Shaiban to Güyük. Shaiban met Güyük ten days' march west of Besh Baliq, but Güyük died there in the spring of 1248. According to André de Longjumeau, Güyük was poisoned by an agent of Batu's, but William of Rubruck's sources report that he was killed by Shaiban.[80] Güyük's death meant the cancellation of the campaign, and the empire was spared a fratricidal war. Güyük's chief wife, **Oghul Qaimish** (r. ad interim 1248–51), was appointed regent, pending a decision on his successor, although Batu imposed the condition that she should not dismiss Güyük's government.[81] By warning Batu of Güyük's impending attack, Sorkaktani Beki gained him as an ally in the upcoming choice of the next Great Khan.



138. According to legend, the Jiekundo Dondrubling Monastery was constructed on the site of a hermitage built around 1265 by Chögyel Phagpa Lodrö Gyaltsen, the fifth of the Five Sakya Forefathers. But it was not until 1398 that Sakya Dagchen Sherab Gyaltsen established the monastery itself. Nevertheless, Phagpa's presence did much to help spread the Buddhist faith in a region where Bön, the indigenous religion of Tibet, predominated. Reconstruction of monasteries destroyed by the Chinese in the 1950s and 1960s began in 1977. The monastery and the nearby town of Gyêgu (Jiekundo) were seriously damaged in the earthquake of 14 April 2010. Kham Region, Qinghai Province, China. Photo: 1999.

139. In the late 1280s, the Drigung Thil monastery, founded in 1179 some 130 kilometres east of Lhasa, was engaged in bitter rivalry with the Sakya order for political supremacy in Tibet, not least through military support from Kublai Khan's arch-enemy Kaidu. Kublai's troops burnt down the monastery in 1290, which was then rebuilt. After it was completely destroyed in the 1960s, rebuilding began again in 1983. Tibet Autonomous Region, China. Photo: 1997.

Spies, Diplomats and Missionaries: The Franciscan Monks Giovanni da Pian del Carpine and William of Rubruck

In the early thirteenth century Western Europeans were remarkably ignorant about the geography of the vast regions east of Cumania, the Russian cities, Iran and the Oxus. The geographical knowledge of classical antiquity had long been lost, and no one was interested in the Arabic translations of classical geographers such as Ptolemy. Knowledge of Asia was confined to biblical ideas about the sources of the Four Rivers of Paradise, and of the peoples of Gog and Magog, who belonged to Satan, augmented by legends of Alexander the Great and belief in various monsters. Among these were the the dog-headed Cynocephali, the one-footed Monopodi, the Antipodes with reversed feet, the headless Blemmyae whose faces were on their chests, the long-eared Panotii, horned Pygmies, thousand-year-old Hyperboreans, satyrs and cannibals.[82] In view of such ignorance it is not surprising that rumours about the priest-king Johannes (Prester John) found favour, and that the Mongol invaders were equated with the peoples of Gog and Magog let loose by Satan. None of the Western rulers had anything like intelligence services as used by the Mongols.[83] Astonishingly, it was not a secular ruler but Pope Innocent IV who in June 1245, at the Council of Lyon, not only had Emperor Frederick II deposed, but also placed the tract *remedium contra Tartaros* on the agenda.[84] Before the Council had begun, Innocent had already sent four delegations to the Mongols, for he had heard that they treated ambassadors with respect; he wanted more details about this threatening people, in particular about the beliefs and intentions of its ruler. The Franciscan Giovanni da Pian del Carpine was to travel to the Mongol ruler by the northern route, across the Kipchak steppe, while his fellow Franciscan, **Lawrence of Portugal**,[85] and the two Dominican friars, André de Longjumeau and Ascelin of Cremona were to depart for the Near East and there give their letters to the first Mongol commander they met, to be passed on to the Great Khan.[86]

While nothing is known of Lawrence's journey, **André de Longjumeau** met the Nestorian prelate in the service of the Mongols, Simeon Rabban Ata, and in 1246 or 1247 gave the two papal letters to a Mongol officer. André's second mission to the Mongols, this time as emissary of King Louis to the Great Khan, was not much more successful than the first, for it confirmed that an alliance between equal partners was out of the question, and that for the Mongols peace was synonymous with unconditional submission and payment of tribute. The despatch of **Ascelin of Cremona** to General Baiju in the summer of 1247 was equally fraught; Baiju wanted to execute Ascelin because of his overbearing manner and Ascelin escaped death only thanks to the intervention of Eljigidei. The latter then immediately chose a Nestorian and a Turk to hand over a letter personally to Pope Innocent IV. Eljigidei's letter stressed the divinely ordained world domination of the Mongols and demanded that the pope should offer his submission to them in order to escape destruction. The two Mongol emissaries met the pope, who was then based in Lyon, in the summer of 1248. In his answer to Eljigidei, Innocent implored the Mongols to give up their erroneous beliefs and no longer massacre Christians. Innocent, who had already read Giovanni's report and Güyük's letter, understood that neither a dialogue nor a political agreement with the Mongols were possible.[87]

Although in diplomatic terms Giovanni's mission was a failure, the Franciscan was an outstanding observer whose account of his journeys provides invaluable information. In it, he analysed the geography, the climate, the people and their customs and religious views, the rulers and above all the army, as well as the way the Mongols conducted warfare, along with recommendations for strategies on how to fight them. Giovanni's report to Pope Innocent IV reads just like a military handbook. **Giovanni da Pian del Carpine**, born about 1180, left Lyon on 16 April 1245 with the additional task of persuading leading orthodox bishops and princes to join the Roman Catholic Church. In Wroclaw (Breslau), Giovanni gained a travelling companion, Benedict of Poland,[88] and the two monks travelled via Kiev to Batu's tent city near Sarai on the Volga, where they arrived on 4 April 1246. Before they could obtain an audience with Batu Khan they were symbolically cleansed by walking between two blazing fires.[89] They then had to bow in front of a felt statue of Batu Khan's deified ancestor Genghis Khan, taking care not to step on the threshold of Batu's yurt – this offence was punishable by death.[90] Shortly before, Prince Michael of Chernigov had refused to bow in front of Genghis Khan's statue and was trampled to death as a result.[91] Since Batu knew of Güyük's impending enthronement, he kept to Mongol protocol and sent Giovanni to the capital, Karakorum, more than 4,000 kilometres away. On the ride through the Kangli region, 'we found many skulls and bones of men lying in heaps over the ground [. . .] [and] innumerable destroyed cities, destroyed forts and many deserted villages'.[92] Three months later, the two monks reached Güyük's camp, half a day's ride (about 25 kilometres) south of Karakorum, where about 4,000 envoys and bearers of tribute had arrived on the occasion of Güyük's enthronement. But Güyük was angry because the papal delegates had come without tribute, and deliberately allowed them to go hungry. Since the market was in Karakorum, where they were not allowed to go, they depended on the support of a Russian goldsmith.

It was not until November 1246 that Qadaq and Chinkai brought Güyük's written answer to the pope. The most important passages were: 'By the power of the Eternal Sky, [We] the Oceanic Khan of the whole great people; Our command. This is an order sent to the great Pope. [. . .] And if you keep to your word, thou, who art the great Pope, together with all the kings, must come in person to do homage to Us.' Güyük then justified the destruction of Hungary on the grounds that King Bela had not obeyed the orders of Genghis Khan and Ögödei, and had killed the Mongolian ambassadors. Then he continued: 'By the power of God [. . .] [He] has delivered all the lands to Us; We hold them. [. . .] Thou in person at the head of all kings, you must all together at once come to do homage to Us. We shall then recognize your submission. And if you do not accept God's command and act contrary to Our command We shall regard you as enemies.'[93] Güyük's message was clear: anyone who did not bow to the commands of the Great Khan, which was equivalent to the will of God, was a rebel against God's commandment and must be punished. On 18 November 1247 the two Franciscans arrived back in Lyon.

In the chapter on 'How to fight the Tartars' in his *History of the Mongols*, after a detailed analysis of the Mongolian army, their weaponry, organisation and battle tactics, Giovanni gave the following advice: since the Mongols had destroyed even those states and peoples that had submitted to them, massacring them or using them as arrow fodder in battles, no reliance should be placed on their word, and they should be fought. To do so, a closed defensive front must be formed, under the control of a high command with a common plan. In addition to the existing types of weapon, divisions of archers and crossbowmen should be formed. The Christian armies should be divided according to the decimal system, with corresponding hierarchies of command, and follow strict discipline. Looting should be forbidden and purposeless exhaustion of horses had to be avoided. Every army needed scouts, spies and a sufficient number of sentries. The armies must by no means move into battle as a closed unit, but form separate divisions and fight in a coordinated manner; it should be ensured that enough reserves stood ready to counter surprise manoeuvres on the enemy's part. On no account should an apparently victorious division be tricked into pursuing the enemy if they appeared to be fleeing, for this would invariably lead them into a trap. And a 'scorched earth' strategy must be pursued on the enemy's approach route: stocks of provisions and hay should be carried away or burned, so that the Mongols' horses would get no nourishment. City fortifications and fortresses must be built of stone, and their defenders should never allow the Mongols to place their siege catapults in position. Defenders should also ensure that nearby rivers could not be diverted in order to flood cities. Finally, Giovanni also pointed out that the Mongols recruited

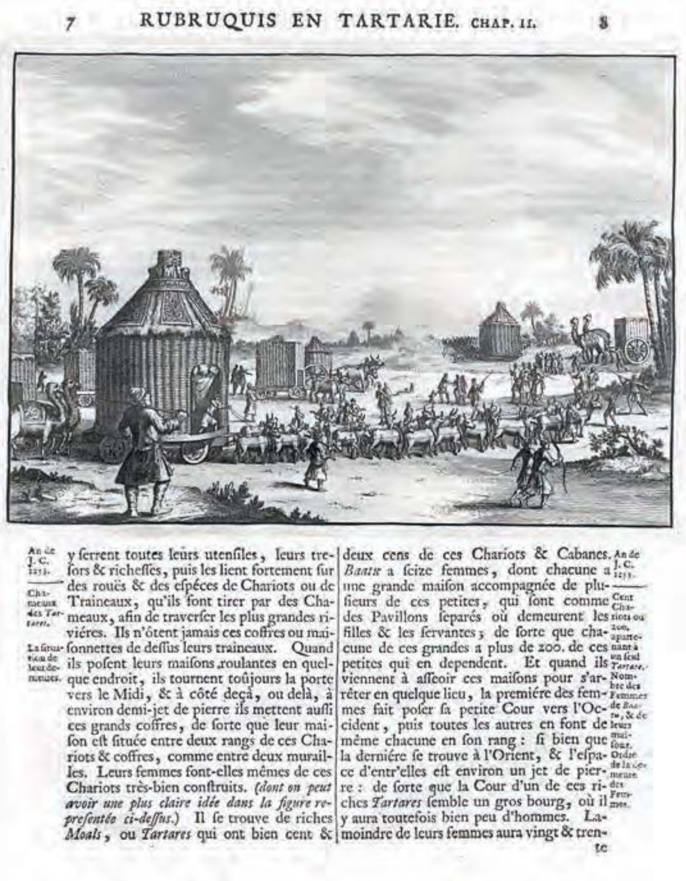
soldiers by force from subject peoples, for example Georgians, Armenians, Cumans and Rum Seljuks, and these auxiliary troops could easily be persuaded to switch sides.[94]

Even before William of Rubruck, in about 1251 or 1252, the Latin knight **Baldwin of Hainaut** had visited the Mongol capital at the behest of the Latin emperor of Constantinople, Baldwin II (r. 1228–61). Emperor Baldwin had twice tried in 1242 to prevent the Mongol prince Kadan from causing devastation in Macedonia or Thrace. Baldwin was victorious in the first battle, but in the second he was defeated and had to offer his submission, at least nominally. A year later, the ***noyan*** (commander) Baiju, after his triumph over the Rum Seljuks, threatened all three the Latin empire of Constantinople and the Greek empires of Nicaea and Trebizond. Trebizond submitted immediately, and both Constantinople and Nicaea had to come to an agreement with the Mongols. It seems most likely that the delegation of the nobleman Baldwin of Hainaut, who met and advised the departing William of Rubruck after his return from Karakorum, had represented a gesture of submission on behalf of Baldwin II. Emperor John III Doukas Vatatzes of Nicaea (r. 1222–54) made efforts to mollify the Mongols: in 1254 William of Rubruck met envoys from Nicaea in Karakorum who were trying to 'win time' without having to submit.[95]

By the time the Franciscan **William of Rubruck** (d. after 1257) left Constantinople for Mongolia, on 7 May 1253, the political ground had shifted since Giovanni da Pian del Carpine's journey there. In Karakorum, Great Khan Möngke nominally ruled the entire empire, but in practice there was a condominium between Batu Khan in the west and Möngke in the east of the empire, as



7 RUBRUQUIS EN TARTARIE. CHAP. II. 8

Chameaux des Tartares.

y ſerrent toutes leürs utenſiles, leurs treſors & richeſſes, puis les lient fortement ſur des rouës & des eſpéces de Chariots ou de Traineaux, qu'ils font tirer par des Chameaux, afin de traverſer les plus grandes riviéres. Ils n'ôtent jamais ces coffres ou maiſonnettes de deſſus leurs traineaux.

La ſituation de leur demeures.

Quand ils poſent leurs maiſons roulantes en quelque endroit, ils tournent toûjours la porte vers le Midi, & à côté deçà, ou delà, à environ demi-jet de pierre ils mettent auſſi ces grands coffres, de ſorte que leur maiſon eſt ſituée entre deux rangs de ces Chariots & coffres, comme entre deux murailles. Leurs femmes font-elles mêmes de ces Chariots très-bien conſtruits. *(dont on peut avoir une plus claire idée dans la figure repreſentée ci-deſſus.)* Il ſe trouve de riches *Moals*, ou *Tartares* qui ont bien cent & deux cens de ces Chariots & Cabanes.

An de J. C. 1253.

Cent Chariots ou 200. appartenant à un ſeul *Tartare*.

Nombre des Femmes de *Baatu*, & de leurs maiſons.

Baatu a ſeize femmes, dont chacune a une grande maiſon accompagnée de pluſieurs de ces petites, qui ſont comme des Pavillons ſeparés où demeurent les filles & les ſervantes; de ſorte que chacune de ces grandes a plus de 200. de ces petites qui en dependent.

Ordre de la demeure des Femmes.

Et quand ils viennent à aſſeoir ces maiſons pour s'arrêter en quelque lieu, la premiére des femmes fait poſer ſa petite Cour vers l'Occident, puis toutes les autres en font de même chacune en ſon rang: ſi bien que la derniére ſe trouve à l'Orient, & l'eſpace d'entr'elles eſt environ un jet de pierre: de ſorte que la Cour d'un de ces riches *Tartares* ſemble un gros bourg, où il y aura toutefois bien peu d'hommes. La moindre de leurs femmes aura vingt & trente

141. Batu Khan and his army on the move. As Rubruck writes, their large yurts were tied securely on to wagons drawn by up to 22 oxen. Copper engraving 1735, William of Rubruck, 'Le voyage de Guillaume de Rubruquis, en diverses parties de l'Orient & principalement en Tartarie et à la Chine', in Pierre Bergeron, Voyages fait principalement en Asie dans les XII, XIII, XIV, et XV siècles: Accompagnés de l'Histoire des Sarasins et des Tartares, 2 vols. (The Hague, 1735), pp. 7–8.

the latter stressed to William at their last audience: 'There are two eyes in one head, and yet in spite of being two they have only one sight, and where one turns its glance so does the other. You came from Baatu, and by way of him, therefore, you must return.'[96] And of course King Louis IX of France had been bitterly disillusioned by the letter from the regent Oghul Qaimish, which she had given to André de Longjumeau in 1250, for it contained an unequivocal threat of war.[97] He therefore instructed William, who had accompanied him on the ill-fated Egyptian campaign, not to present himself as his ambassador, but as a simple monk. William had heard from Friar André that German Catholics captured in Hungary were serving as slaves at Talas in Semirechie, and he wanted to bring them comfort and also to proclaim the Gospel to the Mongols. But since Louis was interested in current information on the Mongols' plans, he gave William a letter of recommendation to Sartaq Khan (d. 1257), Batu Khan's eldest son, who was said to be a Nestorian.[98]

After three days' journey, William met the Mongol commander Scacatai (Chagatai?) north of Soldaia (Sudak), and was highly impressed by his tent encampment: 'We encountered Scacatai's wagons loaded with dwellings [yurts], and I felt as if a great city were on the move towards me.' The Mongolian yurts were firmly fixed on wagons 9 metres wide, drawn by oxen, and William 'counted twenty-two oxen to one wagon, hauling along a dwelling, eleven in a row' (fig. 141).[99] From here, William rode to meet Sartaq, at a spot between the Don and Volga rivers. When Sartaq was informed of Louis' written message, he believed, because of a faulty translation of the letter from the Latin, that King Louis was asking the Mongols for military help against the Muslims, and so he promptly sent William to his father, Batu Khan. William was now considered by the Mongols to be a diplomat in disguise. On meeting Sartaq, William realised that the Mongols did not define themselves primarily by their religious affiliation but by their allegiance to the Mongol nation. Hence the Christian faith of a prince revealed nothing about his political preferences.[100] Batu Khan questioned William about King Louis' motivations for the campaign of 1248–50 in the Near East and sent him on to Great Khan Möngke. On his way, William was the first Western European to observe that the Caspian Sea is landlocked, and that 'Cathaia' (China) was identical with the land of Seres of classical antiquity. He also put an end to the myths of human-like monsters and the priest-king John by denying their existence.[101] Like Giovanni da Pian del Carpine before him, William was struck by the many ruined cities in Semirechie: 'There used to be sizeable towns lying in the plain, but they were for the most part completely destroyed so that the Tartars could pasture there, since the area affords very fine grazing lands.'[102] William's observation confirms that the Mongols deliberately destroyed urban areas to transform them into pastureland. Although he despised the Nestorians as buffoons and drunkards, he acknowledged their presence in 15 cities of northern China, and was happy to enter one of their churches near Kayalik in eastern Kazakhstan: 'And on entering their [Nestorian] church we chanted joyfully, at the top of our voices, the Salve Regina, as we had not seen a church for a long time.'[103] But William did not understand that the Nestorians rejected the crucifix not because they denied the Crucifixion, but because they revered the 'empty' cross as a symbol of parousia (the second coming of Christ) and of the Resurrection.[104]

On 4 January 1254 William met Möngke for the first time west of Karakorum, and on 5 April he reached the capital. He described its different quarters, with temples, mosques and the church as well as the palace, which he compared to a five-nave church, with the famous silver tree standing in it.[105] In Karakorum William received disturbing political news: based entirely on warnings from his trusted soothsayers, Möngke had apparently decided against another European campaign. Instead, he had sent one brother, Kublai, against China and another, Hülegü, against the Assassins of

Alamut, the caliph of Baghdad, the Seljuks of Anatolia and Emperor Vatatzes of Nicaea; this posed a serious threat to Crusader strongholds in both Palestine and Constantinople.[106] As we see from the destruction of the Assassins in 1256 and the capture of Baghdad in 1258, William was well informed. In his letter to King Louis, Möngke showed himself to be as uncompromising as Güyük and Oghul Qaimish before him: 'This is the order of the everlasting God. "In Heaven there is only one eternal God; on earth there is only one lord, Chingis Khan." [. . .] In the power of the everlasting God through the great Mo'al [Mongol] people: the edict of Mangu Chan to King Louis, ruler of the French. [. . .] When you hear and believe it, if you are willing to obey us, you should send your envoys to us; in that we shall be sure whether you wish to be at peace with us or at war.'[107] Möngke had realised that William was not Louis' official ambassador and that Louis did not (yet) regard himself as a vassal of the Mongols. Not until the Mongols' defeat at Ain Jalut in 1260 did their attitude to the Western European kings and popes change; their letters no longer demanded submission, but sought a military alliance against the Mamluks.[108]

In religious terms, too, William's mission ended in failure. He neither met the German slaves,[109] nor did he manage to convert anyone. He correctly assessed that Möngke merely wanted all representatives of the various religions to pray for him, but he himself 'believes in none [religion] of them. [. . .] And yet they all [representatives of various religions] follow his court as flies do honey.'[110] Then William was challenged to take part in one of the theological disputations, a kind of verbal jousting which was very popular with the Mongol rulers. Möngke commanded that Christians, Muslims, Buddhists and possibly Manicheans should debate with each other; but anyone who personally insulted an opponent would be punished with death. In the debate, the first contenders were the representatives of the two Semitic–monotheistic religions against the Manicheans; the latter lost. But when the Nestorians wanted to debate with the Muslims, the latter withdrew, and the Nestorians had a successful discussion with a Uyghur Buddhist. In the end, William concluded in disappointment: 'No one said, "I believe, and wish to become a Christian." When it was all over [. . .] everyone drank heavily.'[111]

William's religious failure was also the result of his own intolerance, for he bitterly attacked other religions and threatened those unwilling to convert with hellfire. Möngke chided him about this, though in a friendly way: 'The nurse at first lets some drops of milk into the infant's mouth, so that by tasting its sweetness he may be enticed to suck; only then does she offer him her breast. In the same way you should persuade Us, who seem to be totally unacquainted with this doctrine, in a simple and rational manner. Instead, you immediately threaten Us with eternal punishments.'[112] At their last audience on 31 May 1254 Möngke taught William a further lesson: 'We Mo'als [Mongols] believe that there is only one God, through whom we have life and through whom we die, and towards him we direct our hearts. [. . .] But just as God has given the hand several fingers, so he has given mankind several paths [religious messages]. [. . .] God has given the Scriptures to you, and you Christians do not observe them; whereas to us he has given soothsayers, and we do as they tell us and live in peace.'[113] With this little parable, Möngke, who put his own trust in shamans and, in particular, soothsayers,[114] was saying that all religions were equally true, since they all represented forms of human religiosity approved by the only God. Two years later, Möngke manifested a preference for Buddhism, when he supported Buddhist building projects in Karakorum: 'If all these religions [i.e. Daoism, Confucianism, Christianity, Islam] were carefully examined as to their origins, one will see that no one of them can be compared to Buddhism. [. . .] As the five fingers all project out from the palm, so Buddhism is the palm from which others stem.'[115] Buddhism, which was inclusive and not monotheistic, thus came closest to Möngke's vision.

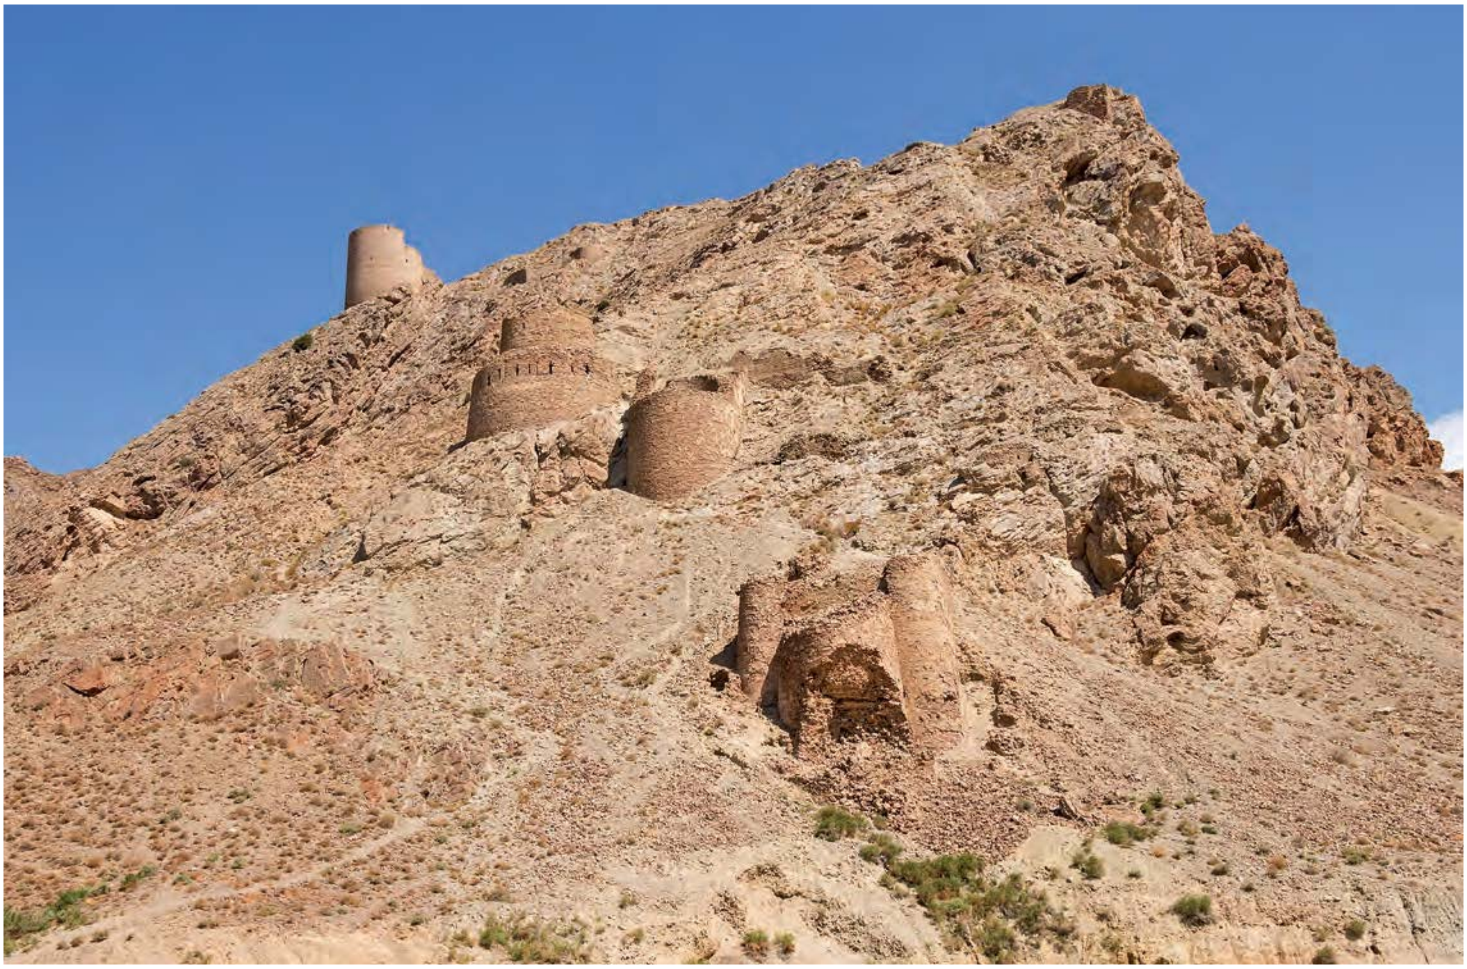
As Peter Jackson stresses, the Mongols' pluralism should not be confused with indifference or selfless tolerance.[116] The khan wanted representatives of all religions to pray for him, and he was above all interested in specialists in the present world, such as soothsayers, astronomers, healers and magicians, who could influence the weather. Religious tolerance also ended where the taboos of the steppe began, such as contaminating water by washing clothes in it,[117] crossing a threshold[118] or a refusal to worship a felt figure of Genghis Khan. In contrast to Islam and Catholicism, which used force and the Inquisition to establish the recognition of their beliefs, which could not be grasped by the power of reason, the Mongol elite did not seek to disseminate faith in their chief god, Tengri; rather they sought recognition of their political claim that Tengri had bestowed on them the sovereignty of the world. For this reason, in the Mongol Empire, as long as one recognised their claim to political leadership, the world of thought and faith remained free – in contrast to Europe, where in 1252 Pope Innocent IV allowed torture in the trials of the Inquisition, and King Louis IX, in the struggle with the southern French Cathars, encouraged the spread of the Inquisition, which actively sought out dissidents in order to condemn them.

William of Rubruck, who returned to Tripoli (in Lebanon) in August 1255, Giovanni and Longjumeau were not only courageous travellers, but contributed significantly to the broadening of horizons and increase in the geographical knowledge of the day.

3. Möngke, the Last Great Khan of the United Mongol Empire

With the death of Güyük the long awaited moment had arrived for the Toluids, led by Sorkaktani Beki (d. 1252), to settle accounts with the Ögödeids. When Sorkaktani's husband Tolui had died in early 1233, probably poisoned, and then Güyük had seized some of her soldiers in 1246, she formed an alliance with Batu Khan and warned him that Güyük was planning an attack. Sorkaktani, a Nestorian, must have been a remarkable woman, as Rashid judged: 'Sorqaghtani Beki [. . .] was the most intelligent woman in the world. Thus both her [four] sons and the army were at her command.'[119] She was such a skilled diplomat that neither Ögödei, nor Töregene, nor Güyük succeeded in entirely wresting an important part of the Mongol army from her (admittedly poorly defined) control. With Batu, Sorkaktani had won the most powerful of the still living descendants of Genghis Khan as an ally, and the Toluids and Jochids rapidly agreed on her eldest son Möngke (1209–59) as a candidate for the succession, while the regent Oghul Qaimish failed to persuade the Ögödeids and Chagataids to agree on a common candidate of their own. Soon after Güyük's death, Batu, suffering from gout, summoned a *kuriltai* at his camp near Kayalik, but most of the sons of Güyük, Ögödei and Chagatai refused to come and only sent representatives. In 1249 or 1250 this rump *kuriltai*, led by Batu, elected Möngke as Great Khan, whereupon Batu charged his half-brother Berke with accompanying Möngke to Mongolia with a strong escort, and there organising the second *kuriltai* that gave legal confirmation of the election.[120] When leading Ögödeids and Chagataids declined to take part in this second assembly, Batu Khan ordered Berke: 'Seat him on the throne! [. . .] And any creature that disobeys the Yasa will lose his head.'[121]

In 1251, without waiting for the arrival of Ögödei's son Shiremün and Güyük's son Nakhu, this second *kuriltai* confirmed **Möngke** (r. 1251–59) as Great Khan. When, after a few days, Möngke received the news that Shiremün and Nakhu were



142. Mansurkuh, the Assassin stronghold 15 kilometres east of Girdkuh, Iran, destroyed by the Mongols in the 1250s. Photo: 2014.

approaching with a heavily armed escort party, he had them intercepted and arrested; he then ordered a comprehensive purge. Dozens of princes, followers and *noyans* of the Ögödeids and Chagataids were executed, including Büri, Yesü-Möngke, Oghul Qaimish, Chinkai, Qadaq and Eljigidei; the princes Shiremün, Nakhu and Yesün-Toqa were assigned armies in order to fight at the front line.[122] As a result of this *kuriltai*, Ögödei's line was almost wiped out, Chagatai's was seriously weakened and the lines of Tolui and Jochi divided the Mongol Empire between them. Möngke was formally Great Khan of the unified empire, but in practice the autonomous ruler in the west was Batu Khan, to whom Möngke owed the title of khan. Möngke himself confirmed to William of Rubruck that the government was effectively a condominium: 'Just as the sun spreads its rays in all directions, so my power and that of Baatu are spread to every quarter.'[123] The new, inherently unstable power structure of a double rule has similarities with the Göktürk division of the First Khaganate into a nominally leading eastern half of the empire and an autonomous western half.[124]

Möngke's first official acts were to reform and streamline the government administration. He reinstated the reliable governors Mahmud Yalavach and Masud Beg in their offices in northern China and Great Turkestan and confirmed the status of Arghun Aqa in Iran. He then abolished all the current *paizas* and many princely privileges, severely limited the right to make use of the state postal system, made it a punishable offence to cause harm to crop farmers, and drastically curtailed the expenditure of the imperial court. He also ordered new censuses to be taken and unified the tax systems.[125] Not satisfied with the attainment of the title of Great Khan, and the elimination of the hated Ögödeids, the four sons of Sorkaktani decided to found two satellite khanates outside the Jochids' sphere of control. Instead of opting for a struggle for power with Batu, Möngke chose to give his brothers Kublai (1215–94) and Hülegü (*ca*. 1218–1265) the task of conquering new lands and setting up to new khanates, subordinated to him. With this strategy he pre-empted the Jochids and secretly sabotaged their claims to take part in conquests and derive future income from them. Towards the end of 1251 or the beginning of 1252, Möngke defined three military targets: the chief ones were western Asia and southern China, and the secondary one was Korea. He handed over the subjection of the Southern Song to his brother Kublai, assigning Sübotai's son Uriyangkhadai to him as field commander, and delegated the conquest of western Asia to his brother Hülegü, to whom he assigned the Nestorian commander Ked Buqa as his general.[126] The basic concept of the two campaigns was the same: both brothers were subordinate to the Great Khan, they had clearly defined military targets, they each had an experienced commander from Möngke's entourage at their side, and the Great Khan reserved the right to appoint and remove important leaders and officials within his brothers' territories.[127] Even when Batu Khan and the Chagataid regent, Orghina Khatun, supplied troops for the western campaign, Möngke instructed Hülegü to stay in western Asia after its conquest, despite the official command to return to Mongolia.[128] In this way the three brothers transformed the allegedly joint campaigns into Toluid enterprises.

As a result of poor Mongol leadership and tough resistance, the Korean campaign, begun in 1252, turned out to be so difficult that it took seven years to compel the Koreans to recognise Mongol supremacy. The China campaign in the densely populated territory of the Southern Song with its many rivers and lakes, its rice fields and hot, humid climate, also presented great challenges to the Mongols. Kublai and Uriyangkhadai decided not to mount a frontal

attack on the Song, but instead to circumvent them on their west flank and occupy the kingdom of Dali (Yunnan). Kublai captured Dali in the winter of 1253–54 thanks to a stratagem of the young *noyan* Bayan (1236–95). Since the Dali army was entrenched on the opposite bank of the Jinsha river, Bayan ordered sheepskins to be inflated to make rafts which were tied together, and with these moved the army across the river by night. In the early morning they surprised and destroyed the enemy.

Kublai left the local royal dynasty in place, albeit under the supervision of Mongol governors. Towards the end of 1254 he rejoined Möngke, while Uriyangkhadai pacified the local tribes south of Dali and, by 1257, also forced the kingdom of Annam (northern Vietnam) to submit. Meanwhile, Kublai reformed the Mongol government of northern China; he encouraged agriculture and trade, and in 1256 decided to build a new capital for his territory in Inner Mongolia, near Dolon Nor. Originally named Kaiping, this city lay barely 300 kilometres north-west of Beijing. When, in 1264, Kublai had ordered the building of Zhongdu, the 'middle capital', on the site of today's Beijing, Kaiping was renamed Shangdu (Xanadu), 'upper capital'; it then served Kublai as a summer residence. Zhongdu was called by the Chinese Dadu, 'great capital', by Turkic-speakers Khanbaliq, 'city of the Khans' (Marco Polo's Cambaluc), and by the Mongols Daidu.[129]

Kublai's construction of a capital in a land with a sedentary population was a provocation to Möngke, since it challenged Karakorum's pre-eminence as capital of the empire and seemed to him to presage a breakaway of northern China under Kublai's leadership. So in 1257 Möngke sent a commission to investigate and purge Kublai's governors. To save his position and probably his life, Kublai travelled to Möngke's court in 1258 and begged him for forgiveness. But Möngke could not in any case do without Kublai, since a violent conflict between Buddhists and Daoists in China was turning into civil war, and he needed Kublai's troops and specialist units for the conquest of southern China. First of all, Kublai summoned Buddhist and Daoist leaders to a congress in Kaiping. The main bone of contention was two Daoist texts which allegedly proved that Buddhism was merely a simplified version of Daoism, which no less a figure than the great philosopher Laozi

had drawn up for the uncultured Indians. Therefore Buddhism was to be subordinated to Daoism and its property and possessions were to be handed over to the Daoist administration. But the Buddhists, led by Phagpa Lama, exposed these two texts, purportedly by Laozi, as forgeries, whereupon Kublai declared the Buddhists to be the victors. He demanded that the Daoists return the Buddhist temples and monasteries they had seized and burn the two forgeries. In 1281, since the Daoists had ignored Kublai's instructions, he ordered the burning of all Daoist texts and the corresponding printing blocks, except those of the *Dao de Jing*.[130] In 1258 Möngke, angry about the lack of progress of Kublai's campaign, took over the leadership of a new attack on the Southern Song in four columns. After Chengdu had been taken, the advance of the main army commanded by Möngke began to falter, and then, on 11 August 1259, the Great Khan died suddenly, either of dysentery or from an arrow wound.[131] His death was of direct importance for southern China and the Near East, for both Kublai, who was besieging Wuchang (a part of Wuhan) and Hülegü, who was threatening Cairo, broke off their campaigns, giving southern China some respite and sparing Egypt from a Mongol attack.

Möngke gave Hülegü precise instructions: 'Begin with Quhistan and Khurasan, and destroy the fortresses [of the Ismailites]. Rip up Gird Kuh and Lambasar fortress and turn them upside down. [. . .] When you are finished there, head for Persia and eliminate the Lurs and Kurds who constantly practise brigandage along the highways. If the Caliph of Bagdad comes out to pay homage, harass him in no way whatsoever. If he is prideful [. . .] let him join the others [in death]. [. . .] [Then] return devastated lands to flourishing state.'[132] Although the Ismailis of Alamut had already submitted to Genghis Khan in 1221, they pursued an independent foreign policy; they are even said to have attempted to murder Möngke.[133] Earlier, in 1238, they had tried to woo Western European rulers to join an anti-Mongol alliance.[134] In August 1252, Hülegü sent Ked Buqa ahead with a smaller army to destroy the Ismailis' eastern Iranian fortresses (fig. 142), a mission he achieved successfully, barring a few exceptions, such as Girdkuh (figs. 61, 144).[135] The campaign of the main army of more than

146. **In February 1258 Il-Khan Hülegü locked the tight-fisted Caliph al-Mustasim Billah in the room where he kept his treasures and left him to die of hunger and thirst. Folio from the *Livre des merveilles,* commissioned by John the Fearless, Duke of Burgundy and completed between 1410 and 1413. Bibliothèque nationale de France, Paris, France, Ms. Fr. 2810, fol. 9 r.**

100,000 men[136] was a great logistical challenge; before they set out, Hülegü had roads and bridges repaired, had pastures reserved for horses on the route of march, and ordered the construction of ferries to cross rivers and canals. He also asked Kublai to provide from China a strong siege and artillery corps with naphtha-throwers.[137] Hülegü did not reach Samarkand until the autumn of 1255 and there he met the viceroy Argun Aqa in Kish (Shahr-i Sabz). On 1 January 1256 he crossed the Oxus on a pontoon bridge.[138] As we have seen, the Ismaili *hujja*, Khur-Shah Rukh al-Din, who had been entrenched in the fortress of Maimundiz, capitulated in mid-November, after which Hülegü had all the Ismaili fortresses razed to the ground, massacring great numbers of Ismailis.[139]

When peace had been established in north-western Iran, Hülegü demanded that Caliph al-Mustasim Billah should subject Baghdad to him and raze the city walls; the caliph contemptuously refused. The Mongols reached Baghdad in early 1258. In accordance with their usual siege tactics, they erected a palisade around the whole city, and with its protection they positioned the siege artillery (fig. 145). The caliph did not realise the hopelessness of the situation until 29 January, when it was too late, and then sent the Nestorian patriarch Makika II (in office 1257–65) to negotiate with Hülegü, whose chief wife Dokuz Khatun was a Nestorian. The caliph capitulated on 10 February 1258. Three days later, a week of plunder and general slaughter commenced; only the Nestorians and their living quarters were spared. Before Hülegü left the devastated city, apparently nauseated by the stench of rotting corpses, he ordered the execution of the caliph and all his family.[140] He'tum of Corycus describes what happened: Hülegü led al-Mustasim to the chamber which contained his former treasures and asked him mockingly why he had not used these to acquire mercenaries and allies. Then he continued: 'Such an important and great master

147. The Citadel of Aleppo in Syria, built by the Ayyubid Sultan Zahir Ghazi (r. 1193–1215) fell to Il-Khan Hülegü in January 1260. Following their defeat at Ain Jalut on 3 September 1260, the Mongols were forced to evacuate Aleppo and Damascus in the winter of 1260/61, whereupon the victorious Mamluks rebuilt the Citadel. In 1400 it was destroyed again, this time by Timur-e Lang, but after his withdrawal the Mamluks reconstructed the building yet again. Photo: 2002.

should not nourish himself on other food. So we are giving you all these precious objects that you loved so much and preserved so greedily, to feed on.' Then Hülegü locked the caliph in the room, where he died of hunger and thirst (fig. 146).[141] So ended the history of the Abbasid caliphate in Baghdad.[142]

When Hülegü had carried out his mission for Möngke, he designated the city of Maragheh in north-western Iran as his new capital, and ordered an astronomical observatory to be built there for the polymath Nasir al-Din Tusi. Next, in the autumn of 1259, he attacked the Ayyubid princedoms of Syria, probably with the aim of controlling the trade routes from Great Turkestan to the Mediterranean. He might have been encouraged in this by the Christians of Iraq and Syria, who experienced the Mongol attack as liberation from Muslim oppression. Hülegü first subdued the Kurds in the Hakkari mountains, then Edessa, Nusaybin (Nisibis) and Harran, and arrived at Aleppo (fig. 147), where King He'tum I of Cilician Armenia and Count Bohemund VI of Antioch (r. 1252–75) joined him with their troops. King David VII Ulu of Georgia (r. 1247–70), however, refused to take part in Hülegü's Syrian campaign, since his troops had suffered heavy losses at the siege of Baghdad.[143] Together, the Mongol prince and military leader, whom the Christians of northern Syria celebrated as a 'second Constantine', while his wife was called a 'second Helen', the Armenian king and the Latin Crusader count rode into Aleppo on 24 January 1260. Shortly afterwards, the city of Hama submitted without a struggle, and on 1 March 1260 Damascus opened its gates to the three rulers; but Count Bohemund was instantly excommunicated by Pope Alexander IV (in office 1254–61) because of his alliance with Hülegü. Meanwhile it rapidly became clear to those in the Latin strongholds of Palestine that Hülegü and his two Christian allies were subduing the Muslim princes of Syria not out of any love for Christianity, but because these two princes were battle-seasoned vassals of the Mongols. The notion that Hülegü's campaign was motivated by sympathy with Christianity proved to be a fatal error on the part of the Christians in the Near East and Palestine. Hülegü was interested only in increasing and consolidating his power, and any loyal vassal was a welcome ally. Soon after the capture of Damascus, Ked Buqa attacked Hebron, Ascalon, Jerusalem and Nablus and demanded that the Crusaders should destroy their own fortresses (fig. 148). He then placed a strong division in Gaza to prevent a counter-attack by the Mamluks.[144]

The hard-pressed Crusaders, who controlled only a narrow coastal strip of Palestine, implored the European powers in vain for help, and when Ked Buqa laid waste to the Christian city of Sidon they could see that the Mongols posed an even greater threat than the Muslims. After the destruction of Sidon, the Crusaders were forced to take sides in the incipient war between the Mongols and the Mamluks of Egypt, for the Mamluk Egyptian sultan Saif al-Din Qutuz (r. 1259–60), mistrustful of the guarantees that the Mongol ambassadors offered in return for his submission, had had them crucified.[145] He was preparing for war, a war that he wanted to conduct outside Egypt, in Palestine. At this critical moment, in the summer of 1260, Hülegü, whose horses could not get enough fodder in Syria and were suffering from the heat,[146] received two ominous reports: his brother and ally Möngke had died, and Jochi's descendant Berke Khan (r. 1257–66) had begun to withdraw the troops that had been placed at his disposal and was evidently hostile to him. Some of Berke's Kipchak groups, prevented from returning to their homes, fled to the Mamluks. Hülegü immediately headed east with most of his army, leaving Ked Buqa behind in Palestine with only 10,000 men.[147] When Hülegü heard that Kublai had proclaimed himself the new Great Khan, he returned to Tabriz, near the borders of the territory of Berke's Golden Horde. This new situation was favourable to the plans of Qutuz and his army commander Baibars al-Bunduqdari, who demanded safe conduct and provisions from the Crusaders. After a long debate about whether they should perhaps even fight alongside the Mamluks, the Crusaders decided to spare their few warriors and simply grant Sultan Qutuz safe conduct. Qutuz and Baibars, with an army of Kipchak slave soldiers and Chorasmian mercenaries, advanced along the coast as far as the Crusader fortress of Acre and set a trap for Ked Buqa at Ain Jalut, north of Jerusalem: during the battle

148. Krak des Chevaliers, the Crusader castle on Syria's frontier with Lebanon, belonged to Latin Empire Crusaders from 1110 to 1271. Following the earthquakes of 1157 and 1170, the fortress was re-built in the Gothic style. It was taken over by the Knights of St John, also known as the Hospitallers, who, in common with other leading Crusaders played a waiting game during the war between Hülegü and Sultan Baibars. After Hülegü's death in 1265 and that of Louis IX, who died in Tunis in 1270, Baibars had a free hand in Syria. He attacked Krak des Chevaliers, which surrendered on 8 April 1271. The fortress was damaged during the civil war in Syria which broke out in 2011. Photo: 1978.

there on 3 September, part of the Mamluk forces feigned retreat and lured Ked Buqa's warriors out of a secure position. The main Mamluk force then surrounded them, and destroyed them in hand-to-hand fighting.[148] Ked Buqa, who fell in the battle, had not considered that the Kipchak slave soldiers on the enemy side were as well versed in the military tactics of the steppe as he was himself.[149]

The Mamluks took advantage of the situation and advanced into Syria, where on 10 December they defeated a second Mongol army at Homs, which Hülegü had sent for the defence of Syria. But because of the increasing tensions with Berke, who had adopted Islam, Hülegü was unable to intervene in person and had to stay in Azerbaijan to ward off an anticipated attack by Berke.[150] At the latest after this second defeat in succession, it was clear that the Mamluks' professional cavalry, with their command of the tactics of steppe warfare, were superior to the Mongols. The myth of Mongol invincibility was thus shattered in the Near East. The Mongol advance and the destruction of the Ayyubid princedoms of Syria, as well as the retreat behind the Euphrates that followed, had created a power vacuum in Syria which was quickly filled by the victorious Mamluks. They annexed the land, including Damascus and Aleppo, but excluding the county of Antioch and the Nizari fortresses. Even though the Mongol Il-Khanate[151] founded by Hülegü in 658 AH (1259/60 CE) undertook five further attacks on Syria, in 1281, 1299, 1300, 1303 and 1312/13, it was never able to drive out the Mamluks. On the contrary, Sultan Baibars I (r. 1260–77), who had murdered Qutuz on his return to Cairo, in 1268 captured the city of Antioch, while Sultan Ashraf Qalawun (r. 1279–90) took Tripoli in 1289, and Sultan Khalil (r. 1290–93) in 1291 eliminated the Crusaders' last bastions on the Near Eastern mainland. Sultan Baibars also gradually subdued the Syrian Nizaris. They had joined the anti-Mongol resistance, but the sultan would suffer no independent centre of power in Syria. Between 1271 and 1273 he occupied the Nizaris' last eight fortresses, marking himself out as a champion of Sunni orthodoxy, all the more so because the Mamluks revived a nominal Abbasid caliphate in Cairo.[152]

The rise of the Egyptian Mamluks was also devastating for the Mongol vassal state of Cilician Armenia, for between 1266 and 1295 it suffered ten Mamluk raids and from 1285 also had to pay tribute to the Mamluks.[153] Later, the Crusaders were criticised as short-sighted because of their benevolent attitude of neutrality towards the Mamluks of 1260. But would they have had a better alternative? Hardly, for first they were too weak in numbers to intervene in the war, and secondly they realised that Hülegü was guided not by religious sympathies, but only by pragmatism. Unlike King Louis in 1248, the Crusaders had seen through the Mongols' double-dealing, and were convinced that after a victory over the Mamluks, the Mongols would destroy them in the same way, or at least demand the destruction of their fortresses with an ultimatum; the Crusaders had also not forgotten the Mongol massacres in Poland and Hungary of 1241/42.[154] In the words of Peter Jackson, 'the Franks of Syria and Palestine were facing a new antagonist and [received] deliverance at the hands of an old one'.[155]

For the history of the Mongol Empire and its neighbours, 1260 was a decisive year. In the east a fratricidal war began between Kublai and Arik Böge for the title of Great Khan, and in the west, two years later, the Inner-Mongolian war started between the Il-Khanate and the Golden Horde around Iranian Azerbaijan, Georgia and Arran (today's Republic of Azerbaijan). These Inner-Mongolian versions of the Wars of the Diadochi put an end to the centrally led campaigns of conquest and expansion; from now on, military struggles would only take place inside the existing empire, with the exception of Kublai's wars of conquest in Southeast Asia and against Japan. Egypt was thus not only spared further attacks, but could also set itself up as a stronghold of Islamic culture and a champion of Islam. When the power struggle for the title of Great Khan was decided in 1264 in favour of Kublai Khan,[156] the Mongol Empire fragmented into four independent khanates, though these were not identical with the four *ulus* allotted by Genghis Khan: Tolui's *ulus* in Mongolia was incorporated with Kublai's Chinese khanate, Ögödei's *ulus* in Dzungaria had disappeared and Chagatai's *ulus* was soon usurped by the Ögödeid Kaidu, who emerged as a kingmaker. Only Jochi's *ulus* remained as the Golden Horde, and the Persian Il-Khanate was a new state. As far as the four lines of descent from Genghis Khan are concerned, the Ögödeids (with the exception of Kaidu) were now completely out of the picture and the Chagataids were weakened, while the Jochids enjoyed a resurgence in the Golden Horde as well as in the subordinated White Horde of Orda.[157] The real winners of the disputes were the Toluids, who ruled the wealthy Chinese and Persian khanates as well as the Mongol homeland, and had seized Azerbaijan from the Jochids, whose territory it was. The Toluids' only setback came from Kaidu, who held his ground in Turkestan and prevented a Toluid land corridor from being created between China and the Il-Khanate.[158] The division of the empire into four khanates, often in conflict with each other, put an end to the supposed *Pax Mongolica*. If we bear in mind the meagre or even non-existent pastures of Southeast Asia, Syria and Western Europe, it is clear that the borders of Mongol expansion coincided with the limits the Mongols faced in their use of horses and equestrian divisions in battle.

VIII

The Independent Mongol Khanates

'I called out saying, "I am Baraq, your king [of the Khanate of Chagatai]. Give me a horse," [but] not one paid the slightest attention to me.'

The unhorsed BARAQ KHAN, ruler of the Chagatai khanate, on his disastrous defeat by the Il-Khan Abaqa near Herat on 22 July 1270. Unlike King Richard III, who finds himself in the same predicament in Shakespeare's play, Baraq survived the battle.[1]

1. A Battle of Brothers

Möngke's death on 11 August 1259 brought an end not only to the unity of the Mongol Empire but to the dominance of the steppe over the urban centres. Of the four potentially serious pretenders to the Great Khanate, two renounced any claim: Hülegü, who governed in the Middle East, and Berke, who ruled the steppes of Kipchak, Russia and the Caucasus. Neither of them was willing to risk their still uncertain hold on their territories for the sake of the title. For this reason, the rivalry between **Arik Böge** (r. 1260–64), who controlled Mongolia from Karakorum, and **Kublai** (r. 1260–94), ruling as viceroy in northern China, came to a head. The two brothers were ill-disposed to one another; they subscribed to different ways of life and different political visions. Arik Böge lived the life of a traditional Mongol steppe ruler, and sought to continue to govern from Karakorum, while Kublai had recognised that his future centre of power would lie not on the steppes but in China, with its great cities.

Kublai did not end his war against the Southern Song immediately upon Möngke's death, but only in the spring of 1260, when Arik Böge threatened his capital Kaiping. Kublai hurried back to his territories and on 5 May had himself proclaimed Great Khan by a *kuriltai* he convened for the purpose; Arik Böge then summoned a *kuriltai* of his own that elected him Great Khan in June. Arik Böge enjoyed the support of Möngke's immediate family, of the Jochid Berke Khan and of the Chagatai; Kublai was supported by Il-Khan Hülegü and by Kadan, one of Ögödei's sons. As governor of Besh Baliq, Kadan controlled Kocho, Gansu and Tangut, not only securing Kublai's north-western flank but barring Arik Böge's access to supplies from that region.[2] But with battles of their own to fight, Hülegü and Berke played no role in the struggle for power. Kublai first cut off vital supplies from the city of Karakorum, which soon capitulated, forcing Arik Böge to retreat to the upper Ienissei. After losing a battle against Kadan, Arik Böge helped Chagatai's grandson Alghu to seize power in the Chagatai khanate, hoping to gain access to its resources. After Kublai had defeated Arik Böge in 1261, Alghu accepted his invitation to change sides and, in 1262, cut off his former ally's supplies. Arik Böge managed to take Alghu's headquarters near Almaliq, since Kublai had been unable to come to Alghu's aid on account of an uprising in northern China. But his brutal massacre of Alghu's captured troops provoked revulsion, and many of his notable followers distanced themselves from him. In 1264, faced with an imminent counter-attack from Alghu, Arik Böge surrendered to his elder brother Kublai, who is said to have had him poisoned two years later.[3]

Kublai's success had its price. The Great Khan's rule of the empire was little more than nominal – he had to recognise the de facto independence of Hülegü[4] and Alghu and tacitly acknowledge Berke's autonomy in the west to secure his claim over the eastern part.[5] And not much later the usurpation of power in the Chagatai khanate by the Ögödeid Kaidu, no friend of Kublai's,[6] prevented the development of a land corridor between the allied khanates of China and Iran. Möngke's empire broke apart into four great independent khanates, whose economic power rested no longer on the steppes but on conquered agricultural or urban territories with their own rich resources. Mongolia itself became an impoverished backyard to China. The steppe's hegemony over northern China and Central Asia, which had been established by the Xiongnu and maintained by the two Turkic khanates, the Uyghurs, and finally Genghis Khan, had ended forever. It was an irony of history that the fatal blow was delivered by a grandson of the great Genghis himself.

The Mongol political world now consisted of the **Toluid khanate**, consisting of northern China and Mongolia, which gave birth to the Chinese Yuan dynasty, the **Chagataid khanate** in central and southern Central Asia, the **Il-Khanate** in Iran and the Middle East, and the **Jochid khanate** in north-western Central Asia and southern Russia, that would become the Golden Horde. The latter was made up of three hordes, that of Batu, the most powerful, and those of his younger brother Shaiban and elder brother Orda.

2. The Chinese Yuan Dynasty

2.1 Kublai Khan

Kublai faced no easy task as the ruler of northern China and Mongolia. The Mongols were only a tiny minority and unsuited to the tasks of administration. He needed to be accepted by his northern Chinese subjects if he were to send his forces to fight the Southern Song without fear of rebellion at home. At the same time, he had to maintain the mental and physical battle-readiness of his warriors, ensuring they did not soften from contact with the comforts of sedentary life. Finally, he had to defeat the dynasty of the Southern Song, which hoped to reconquer northern China and which had an almost inexhaustible supply of troops at its disposal in southern China. Confucian nationalists in both parts of China called on their respective rulers to reunite the land, which had been divided since 907. The geography and climate of southern China presented a further challenge to the Mongols: this was a landscape of canals and rice fields, with deep gorges in the south-west, all of which not only hindered the movement of mounted troops but meant there was little pasture for their horses. In the tropical heat and damp of southern China lurked diseases to which the Mongols were unaccustomed. On top of all this, the many enemy strongholds and the mighty river fleet of the Southern Song, equipped with flame-throwers and simple rockets, meant that the Mongols had to deploy new kinds of weapons if the great offensive launched in 1268 was to succeed.

Kublai therefore incorporated Chinese infantrymen into his army and – assisted by the vassal state of Korea, already experienced in naval warfare – he built a river fleet of his own, which was even provided with basic firearms. Alongside this fleet, a transfer of technology from Iran would prove decisive: in 1271, Kublai's nephew, Il-Khan Abaqa (r. 1265–82), sent him two siege engineers named Ismaïl and Ala al-Din, who built for him 'large Frankish catapults' hitherto unknown in China.[7] These were counterweighted trebuchets invented in Byzantium and further developed in the eastern Mediterranean, capable of firing projectiles – like rocks or firebombs – weighing up to 130 kilograms, a distance of some 300 metres. With his river fleet and his superior artillery, Kublai forced the Southern Song to surrender, nonetheless taking care not to damage the southern Chinese economy. The last heir to the Song throne, a child of seven, died in 1279 in the sea battle of Yai Shan.[8] Kublai's triumph ended the 370-year-old division of China, winning him the recognition of Chinese nationalists, despite the fact that the reunification had been brought about not by a Chinese but a 'barbarian'.

2.1.1 A Hybrid Model of Government and Cultural Exchange with the West

Domestically, Kublai took many steps to consolidate Mongol rule. Since traditional Mongol society had known no specialisation, but Kublai wanted not just to conquer but also to govern the largest agrarian country in the world, he adopted Chinese institutions and also employed non-Chinese specialists in the fields of administration, science and technology. In 1271 he founded the **Yuan dynasty** (1271–1368), whose name means 'origin' or 'originating force' in Chinese, thus inscribing himself in the long succession of Chinese emperors and dynasties. As the Mongols represented less than two per cent of the population of the now reunited China, Kublai chose to govern differently from his predecessors, the Liao and the Jin (Jurchen), who had run a dual administration and employed many Chinese officials. Kublai decided upon a unitary administration but divided the population by ethnicity into a four-class society, at the top of which stood the Mongols, and beneath them the Central and Western Asians (such as the Alans), called *Se Mu*, followed by the northern Chinese, the *Han Ren*, and last of all, the southern Chinese, the *Nan Ren*. According to the census of 1290, there were around a million Mongols, a million *Se Mu*, 10 million *Han Ren* and 60 million *Nan Ren*.[9] Mongols and *Se Mu* occupied practically all the leading positions in the administration, the higher ranks of the officer corps and the imperial guard, as well as some 30 per cent of all other public offices, with Central Asian Muslims being favoured in the finance ministry and the tax administration, with the result that Persian emerged as the lingua franca of the Mongol administration. But Nestorian Christians, too, could make a career in the

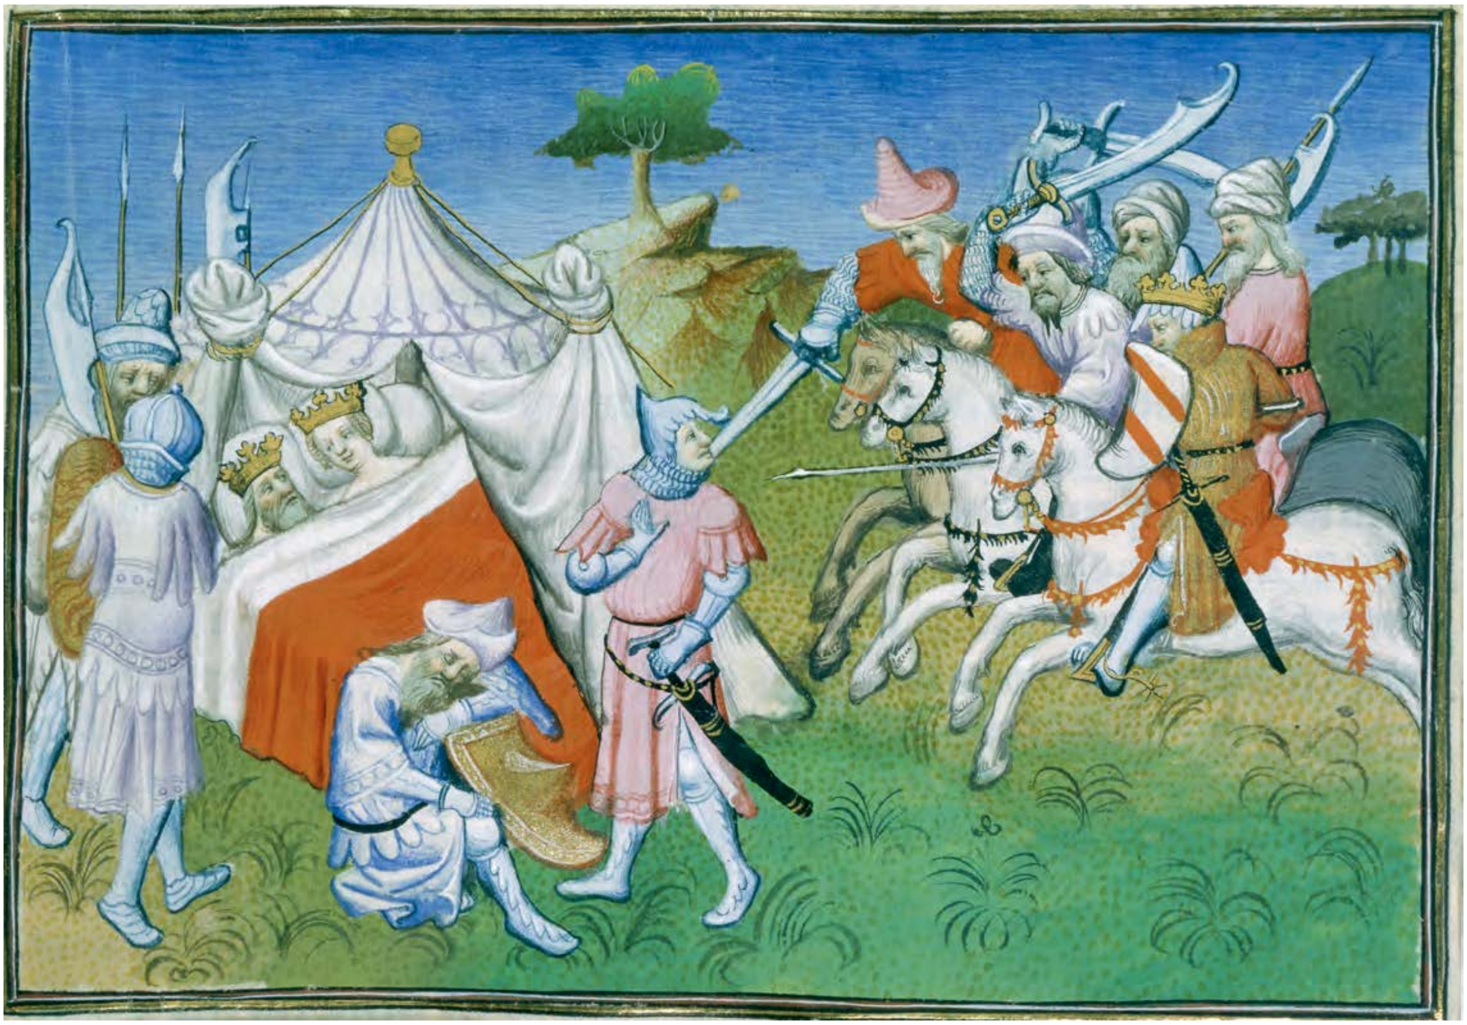
150. Kublai Khan observes the brothers Niccolò (*ca.* 1230–94) and Maffeo Polo (*ca.* 1230–1309) in 1268 as they receive a golden *paiza,* a tablet entitling the Venetians to free transport and free board and lodging wherever they went. Folio from the *Livre des merveilles,* commissioned by John the Fearless, Duke of Burgundy and completed between 1410 and 1413, Bibliothèque nationale de France, Paris, France, Ms. Fr. 2810. fol. 3v.

administration, as witnessed by the example of vice-*darughachi* Mar Sargis, mentioned by Marco Polo. Born in Samarkand, between 1277 and 1280 or 1282 he governed the strategically important city of Zhenjiang at the junction of the Imperial Canal and the Yangtse; yet he was at the same time a priest, and founded seven monasteries in and around the city.[10] Within the Imperial Guard, the elite of the army, a privileged position was enjoyed by 30,000 Christian Alans (called in Mongolian Asud), who had been deported from the Caucasus to Mongolia and northern China in the mid-thirteenth century, and who were distant descendants from the Sarmatians of Antiquity.[11] For the remaining posts, the Han Ren – who included the Jurchen and the Khitan – were preferred over the Nan Ren. With this distribution of functions according to ethnicity, Kublai avoided the path taken by his younger brother Hülegü in the Middle East, who had put his administration in the hands of the conquered Persians.

The Catholic Alans[12] still played a predominant role in the imperial army in 1336, when Toghon Temür (r. 1333–68), the last Yuan emperor, wrote a letter in support of a petition from the Alan Guard – whose commander was head of the imperial military committee – to Pope Benedict XII (in office 1334–42).[13] Toghon Temür's letter to the pope, in which he also asks for horses, continues the contact with the West that Kublai had initiated in 1267 when he entrusted Niccolò and Maffeo Polo with taking a request to the pope to send him 100 learned men. Led by the Genoese merchant Andalò da Savignone, the delegation of fifteen Alans arrived in Avignon in 1338. There they asked the pope for a bishop, because the Catholic archbishop of Khanbaliq, Giovanni da Montecorvino, had died in 1328. Montecorvino had been in China since 1294 and had built two churches in Khanbaliq, not far from the palace.[14] Pope Benedict appointed Giovanni de' Marignolli (in office in China 1342–45, d. 1353), who arrived in Khanbaliq with his Alan companions in 1342. Marignolli's arrival caused a sensation at the imperial court: not because Toghon Temür was impressed by the man himself, but because the bishop had brought with him a splendid warhorse, a gift of the pope that was understood as a tribute offering. The emperor was so enthused that he commissioned the court painter to produce a portrait of the horse, and asked a court poet for an ode, in which the animal was compared to the stallions of Wu Di: '[Emperor] Wu Di of the Han sent out 200,000 soldiers and barely obtained a few horses from Ferghana; but now the Heavenly Horse is come without the exertion of one soldier.'[15] (fig. 149) Marignolli misunderstood this imperial enthusiasm for the pope's gift, believing that the emperor was on the point of converting to Christianity.[16]

Kublai Khan and the Polos

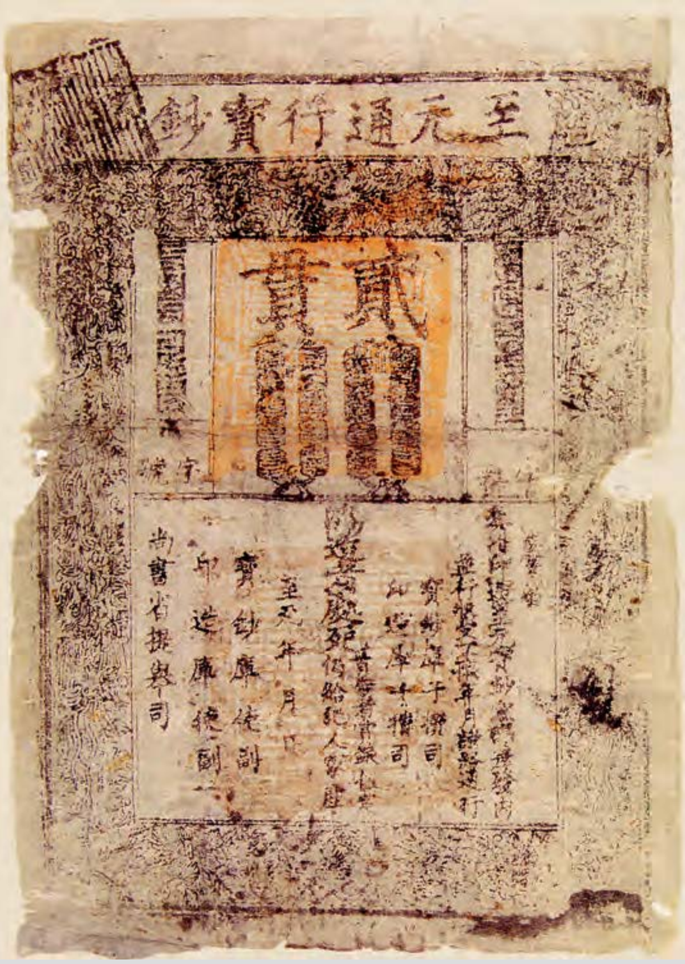
The adventures of the three Polos were the joint outcome of the Venetian trading presence in the Black Sea, three intra-Mongol wars, and Kublai Khan's desire for European scholars. The Polos, a Venetian merchant family, had a house in Constantinople, capital of the Latin Empire,[17] which since 1204 had accorded extensive trading privileges to Venice. After some years in Constantinople, the brothers Niccolò (*ca.* 1230–94) and Maffeo Polo (*ca.* 1230–1309) left the city around 1259 or 1260, moving to their trading post in Soldaia (Sudak) on the southern coast of Crimea, where they traded in precious stones. As Crimea belonged to the Golden Horde of Berke Khan (r. 1257–66), they travelled to Berke's court of Sarai on the Volga. By then, in March 1261, supported by Venice's arch-rival, Genoa, the Byzantine emperor of Nicaea, Michael VIII Palaeologus (r. 1259–82), had regained Constantinople from the Latins, burning the Venetian quarter to the ground and having many of the Venetian prisoners blinded. The Polos could no longer hope to return to Venice via Constantinople. Not long after, a conflict developed between Berke and Hülegü over Azerbaijan, making the Caucasus and eastern Black Sea region impassable. The brothers therefore turned east, reaching Bukhara in 1262 or 1263, where they stayed for three years because the conflict within the Chagatai khanate and the war between the brothers Kublai and Arik Böge prevented them from travelling further. It was not until Kublai's victory that they had an opportunity to continue their journey: an embassy sent by Hülegü to Kublai halted at Bukhara and the Polos joined the group. They reached Kublai Khan in 1266/67, probably in Shangdu, and he received them in friendly fashion. He entrusted the Polos with a letter to the pope, in which he asked to be sent 'a hundred persons of our Christian faith; intelligent men acquainted with the Seven liberal arts'.[18] It seems very unlikely that Kublai wanted



151. Kublai Khan's army surprises in 1287 the rebel Prince Nayan of Manchuria in bed with his wife, while a guard remains asleep. Folio from the *Livre des merveilles,* commissioned by John the Fearless, Duke of Burgundy, and completed between 1410 and 1413, Bibliothèque nationale de France, Paris, France, Ms. Fr. 2810, fol. 34r.

100 missionaries, as is sometimes claimed, since he was close to Buddhism, and Christianity offered him no political advantage. What the emperor surely wanted was men of scholarly and scientific ability, the Seven liberal arts, after all, being grammar, logic, rhetoric, music, mathematics, geometry and astronomy.[19] Provided with a golden *paiza* (fig. 150) that identified them as emissaries of the Great Khan, the two Polos reached the eastern shore of the Mediterranean again in spring 1269.[20] They were, it would seem, the first Latin Europeans to have reached north-eastern China in the Middle Ages.

In Acre, capital of the Latin Kingdom of Jerusalem, the Polos met the newly elected Pope Gregory X (r. 1271–76). The pope was interested in establishing diplomatic relations with Kublai, because in the autumn of 1271 there was a coordinated, if finally unsuccessful, military operation against the Mamluks by the English Prince Edward (later Edward I) and the Il-Khan Abaqa's general Samaghar,[21] and the pope hoped to win the favour of Abaqa's nominal overlord. He gave the Polos a letter for Kublai, but sent with it not 100 learned men but only two Dominicans. These took fright at Sultan Baibar's counter-offensive and faint-heartedly took their leave of the Polos after only a few days.[22] The two brothers went on without them, accompanied by Niccolò's son Marco (1254–1324). Because of the war in Central Asia between Kublai Khan and his Il-Khanid allies and the Ögödeid Kaidu, who had compelled the Chagataids to support him, the Polos chose a southern route avoiding the Ögödeid and Chagataid territories between the Oxus and Ili rivers. The three men crossed Iran (Marco later recorded their encounter with oil wells in Georgia or Azerbaijan)[23] to arrive at the port of Hormuz. From there they hoped to take ship for China, but were horrified at the Arab vessels they saw: 'The ships are wretched affairs and many of them get lost; for they have no iron fastenings, and are only stitched together with twine made from the husk of the Indian nut.'[24] They therefore decided to take the land route, travelling north-east to Balkh and Badakhshan, where Marco heard of rich deposits of rubies and lapis lazuli, and on to Kashgar. In the Wakhan Corridor, Marco was struck by the presence of the large wild sheep that would later be named after him (*Ovis ammon polii*), and in the high Pamirs he noted the lower boiling point of water, which made cooking more difficult.[25]

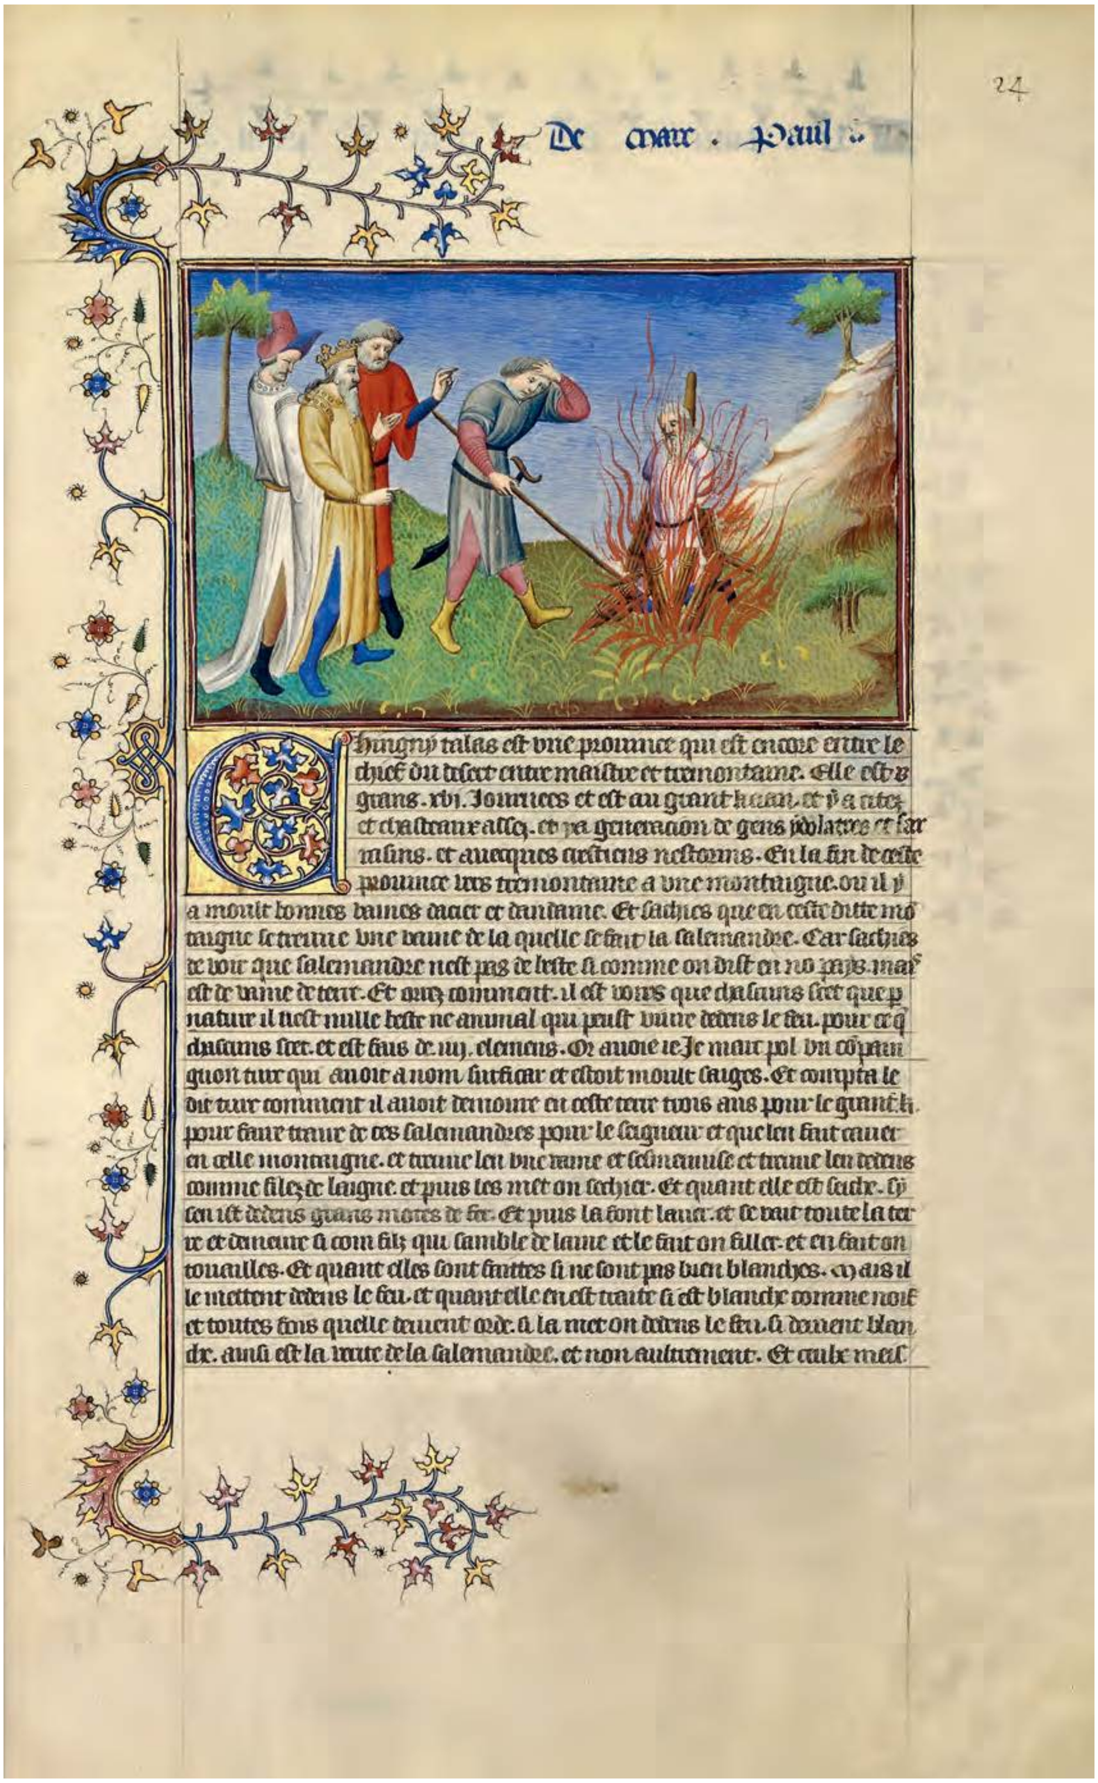


152. Paper banknote printed in the woodblock technique and issued in 1287, Yuan dynasty (1271–1368). Inner Mongolia Museum, Hohhot, Inner Mongolia, China.

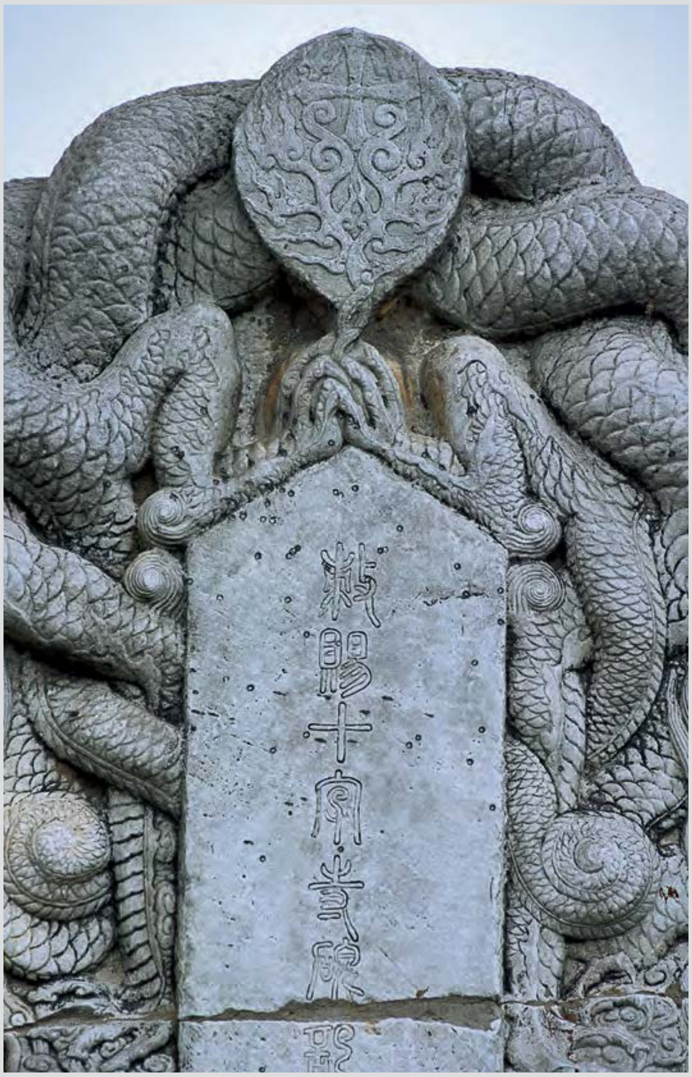
Leaving Kashgar, the Polos followed the southern edge of the Taklamakan Desert, where, crossing the Lop Nor, Marco experienced hallucinations, like the Buddhist pilgrim monks Faxian and Xuanzang before him.[26] 'When travellers are on the move by night [because of the great heat during day], and one of them chances to lag behind [. . .] he will hear spirits talking, and will suppose them to be his comrades. Sometimes the spirits will call him by name; and thus shall a traveller ofttimes be led astray so that he never finds his party.'[27] In the province of Tangut, Marco witnessed a Buddhist cremation, at which the deceased was provided with symbolic gifts made of paper: 'And when it [the body] reaches the burning-place the kinsfolk are prepared with figures cut out of parchment and paper in the shape of men and horses and camels [. . .] and all these they burn with the corpse.'[28] Another funerary custom also attracted Marco's attention: among the Mongols, the parents of a deceased boy and those of a deceased girl wedded their dead children at a solemn ceremony, burnt the marriage agreement, and henceforward treated each other as related by marriage.[29] In 1275, the three Polos reached Kublai's summer capital of Shangdu, where the khan received them in a palace of bamboo that could easily be dismantled and rebuilt somewhere else.[30] The imperial court probably took the Polos to be a papal embassy bearing tribute, redounding to the greater glory of the emperor. Marco reported that Kublai regularly hunted while in Shangdu, taking with him a leopard – most likely a cheetah – on his horse's crupper.[31]

Kublai soon entrusted Marco with administrative tasks,[32] which enabled him to travel to Chengdu, Dali and Kunming in southern China, perhaps even to the Burmese capital of Bagan, which Marco called 'Mien'. He did in any case describe the first, failed Burma

153. The King of Ghinghintalas (assumed to be in eastern Turkestan) observes how wearing an asbestos tunic can protect a man from fire. Folio from the *Livre des merveilles,* commissioned by John the Fearless, Duke of Burgundy and completed between 1410 and 1413, Bibliothèque nationale de France, Paris, France, Ms. Fr 2810, fol. 24r.



campaign of 1277–79; only in 1287 did Kublai's grandson Esen Temür succeed in capturing Bagan and compelling Burma to pay tribute.[33] Marco was the first European to mention Japan, which in 1281, helped by a typhoon, beat off Kublai's second attack.[34] Marco Polo's book also tells of a dangerous pincer offensive launched by Kaidu from the west and Prince Nayan from the east. In 1285, Kaidu incited the Tibetan Buddhist Kagyü-Drigungpa order to revolt against the dominant Sakyapas loyal to Kublai, while the Chagataid Du'a, at his behest, besieged Kocho in the Uyghur lands and then in 1286 launched a successful attack on Besh Baliq.[35] Only a year later Kaidu began to threaten Mongolia, and Prince Nayan, a descendant of Genghis Khan's half-brother Belgutei, rose up in Manchuria. The 72-year-old Kublai thought the situation so dangerous that he led the campaign against Nayan in person, capturing him in battle and afterwards putting him to death (fig. 151). Although Nayan was a Nestorian, the Christians in Kublai's empire suffered no retribution.[36] When Muslims and Buddhists at court taunted the Nestorians, saying that Nayan's god had been no help to him, the emperor reassured them: 'Nayan was a disloyal and traitorous rebel against his Lord, and well deserved that which had befallen him. Wherefore the Cross of your God [which Nayan displayed on his banners] did well in that it gave him no help against the right.'[37]



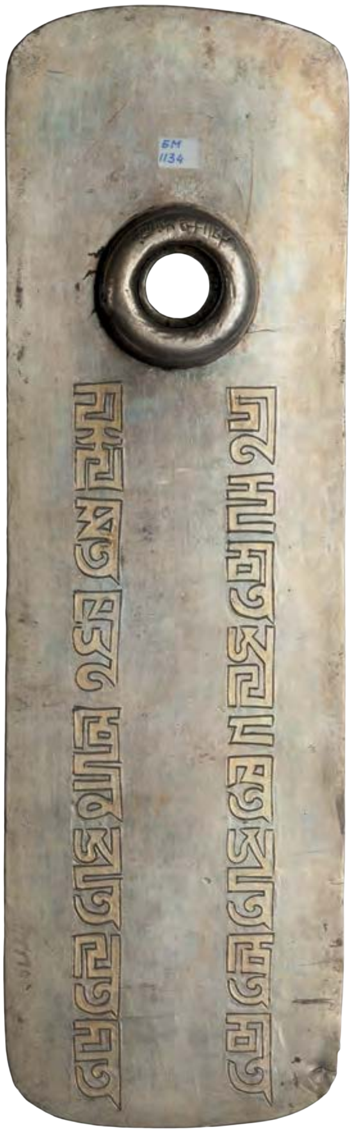
154. Upper section of the front of a Nestorian stone stele in Fang Shan, China. The seven characters state: 'this stele proclaims that by imperial edict this is the Monastery of the Cross'. At the very top a cross is visible. In 1919, two large inscribed steles were found near Fang Shan, situated 70 kilometres south-west of Beijing. The larger stele, 273 centimetres high, is inscribed on both sides. The front, dating from 1365, declares that the restoration of the Nestorian monastery was completed in 1357 and praises the wisdom of Emperor Toghon Temür (r. 1333–68), who authorised the reconstruction.[27] Photo: 2001.

In his account of his travels Marco describes China's many peculiarities,[38] such as the Mongol and Se Mu domination of the administration,[39] the use of paper money (fig. 152), the postal system,[40] the cowrie-shell currency used in Yunnan[41] and the salt used for payment in Tibet,[42] the extensive mining of coal,[43] the silk industry of Taiyuan (Shanxi) and the *nasij* gold brocade (fig. 158) produced in Sindachu,[44] heat-resistant asbestos (fig. 153)[45] and, of course, porcelain (fig. 160).[46] Marco also tells of how Kublai built the Imperial Canal from Hangzhou to Khanbaliq[47] and of the imposing ocean-going ships whose hull might consist of up to thirteen vertical, watertight compartments[48] – should such a ship spring a leak, the water would go no further than the affected compartment, the others remaining dry and the vessel staying afloat. The Chinese discovered the principle of the bulkhead in the twelfth century, while it came into use in the West only in the late eighteenth century.[49]

The Polos remained in China for 17 years.[50] Only in late 1291 or early 1292 did the khan give them permission to return home, asking them to escort the Mongolian princess Kököchin, who was intended as bride of the Il-Khan Arghun (r. 1284–91), on the sea journey to Iran. As well as gifts for themselves, the khan gave them letters to the Pope and the kings of France and England. Together with Kököchin, the Polos embarked at the great seaport of Zaytun (Quanzhou), cosmopolitan starting-point of the maritime silk route, home to large Muslim, Nestorian, Latin and Hindu communities.[51] By the time the Polos reached Hormuz in 1294, Arghun was already dead, so his brother and successor Gaikhatu (r. 1291–95) gave the princess to Arghun's son Ghazan (r. 1295–1304) as his bride. A year later, the Polos finally reached Venice, after a 24-year absence.[52] Marco Polo, however, had one more unwelcome adventure before him, for he would be taken prisoner at the sea battle of Curzola, fought between Venice and Genoa in the autumn of 1298, and released only in the late summer of the following year. He used the period of his imprisonment to dictate his memoirs to a fellow-prisoner, the writer Rustichello da Pisa, whose short text he probably later expanded upon himself, with the result that his celebrated book, *Il Milione*, exists in several different versions.[53]

The Yuan imperial administration resembled a colonial system of government. Of the ten provinces, only the central province consisting of Hebei, Shandong, Shanxi and Inner Mongolia, fell directly under the emperor, whereas the remaining provinces were governed by a civilian general administrator, who was answerable to the central government secretariat. This was led by two prime ministers, who also directed the six government ministries: the ministries of finance, war, rites and foreign relations, justice, personnel, and public works.[54] The governors were each monitored by a *darughachi*, who answered to the finance minister. The provinces enjoyed a wide-ranging autonomy, with the central government retaining sole control only of foreign and economic policy and military affairs. As Kublai doubted the loyalty of his civil servants, he adopted that very Chinese institution, the Censorate, which watched over government servants, and granted it extensive powers. Kublai's hybrid governmental structure combined the traditional form of rule of the northern steppe empires and the Chinese model of administration, though with little involvement of the Han Chinese themselves. However, the appanages granted to Mongol princes by Kublai's predecessors were a considerable burden on state finances.[55] Although Kublai succeeded in reducing them in number, his weaker successors expanded them again to such an extent that the demands of those enjoying such privileges could only be accommodated by the sale of silver reserves and an inordinate expansion in the mass of paper money in circulation, which contributed decisively to the fall of the currency and the collapse of state finances that ensued.[56]

The contradiction between a mobile army of steppe warriors and a sedentary state was one that Kublai Khan could not resolve. The traditional Mongol army was self-sufficient, since those liable for service had to provide horses and weapons for themselves. For this they would be compensated in booty. As nomadic pastoralists and hunters, the Mongols were born warriors, whose everyday life gave them all the training they needed. To be stationed in a Chinese garrison did not suit them at all. Nor did the land allocated to Mongol soldiers in northern China produce enough for their upkeep and armament, so they soon had to sell it. The Yuan dynasty's wars yielded little booty, if any, and the Mongol warriors found themselves in the contradictory position of being owners of agricultural land who were nevertheless expected to be soldiers available for mobilisation at any moment. Many Mongols stationed in China ended up dependent on greedy tax collectors, who also lent out money at usurious interest; they sank into poverty and were forced to sell their children into slavery.[57] Furthermore, soldiers in stationary postings stopped handling horses and weapons on a daily basis, and they lost some of their fighting ability. And as the Mongol heartland, reduced in 1307 to the mere province of Lingbei,[58] no longer enjoyed an inflow of tribute and booty but suffered an exodus of young men and horses, it rapidly fell into poverty.



155. A silver *paiza*, 30.5 centimetres long, with gilt inscription in 'square' Phagpa script, named after its creator Lama Phagpa. On the front surface are three vertical lines, while on the back, shown in the photo, there are two of them. Five additional Chinese characters engraved in the circular bulge surrounding the hole read 'Proclamation no. 42'. The Mongolian inscription translates as follows: 'By the power of the Eternal Heaven, blessed be the name of the Immortal Khan. He who does not show due respect shall be brought down and put to death.' 1269 or later.[28] The State Hermitage Museum, St. Petersburg, Russia. Inv. no. BM-1134.

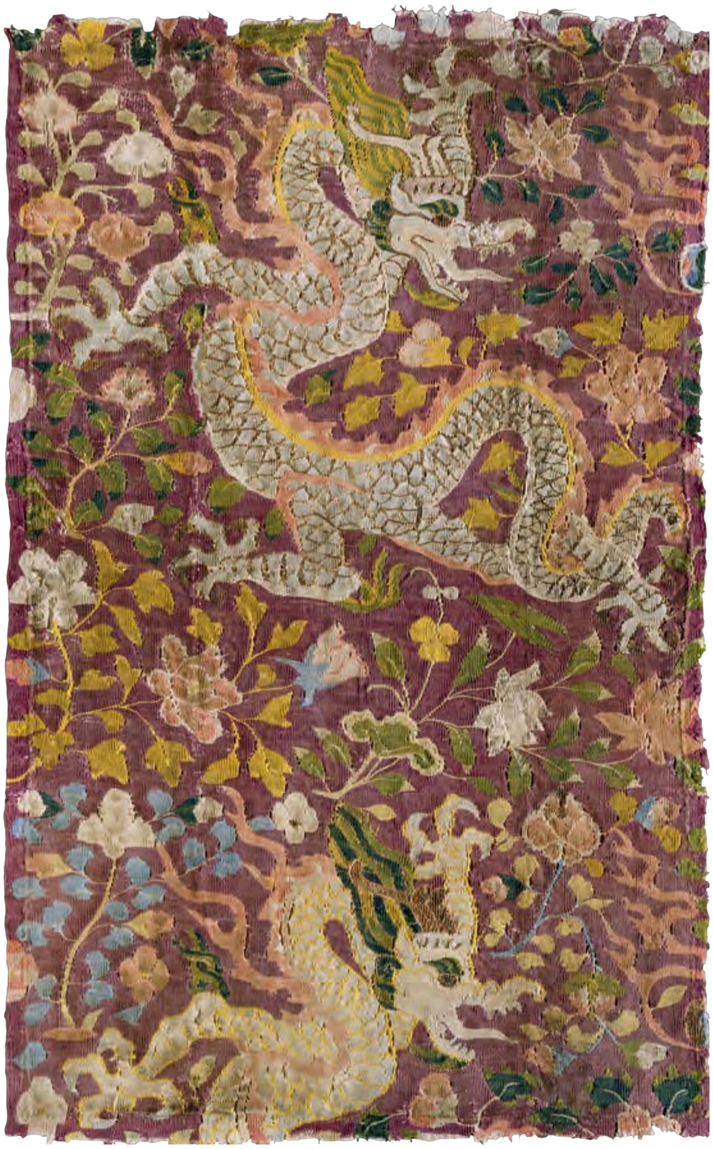
In 1264, even before his attack on the Song, Kublai ordered the creation of a new capital, Zhongdu (Khanbaliq, Daidu),[59] near the site of today's Beijing, indicating a continuity with the Jin dynasty, whose own capital had been in the same area. Khanbaliq was rectangular and symmetrical in plan, with north–south and east–west

156. White stupa in the Miaoying Temple, Beijing, China. The stupa was built in 1279 by the Nepalese artist and architect Aniko (1244–1306). Photo: 2005.

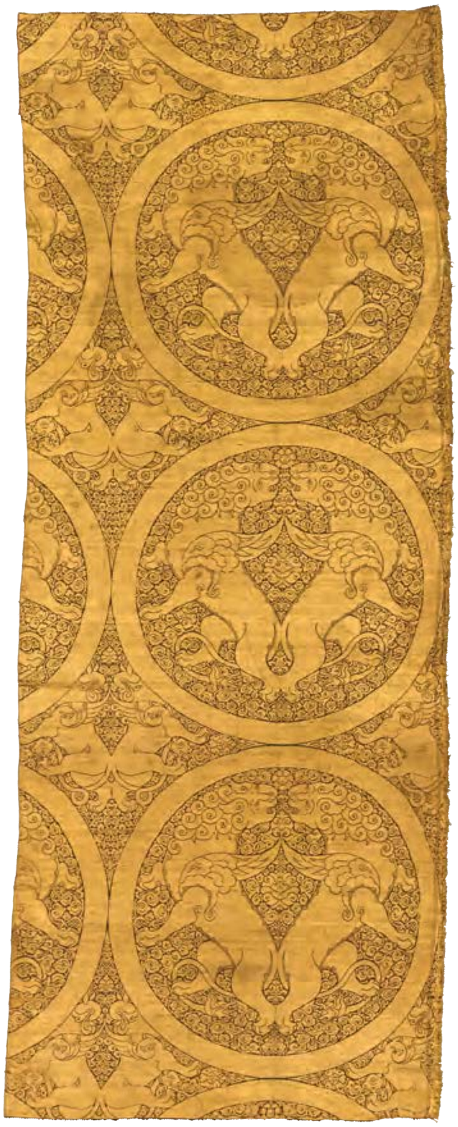
axes running from city gate to city gate, and the main streets were so wide that nine horsemen could ride side by side.[60] The city walls were 28.6 kilometres long. However, Zhongdu – where from 1274 on Kublai lived in his palace except in summer – had the disadvantage that the surrounding region did not produce enough grain to feed the city, so that it had to be supplied with rice and wheat from the south. As transport by land was inefficient and transport by sea unreliable because of typhoons, Kublai Khan ordered the restoration and extension of the Imperial Canal (now known as the Grand Canal), which had first come into use in the year 609/10. Completed in 1293, and mentioned admiringly by Marco Polo,[61] the Imperial Canal, linking Hangzhou in the south to Khanbaliq in the north, was 1,800 kilometres long. It supplied the capital with food and stimulated China's internal trade and thus greatly contributed to the economic reunification of the country. When the Yellow River changed its course to the north in 1344, it made the Imperial Canal unusable and caused an economic crisis. Seven years later, by mobilising 170,000 soldiers and workers, the Mongol imperial chancellor Toghto'a (1314–56), who had earlier overseen the composition of the official annals of the Liao, Jin and Song dynasties, succeeded in diverting the river back to its southern course and reopening the Imperial Canal. It then remained in uninterrupted use until the 1850s, when the Yellow River again shifted north.[62] Other measures to promote economic activity by Kublai Khan were the introduction of a unified paper currency[63] and a uniform tax code, the adoption of foreign technologies and the promotion of health, education and agriculture. The Yuan encouraged cotton production in China and the cultivation of rice and tea in Iran and the Middle East.[64] Kublai's preference for merchants over scholars, however, represented a reversal of values in a China where scholars had traditionally ranked far higher than merchants in the social hierarchy.

Two kinds of foreign experts were employed in Kublai's China: First deported prisoners of war who worked as slaves on the building of Karakorum or at specialist manufactories in Chinkai Balghasun, Besh Baliq,[65] Xunmalin and in the region of Chahar, near Zhangjiakou, producing weapons, armour or consumer goods such as silk fabrics. Particularly popular among the Mongols were the *nasij* (Chinese: *nashishi*) silk textiles, named after an originally

Central Asian technique in which decorative motifs are introduced during the weaving process with the addition of gold or silver thread, normally in the weft. To produce this thread, gold or silver leaf was applied to a core material such as paper thread.[66] These *nasij* silks were favoured by Mongol and particularly Il-Khanid rulers as gifts for Western sovereigns, among them the pope. In Italy, it was called *panno tartarico* or 'Tartar cloth', often used to wrap the relics of Christian saints. As Lauren Arnold observes, 'it is ultimately ironic that a fair proportion of the *panno tartarico* that came to rest in medieval church treasuries was actually the product of Muslim weavers forced to weave in China'.[67] These *nasij* textiles, which European merchants also bought in the markets of Laiazzo (Ayas in Cilicia, on the eastern Mediterranean), Caffa, Soldaia and Tana (Tanaïs) on the Black Sea, as well as in Tabriz in Iranian Azerbaijan, were so highly prized in Western Europe that they were copied by Italian silk weavers and depicted in thirteenth- and fourteenth-century paintings.[68] Chinese-Mongolian textile patterns were even more influential in neighbouring Iran, with dragons, phoenixes, clouds and curious rock formations all making their appearance in fabrics, ceramics and book miniatures of that country.[69] So there were transfers in both directions: at first Central Asian and eastern Iranian prisoners of war brought *nasij* brocade to China, then



157. Silk and metallic thread tapestry of the type known as *kesi* with a pattern of dragons and flowers from Uyghur eastern Central Asia (present-day Xinjiang), eleventh to twelfth century. The Metropolitan Museum of Art, New York. Inv. no. 1987.275. After the Mongols had deported Uyghur weavers to the manufactories north of Khanbaliq, this style from eastern Central Asia spread to China.

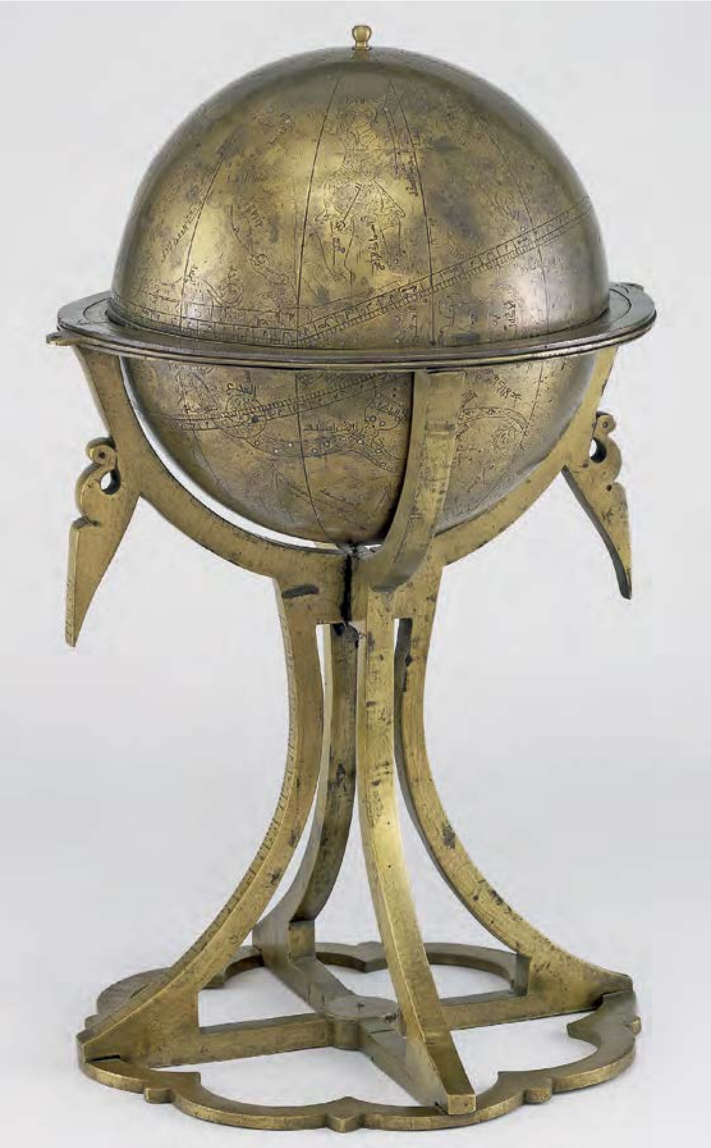


158. Cloth of gold with winged lions and griffins, Central Asia, mid-thirteenth century. Members of the Mongol elite were particularly fond of *nasij* silks of this kind, woven from gold or silver thread. The arrangement of pairs of winged lions and griffins, set inside medallions and in the spaces between, originated from eastern Iran and western Central Asia. Cleveland Museum of Art. Inv. 1989.50.

returning craftsmen and Chinese merchants took Chinese motifs to Central Asia and Iran.

The second group of experts comprised artists and applied scientists such as astronomers, geographers, agronomists and physicians, who more or less willingly entered Mongol service, and by doing so made a massive contribution to cultural exchange between China and Central Asia and the Middle East. A good example is the astronomer Jamal al-Din Muhammad ibn Tahir (Chinese: Zhamaluding) from Bukhara, who first produced a celestial map for Möngke[70] and then in 1267 presented Kublai Khan with seven 'Islamic' astronomical instruments produced in China, including a celestial and a terrestrial globe, an armillary sphere showing the movements of the celestial bodies, and an astrolabe to measure their angles. In 1271 Jamal set up the Islamic Astronomical Bureau in Khanbaliq, and between 1286 and 1291 he directed the production of a geographical compendium including maps of the whole Mongol Empire.[71] Jamal's terrestrial globe was exceptional in featuring a grid in coloured ink representing the Islamic system of longitude and latitude. The use of a grid of longitude and latitude to precisely identify a location in space and in relation to other similarly precisely identified locations[72] went back to the Persian geographer Muhammad ibn Najib Bakran of Tus, in Khorasan, who in 1208/09 produced a map of the world for Shah Muhammad II of Chorasmia, more than a century before Hamdallah Mustawfi al-Qazvini produced his in 1340.[73] As Bakran recorded in his *Jahan-nameh* or 'Book of the World' of 1244, his now lost map had a grid of longitude and latitude drawn in red that made it possible to determine the location of each place, while east–west lines divided it into seven climatic zones.[74] Jamal al-Din's terrestrial globe of 1267 was thus derived from Bakran's world map, and the early-fourteenth-century grid maps of the Yuan dynasty, like those of 1330/31, originated as two-dimensional projections of Islamic terrestrial globes.[75]

Another innovation of the Yuan dynasty is the famous blue and white porcelain commonly attributed to the Ming dynasty



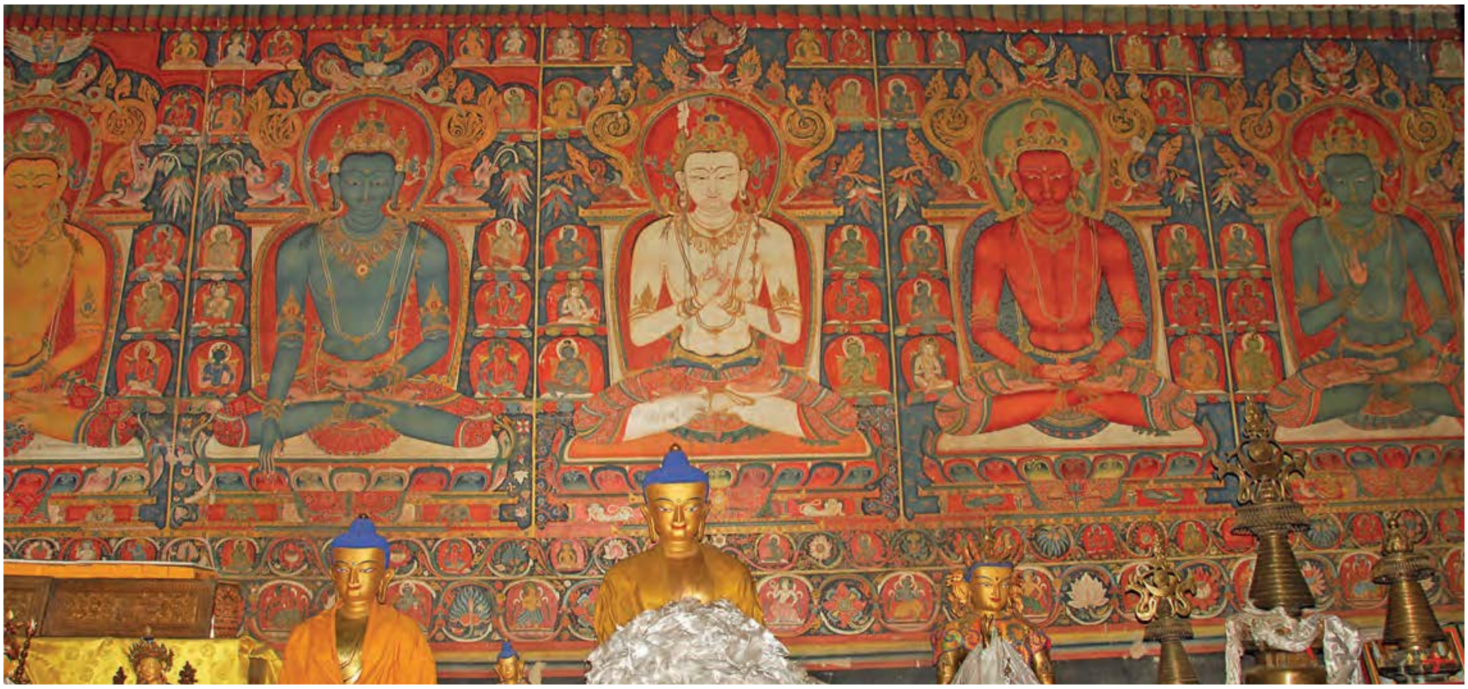
159. A brass celestial globe, 24.1 centimetres in diameter, probably fashioned in Maragheh, Iran by the astronomer Mohammad ibn Hilal, in 1275–76. It is widely thought that Hülegü deported the astronomer from Mosul to Maragheh sometime around 1262. Jamal al-Din Muhammad ibn Tahir may well have made a similar celestial globe for Kublai Khan in 1267. The British Museum, London, ME OA 1871.3-1.1 a,b.

160. Glazed, blue and white porcelain bowl from the Yuan dynasty (1271–1368). Inner Mongolia Autonomous Region Museum Hohhot, Inner Mongolia, China.

(1368–1644) fig. 160. Its production in fact began in the Mongol period, in great part because Kublai freed government potters from the aesthetic requirements of the Song imperial court and its scholar officials, restoring their creative freedom. They began to experiment with new techniques and materials, including the cobalt that came from Il-Khanid Iran.[76] The export of porcelain to the riparian states of the Indian Ocean and Persian Gulf significantly contributed to the growth of maritime trade.[77] The fragile porcelain was packed 'with a mixture of sand, earth, soya bean and wheat and sprinkled with water, which then produced a solid mass. When [the container] reached its destination [the mass] was once more sprinkled with water and the porcelain emerged intact.'[78] Camels were unsuited to the transport of such heavy chests whereas ships could cope easily with large consignments.

In matters of religion, Kublai continued his ancestors' policy of tolerance, so long as no religious practice infringed Mongol law.[79] He found a willing tool in the Tibetan Buddhist dignitary Chögyel Phagpa, who bestowed on him an exalted religious and pseudo-historical status in a way that would have been unthinkable for a Confucian, Muslim or Christian scholar or religious authority. Kublai appointed Phagpa his *ti-shi* or imperial preceptor.[80] The lama for his part declared the emperor to be a *cakravartinraja*, an ideal ruler, fulfilment of the Buddhist notion of the righteous king.[81] Moreover, he also recognised Genghis Khan and Möngke as righteous kings. The three Mongol rulers were no longer mere successors to the fallen Chinese dynasties of the Jin and the Song, but stood in the line of that illustrious paragon the Emperor Ashoka, and Kublai was even glorified as an embodiment of Manjushri, bodhisattva of wisdom, honoured as a divinity by Buddhists. This was not entirely new: early forms of such caesaropapism had emerged in the Tibetan Empire by the eighth and ninth century.[82] Kublai's goodwill towards Tibetan Buddhism also found expression in art and in a new alphabet: as mentioned earlier,[83] he charged Phagpa Lama with the development of a new script, which did not however succeed in gaining broad acceptance (figs. 155, 165).[84] In the mid-1260s Phagpa introduced the young Nepalese artist Aniko (1244–1306) to the emperor, who entrusted him with several building projects in Daidu (fig. 156) and at Mount Wutai. As imperial supervisor of art and architecture, Aniko also contributed to the development of the celebrated Newar-Yuan-style. Famous examples of this style can be seen in the wall paintings of the Serkhang temple at the Shalu monastery in Central Tibet (fig. 161).[85]

Apart from the victory over the Southern Song, which brought about the reunification of China, itself probably the most significant legacy of the Genghisids, Kublai's efforts on the foreign policy front were not unambiguously successful. In the north, he succeeded in retaining control of the Mongol heartland and its supply of horses, and also in repelling Kaidu's offensive. In the

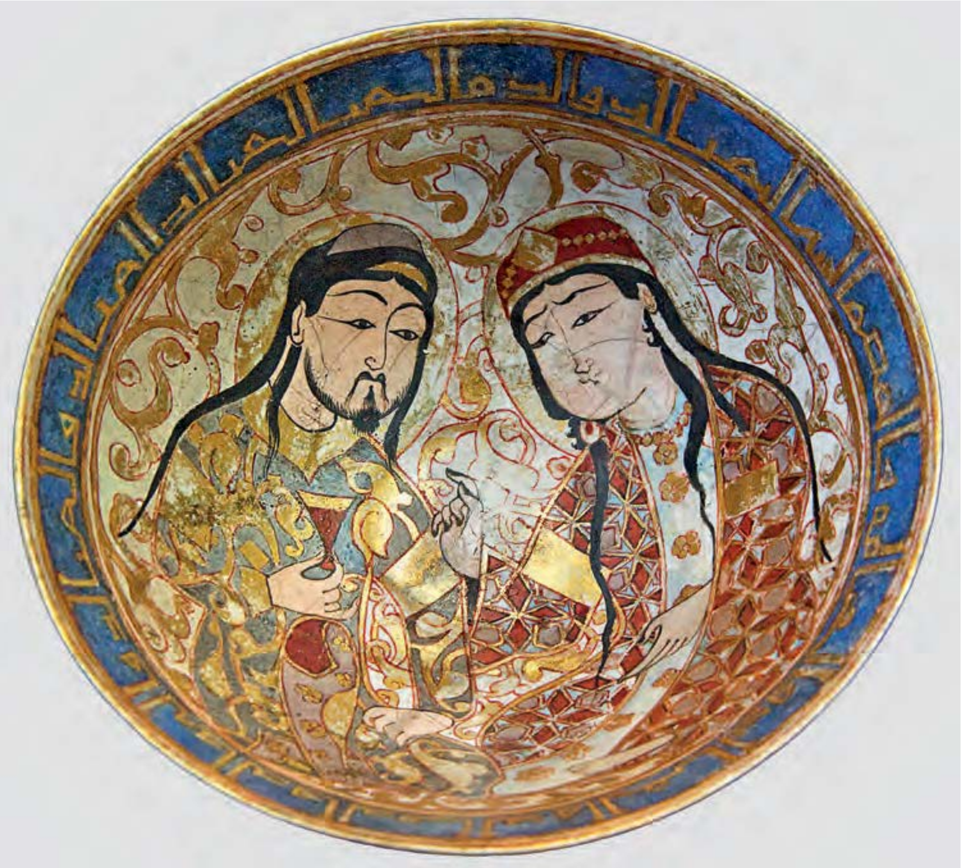


161. The five Tathagata Buddhas in the Segoma Lhakhang Chapel of the Serkhang Temple in the Shalu Monastery, Tibet Autonomous Region, China. The mural depicting the Five Wisdom Buddhas (left to right) Ratnasambhava, Aksobhya, Vairocana, Amitabha and Amoghasiddi was painted in 1306, possibly a little later[29] during the Yuan dynasty (1271–1368). Photo: 2006.

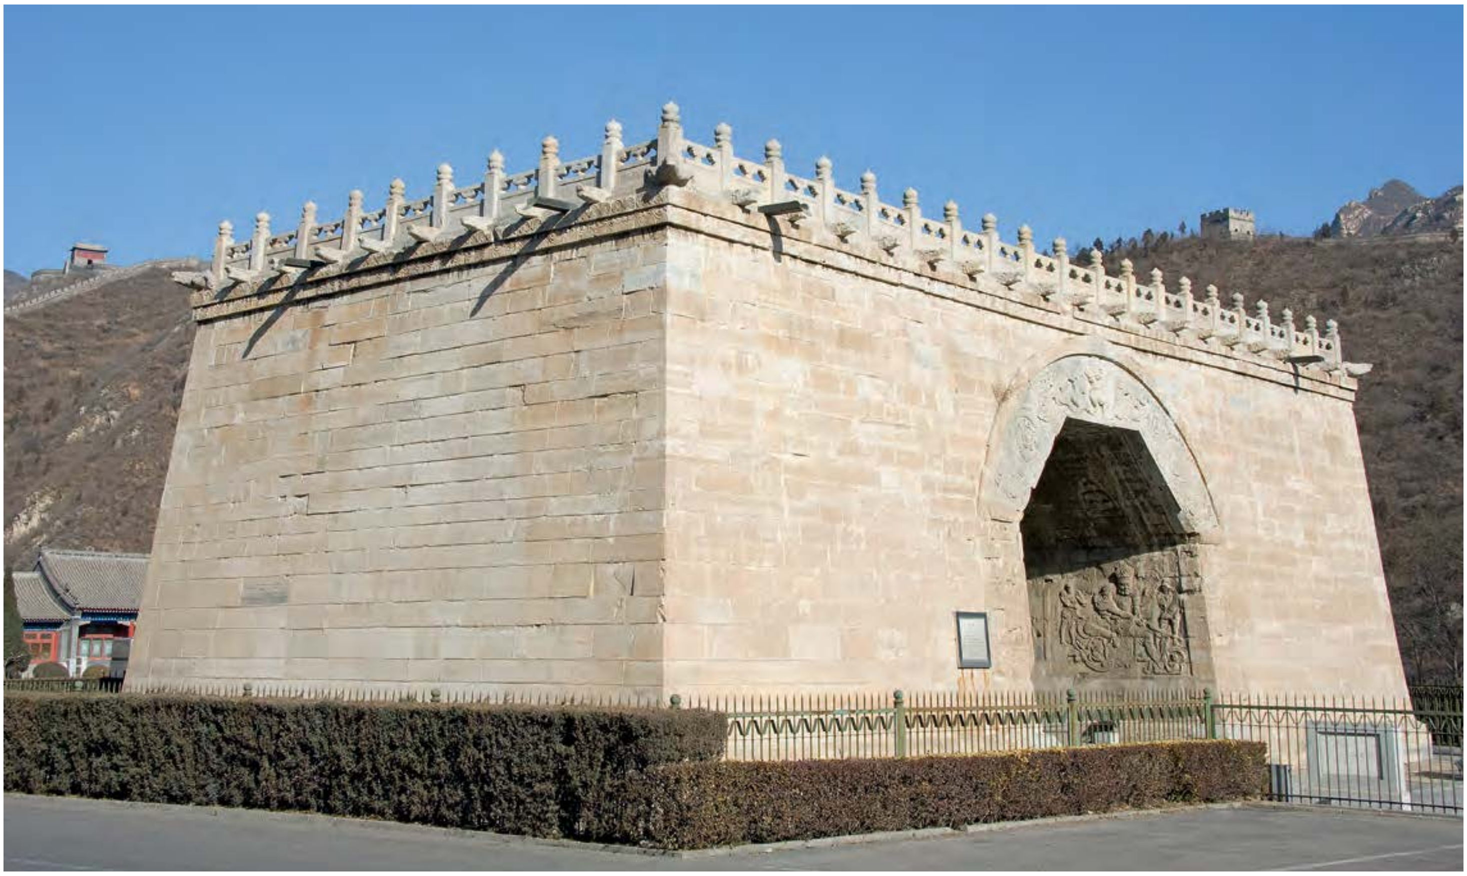
west, he had to put up with a stalemate, for while he had been able to fend off Kaidu (except in Uyghuristan) he had not been able to defeat the Kaidu-controlled Chagatai khanate and so establish a strategically desirable land connection between China and friendly Il-Khanid Persia. In the east, his attacks on Japan in 1274 and 1281 saw the destruction of the invading fleets, while in the south the numerous expeditions to Burma, Annam (northern Vietnam), Champa (southern Vietnam) and Java resulted at best in purely nominal recognition of Kublai's overlordship but often ended in serious defeats.[86] These militarily ineffectual expeditions were a heavy burden on the imperial finances and destroyed the myth of Mongol invincibility. We might ask whether another, more mercantile strategy would have proved more profitable, along the lines of that pursued by the Russian merchant family of the Stroganovs in Siberia, from the sixteenth century on,[87] or the British East India Company in India, from the seventeenth century. These two 'public-private partnerships' sought less tribute or political recognition but rather a trading monopoly whose profits they shared with their respective governments. Military force was employed only when necessary; the ever-present threat of its use was often sufficient. The Mongol Empire was a traditional military empire, while Russia and Great Britain created prototypes of today's global economic empires. In any event, Mongol expansion reached its maximum extent in the time of Kublai: although the political unity of the Mongols was broken, the lands under their rule extended 8,000 kilometres, from Korea to Poland, Syria and Anatolia.

2.2 Kublai's Successors and the End of the Yuan Dynasty

Kublai Khan's successors would have to deal with his legacy, facing increasing financial and economic problems, a weakened military, abuses by the Buddhist clergy, and domestic power struggles. All these would lead to social unrest, rebellion, and finally to the expulsion of the Mongols from China.[88] Kublai was succeeded on his death in 1294 by his grandson **Temür Khan** (1294–1307), who immediately upon his accession to power sold off a great part of the silver reserves in order to pay bribes and meet the claims of holders of appanages, thus undermining trust in the paper currency. The most significant foreign policy event during the reigns of Temür and his successor **Khaishan** (r. 1307–11) was Kaidu's death from wounds received in battle in 1301,[89] upon which the Chagataid



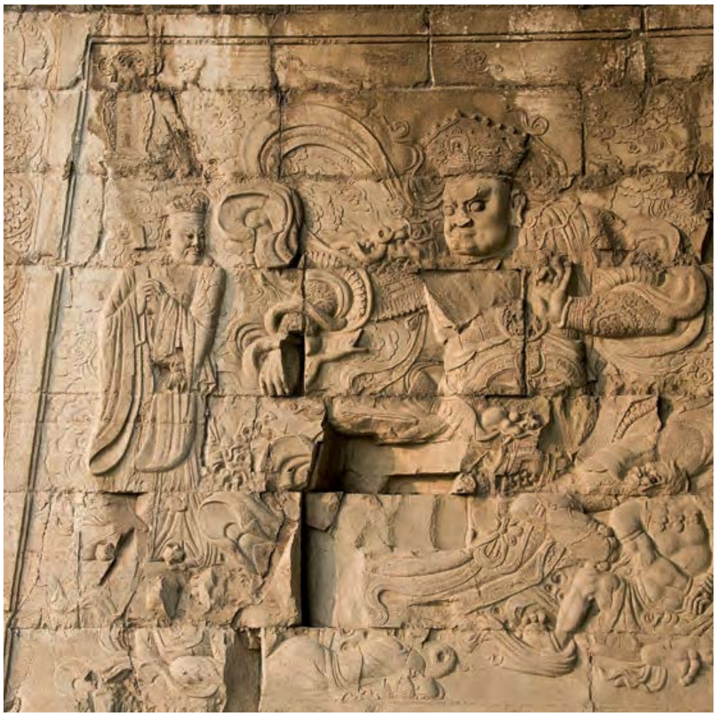
162. Lustre-painted fritware, early thirteenth century, probably from Kashan, Iran. A striking feature of the bowl is the influence of Chinese porcelain. The clothing and facial features of the couple portrayed, one dressed in blue and gold, the other in red and gold, are clearly inspired by Chinese art. The influence of Chinese art on Iranian works of art was even more accentuated under the Il-Khanid Dynasty (1259/60–1335). Abbasi Museum, Tehran, Iran.



163. **The Cloud Terrace – or Yuntai – built in 1342 on the Yuyong Guan Pass north of Beijing, China. Originally there were three white marble stupas mounted on the 9.5-metre-high marble platform, but these were destroyed soon after the Yuan dynasty collapsed in 1368. Buddhist incantations and Dharani texts are carved on the inner surfaces of the east- and west-facing sides of the Yuntai in six different languages and scripts; in Sanskrit language and Lantsa script; in Mongol in 'square' Phagpa script; in Uyghur written in Uyghur script derived from Sogdian script; in Tangut language and script; in Chinese language in ancient Chinese script; and in Tibetan language and script. Photo: 2015.**

Du'a opened peace negotiations with Emperor Temür, leading in 1303–4 to a brief restoration of peace among the Genghisids and the liquidation of the *ulus* of Ögödei.[90] In 1313, Khaishan's successor, his younger brother **Ayurbarwada** (reg. 1311–20), introduced a change whose consequences would be felt right up to the start of the twentieth century. He brought back the Confucian state examinations and thereby restricted appointments to high state office to those intimately familiar with the Four Books in the edition of the neo-Confucian Zhu Xi (1130–1200), the five classics ascribed to Confucius, and the corpus of Neo-Confucian commentary.[91] By doing this, Ayurbarwada sinicised the state elite and also reduced the level of learning required to enter civil service to that which had applied under the Song dynasty, which had fallen in 1279. The fifth Yuan emperor, **Shidebala** (r. 1320–23), was a fanatical Buddhist. His reign was cut short after he twice withdrew financial support from the princes; the Alan imperial guard killed him on 4 September 1323 and replaced him with **Yesün Temür** (1323–28), who sought to reassert traditional Mongol values. When Yesün died, a bloody struggle for the succession ensued, in which emperors **Aragibag** (r. 1328) and **Khoshila** (r. 1329) were both murdered; **Tugh Temür** (r. 1328–29, 1329–32) was no more than a puppet of the high officials El Temür and Bayan, who sought to curb the ever-increasing state deficit through the sale of offices. The next emperor was **Irinjibal** (r. 1332), a child who ruled in name only and who died, probably poisoned, only a few weeks after becoming ruler.

Mongol power came to its end during the reign of **Toghon Temür** (Shunti, r. 1333–68), last of the Yuan emperors. His minister Bayan introduced radical anti-Chinese measures intended to secure the threatened pre-eminence of the Mongols and the Se Mu.[92] The minister Toghto'a (in office 1340–44, 1349–55) succeeded in stabilising the currency for a while; he repaired the Imperial Canal and re-established central government control over military commanders who were acting like independent warlords, and he also pacified several rebellious provinces.[93] Yet Toghto'a was then dismissed and banished, provoking the collapse of the central government, which now controlled only the capital and the surrounding region. In the provinces, struggles broke out between Mongol warlords on the one hand and the rebels of the Red Turban Army and fundamentalist proponents of Confucian renewal on the other. In 1356 the great city of Nanjing fell to the rebel leader Zhu Yuanzhang, the future Emperor Hongwu of the Ming dynasty, who by 1367 would control nearly all of south-east China and enter into an alliance with the Confucian revival movement.[94] Emperor Temür, however, had taken refuge in a world of his own, marked by debauchery and the disconcerting and exotic rituals of Tibetan Buddhist Tantrism. Among these were elaborate theatrical and dance performances, orgiastic sexual practices and even human sacrifices in honour of the 'wrathful deity' Mahakala. All this was repugnant to the Chinese, and it caused them to revolt.[95] The haughty Tibetan lamas, who formed a kind of state within a state,[96] had already caused outrage in the days of Kublai Khan, for example when in 1285 the Tibetan or Tangut monk Yang Lian Zhen Jia had plundered the graves of the Southern Song imperial family and desecrated the bodies of the dead, an act which had fuelled the hatred of the Southern Chinese who had been subdued only in 1276.[97]



164. Buddhist Heavenly King of the West and Lord of the Harvest, Guangmu Tianwang (Virupaksha in Sanskrit), holds a snake in his right hand. The syllables of his Chinese name translate as follows: *Guang* means 'wide' and *mu* means 'eye' or 'view', hence the 'All-seeing King of Heaven'. The identity of the figure is confirmed by the inscription shown in the top left.[30] Southern end of the western inner surface of the Cloud Terrace, or Yuntai, on the Yuyong Guan Pass, China, 1342. 2.3 Withdrawal to Mongolia and Establishment of the Northern Yuan Dynasty

In 1368, Zhu Yuanzhang sent his armies against Daidu. Toghon Temür fled to Shangdu with 60,000 loyal Mongols,[98] leaving rebel leader Zhu to proclaim the new, Han-Chinese dynasty of the Ming, taking the name Hongwu (r. 1368–98), meaning 'immensely martial'.[99] In 1369, Toghon Temür (who then ruled as Northern Yuan emperor, 1368–70) was driven even further north, where he probably founded the city of Bars Qotan on the River Kherlen.[100] As the legitimate heirs of Genghis Khan, he and his successors laid claim to Mongolia and to the title of emperor, which is why they became known as the **Northern Yuan** dynasty (1368–1635). Toghon Temür was succeeded by his son **Ayushiridara** (r. 1370–78), who moved his capital to Karakorum and repelled a major offensive of the Ming in 1372.[101] Having suffered severe defeats at the hands of the Ming in 1380 and 1388, Ayushiridara's brother and successor

Tögüs Temür (r. 1378–88) was killed by a descendant of Arik Böge named **Yesüder** (r. 1388–92), who had allied himself with the Oirats of Western Mongolia.[102] The killing of Tögüs Temür inaugurated almost 100 years of intra-Mongol power struggles, which came to an end only with the accession of Dayan Khan (r. *ca.* 1479–*ca.* 1517).[103] Finally, it is worth noting that the last years of the Yuan offer striking parallels with the end of Manchuria's Qing dynasty (1644–1911/12): national hatred for a foreign ruling caste, a paralysed administration, a weak military, broken finances, popular rebellions in the south, and an out-of-touch, decadent elite. It seems that history does indeed sometimes repeat itself.

3. The Chagatai Khanate

Unlike the Yuan and Il-Khanid dynasties, the **Chagatai khanate** (1227–1346/47) in Central Asia did not rest upon the structure and territory of a defeated empire. It was characterised from the start by a number of distinctive socio-cultural features that would eventually contribute to its downfall in the mid-fourteenth century. In the north-east lived Turkic semi-nomads, who were naturally closer to their Mongol conquerors than the urban, largely Iranian-descended inhabitants of the south-west, with its great cities of Samarkand and Bukhara. The pastoralist horsemen of the north-east were shamanists who held city dwellers in disdain, seeing them only as a source of booty. The Muslims of the south-west, for their part, were merchants, artisans and crop farmers who shunned their semi-nomad neighbours as uncivilised infidels and lived in fear of their raids. The boundary between the two regions had been established by Ögödei in his reforms of 1229, when he brought Turkestan and Uyghuristan under central government control, appointing Mahmud Yalavach as governor, so that only the grasslands of the north-east remained under Chagatai's direct control. The frontier with the administrative region of northern China ran along the border of Uyghuristan (Xinjiang) to Tangut (Gansu),[104] making Uyghuristan a bone of contention between the Chagatai khanate and China's Yuan dynasty.

Chagatai (r. 1227–42) was succeeded by his grandson **Kara Hülegü** (r. 1242–46), son of Mutugen, who had fallen at Bamiyan in 1221. But because he wanted to keep tighter control of the khanate, Great Khan Güyük replaced Kara Hülegü with Chagatai's fifth

167. The Taralingin Durbejin fortress (in Chinese Dong Da Wan Chen) on the east bank of the River Etzin Gol was built under the Yuan dynasty (1271–1368) and extended during the Ming era (1368–1644). Inner Mongolia, China. Photo: 2011.

son, the alcoholic and ineffective **Yesü Möngke** (r. 1246/47–52).[105] The Toluid coup of 1251 further weakened the khanate, after Möngke Khan reinstated **Kara Hülegü** (r. 1251) and commanded him to kill Yesü Möngke, who had opposed his nomination as Great Khan. But Kara Hülegü died on his way to the khanate, so it was his widow **Orghina Khatun** who, in agreement with Möngke Khan, took power, had Yesü Möngke killed, and ruled as regent for her young son **Mubarak Shah** (r. 1252–60). The power struggle between Arik Böge and Kublai brought Orghina's rule to an end and drew the khanate into the maelstrom of civil war, since both contenders believed that control over its rich resources would be militarily decisive. Kublai appointed the Chagataid Abishgha as khan in place of Orghina, but he was captured and put to death by Arik Böge's forces. Arik Böge then made Chagatai's grandson **Alghu** khan (r. 1260–66), requiring his support against Kublai in the form of tribute, horses, weapons and food. Alghu took control of Bukhara and Samarkand, but in 1262, rebelled against Arik Böge, killing his tribute-collectors and declared his support for Kublai. He thus deprived Arik Böge of access to the khanate's resources. In addition, Alghu took Chorasmia and Otrar from the Jochids.[106] He then secured the support of Orghina (by marrying her) and Masud Beg, the experienced administrator of Central Asia.[107] But just as it seemed that peace was returning to the khanate under Alghu's rule, the Ögödeid Kaidu appeared on the scene and rapidly compelled the khanate to recognise his suzerainty.

3.1 The Chagatai Khanate as Vassal of the Ögödeid Kaidu

Kaidu (1236–1301, r. de facto 1271–1301) was a grandson of Ögödei to whom Möngke had granted the region around Kayalik. The fratricidal war of succession of 1260–64 offered him the opportunity to restore the *ulus* of Ögödei. Around 1264, with Berke's help, he led a successful attack on Alghu, but soon thereafter suffered a devastating defeat from whose consequences he was saved only by Alghu's death in early 1266. With Alghu dead, Orghina set her son **Mubarak Shah** (r. 1266) on the throne, but without the consent of Kublai, who immediately appointed **Baraq** (r. 1266–71), who had grown up at his court. No sooner had Baraq unseated Mubarak Shah than he rebelled against Kublai, plundering the city of Khotan within his former lord's domains. That same year, Kaidu attacked Besh Baliq in north-east Uyghuristan, though Kublai's counter-offensive in 1268 drove him far into the west, to Talas, and brought him into conflict with Baraq. After an initial victory over Kaidu on the River Jaxartes, followed by a defeat at Khujand against Kaidu and his ally Möngke Temür of the Golden Horde, Baraq opened peace talks with Kaidu in the spring of 1269, with Masud Beg serving as mediator. Baraq retained two-thirds of the revenue of Transoxiana, giving up the other third to Kaidu and his ally Möngke Temür; in addition, Barak and Kaidu promised not to trouble the cities under Masud Beg's administration.[108] As his next move against Baraq, Kaidu persuaded him to mount a reckless attack on the region of Herat, Ghazna and the upper Indus, which had originally been allotted to the Chagataids but was later granted by Möngke to his brother Hülegü. The campaign ended in Baraq's massive defeat at the hands of the Il-Khan Abaqa, near Herat on 22 July 1270, which forced him to withdraw, wounded, to Bukhara.[109] But in 1271, Abaqa's continued preoccupation with his eastern borders prevented him from sending General Samaghar enough troops for the joint attack on Mamluk Syria that they had planned with Prince Edward.[110]

Baraq's disastrous defeat now offered Kaidu the chance to liquidate his rival and to make himself ruler of the khanate. He encircled Baraq's camp, and Baraq died either from his wounds, from paralysis or from poison. His officers surrendered to Kaidu, who in 1271 declared himself khan of the restored khanate of Ögödei (1271–1310), claiming for himself the right to appoint the khans of Chagatai so that the Chagatai khanate became his vassal. Kaidu now ruled over an area that had the makings of a strong Central Asian state, yet he spent the next three decades at war, mostly against Kublai Khan, and failed to endow his khanate with stable structures. Kaidu first appointed **Negübei** (r. 1271–72), one of Chagatai's grandsons, as vassal khan of Chagatai. When Negübei formed an alliance allied with the sons of Alghu and

Baraq to rebel against Kaidu's overlordship, Kaidu had him killed and appointed **Buqa Temür** (r. 1272–82) in his place. But Buqa Temür was neither in good health nor an effective ruler, and was quite unable to keep Alghu's and Baraq's sons in check.[111] Hearing of the power struggles in the Chagatai khanate, in 1272 Abaqa sent an army that thoroughly looted Bukhara and then put the city to the torch.[112] With his victory at Herat and his destruction of Bukhara, Abaqa secured Khorasan for the Il-Khanids. Three years later, Alghu's sons Chübai and Qaban once again destroyed Bukhara, whose revenues flowed directly to Kaidu. Rashid al-Din tells that the war-ravaged city remained uninhabited for seven years before being rebuilt from the ground up by Masud Beg, on Kaidu's instructions, around 1283.[113] It was only Kaidu's reconciliation with Baraq's family that allowed Masud Beg to accomplish this and restore the city's trade and agriculture. For in 1282 Kaidu appointed Baraq's son **Du'a** (r. 1282–1307) as khan, a man who would remain a true ally until Kaidu's death. Even so, this cooperation between Chagataids and Ögödeids remained precarious, since Du'a retained command of his own troops and created a kind of state within the emerging Central Asian state.[114]

Soon after acceding to power, Du'a began to re-establish his sovereignty over the southern regions in today's Afghanistan that had been lost to the Il-Khanids, Herat excepted. His aim was to regain control over the Qara'una-Mongol warriors of diverse origins whom Genghis Khan, Ögödei and Möngke had stationed in Afghanistan as occupation forces. They had a reputation for being redoubtable fighters but unruly ones. After his victory in 1270, Abaqa had sought to win the Qara'una to his side, appointing as their commander first the dethroned Chagataid Mubarak Shah (in office 1270–79), then his son. In the early 1290s, however, Du'a managed to bring the eastern Qara'una, who lived between Kunduz and Ghazna, under his control, and put his son Qutlugh Khwaja in command. Possession of Ghazna opened the door to India to the Chagataids, and in the years after 1292 they followed in the footsteps of the Ghaznavids and Ghurids, conducting several campaigns of plunder in India and in eastern Iran. In 1299/1300 the Qara'una even defeated the Sultan of Delhi, but had to withdraw with their rich booty when Qutlugh Khwaja received a mortal wound.[115] The descendants of these Qara'una-Mongols, who intermarried with the local mountain

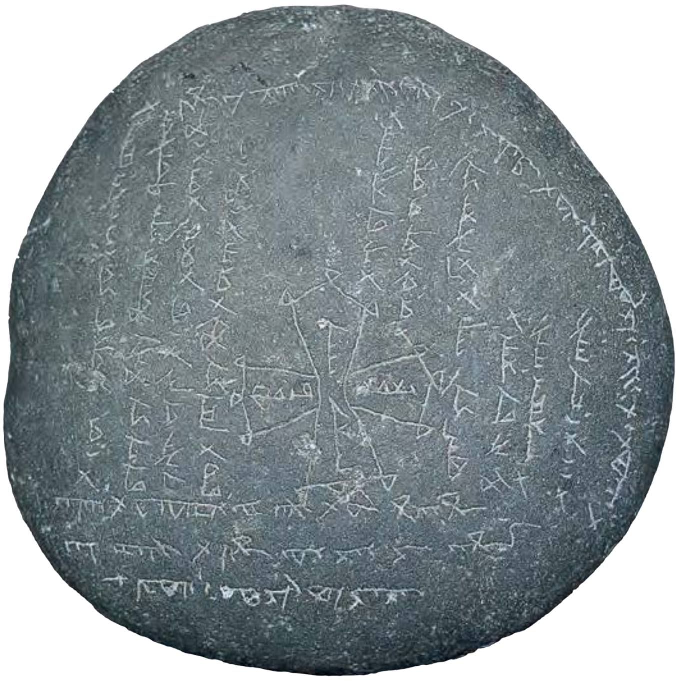
Tajiks, are the Hazaras of central Afghanistan, whose Hazaragi dialect of Persian contains many words of Mongolian origin.[116]

Kaidu gained little advantage from his military endeavours against Kublai Khan, whose authority as Great Khan he refused to recognise. Though Kaidu could prevent Kublai, who was often fighting several wars simultaneously, from controlling Central Asia, he was never able to challenge Kublai's hegemony. The real victim of this 30 years' war was Uyghuristan, whose irrigation systems, agriculture and urban centres suffered long-term damage, as exemplified by the case of Kashgar. While Marco Polo, around 1272, had noted a thriving city, Rabban Sauma recorded some five years later that 'the city was empty of its inhabitants, because it had been already plundered by the enemy [Qaidu]'.[117] At first, the advantage lay with Kaidu. In 1271, Kublai had sent his fourth son Nomuqan west, accompanied by a number of princes, to compel Kaidu's submission. But Nomuqan's campaign was unsuccessful, and in 1276 his princely companions rebelled.[118] They took Kublai's son prisoner and handed him over to Kaidu, who passed him on in turn to Möngke Temür, khan of the Golden Horde.[119] Under threat from Baraq's sons, Kaidu refused the offer of an alliance from the rebellious princes, who then attacked and plundered Karakorum in 1277 until they were driven off by an army of Kublai's.[120] Nevertheless, the princes' rebellion cost Kublai first the region of Almalik, then Besh Baliq ten years later in 1286, followed by Hami in 1290, so that the Tarim Basin was slipping out of his grasp. Fifteen years earlier, in 1275, Prince Du'a had besieged Kocho for six months without success; on his withdrawal, the Uyghur Idiqut ('Holy Majesty') Khochkhar Tegin (r. 1266–before 1283), a vassal of Kublai's, shifted his capital to Hami; from there, around 1283, his successor Ne'üril Tegin (r. before 1283–1318) fled further east, to the province of Gansu. But Kaidu's efforts to incite rebellion by the Mongol prince Nayan and the Drigungpa of Tibet came to nothing, as did his own attack on Karakorum.[121]

When, in 1298, Kublai's brother-in-law Körgüz, the Christian king of the Onguts, was captured by Du'a on the Ienissei and killed, Kublai's successor Temür Khan decided to deal once and for all with the danger that Kaidu represented.[122] The time was propitious, for over the previous decade the Golden Horde had distanced itself more and more from Kaidu and Du'a. Temür made the young prince and future emperor Kaishan (1281–1311) commander of a large army, which he led to victory south of the Altai; during the third battle, in September, Kaidu was mortally wounded.[123] In spite of his success, financial problems made Kaishan leave Uyghuristan and return home.

3.2 The Khanate Regains its Independence

Kaidu's death gave Du'a an unexpected opportunity to recover the khanate's independence. He first employed intrigue to make sure that it was not Kaidu's eldest son Orus who was chosen to succeed him but the weaker **Chapar** (r. 1303–6/7). He then decided to make peace with Emperor Temür, seeking not only to secure the independence of the Chagataid khanate but also to annex the Ögödeid lands. As Du'a represented no danger to Temür, he was happy to agree. The two former opponents probably agreed, too, that they should then proceed to deal with the troublesome Ögödeids for good. Du'a first pressurised the inexperienced Chapar to join the peace, which led to a complete though short-lived truce among the Mongol states in 1304, ending a conflict that had lasted since 1260. In 1306, however, Du'a and Prince Kaishan attacked and defeated Chapar, who was then deposed and replaced by the puppet ruler **Yanchichar** (r. 1307–10). At the same time, Du'a



170. Nestorian silica gravestone. Discovered in 1963 near Saruu on the southern shore of Lake Issyk-Kul, in Kyrgyzstan, it bears a lengthy Turkish inscription in Syriac script, which reads as follows: 'According to the reckoning of King Alexander, it was in the year 1647 [i.e. 1335 CE], on 14 December [. . .] at the first light of dawn, in the year of the mouse, Khan Jenkshi [Changshi] set himself upon the throne, at the head of the empire [of the territory of the Chagataids] and prepared for this Alma Khatun a commemoration [. . .] she was a new bride [. . .] this woman fled in the year of the pig [. . .] she died at the exact age of 26. [. . .] May a memorial be built to her and may she never be forgotten by her friends.'[31] The young Nestorian woman, who bore the honorific title *khatun*, was the wife of Khan Changshi (r. 1335–37), who supported the Nestorians and the Catholic missionaries and had one of his sons baptised with the name John. Soon after his early death in 1337, the Christians of Almalik were massacred by the Muslim Ali Sultan (r. 1339/40–*ca.* 1341/42). Toktogul Satulganov Museum, Bishkek, Kyrgyzstan. Photo: 2004.

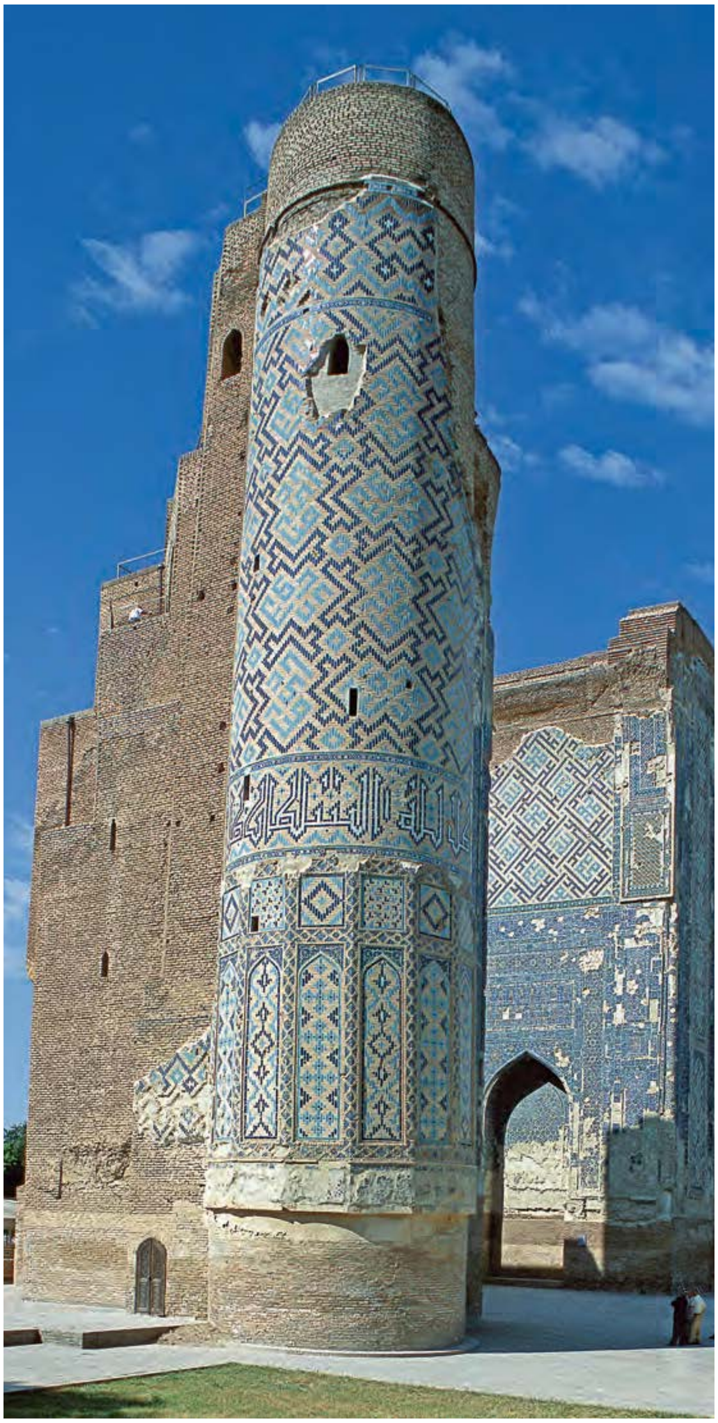
arranged the murder of Kaidu's warlike daughter Khutulun, who had often accompanied her father on campaigns and who in 1303 had taken the side of her brother Orus.[124] Only the death of Du'a in 1307 prevented the complete liquidation of the Ögödeids. Du'a's successor, his son **Könchek** (r. 1307–8) ruled for just a year. He was followed by the Muslim **Nalighu** (Naliqoa, r. 1308–9), brother of Du'a's predecessor Buqa Temür. However, Nalighu's attempt to force the Chagataid elite to adopt Islam led to unrest among the officers, who espoused the cause of Dua's son Kebek, and the khan was killed. **Kebek** (r. 1309–10, 1319/20–26) immediately faced an uprising by Kaidu's sons, which he decisively defeated. Chapar and Yanchichar fled into Chinese exile and the Ögödeid lands were divided between the Chagataids and the Yuan.[125] With this, Kaidu's dream of an Ögödeid empire in Central Asia faded forever.

In 1310 a *kuriltai* elected Kebek's older brother **Esen Buqa** (r. 1310–19/20) as khan. Tensions very soon developed with the Yuan over the line of the new border and questions of trade. Fearing an alliance between the Yuan and the Il-Khanids, Esen Buqa attacked on both fronts. In Il-Khanid Khorasan, in 1312, his army suffered a severe defeat, and his two offensives against the Yuan in Uyghuristan two years later also failed, though his scorched earth policy still did enormous damage to the hydraulic infrastructure. Immediately afterwards, the two brothers again attacked Khorasan. The Yuan took advantage of their absence from home, and in 1316/17 drove deep into the Chagataid khanate, reaching Talas and Lake Issyk Kul. After this success, the imperial troops returned to Uyghuristan, where they restored Idiqut Ne'üril Tegin as ruler, bringing him back from exile in Gansu.[126] Returned to power, **Kebek** (r. 1319/20–26) made peace with Emperor Shidebala in 1323. He agreed to pay tribute to the Yuan and in return was probably made ruler of the impoverished Uyghuristan, no longer so attractive to the Yuan, either financially or logistically. In any event, documents of 1338 and 1339 show that Kocho was under Chagataid control and the Chagataids inaugurated a new ruling dynasty.[127] After making peace with the Yuan, Kebek sought to revive trade and agriculture by reorganising the administration, moving his capital to Qarshi, southwest of Samarkand, and introducing a new standard coinage



173. **The north-facing portal of the Ak Saray – 'White Palace' – or of its audience hall in Shahr-e Sabz, Uzbekistan.[32] At its highest point, the arch, which collapsed around 1800, was 49 metres high. The height of the tower is 65 metres. Timur-e Lang, who was born near Kesh, as Shahr-e Sabz was formerly known, ordered a great palace to be built in his home town. Work began around 1380 and continued until 1405, but was never completed. The Spanish diplomat Ruy González de Clavijo, who visited the palace in 1404, wrote: 'These palaces had a long entrance and a very high gateway. [. . .] In front of the first entrance there was another gateway, leading to a great courtyard. [. . .] The courts led to the body of the building, by a broad and lofty doorway, ornamented with gold and blue patterns on glazed tiles, rich and beautifully worked. On the top of this doorway was the figure of a lion and a sun, which are the arms of the lord of Samarkand.'[33] Photo: 2004.**

for the whole khanate. At the same time, he undertook further campaigns of plunder in India and again attacked Khorasan, whereupon the Il-Khanids attacked and crushingly defeated his brother Tarmashirin in Afghanistan.[128]

Kebek was succeeded by his brother **Eljigidei** (r. 1326–30), who intervened in support of Koshila in the power struggle in Khanbaliq. Eljigidei's death was followed by a period of unrest and marked by religious conflict, which seventeen years later would result in the division of the khanate. Eljigidei's successor **Du'a Temür** (r. 1330–31) ruled only a few months before being replaced by **Tarmashirin** (r. 1331–34). As reported by the explorer Ibn Battuta (1304–68), who journeyed through Central Asia between 1331 and 1334, the cities of Bukhara, Samarkand, Merv and Balkh at that time lay in ruins.[129] Unlike Eljigidei, who had been well-disposed toward the Christian and Buddhist minorities, Tarmashirin was a staunch Muslim who held *sharia* above traditional Mongol law. His partiality toward Muslim urban civilisation aroused the wrath of traditional princes, who deposed and killed him in 1334. Now began a fierce struggle for power, a clash of two ideologies, with the Muslim, urban way of life led by professional army commanders on the one hand and the shamanistic, semi-nomadic culture of Chagatai's descendants on the other. This tore the khanate apart, with at least six successive khans coming to power in twelve years. The first of these, **Buzan** (r. 1334–35?) was soon replaced by **Changshi** (r. 1335–37), whose own wife, who died in the year of his accession, had been a Nestorian (fig. 170).[130] Residing at Almalik in the east of the khanate, he showed favour to the Nestorians, Catholic missionaries and Buddhists, many of whom lived in Almalik and the Chu valley. Some 700 Nestorian gravestones found in those areas, mostly dating from the 1250s to 1345, show that a thriving Nestorian community existed there in the Chagataid period.[131] Changshi was murdered in 1337 by his brother **Yesün Temür** (r. 1337–39/40), whose reign saw an outbreak of plague in the Issyk Kul region in 1338–39. It is possible that the Black Death that killed a third of Europe's population between 1347 and 1353 had its origins here, in today's Kyrgyzstan.[132] Around 1339/40, the Ögödeid **Ali Sultan** (r. 1339/40–*ca.* 1341/42), a fanatical Muslim, seized power and then carried out a massacre of Christians, killing Richard de Bourgogne, the Catholic bishop of Almalik, and six other Franciscans.[133] The persecution of non-Muslims, along with the ravages of the plague, a severe decline in trade and years of domestic conflict brought about the disappearance of many towns in north Kyrgyzstan, while fields returned to steppe and the region's economy was reduced to pastoralism.

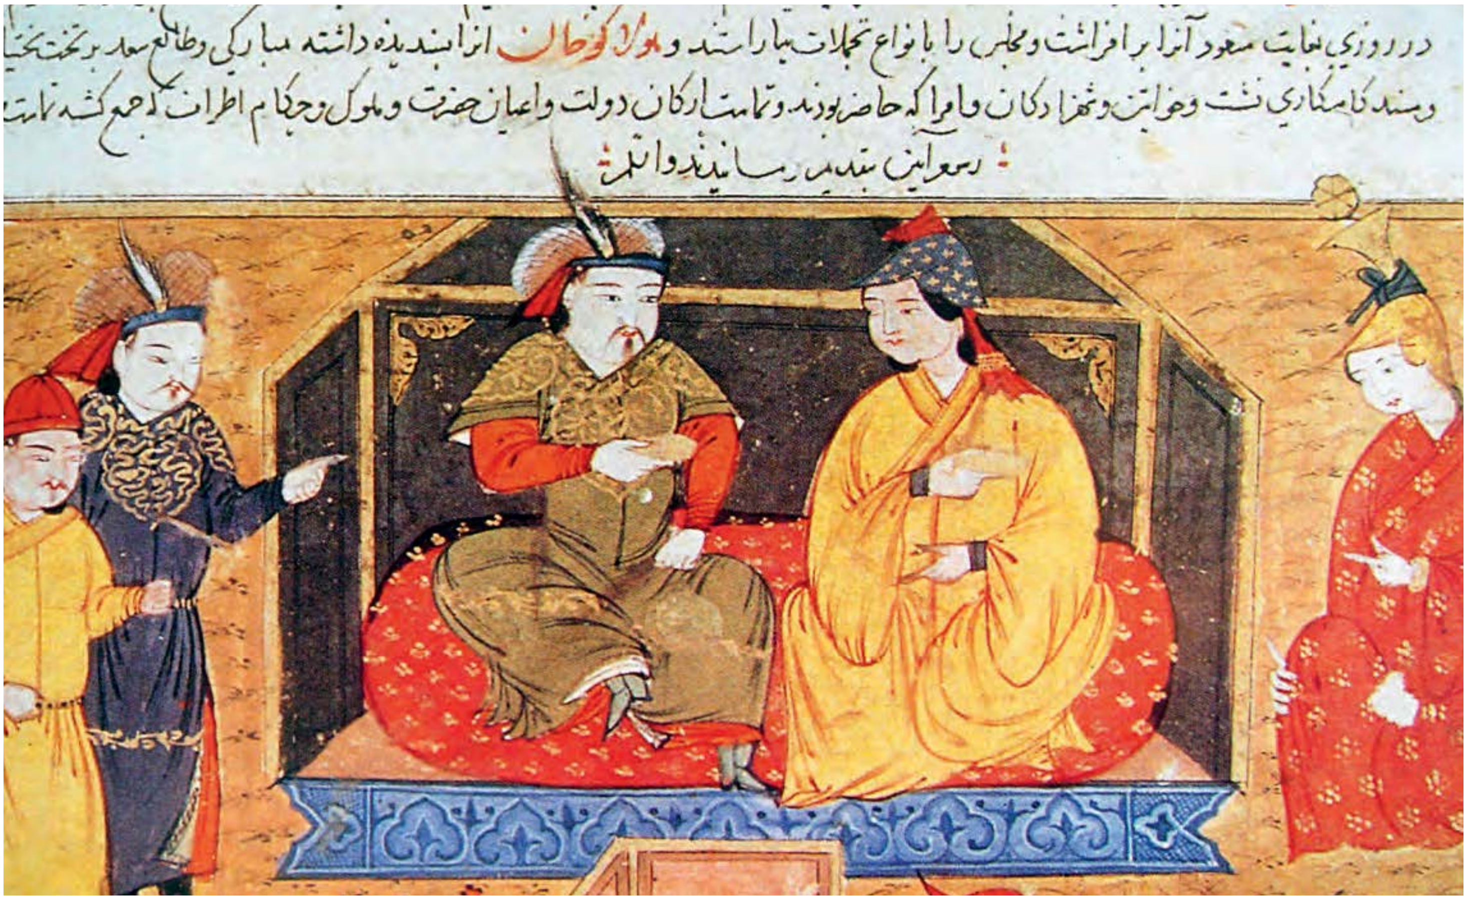
3.3 The Division of the Khanate

The Chagataids quickly removed Ali Sultan, replacing him with **Muhammad ibn Pulad** (r. 1342–43?), who was soon succeeded by **Qazan ibn Yasaur** (r. *ca.* 1343–46/7). As Qazan attempted to consolidate his authority, Emir Qazaghan, the leader of the Qara'una, rose up in 1346/47 and killed him. **Emir Qazaghan** (r. 1346/7–58) now controlled the south-western part of the khanate, comprising Transoxiana, Afghanistan and also eastern Khorasan, which Qazan had succeeded in conquering when the Il-Khanids collapsed. By this time at the latest, the khanate had split into south-western and north-eastern halves. Qazaghan refrained from taking the title of khan, to which Genghisids alone were entitled; he called himself 'emir' or 'commander', and legitimated his rule by appointing the Ögödeid **Danishmendji** (nominal ruler 1346/47–48) as khan; two years later he replaced him with the Chagataid **Bayan Quli** (nominal ruler 1348–58). All power, however, lay with the emir, who continued the campaigns of plunder in northern India, also looting Herat. In 1358, Qazaghan was murdered and succeeded as emir by his son **Abdullah** (r. 1358–*ca.* 1359). But his choice of Samarkand as his capital angered the leaders of two local tribes, Hajji Beg of the Barlas and Buyan of the Suldus. They expelled Abdullah, and **Buyan** (r. *ca.* 1359–60, d. 1362) became emir of what remained of the *ulus* of Chagatai. Buyan was weak, however, which allowed Tughluq Temür Khan – ruler of Moghulistan to the east – to invade Transoxiana in 1360. Hajji Beg fled, but Timur-e Lang (Tamerlane), his nephew and earlier comrade in arms, recognised Tughluq Temür as his overlord and was rewarded with the governorship of southern Uzbekistan, which had been Hajji Beg's. Not long afterwards, Timur made an alliance with Sheikh Husayn, a grandson of Emir Qazaghan, and in 1369/70 managed to gain power over the *ulus* of Chagatai.[134]

174. Takht-e Sulayman, or 'Throne of Solomon' was built in the early 1270s by Il-Khan Abaqa (r. 1265–82). It stood on the ruins of a former Adur Gushnasp fire temple and a shrine to the goddess Anahita. Sassanid monarchs were crowned at this important national monument. The site, which is called Ganzak or Ganjeh in Pahlavi, is set on a 25-metre-high limestone plateau covering an area of 330 x 250 metres. In the middle of the plateau is a tiny lake, 60 metres deep, fed by an underground spring. The curtain wall and its bastions date back to the Sassanid era. Beyond the lake, we see the ruined northern *iwan* (vaulted hall) of the palace, surrounded by scaffolding. Three kilometres north-west of Ganjeh (on the left of the picture) is the 110-metre-high cone of an extinct volcano, known as Zendan-e Sulayman, or 'Prison of Solomon', on whose steep slopes a Zoroastrian shrine once stood. Azerbaijan Province, Iran. Photo: 2001.

The history of the north-eastern part of the khanate followed a similar course. In 1347, **Emir Bolaji**, the leader of the Dughlat tribe of Mongols, who also controlled the cities of the western Tarim Basin, such as Kashgar, Khotan and Aksu, appointed **Tughlugh Temür,** said to be a son of Esun Buqa, to be khan of Moghulistan (r. 1347–60 in Moghulistan, 1360–63 in the whole khanate), as the eastern part of the khanate was known in Persian.[135] Unlike the khans of the south-west, Tughlugh Temür was a strong ruler at the head of a tribal confederation, and he was able to curb the power of the Dughlats. In 1354 he converted to Islam and immediately embarked on a campaign of Islamisation among the Chagataid elite. The army general and historian Mirza Muhammad Haidar Dughlat (1500–51), cousin of Babur, the Timurid founder of the Mughal Empire, recounts that Tughlugh Temür and the Muslim cleric who converted him 'then decided that for the propagation of Islam they should interview the princes one by one, and it should be well for those who accepted the faith, but those who refused should be slain as heathens and idolaters'.[136] Having thus dealt with the princes who rejected Islam, Tughlugh Temür promoted the new religion as an ideological means of unifying the tribes under him.

The murder of Emir Abdullah in Transoxiana and the weakness of Buyan Suldus offered Tughlugh Temür the opportunity to occupy Transoxiana and undo the division of the khanate. When he attacked in spring 1360, most of the emirs surrendered, while Hajji Beg Barlas fled. Betraying his tribal leader Hajji Beg, Timur-e Lang defected to Tughlugh Temür, who awarded him the region of Kesh (Shahr-e Sabz in southern Uzbekistan) and command over Hajji Beg's warriors. But as soon as Tughlugh Temür had left Mawarannahr, Hajji Beg returned and Timur-e Lang's newly acquired forces crossed back over to him, so that Timur lost this first struggle over the leadership of the Barlas. A year later, Tughlugh Temür invaded again and had Buyan Suldus and a number of emirs executed; Hajji Beg died as he fled once more. Once Tughlugh Temür had overcome resistance in the south-west of the newly reunited khanate, he installed his son Ilyas Khwaja as viceroy there before returning to Moghulistan.[137] The killing of the emirs, however, had enraged the south-western tribes, who now sought blood vengeance against the Moghuls they disparaged as *jete*,



175. Il-Khan Hülegü with his Nestorian chief wife Dokuz Khatun, widow of his father Tolui. In accordance with the rules of levirate marriage, Hülegü was able to marry Dokuz Khatun, since she was not his mother, after his father's death in 1233. meaning bandits and vagabonds. They united behind Timur-e Lang and the Qara'una leader Sheikh Husayn, who defeated the occupying Moghul forces towards the end of 1364. In early summer 1365, now khan himself, **Ilyas Khwaja** (r. 1363–65) returned to Mawarannahr and defeated both rebels. But his siege of Samarkand failed, mainly because an epidemic killed about a quarter of his horses, and he had to withdraw again from Transoxiana, after which Sheikh Husayn and Timur-e Lang returned. But such alliances of convenience never lasted long, and the power struggle between the two leaders ended with Sheikh Husayn's death in 1369.[138]

In Moghulistan, Emir Bolaji's younger brother **Qamar al-Din Dughlat** (r. 1365–*ca*. 1390) took advantage of Ilyas Khwaja's failure to seize power in Mawarannahr. He had him poisoned, eliminated all Tughlugh Temür's other sons (except Khizr Khwaja[139]) and proclaimed himself khan. A claim to the title of khan by a non-Genghisid could only be illegitimate, which gave Timur-e Lang the pretext to attack Qamar al-Din as a usurper. But although he led six campaigns against Moghulistan between 1371/72 and 1390, he never succeeded in capturing Qamar, who fled to the Altai around 1390 and disappeared. Nonetheless, Timur-e Lang's campaigns caused political chaos, for Qamar's heavy defeat around 1382 prompted two tribal leaders to launch a struggle for power: these were Emir Khudaidad Dughlat, who put forward Tughlugh Temür's son **Khizr Khwaja** (r. *ca*. 1383–99) for khan, and Engke Tura, who backed the Chagataid Gunashiri. It was Timur-e Lang who settled the matter, decisively defeating Engke Tura in 1389, leading Khudaidad and Khizr Khwaja to submit to him. Gunashiri, who had waited on the outcome of events, went on to found the little kingdom of Hami; his successor, his brother Engke Temür, would submit to the Ming dynasty in 1403.[140]

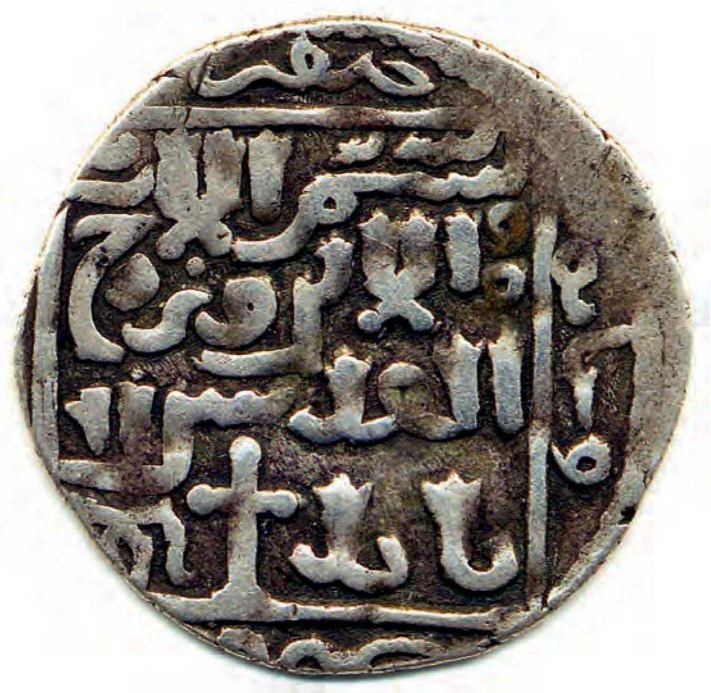
4. The Il-Khanids in Iran

In the period between Söbotai and Jebe's campaign of 1220–22 and Hülegü's invasion of 1256–58, Iran, Transcaucasia and Azerbaijan more or less descended into anarchy. Jalal al-Din Manguberdi plundered the southern Caucasus and part of Azerbaijan before being decisively defeated by the Mongolian general Chormaghun (d. 1241), who chose Azerbaijan as the Mongol power base in the Middle East.[141] He and his successors Baiju (d. *ca*. 1260) and Eljigidei (d. 1251) made vassals of the Christian kingdoms of Georgia and Cilician Armenia together with the Seljuk Sultanate of Rum, exacting tribute from them. But it was the **Il-Khanids** (1259/60–1335) who laid the basis for a centralised Mongol state in Iran. Unlike the Chagataids, the Il-Khanids succeeded in bridging the contradiction between a traditional, nomadic warrior-aristocracy on the one hand and the centralised administration of an urbanised territory on the other.

4.1 The Non-Muslim Il-Khans

The first steps towards state formation were taken by **Hülegü** (r. 1259/60–65) when he separated civil administration from the military command structure, appointing Shams al-Din Juvaini – brother of Ala al-Din Ata Malik Juvaini, the historian and governor of Baghdad – to be grand vizier and minister of finance, posts he occupied from 1262 to 1284.[142] Hülegü's title, meaning 'subordinate khan', which first appears in 657 AH (1258/59 CE),



177. Obverse of a silver dirham which Il-Khan Arghun (r. 1284–91) minted for his vassal state Georgia. The Arabic text reads: 'In the name of the Father and the Son and the Holy Spirit, the only God'; a cross is stamped on the lower left of the coin. Private collection.

shows that he recognised the Great Khan's overlordship. Hülegü's first coins bearing this title were minted the following year, in 658 AH (1259/60 CE), which is regarded as the year of the dynasty's foundation.[143]

The first two Il-Khans, Hülegü and Abaqa, enjoyed no peace, for they faced war on three fronts: in the east, Kaidu and the Chagataids threatened Khorasan and western Afghanistan; in the west, the Mamluks invaded Syria and in the north the Golden Horde was descending on Azerbaijan. The danger in the north-west was all the greater since the Mamluks and the Golden Horde had formed an alliance. Behind the Golden Horde's attacks, which hastened the end of Mongol unity, lay the frustration of its khan, Berke (r. 1257–66). It had in fact been he and his brother Batu Khan who placed Möngke on the throne in 1251, bringing the Toluids to power. Some years later, though, the former kingmaker Berke lost ground in the Middle East to the Toluid Hülegü. Berke, who had come to power by poisoning his two predecessors Sartaq (r. 1256–57) and Ulaghchi (r. 1257), was enraged because Hülegü had seized Azerbaijan, the southern Caucasus and north-western Mesopotamia and had expelled the Jochid collectors of tribute. The loss of Azerbaijan, with its rich pastures and profitable trade routes, was particularly painful, all the more as the three Jochid princes Balagai, Tutar and Quli had each contributed a *tumen* of Kipchak-Mongol warriors to Hülegü's campaign of conquest.[144] Berke claimed that Hülegü had usurped lands that according to Genghis Khan's will rightly belonged to the Jochids, since he had granted Jochi the territories west of Kayalik and Chorasmia 'as far in that [western] direction as the hoof of Tatar horse had penetrated'.[145] And as Sübotai and Jebe had in fact passed through Azerbaijan and Transcaucasia, Berke had a right to these territories.[146] In any event, Batu could never establish himself as sovereign ruler there, for the territories were governed by military commanders answerable to the Great Khan, even if individual tribes acknowledged the overlordship of the Golden Horde.

The execution or poisoning of the three Jochid princes Balagai, Tutar and Quli[147] in the winter of 1259/60, and the murder of two of Berke's emissaries, triggered a massacre, in which each side killed the other khanate's traders[148] and forced Kipchak forces to flee the Il-Khanate. The Kipchaks fled either to Mamluk Egypt or to Afghanistan and Sind, where they reinforced the ranks of the Qara'una.[149] The Persian historian Wasaf (d. 1323) writes that Hülegü ordered 'that Berke's merchants [. . .] who had come to Tabriz to trade [. . .] and had great and innumerable riches, all be killed. [. . .] Berke [. . .] seeking in turn to revenge this deed put to death the merchants of the khan's [Hülegü's] realm and did the same with their possessions. The roads in and out [connecting Sarai on the Volga with Tabriz] and the merchant's journeys were much reduced, once the devils of enmity had leapt from the jar of time.'[150] By then at the latest the so-called *Pax Mongolica*, which was supposed to ensure safe passage to merchants throughout the Mongol Empire, was over. It was these events that triggered Berke's diplomatic and military offensive. In 1261, the Muslim convert Berke made contact with Hülegü's arch-enemy, the Mamluk sultan Baibars, calling on him, in the name of their shared faith, to continue his war against his infidel cousin in Iran. To adherents of the Genghisid ideal of an empire under the government of a single family, Berke's letter was an outrage, encouraging a non-Genghisid enemy to attack another member of the family. Baibars quickly seized the opportunity to encircle Hülegü, and the following year sent an embassy to Berke that indeed declared that Islam called for jihad against infidels, even one's own relatives.[151]

In 1263 Baibars and Berke formed an official military alliance that brought the Mamluks great advantages: firstly, it took a great deal of military pressure off Egypt, as Hülegü now had to deal with a war on two fronts, and secondly, friendship with the Golden Horde guaranteed a regular supply of young Turkic slaves to be trained as soldiers in Egypt. The alliance between Egypt and the Golden Horde also profited from the newly won dominance in the Black Sea of the mercantile republic of Genoa. With the Treaty of Nymphaeum in 1261 the Byzantine emperor Michael VIII

Palaeologus of Nicaea had granted his Genoese allies extensive trading privileges in the form of rights of settlement in Galata on the Golden Horn, together with exclusive rights of navigation in the Bosphorus and the Black Sea. In addition to this, the Genoese had acquired the port of Caffa (Feodosia) on the south coast of Crimea from a prince of the Golden Horde.[152] The powerful position of the Genoese merchant fleet on the Black Sea enabled trading contacts between the Mamluks, who had only a small fleet, and the Golden Horde, who had none, by creating a sea route all the way from the Don to the Nile. In 1271, Prince Edward (soon to be King Edward I) of England was enraged by the fact that Christian Genoese and Venetians were continuing to trade extensively with the Mamluks, who were threatening the few Crusader strongholds.[153] Both the Italian mercantile republics got round the papal embargo on trade with the Mamluks by using Cyprus as an entrepôt[154] to disguise the ultimate destination, just as the US embargo on Iran after the 1980s was circumvented via the Caspian Sea and various Gulf States.

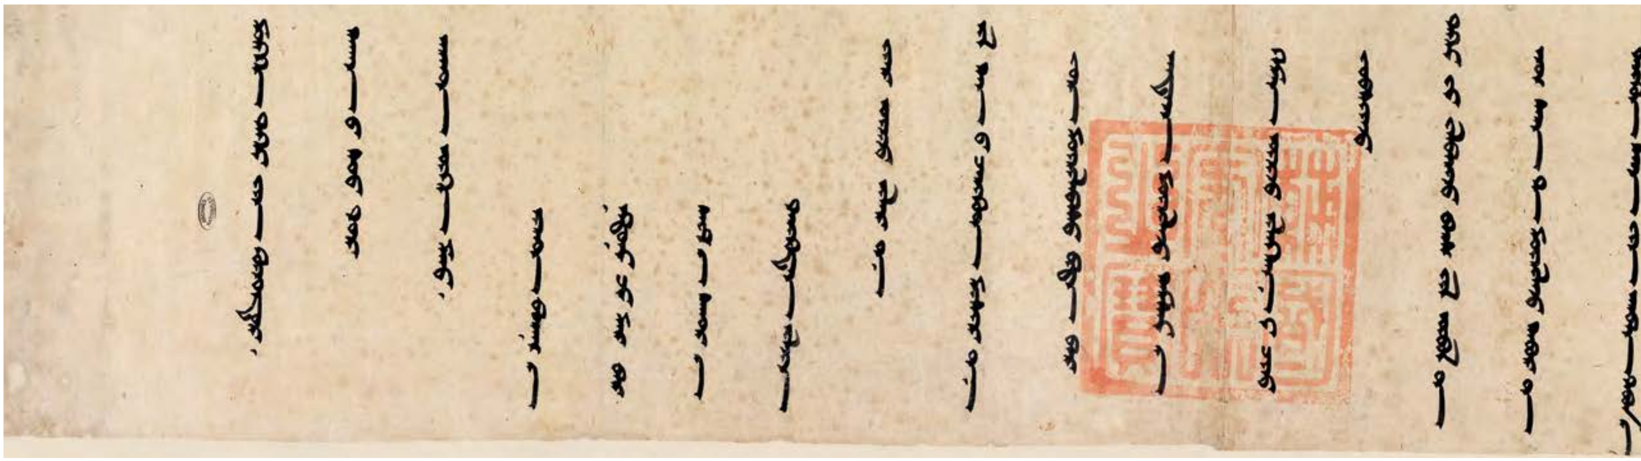
Surrounded by enemies, Hülegü had no choice. He had to make allies of the Mamluks' rivals: the Pope, the Latin kings of Western Europe, and also the Italian republics of Genoa and Venice, which controlled the Mediterranean.[155] Between 1262 and 1313, the Il-Khanids sent at least nineteen embassies to Western rulers, offering a military alliance against the Mamluks, frequently coupled with a tempting promise to hand over a conquered Jerusalem to the Crusaders.[156] Apart from the unsuccessful Syrian joint venture of the Mongol general Samaghar and Prince Edward of England, the Il-Khanids' offer of alliance met with no response from Western Europe. There were many reasons for this: the Latins distrusted the Mongols, suspecting that if there was a shared victory they would forget their promises and turn against their allies. Chronicler and confidant of King Louis IX, the French knight Jean de Joinville (d. 1317) believed that 'Whenever the Mongols wish to make war on the Saracens they send Christians [Georgians and Armenians] to fight against them, and on the other hand employ Saracens in any war against Christians.'[157]

That the Mongols did not keep their promises was evident from the number of times they abandoned their vassals or allies. In 1266 they failed to respond to Baibars' attack on their loyal vassals, the Cilician Armenians, and the capture of the Cilician crown prince Leo, even though the Cilician port of Laiazzo (Ayas) was of great economic importance, standing as it did at the end of the traditional Middle trade route from Mawarannahr, as well as the southern 'Spice Route' from India via the port of Hormuz on the Persian Gulf. As the war between the Mamluks and the Il-Khanate was also an economic one, the Mamluks launched ten major invasions of Armenian Cilicia between 1266 and 1305, seeking to control or destroy this trade gateway to Asia.[158] Later, in 1268, the Mongols did not offer any military support to their vassal Bohemond VI of Antioch when he was attacked by the Mamluks, so that he lost his whole principality with the exception of Tripoli.[159] And in 1302 the Mongols again showed how unreliable they were. Responding to Il-Khan Ghazzan's appeal of 1300, Henry II, the Lusignan king of Cyprus, his brother Amaury, and Jacques de Molay, grand master of the Knights Templars, established a bridgehead to Palestine on the little island of Arwad. When in 1302 the Mamluks besieged the small garrison, Il-Khanid support failed to materialise and the island fell.[160] The following year, the Il-Khanids suffered a resounding defeat at Damascus.

The Latins also rejected an alliance with the Mongols because they had forgotten neither the atrocities they had committed in



179. Letter sent by Il-Khan Arghun to King Philippe the Fair of France in 1289 and carried to Paris by the Genoese merchant Buscarello de Ghizolfi. In it, Arghun refers to an envoy of Philippe's who, in company with Rabban Sauma, visited him the previous year, asking him, as previously agreed, to join forces with the French King to attack Syria and seize Damascus. Arghun also pledged to hand over Jerusalem to Philippe. The Chinese characters on the seal read as 'Seal of the Head of State and Bringer of Peace'. Archives nationales de France, Pierrefitte-sur-Seine, France. Ms. Inv. AE/III/202.

Poland, Russia and Hungary nor Ked Buqa's destruction of Sidon. Moreover, the Il-Khanids tended to lose most of their battles with the Mamluks, and most of their few victories were won with the substantial involvement of Georgian and Armenian forces. And, finally, the French and English kings were absorbed in building their own national states, while the Holy Roman Empire had seen an interregnum from 1254 to 1273, which meant that the early Habsburgs had to concentrate on consolidating their rule. In any event, in 1323, the last Il-Khan, Abu Said – or his all-powerful commander-in-chief, Choban – would conclude a peace treaty with the Mamluks.[161]

Berke's military offensive began in summer 1262, when his forces defeated Hülegü's vanguard south of Derbent in the Caucasus. In the counter-offensive, the Il-Khanid army inflicted a severe defeat on Nogai (d. 1299), one of Berke's generals, but then in early 1263 succumbed to a surprise attack by Berke on the River Terek, where it was defeated with many losses. Despite this grievous defeat, Hülegü succeeded in pushing the border northward to the Darial Gorge, north of the main crest of the Caucasus Mountains, thereby robbing the Golden Horde of their natural rampart in the south.[162] As Nogai launched another attack the following year, he learned of Kublai's victory and of his confirmation of Hülegü as the lawful ruler. As Kublai had also sent reinforcements of 30,000 Mongolian horsemen to support his brother, Nogai withdrew without a fight.[163] Hülegü died in early 1265, and his funeral was the only one of an Il-Khanid ruler in which humans were sacrificed.

On his accession in 1265, Hülegü's successor, his eldest son **Abaqa** (r. 1265–82) had to fight off another invasion by the Golden Horde's general Nogai. When this failed, Berke called up a second army, only to die in 1266 in the attempt to cross the River Kura, whereupon his army disintegrated and his successor Möngke Temür (r. 1266/67–80) made peace with Abaqa.[164] Abaqa devoted his whole reign to consolidating the Il-Khanate. In 1270, he put an end to the ambitions of the Chagataid Baraq at the Battle of Herat, and three years later he burnt down Bukhara, which had served as a launching-pad for attacks on Khorasan. In 1275, Abaqa lured his Iranian vassal Shams al-Din I Kart (r. 1245–75, d. 1278) – who ruled the region of Herat and who had followed an opaque and vacillating policy during the war against Baraq – to Baku and Tabriz, where in 1278 he had him poisoned.[165] The unrest that then broke out in Herat forced Abaqa to install Shams al-Din's son Rukhn al-Din (Shams al Din II, r. 1278–95) as the new ruler. In terms of domestic policy, Abaqa continued his father's work of construction. He confirmed Shams al-Din Juvaini as vizier and appointed Ata Malik Juvaini as deputy governor of the provinces of Iraq and Fars. Abaqa and the Juvaini brothers developed a new state ideology that emphasised the independence of pre-Islamic Iran and its culture, portraying the Il-Khanids as successors of the secular Sassanid kings. Thus in the early 1270s Abaqa had a palace built at the Zoroastrian shrine of Takht-e Sulayman, south-east of Maragheh and Tabriz, where the fire temple of Adur Gushnasp had once stood and the pre-Islamic kings had been crowned (fig. 174). The location had excellent pastureland and even the Sassanid encircling wall with its 38 bastions still stood. By building his palace on the ruins of the fire temple and decorating it with painted friezes depicting episodes from the *Shahnameh*, the national epic, Abaqa positioned himself as the heir to the Sassanids and to the legendary heroes of Iran.[166]

In the later years of his reign, however, Abaqa suffered two great failures. In 1276, the vizier of the Rum-Seljuks, who were vassals of the Il-Khanate, invited the Mamluk sultan Baibars to take control of their territory, which he did in spring 1277. He defeated the occupying Mongol army east of Kayseri in Central Anatolia but quickly withdrew again as Abaqa hastened to the scene and had the traitorous vizier executed.[167] Three years later, Abaqa launched a major invasion of Syria, sending his younger, militarily inexperienced brother Möngke Temür against Aleppo. This brought the Mamluk sultan Qalawun (1279–90) hurrying to Syria, forcing Möngke Temür to retreat. In the autumn of 1281, Möngke Temür again crossed the Euphrates. On 30 October, reinforced by large contingents from Leo III (sometimes counted as Leo II) of Armenian Cilicia, Demetrius II of Georgia, and the Order of St John of Jerusalem, the Mongol army attacked Sultan Qalawun at Homs. The Christians formed the right wing of the Mongol army and quickly put the enemy's left wing to flight. In the centre, however, Möngke Timur had left the battle upon being wounded, followed by most of his Mongols, so that early victory ended in complete disaster.[168] The contemporary Armenian chronicler Prince He'tum wrote disdainfully: 'Möngke Temür, who had never experienced battle, then withdrew without reason, for fear of a few Saracens [Mamluks], abandoning the field of victory and forsaking the King of Armenia and others of his commanders, who had put the enemy to flight.'[169]

After Abaqa's death from alcoholic poisoning, Hülegü's seventh son Tegüder, supported by most of the emirs, became Il-Khan instead of his rival, Abaqa's eldest son Arghun. Tegüder had originally been baptised Nicholas but had converted to Islam before his accession, taking the name **Ahmad** (r. 1282–84). His first actions were to have the churches of Tabriz destroyed and to launch a systematic persecution of Christians, throwing the Ongut Nestorian patriarch Mar Yahballaha III into prison. Thanks to the intervention of Ahmad's mother, Qutui Khatun, who was also a Nestorian, Mar Yahballaha escaped with his life and regained his freedom.[170] Then, against the express advice of the commanders who had just made him ruler, he dispatched two embassies to Cairo – in 1282 and 1283 – charged with establishing peaceful diplomatic relations with the Mamluks. Sultan Qalawun received the first mission coolly and mistreated the second, so Ahmad lost much of his support among the army. Ahmad's foreign policy u-turn had been a failure, not least because he had sacrificed his allies, the Armenian Cilicians. For in 1283 Sultan Qalawun had devastated Cilicia as far as Laiazzo and two years later compelled King Leo III to pay a ten-yearly tribute.[171] Now a number of anti-Mamluk emirs, who disapproved of Ahmad's efforts at Islamisation, intervened in the conflict between Ahmad and the rebellious Arghun on the side of the latter. They freed him from imprisonment, and 'Arghun, who had been a prisoner when night fell, woke up in the morning as the emperor of the face of the earth'.[172] Ahmad was seized and put to death on 10 August 1284, and on the next day **Arghun** (r. 1284–91) ascended the throne. One of his first official acts was to have Shams al-Din Juvaini executed on the basis of slanderous accusations by his enemies, despite his earlier declaration of a general amnesty.[173] Even the Syriac bishop and historian Bar Hebraeus (d. 1286) had held Juvaini in great respect: 'And the whole kingdom of the House of Mâgôgh [the Mongols] hung on his finger, for he was very sagacious with an understanding nature.'[174]

Like Abaqa, Arghun wanted to drive the Mamluks out of Syria. Ultimately, it was not only a matter of avenging past defeats

180. The Armenian Monastery of Saint Thaddeus in north-western Iran. The small church, built of black stone, was erected in 1319–29 and restored in 1490. A donation from the Persian crown prince Abbas Mirza paid for the white stone addition to the west side of the church, built in 1810–20. The construction of the first church towards the end of the Il-Khanid dynasty suggests a return to a more tolerant official attitude to religion. Photo: 2001.

but also of recovering control over the western terminus of the Middle and Southern trade routes coming from Mawarannahr. The Mamluks' occupation of Syria and their devastation of Cilicia meant that the flow of transcontinental trade now ran either from Tabriz north-west to Trebizond or avoided the Middle route altogether in favour of the Northern one, via Sarai, Crimea and the Black Sea, thus losing the Il-Khanate a significant source of income.[175] For these reasons, Arghun sought a military alliance with the Latin powers of Western Europe. In 1285 he sent an embassy to Pope Honorius IV (in office 1285–87), one of whose members was the Nestorian physician Isa Kelemechi ('Jesus the Translator', in Chinese Ai Xie). Isa had already served Güyük, and in the early 1280s Kublai had sent him to the Il-Khanate as translator for his ambassador Bolad.[176] In the letter that Isa gave the pope, Arghun proposed a coordinated attack on Egypt.[177] In 1287 Arghun sent the Ongut-born Nestorian prelate Rabban Bar Sauma to Rome and then to King Philip IV (the Fair) of France (r. 1285–1314) and Edward I of England (r. 1272–1307), whom the Nestorian met in what was then the English duchy of Gascony; these monarchs received Arghun's emissary with great honour, but nothing concrete came of the proposed alliance.[178] Despite this, in 1289 Abaqa summoned the Nestorian patriarch Mar Yahballah III and asked him to consecrate a tent-church that stood alongside his own tent. He also took the occasion to have his son Oljeitu baptised Nicholas in honour of Pope Nicholas IV, whom Rabban Bar Sauma had met in Rome.[179] That same year he sent Buscarello de Ghizolfi, a Genoan in his service, to carry letters to Philip of France and Edward of England. The letter to Philip refers to an assurance the king was said to have given to Rabban Bar Sauma, that he was prepared to undertake a joint attack on Egypt, and went on: 'We will start in the winter of the tiger year, in the last month [January 1291], and in the spring, on the 15th day of the first month [15 February 1291], we will camp at Damascus. If you [the king] send your troops at the stated time, and we, with the help of heaven, defeat these people and conquer Jerusalem, we will hand it over to you' (fig. 179).[180] Yet this mission, too, proved fruitless and Arghun died in March 1291, poisoned by an elixir compounded of mercury and sulphur prescribed to him by an Indian quack, that was claimed to increase longevity.[181] In the same year Acre, the last Crusader stronghold in Palestine, fell to the Mamluks.

Of the three candidates to the succession, Ghazan, Gaykhatu and Baydu, it was Arghun's brother **Gaykhatu** (r. 1291–95) who became Il-Khan. The khan, who had been given the Tibetan name of Irinjin Dorje by Buddhist monks at his court, was notorious for his immorality and extravagance, which ruined the state finances.[182] Hoping to generate new financial resources, in 1294, after discussions with Kublai's ambassador Bolad, Gaykhatu introduced his own copy of the Chinese paper money. While Kublai's *chao* was backed by silver reserves, the Il-Khanate was practically bankrupt, and the Iranian currency lacked the backing of any precious metal. The contemporary chronicler Rashid al-Din describes the disastrous results: 'On the Saturday 19th of Shawwal [12 September 1294] the *chaos* were brought out in Tabriz and put into circulation. A command was issued that anyone who did not accept them would be immediately executed. [. . .] [Therefore] most of the people of Tabriz chose to leave the town. Goods and victuals were withdrawn from the market [. . .] and such a bustling city was totally emptied of inhabitants [. . .] and caravans ceased coming. [. . .] and tax revenues completely fell away.'[183] The *chao* was withdrawn after less than two months. Soon afterward, **Baydu** (r. 1295) rose up and had Gaykhatu killed, whereupon the Il-Khanate threatened to descend into civil war between contending emirs.

Rabban Bar Sauma and Rabban Markos: Nestorian 'Marco Polos' from Asia

At the same time as Marco, Niccolò and Mafeo Polo were living in China, an Ongut Nestorian travelled from Khanbaliq (Beijing) to Baghdad, Constantinople, Rome, Paris and Bordeaux. This was Rabban Bar Sauma (*ca.* 1225–94), who received the tonsure in 1248 and who lived from 1255 at a monastery in the Fang Shan mountains south-west of Khanbaliq (fig. 154). In 1260, a young man called Markos (1245–1317), son of the archdeacon of Olon Süme, became his pupil before taking monastic vows three years later. In 1275, Markos expressed his long-standing wish to make a pilgrimage to the graves of the patriarchs in Mesopotamia and the Holy City of Jerusalem, and the two monks set off not long after. In the Ongut capital of Olon Süme they met the princes Ai Buqa[184] and Kun Buqa before travelling in Marco Polo's footsteps to the west. From Tangut they went on to Miran, and in 1277/78 they reached Kashgar on the southern trade route through the Tarim Basin, where they were shocked by the destruction wrought by Kaidu in a city whose wealth, Nestorian churches and beautiful gardens had been admired by Marco Polo only five years earlier.[185] The two monks then met Kaidu in Talas before reaching Hülegü's old capital of Maragheh in early 1280. They visited many pilgrimage sites but the war with the Mamluks meant they had to forgo Jerusalem. Probably because the Onguts enjoyed official status as envoys of Kublai Khan,[186] the Nestorian Catholicos (Patriarch) Mar Dinkha I (in office 1265–81) asked them to travel to Abaqa's new capital Tabriz and to obtain for him the Il-Khan's confirmation of his patriarchate, which he had been awaiting for fifteen years. The Il-Khan immediately granted their request, whereupon Mar Dinkha appointed Markos metropolitan of 'Cathay and Ong' (that is of China and the Onguts), bestowing on him the name of Yahballaha, meaning 'God-given', and made Rabban Bar Sauma vicar-general. But the return of war to Central Asia made it impossible for them to journey home and they withdrew to a monastery near Mosul. When Mar Dinkha died in February 1281, the electoral college, for political reasons, unanimously appointed the Ongut Yahballaha to be the new Catholicos (in office 1281–1317). Abaqa confirmed the election and delivered to him the seal that Möngke had granted the patriarchate as a sign of its authority. The anti-Christian policy of Abaqa's successor was a first trial for the two Onguts: the new Il-Khan had them both imprisoned in 1283. Only the intercession of influential emirs and of Ahmad's mother Qutui Khatun would save them from death.[187]

In 1286 Arghun decided to send another embassy to the Latin sovereigns in the attempt to forge an offensive alliance against the Mamluks. As his ambassador he chose the polyglot Christian Rabban Sauma, who set off in early 1287, travelling via Trebizond to Constantinople, where he was received by Emperor Andronicus II (r. 1282–1328). The attempt to inveigle the Byzantine emperor into a military alliance was futile, however, for Andronicus pursued a policy of neutrality, maintaining diplomatic and commercial relations with the Golden Horde, the Mamluks and the Il-Khanate.[188] Rabban Sauma travelled onward to Naples where on 23 June 1287, standing on the roof of his inn, he witnessed the sea battle in the War of the Sicilian Vespers between the fleet of a Sicilian–Aragonese alliance and the forces of Charles of Anjou and his allies. In Rome Rabban Sauma was received by twelve cardinals, for Pope Honorius IV had died in April and no successor had yet been found. Their encounter was marked by a clash of interests, as Rabban Bar Sauma sought a political discussion while the cardinals, wishing to avoid one, focused on theological matters. Having explained to them the dyophysite belief of the Nestorian Church, he refused to enter into a debate on the *filioque*,[189] declaring: 'I have come from remote countries neither to discuss nor to instruct in matters of the Faith, but I came [. . .] to make known the words of King [Arghun] and the Catholicos.'[190] In Genoa, his next port of call, Arghun's ambassador was received warmly enough, but because of the Ligurians' see-sawing alliances his request was ignored.

In Paris, Rabban Bar Sauma made a pilgrimage to all the important churches, as he had in Constantinople and Rome before. While King Philip enthusiastically welcomed Arghun's request for an alliance and his proposal to hand over a liberated Jerusalem to the Latins,[191] other matters occupied his attention as he sought to construct a French national state that would incorporate Gascony in the south-west and Flanders in the north; in addition, he was in dispute with the Pope over the drain of ecclesiastical revenues to Rome. Like Philip of France, King Edward of England declared himself ready for a coordinated offensive in Palestine when Rabban Bar Sauma met him in Bordeaux, yet he too had more pressing domestic political preoccupations.[192] Unaware of any of these constraints, Rabban Bar Sauma gained the impression that both these powerful Latin rulers were willing to provide military support for Abaqa's plan, a belief reflected in Arghun's letter to the two kings in 1289. But his audience with the newly elected Pope Nicholas IV (in office 1288–92) must have been a bitter disappointment. Although the pope let the Mongol vicar-general celebrate a Holy Week mass according to the dyophysite Nestorian rite while he was present, his letter to Arghun proved most unhelpful. He avoided giving explicit support to any crusade, even though such a call would have put the Latin rulers under pressure. Instead, he advised the Il-Khan to have himself baptised, to escape 'the gates of Hell', and in a second letter, to the Catholicos, reiterated the Roman church's claim to primacy.[193] Rabban Sauma died in Baghdad in 1294, and it is an irony of history that the only concrete result of his journey to Western Europe was to endanger his own church in China: after he had told the pope of the many Christians to be found in China and among the Mongols, in 1291 the pontiff sent the missionary bishop Giovanni da Montecorvino to Khanbaliq, where his chief ambition would be to 'convert' the Nestorians to Catholicism.[194]

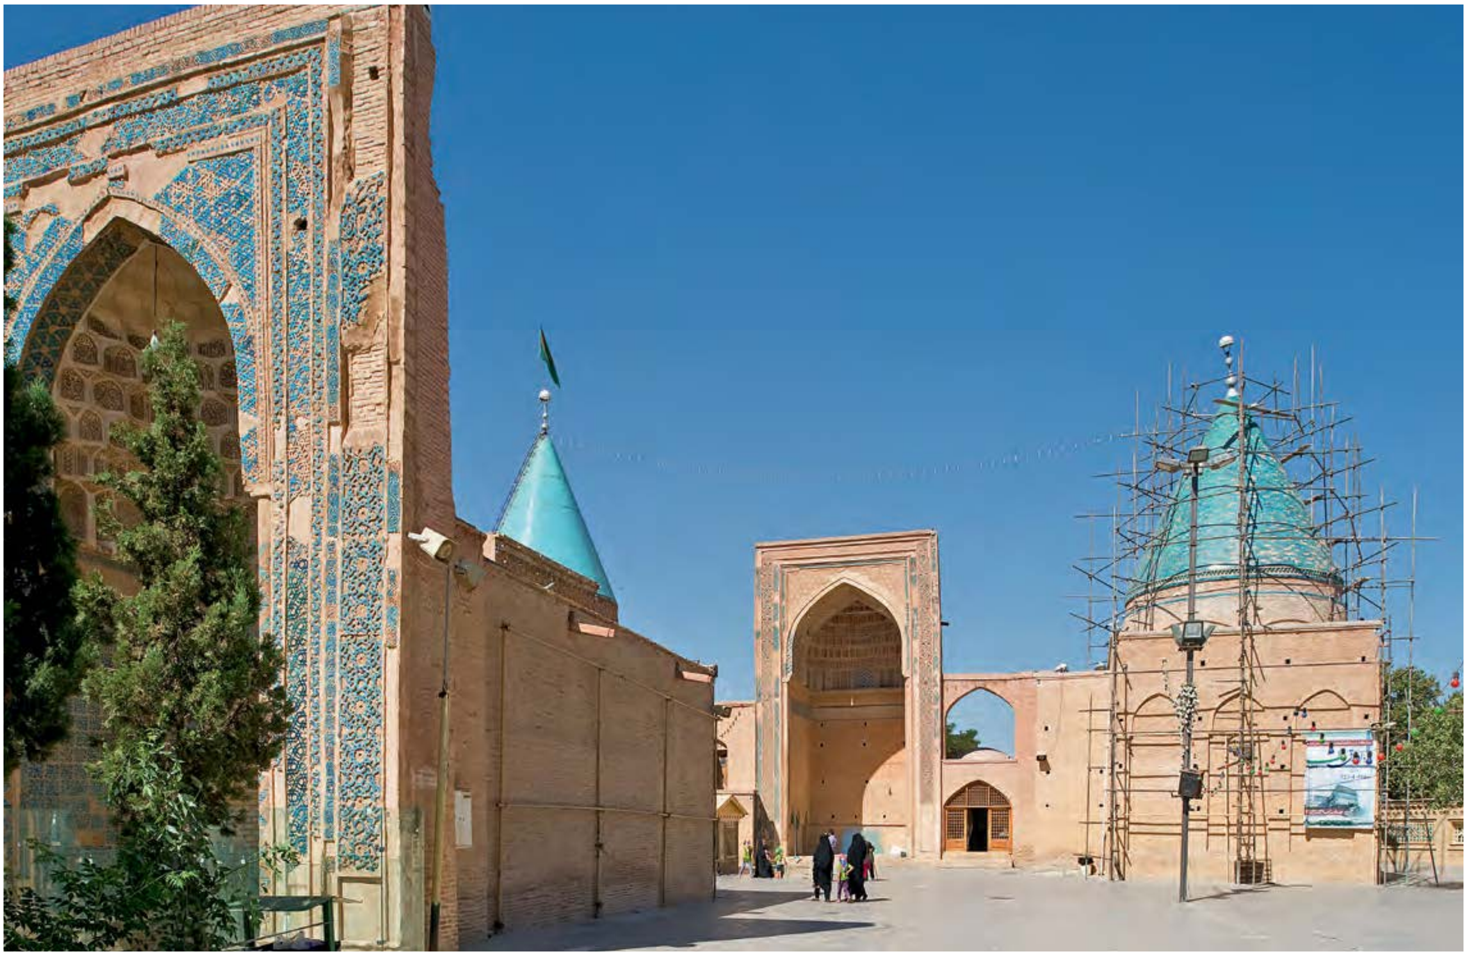
181. The Citadel of Arbil, Kurdistan, Iraq. The Mongols failed to take the citadel in 1235 but succeeded in 1258 after a six-month siege. Between 1306 and 1310 it was the seat of the Patriarch of the Church of the East, Mar Yahballah III, and from 1296 until 1310 a refuge for Christians in the Muslim city. In 1310 the patriarch was forced to leave his residence and flee to Maragheh, while the Christians of Arbil were slaughtered. During the author's visit in 2009, there was an air of religious tolerance in Arbil. This was clear to see from the wall hangings and prints showing the Virgin Mary, Jesus Christ and Mickey Mouse, as well as Kurdish politicians, Islamic mullahs and the Ka'aba in Mecca. Photo: 2009.

4.2 The Muslim Il-Khans

Arghun's son **Ghazan** (r. 1295–1304), viceroy of Khorasan since 1284, did not recognise Baydu's seizure of power. Ghazan had been brought up as a Buddhist, but under pressure from his powerful military commander Nauruz, a fanatical Muslim, he converted to Islam in June 1295 and rallied the many Muslim commanders and officers behind him. He captured and executed Baydu.[195] Then, under pressure from the kingmaker Nauruz, Ghazan made Islam the state religion and ordered the destruction of non-Muslim places of worship. Rashid al-Din, later his vizier, records that 'An edict was given that all the bhakshis' [Buddhist] temples and houses of worship, as well as Christian churches and Jewish synagogues, were to be destroyed.'[196] At the same time, all foreign Buddhist monks were expelled[197] and the Il-Khanate's non-Muslim elite was forcibly converted to Islam. Patriarch Yahballaha again found himself in grave danger, as he had been under Sultan Ahmad: he was incarcerated and tortured. His life was saved by the intercession of the Cilician King He'tum II, who was visiting Ghazan in Tabriz.[198] Christians and Jews were compelled to wear distinctive clothing to mark their religion.[199] Although these requirements were relaxed a little following Nauruz's fall in 1297, prompted by the discovery of his secret contacts with the Mamluks, Christians and Jews were still treated as second-class citizens. A few churches and synagogues survived, or were rebuilt, but the Buddhist temples disappeared without trace.[200] Under Ghazan's successor Oljeitu, too, the Nestorian patriarch found himself cruelly persecuted: in 1310, Mongolian troops compelled him to abandon his refuge in the citadel of Arbil, and the Christians left behind were massacred or sold into slavery.[201]

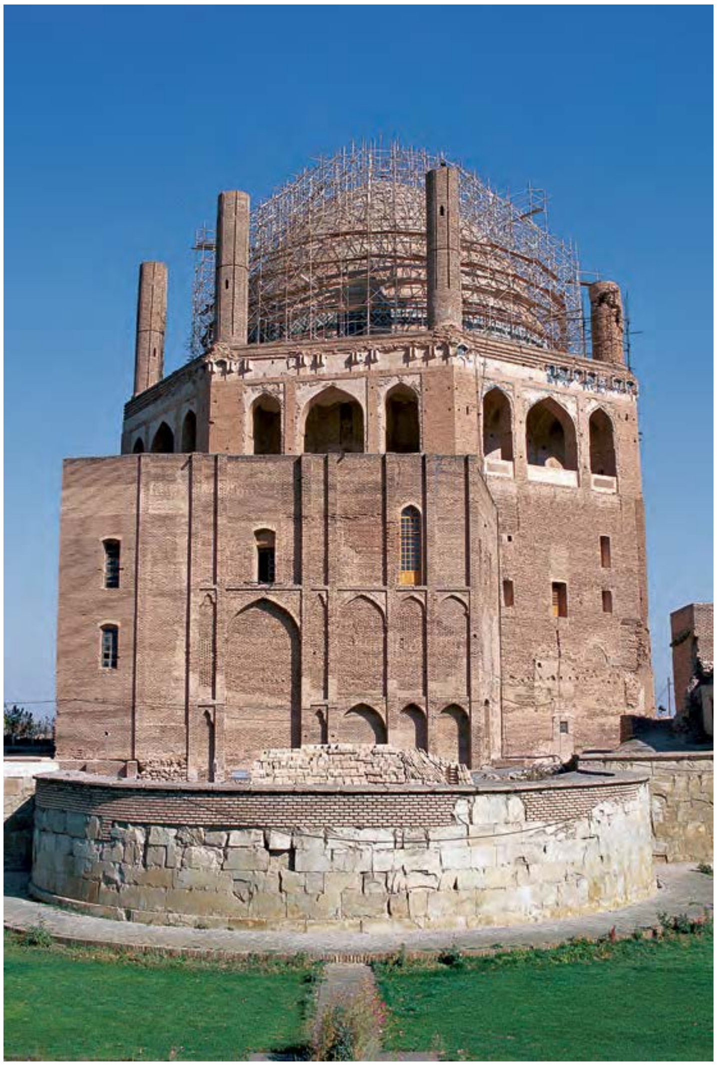
Ghazan's most important domestic measure was the appointment of Rashid al-Din as joint vizier in 1298, when the economy was on the brink of collapse because of mismanagement by Gaykhatu and Baydu. Rashid dealt with corruption in financial administration, reduced and simplified taxes, promoted the resettlement of depopulated agricultural districts, overhauled the irrigation system and protected farmers from the nomads – all of which helped to revive the economy.[202] Ghazan also commissioned Rashid to compose the great chronicle *Jamia al-Tawarikh*, which under Oljeitu grew into a world history from a Mongol perspective. In the struggle against the Mamluks, Ghazan, like his predecessors, got nowhere. Having succeeded in winning a glorious victory at the third Battle of Homs in December 1299, he failed to pursue the fleeing Mamluks. After occupying Damascus for a short while, he then returned home, squandering his victory and allowing the Mamluks to regain control of the whole of Syria in May 1300.[203] Ghazan's second Syrian campaign in January 1301 was ended by torrential rains,[204] and the third campaign saw the Il-Khanid army under its commander Qutlugh Shah suffer a heavy defeat at Damascus on 20 April 1303.[205] As Ghazan prepared for another campaign in the autumn of 1303 he fell seriously ill, and he died in May 1304.

Ghazan was succeeded by his brother **Oljeitu** (r. 1304–16), who completed the construction of the new capital Soltaniyeh that had been begun by Arghun and had an impressive mausoleum built for himself there (fig. 183).[206] In religious terms, Oljeitu seemed fond of variety: he was baptised a Christian by Mar Yahballaha, under the name of Nicholas, then converted to Buddhism, before becoming a Sunni of Hanafi and later Shafi'i obedience. The never-ending verbal disputes at court between Hanafis and Shafi'is earned the disdain of Oljeitu and some of his emirs. One of these was Qutlugh Shah, who asked: 'Why



182. The Bayazid Mausoleum in Bastam, Iran, built in honour of Sheikh Bayazid Bastami, founder of a branch of ecstatic Sufism, who died in *ca.* 848. To the left, on the eastern side of the mausoleum compound, is the entrance portal, built in 1313/14 by Il-Khan Oljeitu (r. 1304–16), adorned with blue and turquoise strapwork panels. Behind it, rising above Bayazid's tomb is a conical, triple-shell dome, tiled in pale blue.[34] To the right is the mausoleum of Imam-Zadeh Mohammad, built in 1300 under Il-Khan Ghazan (r. 1295–1304) to honour the memory of this descendant of the sixth imam Ja'far al-Sadiq. The tiled western *iwan* was also built during Il-Khan Ghazan's reign. Only the minaret, to the south of the main mausoleum but not visible in the photo, is not from the Il-Khanid period, but dates from 1120. Photo: 2014.

have we abandoned the Yasa of Genghis Khan and the religion of our forefathers and accepted this religion of the Arabs, which is divided in so many sects?'[207] Finally, around 1309/10, Oljeitu decided to join the Twelver Shia, giving that branch of Islam a significant boost in Iran[208] (though it would appear that he later returned to the Sunnis[209]). Perhaps Oljeitu hoped to position himself as the political leader of all the Shia, so constituting a counterweight to the Sunni Mamluks. In those days, the Twelver Shi'ites were making headway in the leading Sufi orders, such as the *Kubraviyya* and the *Safaviyya* founded by Sheikh Safi al-Din Ishaq Ardabili (1252–1334). In the mid-fifteenth century, however, the Safaviyya became a military order, later giving birth to the Safavid dynasty (1501–1736) that proclaimed Twelver Shi'ism the state religion of Iran.[210]



183. The three-storey mausoleum of Il-Khan Oljeitu (r. 1304–16) in Soltaniyeh, Iran, is 51 metres high and was built sometime between 1305 and 1314. Its double-shell dome has a span of 25 metres. The eight minarets were originally considerably taller. Photo: 2001.

Oljeitu's foreign policy met with little success. In the north, he failed in his attempt in 1307 to subjugate the small but independent principalities of the Gilan region,[211] and in that same year the Mongol general Bilarghun, who acted like an independent warlord, murdered the young King Leo III (IV) of Cilician Armenia together with his uncle and Regent, the former King He'tum II. In response to this murder, Leo's successor Oshin (r. 1308–20) drove the Mongols out of Cilicia. Oljeitu did not react – it would seem he no longer had the slightest interest in cooperating with the Armenians.[212] The inadequate force that Oljeitu dispatched against the young Osman principality also met with little success and the Syrian campaign of the winter of 1312–13, which he led in person, ended right on the Mamluk border when he failed in his siege of the fortress of Rahba al-Sham on the Euphrates.[213] This was the last Mongol attempt to conquer Syria, and with this ignominious failure, 52 years after the Mongols were defeated at the Battle of Ain Jalut, the long struggle for Syria finally ended with a victory for the Mamluks.

As Oljeitu's successor, his son **Abu Said** (r. 1317–35), was only twelve years old at his father's death, power was held by commander-in-chief Emir Choban (d. 1327) who immediately began to scheme against the vizier Rashid al-Din and had him put to death in 1318. The following year, and again in 1325, Choban had to fight off an invasion by Özbek, khan of the Golden Horde.[214] Understanding the pointlessness of further attacks on Syria, Choban opened negotiations with the Mamluks in 1321. These negotiations ended two years later in a lasting peace with Egypt that confirmed the status quo.[215] Choban was eventually brought down by the mutinous and lawless behaviour of two of his sons and, not least, by his refusal to countenance Abu Said's pursuit of his already married daughter Bagdad Khatun.[216] In 1327, Abu Said won the support of important emirs and had Choban put to death, then compelled Bagdad Khatun to divorce her husband Hasan-i Buzurg (later founder of the Jalayirid dynasty) and married her himself. Eight years later, in November 1335, the last Il-Khan to rule in his own right died without a successor – killed by poison, probably administered by Bagdad Khatun.[217] Between 1335 and 1344 there followed a series of eight puppet Il-Khans, little more than playthings of contending emirs. The Il-Khanate thus fragmented into at least fifteen regional dynasties, of which only one was of Mongol descent – the Jalayirid dynasty (1336–1432), founded by Hasan-i Buzurg (r. 1336–56), who captured Baghdad in 1340.[218]

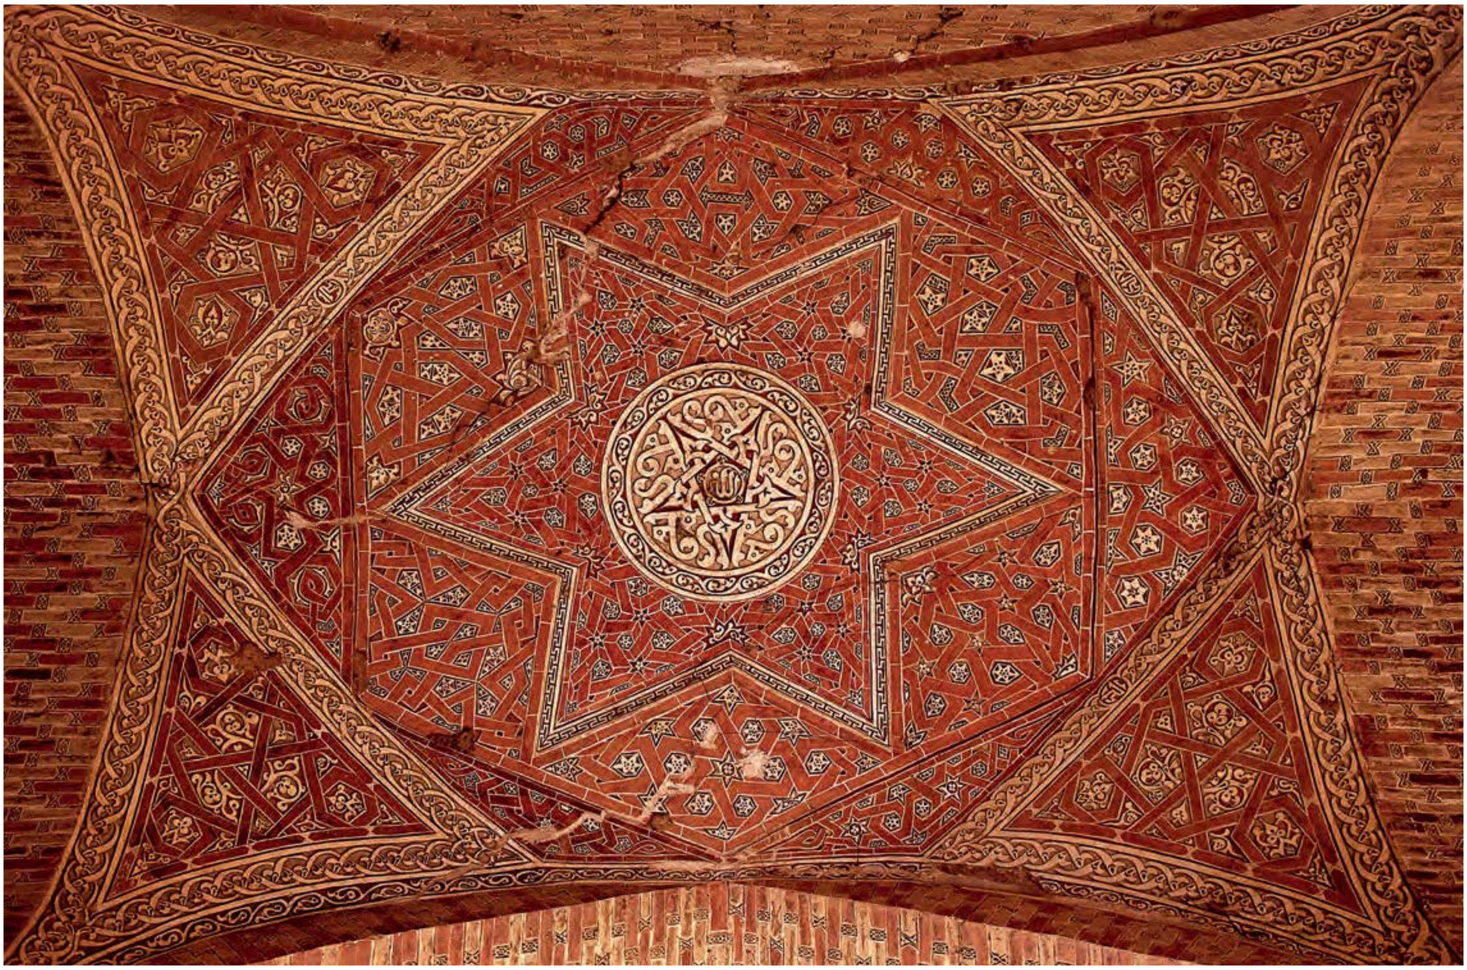
4.3 The Cultural Legacy of the Il-Khanids

The cultural legacy of the Il-Khanids is to be found in language, historiography, illuminated manuscripts, architecture and textiles. Thanks to their unique trade and diplomatic contacts with both China and the Latin West, Chinese cultural influence is to be found in Iranian art and design which in its turn influenced the Latin West, and Italy in particular. Historiography had been developing in China since the second century BCE, thanks to state encouragement for the establishment of thorough and systematic historical records; it was now adopted by the Mongols, in the *Secret History,* and continued by the Il-Khanids. The best-known works are those of Ala al-Din Ata Malik Juvaini and Rashid al-Din. As J. A. Boyle has emphasised, the fact that these chronicles were written in Persian, not Arabic, helped to develop a national sentiment in Iran[219] that was reinforced by the Il-Khanids' turn toward the pre-Islamic, Sassanid legacy. Particularly noteworthy are the two Muslim rulers Ghazan and Oljeitu, who commissioned Rashid's monumental work. In Rashid's scriptorium in Tabriz there then developed a distinctive school of manuscript illumination. The richly illustrated epic scenes in Rashid's *Jamia al-Tawarikh*[220] and the emergence of illustrated editions of the *Shahnameh* – such as the so-called 'Small' *Shahnameh* of 1287–1307, the 'Great Mongol' *Shahnameh* (also known as the Demotte *Shahnameh*) made for the Il-Khan Abu Said, and the editions prepared under successor dynasties like the Jalayirids[221] justify Grabar's observation 'that interest in and development of an epic art illustrating books on the legendary [and historical][222] past of Iran appears to be an Il-Khanid creation'.[223] The new interest in the *Shahnameh*, and the construction of Abaqa's palace at Takht-e Sulayman, were both expressions of a deliberate identification with the grandeur and distinctiveness of Sassanid Iran, and the crucial legacy of the Il-Khanids was indeed the revival of Iran's cultural and political autonomy.

From a religious point of view the conversion of the Il-Khans Ghazan and Oljeitu to Islam was of paramount importance for the self-confidence of the Muslim community. For it suggested that Islam was so powerful and convincing as an ideology that even 'infidel' conquerors who had broken the political pillar of Islam, the Abbasid Caliphate, had to yield to its persuasiveness and embrace it. A few years later khan Özbek (r. 1313–41) of the Golden Horde felt compelled to embrace Islam as well.[224] Even the fierce Mongol conquerors couldn't impede Islam's dominance in the Middle East and Central Asia.

184. The entrance portal to the Friday Mosque in Yazd, Iran. The mosque was built between 1325 and 1334, at the end of the Il-Khanid dynasty, Photo: 2001.

The pictorial language developed in Rashid's scriptorium displays numerous Chinese elements imported into Tabriz along with the silk fabrics, woodblock prints and handscroll paintings on silk or paper that came from China.[225] Among these elements are pen and ink drawings, the monochrome representations of animals, the gnarled trees, the clouds and the typically Chinese-looking rocks and mountains, dragons, phoenixes and lions.[226] Occasional illustrations such as those depicting the birth of the Prophet draw on Christian traditions.[227] As Rashid's magnum opus was intended as a history of the world, the Arabic translation of 1314, in the chapter on the history of India, contains a section on 'The Life and Teaching of the Buddha' with three illustrations, and this despite the fact that Ghazan had banned the Buddhist religion in 1295.[228] Chinese motifs were found not only in Persian illuminated manuscripts and in painted and glazed tiles such as those used in the decoration of Abaqa's palace at Takht-e Sulayman,[229]

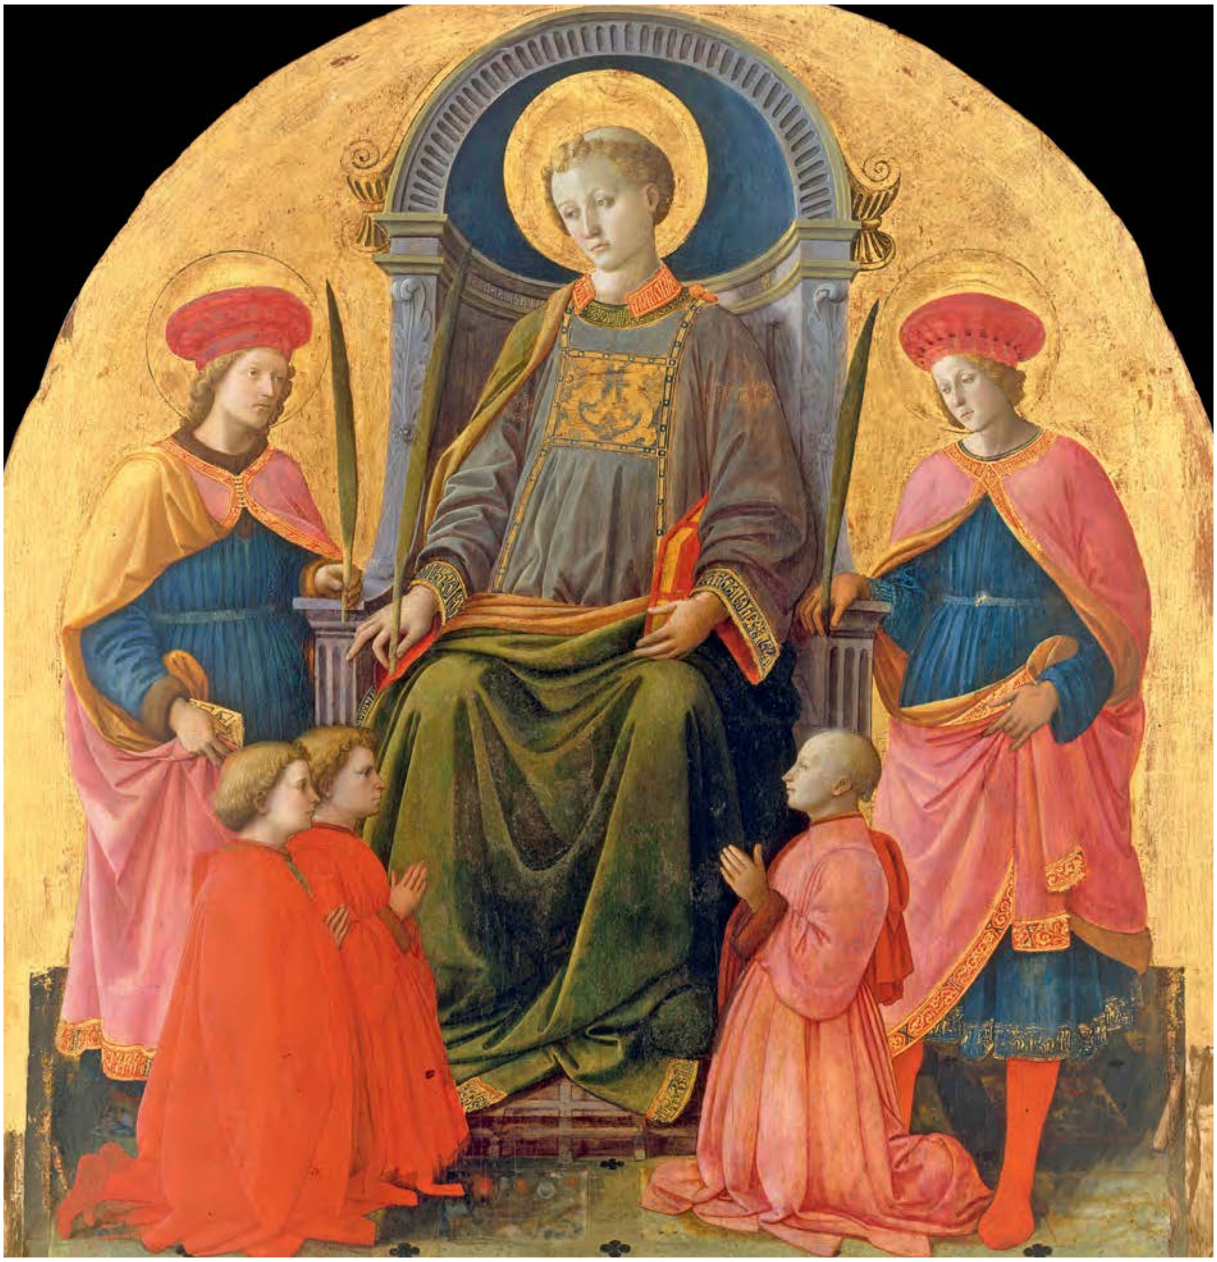


185. Stuccoed ceiling in the arcade of the mausoleum of Il-Khan Oljeitu (r. 1304–16) in Soltaniyeh, Iran. The patterns show a striking resemblance to contemporary book illumination, presumably because the artists working on the stuccoed ceiling used similar pattern books. Photo: 2001.

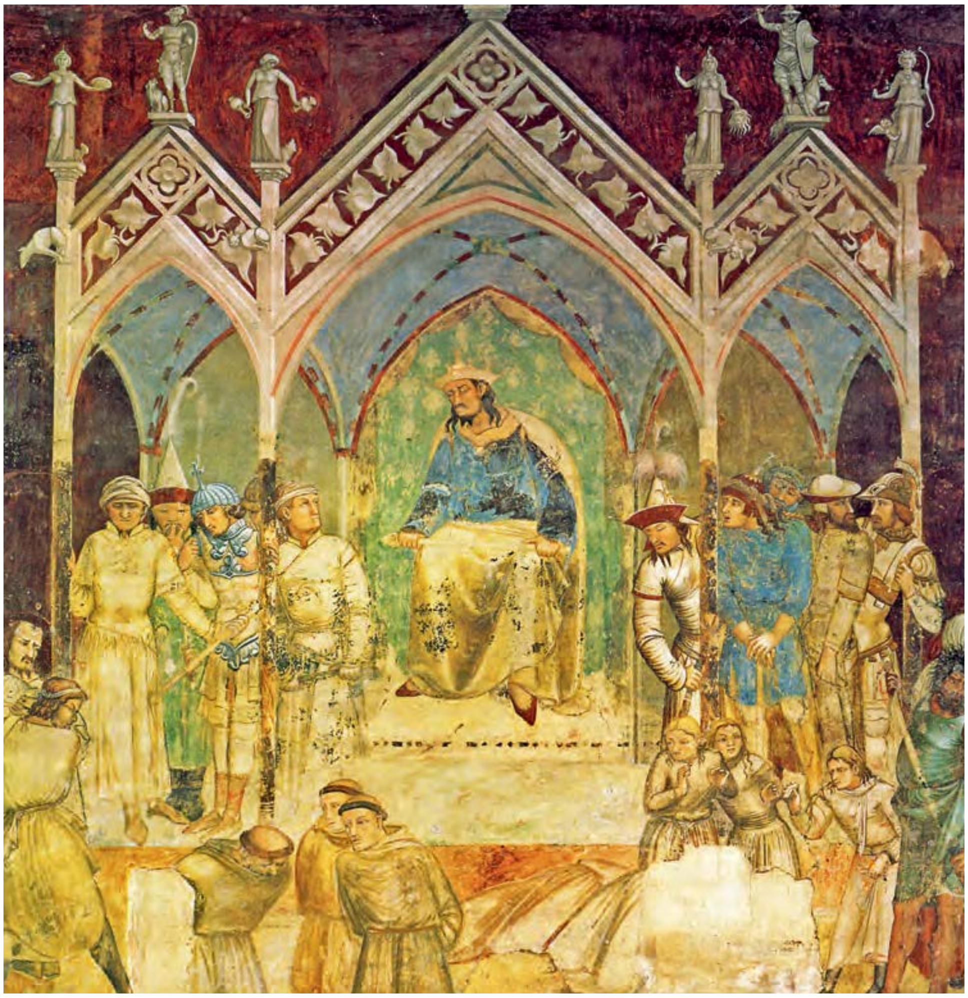
but also in Christian-Armenian books. An outstanding example of this is a richly illuminated lectionary produced in Cilicia in 1286; in one of its miniatures Christ is protected by two Chinese-style prancing lions.[230]

Two characteristic features of Il-Khanid architecture are the penchant for height, exemplified in the monumental portal of the Friday mosque in Yazd, with its two flanking minarets (fig. 184), which dates from the reign of Abu Said, and the exterior decoration of domes with turquoise tiles, as seen in Bayazid's Mausoleum in Bastam (fig. 182).[231] Dating from the last quarter of the fourteenth century, the polychrome faïence mosaic of the Yazd mosque foreshadows the rich decoration of the Timurids.[232] For his own mausoleum in Soltaniyeh (fig. 183), Oljeitu adopted the concept of a monumental mausoleum with a double-shelled dome like that of Sanjar's audience-hall in Merv (fig. 60). As Richard Yeomans has noted, Oljeitu's majestic mausoleum with its octagonal plan and eight minarets equal in height to the summit of the dome anticipates the mausoleums of the Mughals in India.[233] Remarkable, too, is the painted stucco relief decoration of the vaulted ceiling of the outer arcade, which, as Sheila Blair and Jonathan Bloom point out, shows great similarities with contemporary manuscript illumination. The artists who created it probably used paper templates for guidance (fig. 185).[234]

The Mongols prized their *nasij* silks embroidered with gold and silver thread, called *panni tartarici* in Italy,[235] and these were often used by the Il-Khans as precious gifts for Latin sovereigns, including the pope. A papal inventory of 1295 describes 100 items as *tartarico*, among them many *panni tartarici*; an inventory of the Basilica of Saint Francis in Assisi dated 1338 similarly lists many 'Tatar' items.[236] And it was not only the textiles that caused a sensation, but their bearers too: during the Holy Year of 1300 the Il-Khanid ambassador, the Florentine Guiscardo de Bastari, appeared in Rome with a retinue of a hundred, all in 'Tatar' dress.[237] The encounter with these fabrics and those who brought them led to the appearance of Chinese, Mongol and Persian elements in Italian painting of the fourteenth and fifteenth centuries. It is no accident that one of the first clear examples of Sino-Mongol influence can be seen in the wall paintings of the Upper Church of the Basilica of Saint Francis of Assisi, executed between 1295 and 1308. For it was Pope Nicholas IV who had received Mongol ambassadors on several occasions, who ordered the restoration and decoration of the basilica (fig. 187).[238] Eastern influence can be seen here, and later elsewhere, in the depiction of biblical figures wearing *nasij* silks with Chinese and Central Asian patterns, and in the representation of Mongol officers and horsemen. Particularly popular were varying types of pseudo-Phagpa and pseudo-Arabic script, used in the borders of garments, haloes and open books (fig. 186). Among the painters who adopted such oriental elements in their works are Giotto di Bendone (1267–1337), together with his workshop and circle, Simone Martini (1283–1344), Ambrogio Lorenzetti (*ca.* 1290–1348), Bernardo Daddi (d. *ca.* 1348), Paolo Veneziano (d. after 1358), Gentile da Fabriano (d. 1427) and Fra Filippo Lippi (*ca.* 1406–69).[239] The luxury textile industry located in Syria and notably in Damascus was destroyed by Timur-e Lang between 1399 and 1402, which helped the Italian industry to become dominant in the Mediterranean region.[240]



186. **St Lawrence enthroned with Saints Cosmas and Damian, and three donors. Tempera on wood with a gold ground by Fra Filippo Lippi (*ca.* 1406–69). It is interesting to note the pseudo-Arabic and pseudo-Phagpa script motifs on the braid edging of the three saints' garments. The rectangular design on Saint Lawrence's robe imitates the similarly positioned motifs which adorned the robes worn by Chinese officials. The Metropolitan Museum of Art, New York. Inv. no. 35.31.1a–c.**



187. The martyrdom of Franciscan friars in Ceuta, Morocco in 1227, or in Thanah – now Mumbai, India – in 1321. Mural by Ambrogio Lorenzetti (*ca.* 1290–1348) in the Basilica of Saint Francis in Siena, Italy, painted *ca.* 1330. The Asian influence can be seen in the Mongol features of the enthroned ruler and of two officers who stand looking on. Their cone-shaped hats adorned with feathers and raised brims and neck guards echo the headgear of a Mongol commander of a *mingan*, a force of 1,000 warriors.[35]

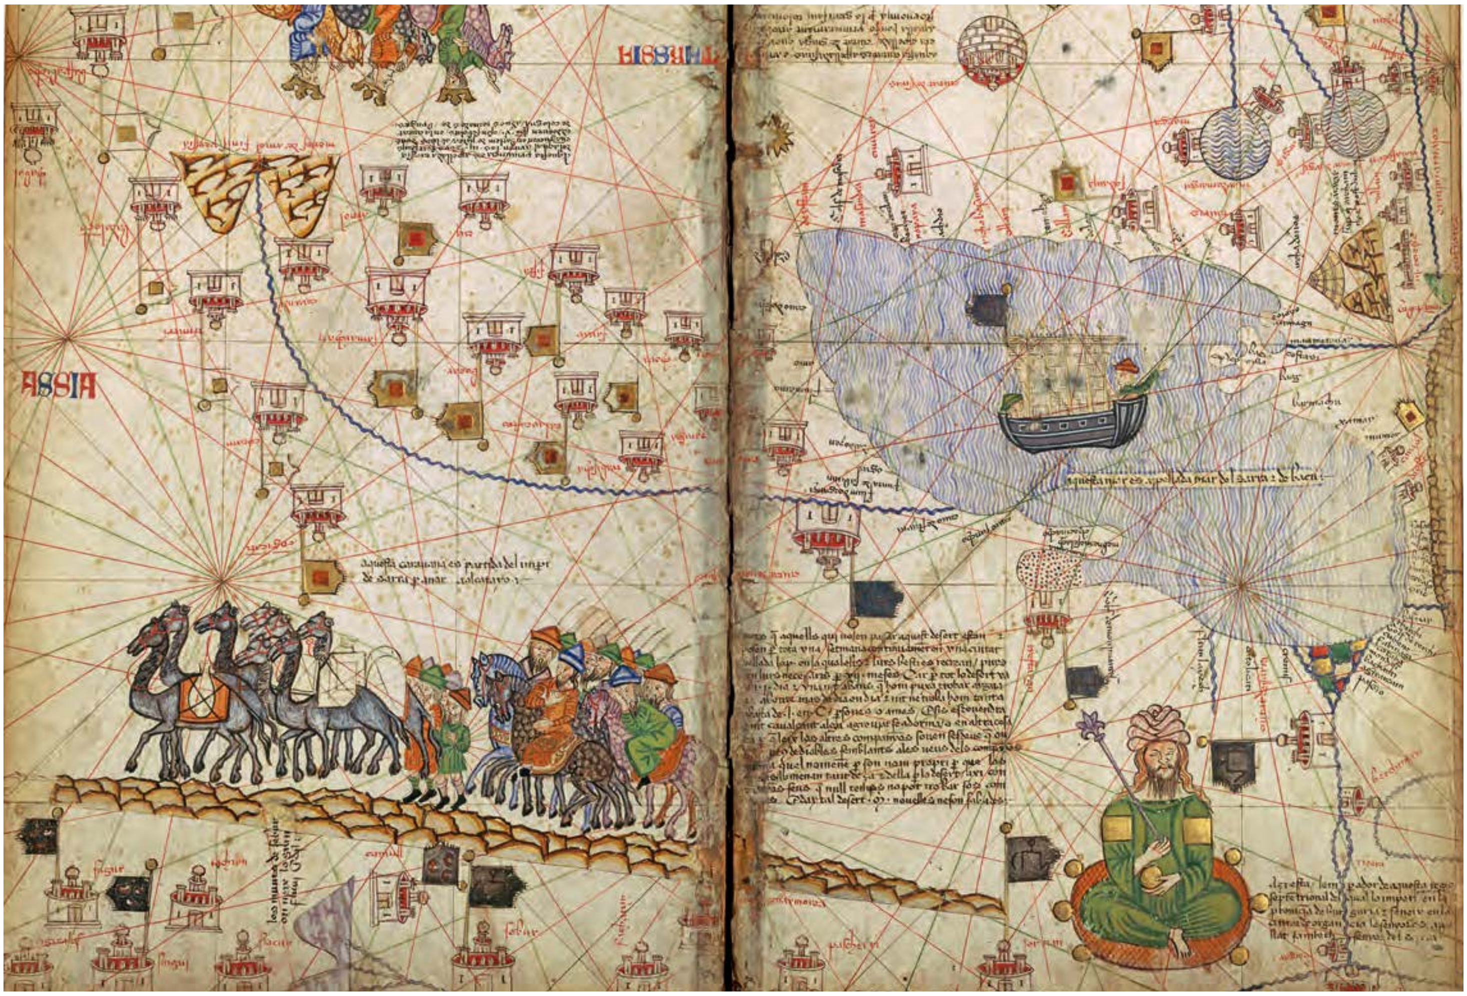
5. The Golden Horde

The khanate of the **Golden Horde** (1207/8–1502) originated in Genghis Khan's gift to his eldest son **Jochi** in 1207/8, when he granted him lordship over the 'forest people' living on the Irtysh, Angara and Ienissei rivers, who he had recently conquered at no great cost.[241] Genghis Khan confirmed Jochi's *ulus* in the winter of 1218/19, granting him in addition the territories that might in future be conquered in the north-west. After the destruction of Gurganj in 1221, Genghis Khan sent Jochi to the north-west to conquer the Kipchak steppe, but Jochi remained passive and died in early 1227, so Genghis appointed Jochi's second-eldest son **Batu** (r. 1227–55) to be ruler of the *ulus*.[242] After the successful campaign in the west in 1236–42, Batu allocated his brothers their own camps: Batu's own camp stood on the Lower Volga, in the region north of Astrakhan, where the city of Sarai Batu ('Old Sarai') would emerge in the early 1250s. Later, either Berke Khan (r. 1257–66) or (more likely) Özbek Khan (r. 1313–41) would found New Sarai east of Volgograd.[243] Batu had direct control over the region west of the Urals; to his younger brother Shaiban he allotted the pastureland east of his own camp, and east of that, in today's Kazakhstan, resided Jochi's eldest son Orda. Timurid and Uzbek sources of the fourteenth to sixteenth centuries call the western part of the Golden Horde (this latter being a Russian term from the sixteenth century) the 'Blue Horde', and the eastern part controlled by Orda the 'White Horde'.[244] The Golden Horde, which between 1240 and 1480 ruled much of the Russia of the time, lasted longer than the other Genghisid khanates, for several reasons. The Mongols and Kipchaks lived on the vast grasslands of the Kipchak steppe, never mixed with the conquered Slavic peoples and had nothing to do with their cities – they avoided the Russian forest zone and lived a traditional nomadic life on the steppe, thus providing the khan of the Golden Horde with a standing cavalry that he could send against rebels at will. The khans contented themselves with political control over the Russian towns and the posting of *basqaqi* to collect taxes. However, in providing for their army in part by a system akin to military fiefdoms, whereby nobles and large landowners were exempted from taxes in exchange for supplying soldiers, they laid the foundations for the feudalism and enserfment of the peasantry that later spread from the Principality of Moscow.[245] It was the strict refusal to assimilate with the Russians that guaranteed the Golden Horde its military superiority. The Mongols' and Kipchaks' conversion to Islam further separated the Tatars, as their descendants were known, from the Christian Slavs of Russia. Not only did the Muslim Tatars not try to convert the Russians by force, but they also made an ally of the Orthodox Church, exempting it from taxes and so enabling it to become a large landowner.[246] The only exception to this policy of rigorous non-assimilation was the adoption of Kipchak, the Turkic language spoken on the Lower Volga, as the official language instead of Mongolian in the course of the fourteenth century.[247]

5.1 The Blue Horde of Batu Khan

As Batu's successor, Möngke appointed the dead ruler's son **Sartaq** (r. 1256–57), who may have been a Christian, and to succeed him, when he died soon after returning from Karakorum, Batu's young grandson **Ulaghchi** (r. 1257), who also died only a few months later.[248] It is likely that Batu's brother **Berke** (r. 1257–66) had his two predecessors poisoned. Batu's and Berke's political and economic strategy was aimed at the exploitation of the Russian towns through taxation and control over the northern route from Transoxiana to the Mediterranean, for the *ulus* was dependent on trade, as the Khazar Empire had been earlier.[249] The preferred route to the Mediterranean led from Sarai through the eastern Caucasus to Tabriz in Azerbaijan, and from there to Laiazzo or alternatively Trebizond on the Black Sea. Yet Berke suffered two serious setbacks: first, immediately after Batu's death, Möngke removed General Baiju, the commander of the armies in the Caucasus and the Near East who was close to the Jochids, replacing him with

188. The Church of the Holy Trinity – Zminda Samebaba in Georgian – a place of pilgrimage in Gergeti, Georgia. It was built in the first half of the fourteenth century at the foot of the 5,033-metre-high Mount Kazbek in the Greater Caucasus. The River Terek runs through the valley and, only a few kilometres northwards, flows into the infamous Darial Gorge, over which the Il-Khanids and the Golden Horde fought bitterly in the 1260s. Il-Khan Hülegü succeeded in securing the strategic highly important Darial Pass as his farthest outpost situated north of the main ridge of the Greater Caucasus. Photo: 2013.



189. Detail of Panel V of the Catalan Atlas produced in Mallorca in 1375. Painted on parchment, the atlas contained everything hitherto known about world geography. For information on Central and East Asia, the creators of the atlas also drew on Marco Polo's reports. North is represented at the bottom of the map, while east is shown on the left. The Caspian Sea appears on the right, while at the bottom of the left-hand page a camel caravan makes its way eastwards. The caption states: 'The caravan belongs to the Emperor of Sarra (Sarai, capital of the Golden Horde) and is going to China.' Bibliothèque nationale de France, Paris, manuscript occidental espagnol 30.

his brother Hülegü, who set himself up as sole ruler of the Middle East, taking Tabriz as his seat of power and expelling the representatives of the Jochids from his domains.[250] So the doors of the Mediterranean remained closed to the Jochids, with the result that Berke entered a military alliance with the Mamluks in order to conquer Azerbaijan and thus secure access to the sea. But Berke's two campaigns against the Il-Khanate in 1262/63 and 1265/66 met with no success. And in the east, too, Berke had to accept loss of territory when the Chagataid Alghu took Chorasmia and Otrar between 1261 and 1265.[251]

Berke and his successors reacted to this failure to obtain access to the Mediterranean through military means and by strongly encouraging internal and transit trade and cooperation with the Italian mercantile republics of Genoa and Venice. They built or expanded towns at nodal points on the trade routes, towns which also served as centres of administration. Archaeological investigations have identified 110 medieval towns on the territories of the Golden Horde (including the Russian towns), and 30 more are known from medieval sources. Although this urban development was centrally planned, the larger towns and cities enjoyed considerable autonomy – as many as 17 of them had the right to strike coins.[252] As the Jochids had no merchant fleet, they established trade relations with Genoa and Venice, playing one against the other with more or less success.[253] For the Italian republics, which had settlement rights and trading posts on the coasts under the control of the Golden Horde – as for example on the south coast of Crimea and at Tana on the Don Delta – trade with the Jochids became considerably more important after the loss of the last Crusader strongholds. When the Il-Khanate descended into chaos following the death of Abu Said, and its trade routes became unsafe, the northern route became even more attractive. 'The Golden

Horde [became then] a bridge connecting Asia and Europe,'[254] the route running from Gurganj or Otrar via Sarai, Tana and Pera (Galata) to Genoa or Venice.[255] Detailed information about the individual routes, the towns, and the goods conveyed is to be found in *La practica della mercatura*, a book written around 1340 by the Florentine merchant Francesco Balducci Pegolotti. In it Pegolotti advises European merchants to grow their beards, and at Tana, on the Don, to engage a local dragoman, at least two men servants, and preferably a woman as well. As goods, merchants from Italy should take with them the finest stuffs, exchanging these for silver in Gurganj, which would again be exchanged for paper money at the Chinese border.[256]

These trade relations were to the advantage of all parties involved: the Golden Horde, the Mamluks and the Italian republics. The Dominican William Adam noted disapprovingly in about 1317 that 'whatever these two, the Tatar [Golden Horde] and the [Mamluk] sultan, want to send each other, the Genoese transport it in their ships and galleys'.[257] The fact that many towns of the Golden Horde were built at locations important from a trade point of view, but which were unsuited to a self-subsistent, settled life is clear from the consequences of Timur-e Lang's depredations in 1395–96, when he systematically laid waste to the centres of trade. The flow of trade shifted to the south, to Iran, which Timur controlled, and many towns and cities of the Golden Horde vanished without trace.[258]

Berke's successor **Möngke Temür** (r. 1266/67–80) was the first to formally proclaim the independence of the Golden Horde; he marked his accession by striking coins that did not bear the name of the Great Khan.[259] He strengthened the *ulus* with campaigns against Lithuania and the Alans and allowed Genoa to establish a colony at Caffa (Feodosia). In 1285, Emperor Andronicus II granted the Republic of Venice right of passage through the Dardanelles; between 1288 and 1343, Venice regained her old foothold of Soldaia

190. Fourteenth-century tower and Armenian Church of Saint John inside the medieval Genoese fort of Caffa (Feodosia) on the south coast of Crimea. Caffa was the administrative centre and the principal port for Genoese trading activities in the Black Sea. The city fell to the Ottomans in 1475. Photo: 2011.

(Sudak), and in the 1320s opened a trading-post at Tana. Genoa, however, kept the upper hand in the Black Sea until 1475, with maritime hubs at Pera (Galata), Caffa and Trebizond.[260] Möngke Temür was succeeded by his brother **Tudä Möngke** (1280–87), a pious Muslim who proved a weak ruler. The real decisions were taken by Emir Nogai, who, despite never being a khan, would be the most powerful man in the Golden Horde until his death in 1299. In 1287, Nogai (whose name means 'dog' in Mongol, a positive reference to his skill and strength in battle) compelled the khan to abdicate, replacing him with **Töle Bugha** (r. 1287–91). Nogai's domain lay in the western part of the *ulus* and extended from the Don to the Danube. He forced Bulgaria to recognise his overlordship, yet he failed in his attack on Hungary in 1285, suffering two defeats with heavy losses. Two years later he ravaged Poland. When Töle Bugha showed signs of taking government into his own hands, Nogai took him prisoner, handing him over to **Tokhta** (r. 1291–1312), a son of Möngke Temür, who killed him, whereupon Nogai made Tokhta khan. After nipping in the bud the first stirrings towards independence of a number of Russian cities, Tokhta then turned against Nogai. He lost his first battle in 1298 and had to flee; he won the next, in 1299/1300, during which Nogai was killed.[261]

Tokhta's attempt to wrest Azerbaijan from the Il-Khanids was a failure. In 1302 or 1303, after Ghazan refused to hand over the disputed province, Tokhta sent an embassy to the Mamluks, hoping to persuade them to mount a joint attack on the Il-Khanate. Sultan al-Malik al-Nasr Muhammad rejected the idea, so in 1306/07 Tokhta repeated his demand to Oljeitu that Azerbaijan should be ceded to him, but without success. To punish the Mamluks, who were dependent on regular supplies of slaves from the Golden Horde, for their non-cooperation Tokhta, in 1307, ordered the imprisonment of all Genoese merchants and besieged Caffa. In May 1308, after eight months of siege, the Genoese put their city to the torch and got away in their ships. The real loser in all this, though, was the Golden Horde, which had gained taxes and other revenues from the transit trade. Hardly had Tokhta's successor **Özbek**[262] (r. 1313–41) acceded to the throne than he hastened to re-establish cooperation with Genoa, not least in order to revive the alliance

191. The citadel of the medieval fortress of Soldaia (Sudak), the trading centre known in the early Middle Ages as Sugdeia.[36] Soldaia's port and fortress on Crimea's southern coast belonged to Genoa between 1261 and 1475, although it was under Venetian control from 1288 until 1343. The Mongols attacked Soldaia in 1223, 1239, 1298, 1322 and 1323. Thereafter it was administered mostly by a governor from the Golden Horde until 1365. Like Caffa, Soldaia fell to the Ottomans in 1475. Photo: 2011.

with Cairo. From now on, Genoa would enjoy extraterritorial rights in Caffa, and the city was excluded from the jurisdiction of the Golden Horde.[263]

Just as Il-Khan Ghazan had earlier come to power with the support of Emir Choban, so Özbek was compelled to give in to the pressure of the powerful emir Qutlugh Temür and convert to Islam before gaining the throne. He then called together more than 100 Tatar princes who, preferring the law of Genghis Khan to the law of Islam, rejected the 'Arab religion', and had them all killed. The forced Islamisation of the Golden Horde's Tatar nobility was completed with the expulsion of all Buddhists.[264] In the 1550s, Ötemish Hajji composed a fanciful narrative account of Özbek's conversion, according to which the arrival of four Muslim 'saints' disturbed a heathen ceremony at the khan's court, whereupon a trial by fire was arranged. Blazing fires were to be lit in two oven pits; in one would go a representative of the 'infidel sorcerers', into the other a representative of the 'saints', and 'Whoever emerges without being burned, his religion will be true.' While the Muslim Baba Tükles went willingly, donning armour over his bare flesh, three of the 'sorcerers' had to take their colleague by force and throw him into the oven, where he died immediately. Baba Tükles in the meantime could be heard praying peacefully, and when the oven was opened 'they saw that the armour was glowing red hot, but by the power of God most high not a hair of the Baba's body was burned'.[265] Ibn Battuta, in any event, testifies to Özbek's insistence on the observance of Islamic law, recording after his visit to Gurganj that 'Any person who absents himself from the communal prayers is beaten by the *qadi* [judge] in front of the people.'[266]

Özbek's protracted efforts to conquer Azerbaijan would all fail. His attack on the Il-Khanate in 1319 was defeated, and offering a Mongol princess in marriage to Sultan al-Malik al-Nasr Muhammad, together with a large dowry, proved ineffectual, as the sultan still categorically refused to take part in a new attack, marriage or no marriage: 'We have made peace with the king Abu Said for the sake of the Muslim faith. [. . .] He is a pillar of Islam. [. . .] As for what the king [Özbek] says about having forbidden merchants to buy slaves, we – praise be to Allah! – have no need of slaves.'[267] This peace with the Il-Khanate was the fruit of the Mamluks' effective diplomacy since Baibar's alliance with Berke in 1262/63. For 50 years Egypt had countered the Il-Khans' pressure and prevented their conquest of Syria. The conclusion of peace in 1323 had also removed the need to purchase costly slaves for the army. After this foreign policy reverse, Özbek devoted more time and energy to domestic affairs, and also intervened in support of Moscow in an intra-Russian conflict. In 1328 he appointed the Muscovite prince Ivan I. Daniilovich (r. 1328–41), called Kalita ('moneybag'), as grand prince of Vladimir, after the two of them had devastated Moscow's rival principality of Tver. At the same time, Özbek took a fateful decision when he abandoned the former policy of divide and rule by making the new grand prince responsible for collecting and passing on tribute and taxes from all the Russian cities. Ivan delivered these exactions punctually, so further strengthening his position of privilege. In this way he laid the foundations for Moscow's future as a regional great power that in the 1380s would challenge the Golden Horde itself.[268]

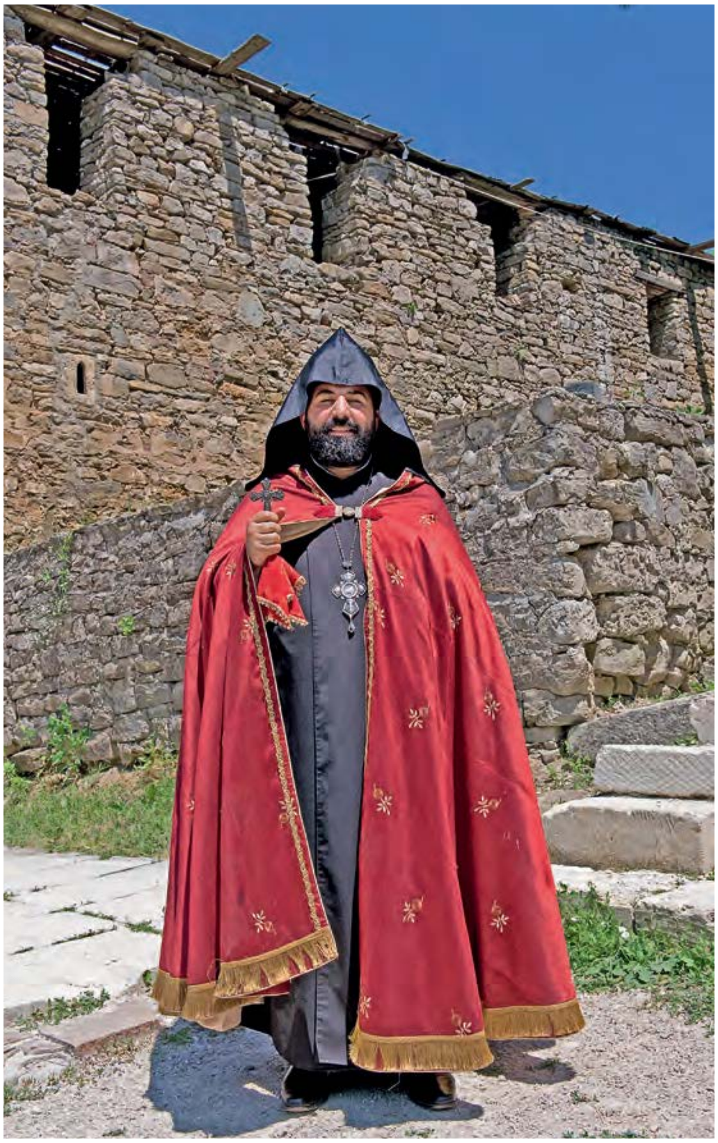
Özbek's successor was **Tini Beg** (r. 1341–42), who was in turn succeeded by his brother **Jani Beg** (r. 1342–57). It was during Tini Beg's reign that the Golden Horde began its rapid decline. In the west, the loss of Volhynia (in the north-west of today's Ukraine) to Lithuania in 1341 was followed in 1345 by a defeat at the hands of the Hungarians,

192. The Ozbek Khan Mosque, built in 1314 in Solkhat – present-day Staryj Krym – is 25 kilometres west of Caffa, Crimea. Photo: 2011.

193. Tower of the medieval Genoese fortress of Cembalo (Balaclava) on the south coast of Crimea. The fortress was a vantage point from which to monitor shipping as it entered the sheltered Cembalo Bay, where the Soviet Union much later maintained a submarine base. Like Caffa and Soldaia, Cembalo fell to the Ottomans in 1475. Photo: 2011.

and then, in 1349, by the loss of Galicia in western Ukraine to Poland.[269] Jani Beg's attempt to take control of the trade in the Black Sea failed miserably as well. The two sieges of Caffa in 1343 and 1345/46 also failed, while at Cembalo (Balaklava) on the south coast of Crimea the Genoese completely destroyed both his new fleet and his shipyards. At the second Siege of Caffa the khan is said to have had the bodies of soldiers that had died of bubonic plague catapulted into the city. The result of this biological warfare was that Genoese ships carried people infected with plague to Egypt and Western Europe, so propagating the epidemic known as the Black Death. The epidemic, which had probably originated in Kyrgyzstan, had reached the Golden Horde along the northern trade route. A joint embargo by both Genoa and Venice forced Jani Beg to conclude a truce in 1347.[270] But in 1356 the khan did succeed in taking Tabriz in Azerbaijan, where all his predecessors since Berke Khan had failed, and installed his son Berdi Beg as governor. He died suddenly in 1357, probably poisoned by that same son. **Berdi Beg** (r. 1357–59) hurried to Sarai, where he declared himself the new khan, but only two years later he was killed in turn by his brother **Qulpa** (r. 1359–60).[271] After Berdi Beg's death the Golden Horde descended into political chaos: between 1359 and the accession of Toqtamish in 1378 there was a series of 19 reigns, at least eight of them puppets of the warlord Mamai (d. 1380/81).

That the Golden Horde did not fall apart completely was only thanks to Mamai, who was not a Genghisid and thus was unable to claim the khanate for himself. His area of control lay in Crimea and on the Don, while Hajji Sarkis controlled the region around Hajji Tarkhan (Astrakhan) and Urus Khan ruled the White Horde further east.[272] Yet even Mamai could not prevent the erosion of the Golden Horde's territories: defeat by Lithuania in 1362 was followed between 1365 and 1370 by the loss of Podolia in western Ukraine and the region of Kiev to the Lithuanians.[273] By this time Lithuania and Moscow had the upper hand. Moscow decided in the early 1370s to cease its payment of tribute, and the Golden Horde was reduced to the status of a second-rank power. Only then did Mamai recognise the danger that Moscow represented, but his campaigns of 1373 and 1378 both failed. Two years later, Mamai raised a strong army, only once again to be crushingly defeated on 8 September 1380, by Dmitri Ivanovich, prince of Moscow and grand prince of Vladimir, at the battle of *Kulikovo pole* ('the Snipe Field'). Dmitri's hard-won victory was the first the Russians had won against a Mongol army in 140 years; it earned him the sobriquet Donskoy ('of the Don'). But the real winner of the battle was Toqtamish, khan of a reinvigorated White Horde. That same year he defeated the much weakened Mamai on the River Khalkha, reuniting Jochi's *ulus*. Mamai fled to the Genoese in Caffa, who soon had him poisoned; in exchange, Toqtamish confirmed the extraterritoriality of the Genoese settlements of Caffa, Soldaia and Cembalo, adding Gothia to their number. Now Genoa controlled every significant port on the south coast of Crimea, from Cherson in the west to Cherco (Kerch) in the East.[274] The victorious Dmitri Donskoy, however, had suffered such losses in his battle against Mamai that he was unable to save Moscow from Toqtamish's attack in 1383; the city was burnt to the ground.[275]



194. The Very Reverend Father Hayrik Hovhannisyan in front of the Armenian Monastery of the Holy Cross or *Surb Khach*, from which the toponym Solkhat, the former name of Staryj Krym, was derived. The monastery in Crimea, built in 1358, was closed down by the Soviet authorities in 1925 and bombed by the German Luftwaffe in 1944. In 2006, His Holiness Karekin II Nersissian, the Supreme Patriarch of All Armenians, travelled from the Armenian Church's administrative headquarters in Etschmiadsin to re-consecrate the monastery. 5.2 The White Horde of Orda Khan

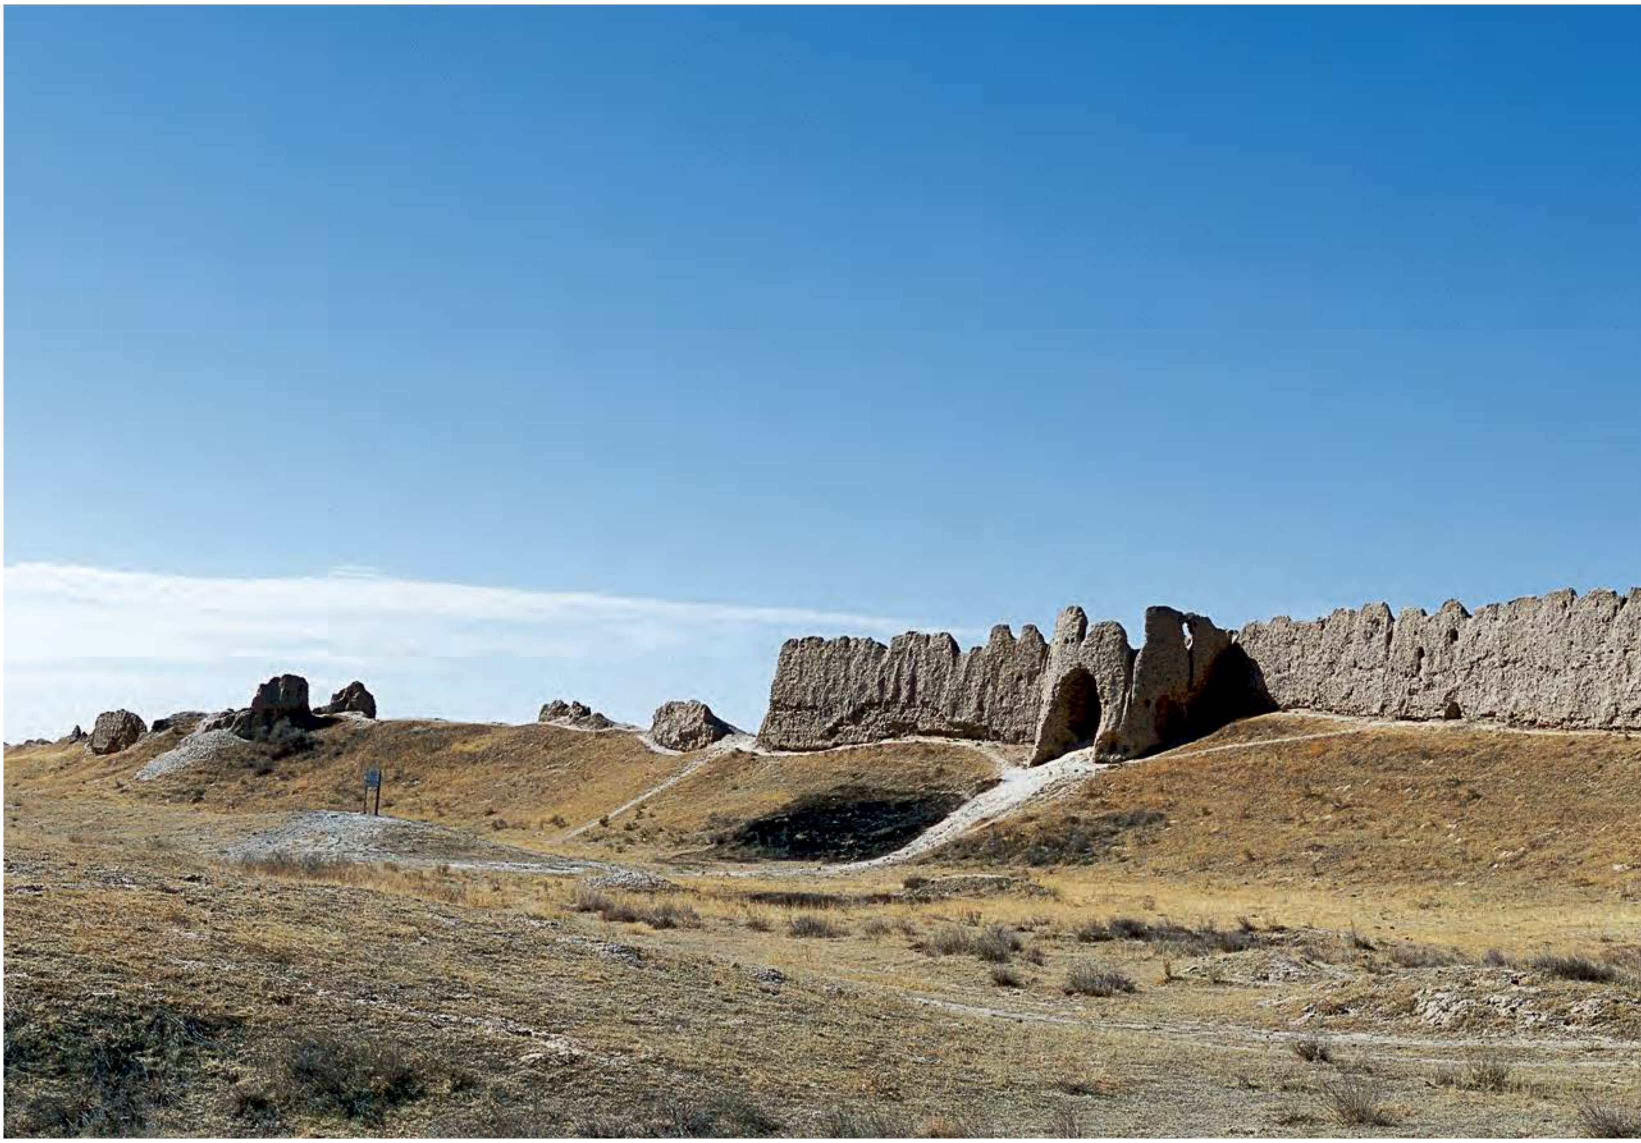
With **Toqtamish** (r. 1378–97) and his predecessor and opponent Urus, the house of Orda – of which little is known – replaced the house of Batu at the head of the Golden Horde. **Orda** (r. *ca.* 1227–after 1255) ruled the eastern part of the Golden Horde, which stretched from the Urals to Lake Balkhash; to the south-east, the boundary with Kaidu's territory ran north of Talas and Sairam. Orda took part in the western campaign of 1236–42, supported Möngke's election as great khan, and in around 1255 sent his second son Quli with a *tümen* to assist Hülegü in his Iranian campaign.[276] Orda was succeeded by his fourth son **Qongqiran** (r. after 1255–before 1277), followed by **Qonichi** (r. *ca.* 1277–before 1299), who initially supported Kaidu in his struggle with Kublai Khan before changing sides in the early 1280s. Qonichi was then succeeded by his son **Bayan** (r. before 1299–before 1312), who had to struggle to assert his claim against his cousin Kupalak. Bayan was succeeded by his son **Sasi Buqa** (r. before 1312–1320/21), who would be buried in the city of Sauran (fig. 196) and by his son **Irzan** (or Ilbasan, r. 1320/21–?), who also ruled the cities of Otrar and Jand. This meant that the White Horde had managed to extend its territories to the south at the cost of the Chagatai khanate, and that Sauran may have been its capital. During the same period, however, the Horde lost its autonomy and was compelled to recognise the overlordship of Özbek Khan.[277] Very little is known of the next two khans, **Mubarak Khwaja** (r. ?–1344?) and **Chimtay** (r. 1344?–61). They were followed by **Urus Khan** (r. 1361–74/75 or 77, in Sarai 1374/75 or 1374/5–77). His rule was challenged by **Toqtamish,** said to be his nephew (r. as Khan of the White Horde from 1378, of the Golden Horde 1380–97), who took refuge with the rising Timur-e Lang and asked him for his aid. Timur seized the opportunity to put someone he favoured at the head of the White and perhaps the Golden Horde. In 1377 (or 1375) he defeated Urus Khan, and shortly thereafter defeated the latter's son **Tuqtaqiya** (r. 1377), **Timur Malik** (r. 1377–78) and Hajji Tarkhan as well. Toqtamish now proclaimed himself khan of the *ulus* of Jochi, a claim strengthened by his victory over Mamai in 1380. Two years

195. Golden belt-bowl, 17.8 centimetres in diameter and 12 centimetres high, with two handles in the shape of water dragons, early fourteenth century. Discovered in 1848 in New Sarai, Russia. The State Hermitage Museum, St. Petersburg, Russia. Inv. no. SAR-1613.

later he punished a rebellious Moscow and defeated a Lithuanian army at Poltava, thus reimposing the 'Tatar yoke' on the cities of Russia.[278]

It is likely that Toqtamish and Timur-e Lang underestimated each other. Toqtamish looked down on Timur as a non-Genghisid upstart and failed to appreciate his military skills. Timur, on the other hand, seems to have thought that the Genghisid who stood at the head of the last surviving *ulus* of the Mongol Empire should content himself with the role of junior partner. In the short term, Toqtamish sought to gain control over the Middle trade route; in the long term he wanted to bring the fragmented Il-Khanate and the divided Chagatai khanate under his rule. After taking Chorasmia as early as 1379, in the winter of 1385/86 he invaded Azerbaijan, gratuitously laying waste to Tabriz. Timur, however, who saw Iran as falling within his sphere of influence, occupied the city in 1386, wresting it from Jalayirid control. The following year, Timur repulsed another attack by Toqtamish, on Karabakh, then went on to recapture Chorasmia and raze to the ground the city of Gurganj, which had allied itself with Toqtamish. Around the end of 1387, Toqtamish threatened Bokhara, withdrew in the face of Timur's advance, but then briefly occupied Fergana. To break Toqtamish's power, Timur drove his next attack into the heart of the Golden Horde, defeating Toqtamish at Samara on the Middle Volga in the summer of 1391. Toqtamish, however, had not been decisively weakened, and in 1394 he launched his sixth attack on Timur's territories, again invading Azerbaijan. Timur now decided that he must not only defeat Toqtamish militarily but destroy the Golden Horde's economic foundations, since he had no wish to annexe the Golden Horde's territory. In April 1395, Timur defeated Toqtamish on the River Terek, and then systematically razed all the Golden Horde's most important trading cities, though still without capturing the fleeing Toqtamish. In his place he set Urus Khan's grandson **Temür Qutlugh** (r. 1397–99). But the most powerful figure of the Golden Horde was the army commander Emir Edigü (d. 1419), leader of the Turco-Mongol Manghit tribe, from which the Nogai Horde would later emerge.[279] The chief beneficiary of Timur's campaign of devastation, though, was Moscow, since the Golden Horde would never recover from this defeat.



196. The commercial city of Sauran in southern Kazakhstan, destroyed by the Mongols in 1220, was later rebuilt 3 kilometres further to the north-west and is thought to have served as the White Horde capital during the fourteenth century. The city went into decline in the eighteenth century as trade flows changed direction. The picture shows the eastern city wall with the main gate. Photo: 2005.

Toqtamish fled to the Lithuanian grand prince Vytautas (1392–1430), who allowed some of his followers to settle in Lithuania and Poland. Vytautas, who had his capital in Kiev, wanted to extend his rule to the south-east, and he therefore agreed with Toqtamish to launch a joint attack on the Golden Horde. In August 1399, however, Edigü and Temür Qutlugh defeated the Lithuanian force on the River Vorskla, a tributary of the Dniepr, not least because Toqtamish abandoned the battle prematurely and fled once again, this time to Western Siberia, where he was killed by Edigü's forces in 1406.[280] As Bertold Spuler observes, from around 1397 onward the Tatars of the Golden Horde were often reduced to 'auxiliaries or mercenaries in foreign service'.[281] Under Edigü's auspices, the steppes of the Golden Horde were ruled by **Shadi Beg** (r. 1399–1407) and **Pulad** (r. 1407–10), until 1410, when one of Edigü's sons forced his father into flight. A confused struggle for the khanate then ensued: after nine khans had succeeded each other in as many years, **Ulugh Mohammad** (r. with interruptions 1419–33) gained the throne, which was also claimed by **Daulat Berdi** (r. as anti-Khan 1419–21) and **Baraq** (r. as anti-Khan 1422–27). **Sayyid Ahmad** I (r. 1433–35) toppled Ulugh Mohammad, who went on to found the khanate of Kazan in 1437 or 1438.[282]

Under the next three khans, **Küchük Mohammad** (r. *ca.* 1435–59), **Mahmud** (1459–65) and **Ahmad** (r. 1465–81) the Golden Horde broke up into eight smaller Tatar khanates: the little principality of Kursk (or Jagoldai, founded 1438), which soon became a Lithuanian vassal,[283] the Khanate of Kazan

(1437/38–1552), the Khanate of Astrakhan (1466 or 1502–1556),[284] the Khanate of Kasimov (1467–1694), a vassal of Moscow's, the Nogai-Horde (second half of the fifteenth century–*ca*. 1634), the Khanate of Crimea (1437/41–1783); what remained of the Golden Horde between the Dnieper and the Urals became known as the Great Horde (*ca*. 1466–1502), while the Khanate of Sibir (*ca* 1428/29–1598) had emerged even earlier in the Tjumen region on the River Tura.[285] It is striking that the three most powerful of these khanates, those of Crimea, Kazan and Astrakhan, were based not on the steppe but in trading cities. In 1480, Ahmad made a last attempt to force Moscow to pay tribute. Yet at the so-called 'stand on the Ugra' the two sides confronted each other for weeks, each on its side of the River Ugra, before Ahmad withdrew without a fight, so ceding the field to the Muscovite army under Ivan III (r. 1462–1505) – probably because his ally Casimir IV of Lithuania and Poland had left him in the lurch.[286] The event is celebrated in Russian historiography as marking the end of the 'Tatar yoke'. In 1502, the Crimean khan Mengli Giraï defeated the last ruler of the Great Horde, **Sheikh Ahmed** (co-ruler 1481–98, r. 1499–1502), dispersed his people, and brought the story of the Golden Horde to its end.[287]

IX

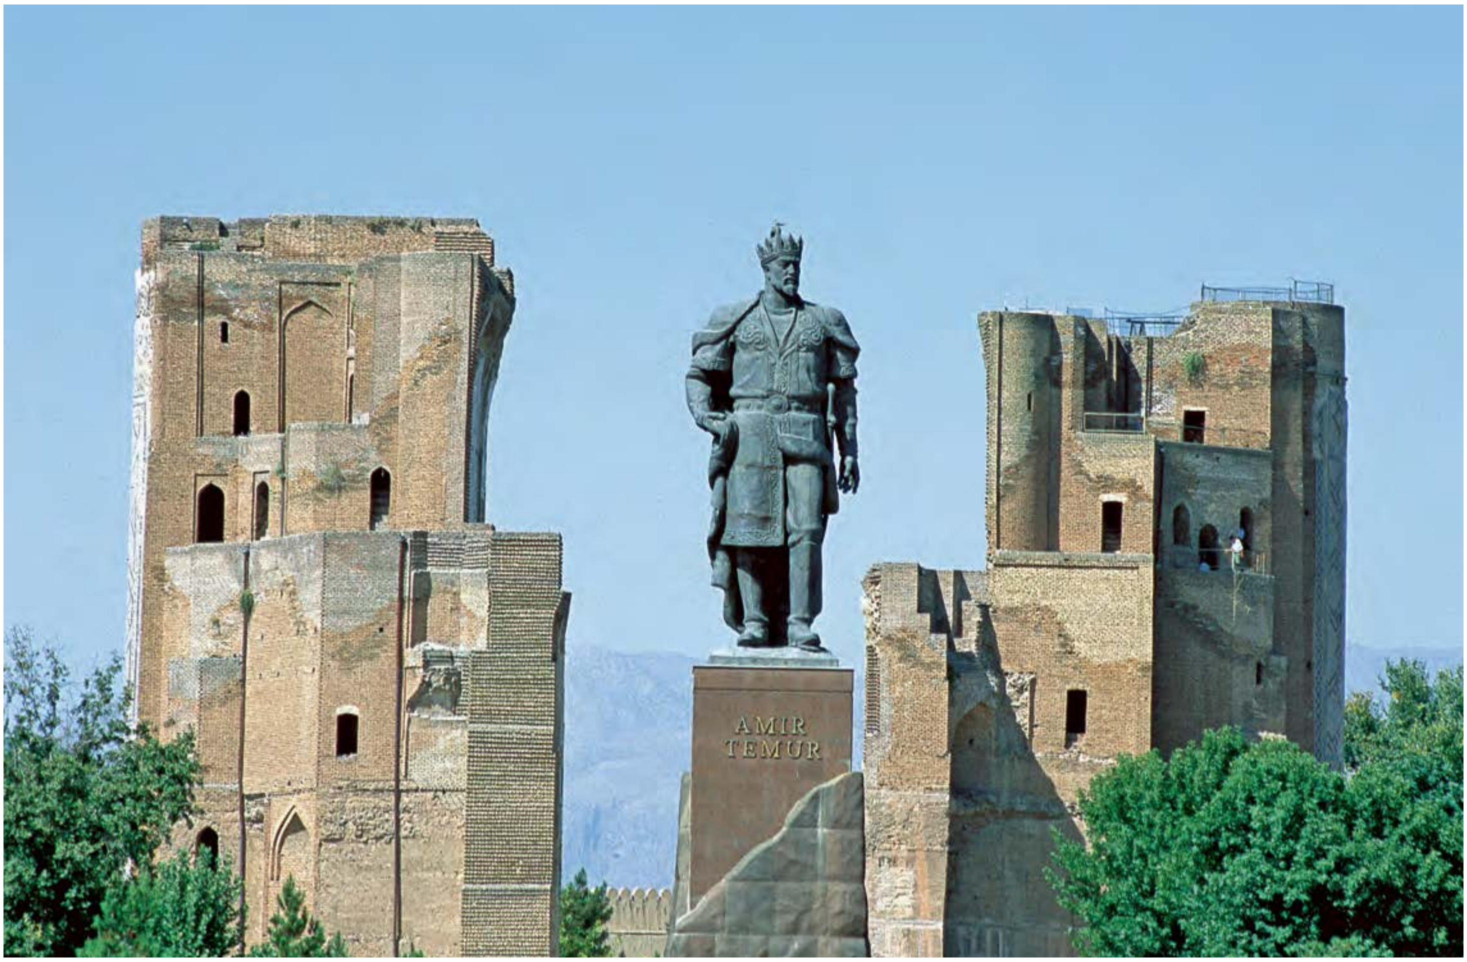
Timur-e Lang and the Timurids

'Outside of the town of Damghan [in Khorasan] there were two towers, so high that a man could scarcely throw a stone on top of them. They were made of mud and the heads of men; and there were two other towers, fallen to the ground. [. . .] They say that sixty thousand of these Tartars were killed [by the lord Timur].'

The Castilian ambassador RUY GONZÁLEZ DE CLAVIJO, recalling his journey to the court of Timur-e Lang in 1404.[1]

1. Timur-e Lang's Military Campaigns

Born sometime between 1328 and 1331,[2] **Timur ibn Taraghai Barlas** (reg. 1370–1405) – known in English as Tamerlane, from Timur-e Lang or 'Timur the Lame' – was a member of the Turco-Mongol Barlas clan based in Mawarannahr.[3] He was no Genghisid, a fact that did not prevent his grandson Ulugh Beg, governor of Samarkand, from having an inscription carved on his tombstone in the Gur Emir in that city (figs. 206–7) that makes him a descendant of both Genghis Khan's mythical ancestor Alan Qoa and Muhammad's son-in-law, the caliph Ali, and so a scion of the greatest families of the Mongols and the Shiites.[4] Timur began his career in turbulent times, as the opportunist leader of a band of personal followers, mercenaries and brigands. Around 1360, Tughluq Temür of Moghulistan invaded Mawarannahr and the leader of the Barlas, Timur's uncle Hajji Beg, took flight; Timur then offered his support to Tughluq, who rewarded him by making him governor of his home-town Kesh in southern Uzbekistan. But when Haji Beg came back, Timur's forces deserted him and returned to Haji, and Timur submitted to his uncle. A year later, Tughluq Temür attacked again, Haji Beg fled once more and was killed on his way to Khorasan, and Timur again switched sides to support the invader in return for Kesh.[5] When Tughluq's son Ilyas Khwaja, the viceroy of Mawarannahr, later prepared to punish Timur for repeated acts of insubordination, the latter took refuge with his brother-in-law Sheikh Husayn, leader of the Qara'una in the region of Balkh and Kunduz. After three years of guerrilla warfare, Timur and Sheikh Husayn defeated the occupying forces of the Moghul Khanate but suffered a heavy defeat at the hands of Khan Ilyas Khwaja in 1365. But Ilyas Khwaja failed to break the determined resistance of Samarkand, and hardly had he left Mawarannahr than Timur and Husayn marched on that city and there proclaimed their peaceful intentions. They then seized and killed the leader, who had so capably defended Samarkand, and occupied the city. In 1369, Timur eventually came out on top in



200. Monumental contemporary statue of Amir Timur-e Lang (r. 1370–1405) behind the entrance portal to the Ak Sarai Palace that he built in Kesh (Shahr-e Sabz), Uzbekistan. Photo: 2004.

the ensuing struggle for power between the two emirs, capturing Balkh and killing Sheikh Husayn. Not much later, on 9 April 1370, he declared himself Emir of the Chagatai *ulus*, installing a puppet khan of the Genghisid line and ruling the territories under his control from Samarkand.[6]

Unlike Genghis Khan, who had aimed to create an empire and had laid the administrative basis for it, or his first three successors, who had endowed it with a sophisticated system of government and had strived to reconstruct and develop the economy, Timur remained an opportunist warlord who pursued little more than fame and booty. Since he had neither a comprehensive strategy for government nor a plan for the development of the economy, his territories resembled not so much an empire as a zone of war and influence. He did not hesitate to attack the same cities and princedoms over and over again, returning for yet more plunder or protection money. In conquered territories, he established no lasting administrative structures but left either local, tribute-paying princes in place or installed members of his own family as governors. Fear of his terrible retribution prevented any stirrings of resistance or rebellion. As governorships were reserved for family members, each supported by experienced military leaders, or for members of the Chagataid nobility, and the most important posts were hereditary, there were no possibilities of advancement for outsiders. In this, too, Timur differed from Genghis Khan, who had recruited his ruling cadre from beyond his own family and clan, on the basis of ability alone. Timur's lack of interest in building an empire can also be seen in his lasting destruction of the ecological bases of conquered territories, as for example in Chorasmia and Sistan,[7] and in his ambitions when he attacked Iran and north India, which amounted to no more than the extraction of booty and the deportation of architects, artisans, artists and slave labourers. Timur's only long-term goal was to make Samarkand, together with Kesh and Bukhara to a lesser extent, into magnificent cities, awe-inspiring in their monumental architecture.[8] From Timur's actual practice one can see that he divided his territories into three categories: first the heartland around the Chagatai *ulus* and Khorasan, secondly regions whose trade and agriculture (such as Iran) or rich pastures (like Azerbaijan) endowed them with an economic potential worthy of long-term exploitation, and thirdly areas that for him represented no more than opportunities to plunder (especially north India and Syria) or to demonstrate his power (the Golden Horde and Anatolia).

Timur strengthened his power base by incorporating troops from outside the Chagatai *ulus* into his army, thus diluting the influence of the Turco-Mongol confederations of Transoxiana. At the same time, he kept them busy for long periods away from home, as for example with the attacks on Moghulistan in 1371/72 and on Chorasmia in 1372–73.[9] Despite this, Timur's position would remain uncertain until 1395. In the east, his borders were threatened by the Moghuls, who still lived as nomadic horse warriors; in response, he led six campaigns against them between 1371/72 and 1390.[10] And on his 2,300-kilometre-long northern border Timur had to fend off repeated attacks from his former protégé Toqtamish and his cavalry, undertaking six campaigns against him between 1385/86 and 1395.[11] At the same time, he waged several other wars to win booty or to punish rebels. In 1381, he compelled the submission of the Kartid dynasty that ruled Herat (1245–1383), and when these rose up two years later, Timur's son Miran Shah (1366–1408)

Wereshchagin, B., Turkestan. *Etyudy s natury* (St. Petersburg, 1874).

put down the rebellion and had towers built of the decapitated heads of the vanquished.[12] In the following winter of 1383–84, Timur laid waste to Sistan and captured Kandahar in southern Afghanistan; he then advanced on Azerbaijan and subjugated Soltaniyeh. In 1388, he defeated the Sufi dynasty of Chorasmia (*ca*. 1361–88) and destroyed the city of Gurganj for the second time since 1379.[13]

In 1388, Timur wreaked cruel vengeance on Isfahan, whose inhabitants had killed his collectors of tribute. The contemporary writer Ahmad Ibn Arabshah (1392–1450) reports that Timur ordered a general massacre of the population; and that when the frantic inhabitants of the surrounding villages brought him a host of young children in the hope that the sight of them would calm his rage and induce him to end the massacre, 'He made no reply and uttered no speech, but urged his horse into them [. . .] and likewise with him his troops and army [. . .] gave them [the infants] up to the horses' hooves and ground them beneath the horses' feet.'[14] According to Johannes Schiltberger (1380–after 1438) Timur had 7,000 children under seven years of age trampled to death in Isfahan.[15] Another contemporary, named Hafiz-i Abru (d. 1430), a historian in Timur's service, says that along half the length of the city walls of Isfahan he counted 28 towers of skulls consisting of some 1,500 skulls each, and that there were such towers also along the remainder of the wall, confirming the report that 70,000 inhabitants had been massacred in the city. Timur was equally brutal at Khosrowgerd (Sabzavar), killing similar numbers and building towers of their skulls, as well as having 2,000 men buried alive (fig. 201).[16]

In 1397, Timur turned to India, where a power struggle had raged in the sultanate of Delhi since the death of Firuz Shah Tughluq (r. 1351–88). He entrusted his grandson Pir Muhammad ibn Jahangir (*ca*. 1374–1407) with the conquest of Multan in the Punjab, and followed him there the next year; he then advanced on Delhi, killing 100,000 Indian prisoners shortly before his capture of the city, when he unleashed another slaughter and plundered everything of worth. As Khwandamir put it in his somewhat purple prose: 'The Timurids wielded their glistening swords and poured the Indians' blood into goblets like wine.'[17] In the winter of 1399/1400 Timur again attacked in the west, taking the cities of Aleppo, Sivas in central Anatolia (where he had 4,000 Armenian Christians buried alive[18]) and, early in 1401, Damascus. Though Timur granted safe passage to the historian Ibn Khaldun, who found himself in the besieged city, he otherwise lived up to his reputation as crueller than Genghis Khan. Ibn Arabshah and Ibn Khaldun both report that Timur massacred the population and thoroughly looted the city before setting it on fire. The flames did not spare the renowned Omayyad Mosque, dating from the eighth century, whose destruction both writers denounce. Ibn Khaldun wrote that 'This was an absolutely dastardly and abominable deed.'[19] The next victim of Timur's lust for destruction was Baghdad. Even though he had taken it without a struggle in 1393, on 9 July 1401 he razed it to the ground for having dared turn away his collectors of tribute. Ninety thousand men, women and children were massacred, when Timur celebrated the Muslim feast of Eid al-Adha – at which an animal is sacrificed in memory of Abraham's willingness to sacrifice his first-born son – 'by slaying Muslims and [thus] performed his sacrifice on them'. Ibn Arabshah further reports that he commanded every one of his soldiers to bring him the decapitated heads of two Baghdadis, and so built 120 towers of skulls.[20]

Timur's conquest of Syria and advance upon Sivas put him on a collision course with the Ottoman sultan Bayezid I (r. 1389–1402), whom he defeated near Ankara in the summer of 1402, thanks to superior tactics and the treachery of Bayezid's Kipchak soldiers. Surprised witnesses to Timur's victory were the two Castilian envoys Payo de Sotomayor and Hernán Sánchez de Palazuelos.[21] Timur kept the captured sultan in an iron cage, like a bird; he died within months. Timur also used a ruse to capture the commanders of the Kipchaks who had changed sides in the course of the battle, and deported them to the eastern frontier of his territory.[22] The real beneficiary of the defeat of the Muslim Bayezid by

To the left of Bibi Jawindi's mausoleum is the tomb of Baha Al-Halim, built in 1370, while to the right is that of the architect responsible for Bibi Jawindi's tomb. Heavy flooding of the River Chenab in 1817 swept away the north-eastern halves of all three mausolea. Photo: 2007.**

the Muslim Timur was the Christian Byzantine Empire, which by then consisted only of Constantinople, Thessaloniki and the Peloponnese. Bayezid had been besieging Constantinople since 1394, and in 1396, at Nicopolis, he had inflicted a catastrophic defeat on the Crusader army that had come to its relief, an army which included French forces under Burgundian command and others under King Sigismund of Hungary. Captured in battle and spared the ensuing massacre of prisoners only by his youth, the 16-year-old Bavarian squire Johannes Schiltberger would later report that the pride and indiscipline of the French knights were responsible for the disaster.[23] Bayezid was compelled to break off the siege in 1401, whereupon Constantinople (according to Clavijo's account) made overtures to Timur and pledged itself to use its fleet to prevent Bayezid from moving troops from the Balkans to Anatolia.[24] Following the Battle of Ankara in 1402, the Byzantine Emperor Manuel II (r. 1391–1425) confirmed his submission to Timur, who accepted it.[25] In retrospect, it is evident that Timur's victory at Ankara gave Constantinople a 50-year respite.[26]

After his victory over Bayezid, Timur launched his eighth attack on the Christian kingdom of Georgia in 1403. Although he had already ravaged Georgia seven times between 1386 and 1401 – not least because its rulers Bagrat V and Giorgi VII had not prevented Toqtamish from passing through on his way to Azerbaijan – neither he nor his son Miran Shah (who even exceeded his father in sadistic cruelty) had ever managed to completely subjugate the mountainous country.[27] In 1403, then, Timur devastated the capital Tbilisi,

systematically destroyed the churches and monasteries of central Georgia and massacred all civilians who had not managed to escape to the forests and mountains in time. Timur's cruelties in Georgia had a religious aspect that moved historian René Grousset to remark that 'To his ferocity, Tamerlane added a taste for religious murder. He killed from piety. He represents a synthesis, probably unprecedented in history, of Mongol barbarity and Muslim fanaticism.'[28] Yet he failed once again to achieve a decisive victory over Giorgi VII (r. as co-ruler 1369–93, in his own right 1393–1407), who had withdrawn to Imeretia and Abkhazia in western Georgia. He therefore had to accept a compromise: Giorgi recognised Timur as his overlord and paid him tribute, while Timur recognised Georgia as a Christian kingdom, withdrawing to Karabakh, where he spent the winter of 1403–4.[29] On returning to Samarkand that summer after a five-year absence, he convoked a great *kuriltai*, witnessed by the Castilian envoy Clavijo. At the close of the *kuriltai*, Timur announced a four-year campaign against China, probably provoked by the Chinese envoy's insolence in demanding that he pay China the tribute owing since 1396.[30] According to Schiltberger, Timur answered the ambassador that he would bring the tribute to the emperor personally, together with his army.[31] In late autumn 1404, Timur set out for Otrar, where in February 1405 he died, sparing China an invasion.[32]

Two European Eyewitnesses: Ruy González de Clavijo and Johannes Schiltberger

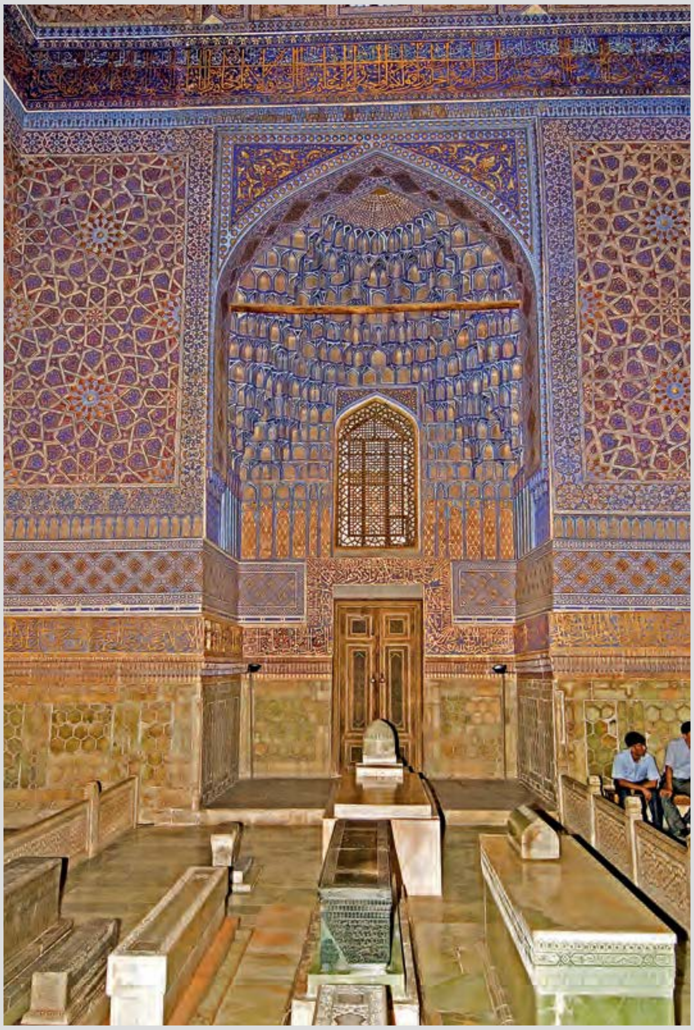
The eyewitness accounts of two Europeans offer unparalleled insight into events in Central Asia in the time of Timur. One is the account of Castilian envoy Ruy González de Clavijo (d. 1412), first published in 1582, the other the short history of Central Asia between 1396 and 1426 written by the Bavarian knight Johannes Schiltberger (1380–after 1438), once an enslaved prisoner of war among the Timurids, which was first published as a printed edition in Augsburg around 1460.

After the Ottoman Bayezid's defeat of the Franco-Hungarian army at Nicopolis, the prospect of the fall of Constantinople kept the Near East very much on the minds of Western rulers, among them King Henry III of Castile and León (r. 1390–1406), who wanted to get a clearer picture of recent events and more information about Bayezid's potential enemy, Timur. So he sent the two knights Payo de Sotomayor and Hernán Sánchez de Palazuelos on an embassy to Timur, who received them courteously in Ankara. After his victory over Sultan Bayezid Timur sent them back accompanied by his own ambassador Mohammad al-Kazi. King Henry's assessment was ambivalent: Timur had certainly inflicted a severe defeat on the Ottomans, who threatened Central Europe, but he seemed to be even more dangerous than Bayezid. It therefore seemed best to cultivate friendly relations with Timur and try to make him an ally. The king charged **Ruy González de Clavijo** with leading another embassy to Timur, which set off in 1403, together with al-Kazi, intending to meet the emir in Karabakh. But as they were sailing from Constantinople to Trebizond their ship ran into a fierce storm and was forced to take shelter in an Ottoman port, where Timur's ambassador only managed to avoid death at the hands of the Turks by dressing as a Christian.[33] The party had to return to Constantinople, and it was not until 20 March 1404 that they set sail again for Trebizond, whose emperor, Manuel III (r. 1390–1417), was paying tribute to both Timur and the Ottomans.[34]As

206. The Gur Emir Mausoleum in Samarkand, Uzbekistan, completed in 1404, was originally commissioned by Timur-e Lang for his grandson Muhammad Sultan. Later, he ordered that he should be buried with his grandson. Photo: 2004.

Timur had in the meantime left Karabakh, Clavijo had to follow him to Samarkand, where he arrived on 31 August. On his way, Clavijo met Timur's son Miran Shah, who had been governor of Azerbaijan between 1396 and 1399 but had been removed by Timur on account of his extreme cruelty and his bloodlust: 'Miran Meeza [Shah] did nothing himself, but he caused the grandest works in the world [in Tabriz and Soltaniyeh] to be destroyed.'[35]

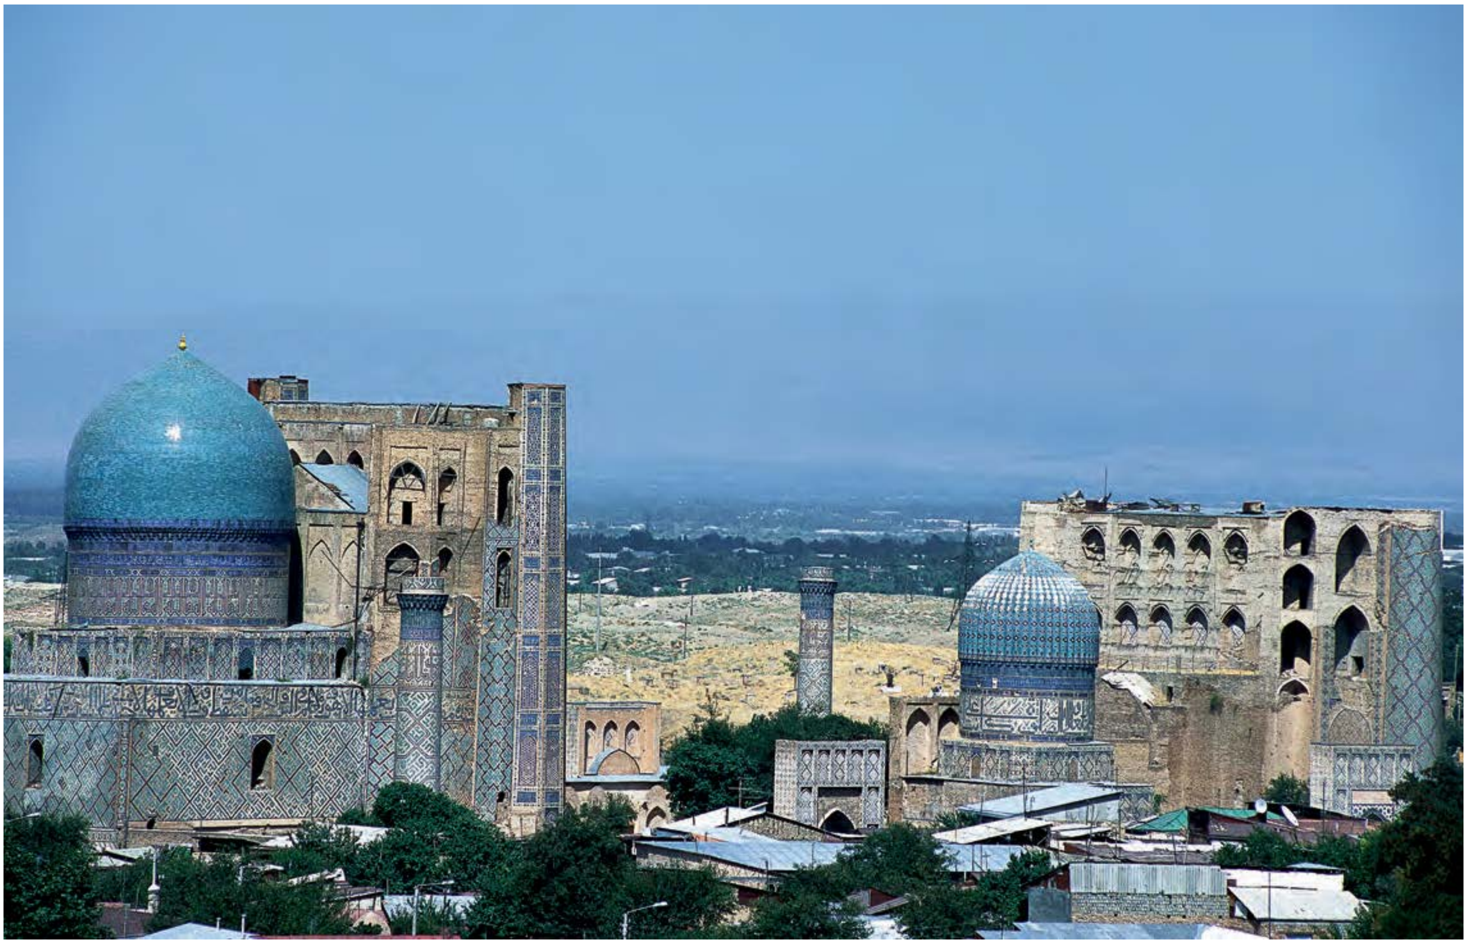
Despite representing a small and faraway land, Clavijo was seated in a higher position than the Chinese envoy at Timur's official reception for ambassadors, testimony to the tensions between the emir and China. At a later banquet, Timur had silver coins showered over the gathered ambassadors, a custom that Ibn Fadlan had already observed among the Oghuz in 922.[36] The feast that followed was accompanied by wine, and all guests were expected to get drunk, even though the private consumption of wine was forbidden in Samarkand. At another feast, to celebrate the marriage of Timur's ten-year-old grandson Ulugh Beg (1394–1449), Timur had several gallows erected and hanged two high officials who had abused their offices for their own ends. Two other officials who asked Timur to show leniency to their convicted colleagues, fining them instead, were promptly hanged as well.[37] Able to move freely in Samarkand, Clavijo noted the frantic building activity going on. To ensure the splendour of his new capital, he wrote, Timur had brought 150,000 artisans and artists by force from Iran, Iraq, Syria, Armenia, Georgia, Turkey and northern India.[38] The construction of monumental buildings was crucial for Timur – they were supposed to reflect his own greatness. An inscription on a wall of the palace of Ak Sarai in his home city of Kesh (figs. 173, 200) makes the point: 'If you have doubts about our grandeur, look at our edifice.'[39] Should a hall or portal not strike him as big enough, he would order it to be torn down and rebuilt, as was the case with his mausoleum in Kesh or the Gur Emir in Samarkand, which Timur had originally intended for his grandson Muhammad Sultan, killed at the Battle of Ankara (figs. 206–7). Clavijo reports: 'When the lord [Timur] arrived, he said the chapel [of the funerary mosque] was too low, so he ordered it to be pulled down, and rebuilt in ten days. They worked day and night, and he himself came twice to the city, to watch the progress.'[40] As Timur was already very old indeed by the standards of the time, building work could never go fast enough.



207. A cenotaph of dark green nephrite jade in the Gur Emir Mausoleum in Samarkand, Uzbekistan marks Timur-e Lang's last resting place, although his actual grave is in the crypt beneath. The block of jade was damaged by the Persian warlord Nadir Shah when he tried to steal it in 1740. Lying beside Timur are his grandson Muhammad Sultan, his spiritual teacher Mir Said Baraka, his sons Miran Shah and Shah Rukh, his grandson Ulugh Beg, two of the latter's sons and an unknown cavalry commander. Papier-mâché muqarnas, or honeycomb vaulting, reminiscent of stalactites in limestone caves, decorate the ivan-shaped inner niches. Photo: 2004.

Timur's megalomania also found expression in the Friday mosque of Samarkand, called the Bibi-Khanym Mosque (fig. 208). As Ahmed ibn Arabshah and Khwandamir report, Timur admired the marble mosques of northern India, and in 1399 he commanded the construction of such a mosque in Samarkand: 'The stone-cutters [of Delhi] were assigned to Temür's personal property [. . .] and taken to Samarkand to work on the congregational mosque that would be constructed there.'[41] Yet when Timur returned in the summer of 1404 he was displeased, as Clavijo witnessed: 'The mosque [. . .] seemed to us the noblest of all those we visited in the city of Samarqand, but no sooner had it been completed than he [Timur] began to find fault with its entrance gateway, which he now said was much too low and must forthwith be pulled down. Then the workmen began to dig pits to lay the new foundations, when in order that the piers might be rapidly rebuilt his Highness gave out that he himself would take charge to direct the labour for the one pier of the new gateway. [. . .] Now at this season Timur was already weak in health, he could no longer stand for long on his feet, or mount his horse, having always to be carried in a litter. It was therefore in his litter that every morning he had himself brought to the place, and he would stay there the best part of the day urging on the work. He would arrange for much meat to be cooked and brought, and then he would order them to throw portions of the same down to the workmen in the foundations, as though one should cast bones to dogs in a pit, [. . .] and at times would have coins thrown to the masons when especially they worked to his satisfaction. Thus the building went on day and night until at last a time came when it had perforce to stop [. . .] on account of the winter snows which began now constantly to fall.'[42] (fig. 222) Timur's haste and megalomania had dire consequences, however, for the foreign architects were as unfamiliar with the nature of the ground as they were with the danger of earthquake in Samarkand. The hurried construction led to problems of statics and the 44-metre-high cupola was vulnerable to earthquake and also too heavy for the supporting brick walls, so that it began to fall down after only a few years.[43] Clavijo left Samarkand on 21 November 1404, though the power struggle that broke out among Timur's successors on his death would detain him in Tabriz for six months.[44] Timur's death brought an end to Timurid expansion, rendering Clavijo's mission obsolete.

While Clavijo got to know Timur's realm only during the short time he spent there as an observant ambassador, **Johannes Schiltberger** lived in the Near East and Central Asia for 30 years, as a prisoner of war and slave soldier. Born in Bavaria in 1380, Schiltberger had accompanied the knight Leonhard Reichartinger as his squire when he joined the crusade against the Ottomans. On 25 September 1396, their army suffered a decisive defeat at Nicopolis, after John the Fearless, the leader of the Franco-Burgundian knights, refused to accept the battle plan of supreme commander King Sigismund of Hungary and charged thoughtlessly against the ranks of Ottoman infantry and bowmen. This opened up a gap between his knights and the Hungarian infantry that Bayezid was quick to exploit. Reichartinger was killed and the 16-year-old Schiltberger taken prisoner. His youth saved him from execution with the other 10,000 captured men, and he was assigned to serve one of Bayezid's sons, first as a foot-soldier and then as cavalryman. In 1398 he took part in the capture of the city of Sivas and was then captured by the Timurids at the Battle of Ankara. He would later lay the blame for Bayezid's defeat on the treachery of his Kipchak allies.[45] He now served Timur, and after his death, his son Shah Rukh. The latter then apparently sent troops to Iran – Schiltberger among them – to help his brother Miran Shah and his son Abu Bakr in their struggle with



208. The great Bibi-Khanym Friday Mosque in Samarkand, Uzbekistan, took from 1399 until 1405 to complete. However, earthquakes, technical miscalculations and building work carried out at breakneck speed caused stones to quickly fall from the inside of the dome. Photo: 2004.

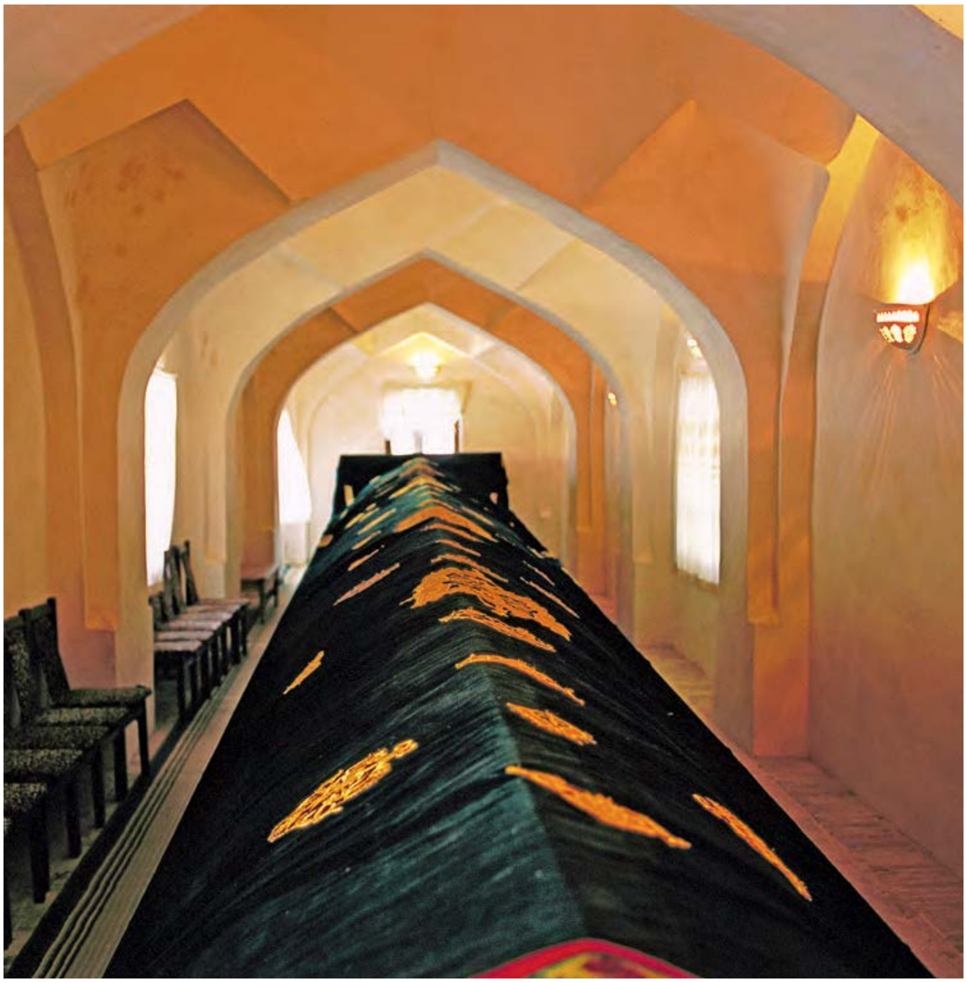
209. Two illustrations from Johannes Schiltberger's travel book written some time after 1427. The left-hand page shows Timur-e Lang invading Babylon (Baghdad); on the right, he appears as he is conquering India. Johannes Schiltberger. *Ein wunderbarliche und kurzweilige History,* (Frankfurt am Main, 1554), no page numbers shown.

the Turkmen Qara Yusuf of the Qara Qoyunlu confederation, who had defeated them at Nakhchivan in 1406. In 1408, however, Qara Yusuf defeated the Timurids once again and Miran Shah was taken prisoner and beheaded.[46]

Schiltberger remained in the service of Abu Bakr until 1412 or 1413. Prince Chokra of the Golden Horde lived at Abu Bakr's court at that time, enjoying the support of the warlord Edigü.[47] He took Schiltberger with him when he travelled north to join Edigü in southern Siberia. In his account, Schiltberger tells of the khans – Pulad, Temür, Jalal al-Din, Karim Berdi and Kebek – who rapidly succeeded each other between 1410 and 1414, and describes how Edigü set his new master Chokra (r. 1414–17) on the throne: 'When [in Great Tartary] they choose a king [khan], they take him and seat him on white felt, and raise him in it three times [. . .] and seat him on a throne.'[48] Schiltberger also tells of the sledge dogs used in Siberia in winter, and how a Tatar woman came with 4,000 women to Edigü and Chokra to ask their help in avenging the death of her husband. His killer was made prisoner and brought to her, and she ordered him to kneel, and cut off his head with one blow.[49] According to Schiltberger, Chokra was the last of Edigü's puppet khans, since a certain Machmet (Ulugh Muhammad, r. 1419–21) drove out both of them and succeeded in making himself khan after a few more battles.[50] In the next stage of his odyssey Schiltberger fled with a counsellor of Chokra's named Manchuk to Cherkessia, whose inhabitants were said to sell their own and other people's children into slavery,[51] and later to Mingrelia in western Georgia. In 1426, Schiltberger and four other enslaved Christians were finally able to escape on a Genoan ship that took them to Constantinople. There the widely travelled Schiltberger was received and questioned by the emperor and the patriarch, before putting to sea again and finally returning to his homeland of Bavaria via Wallachia and Poland.



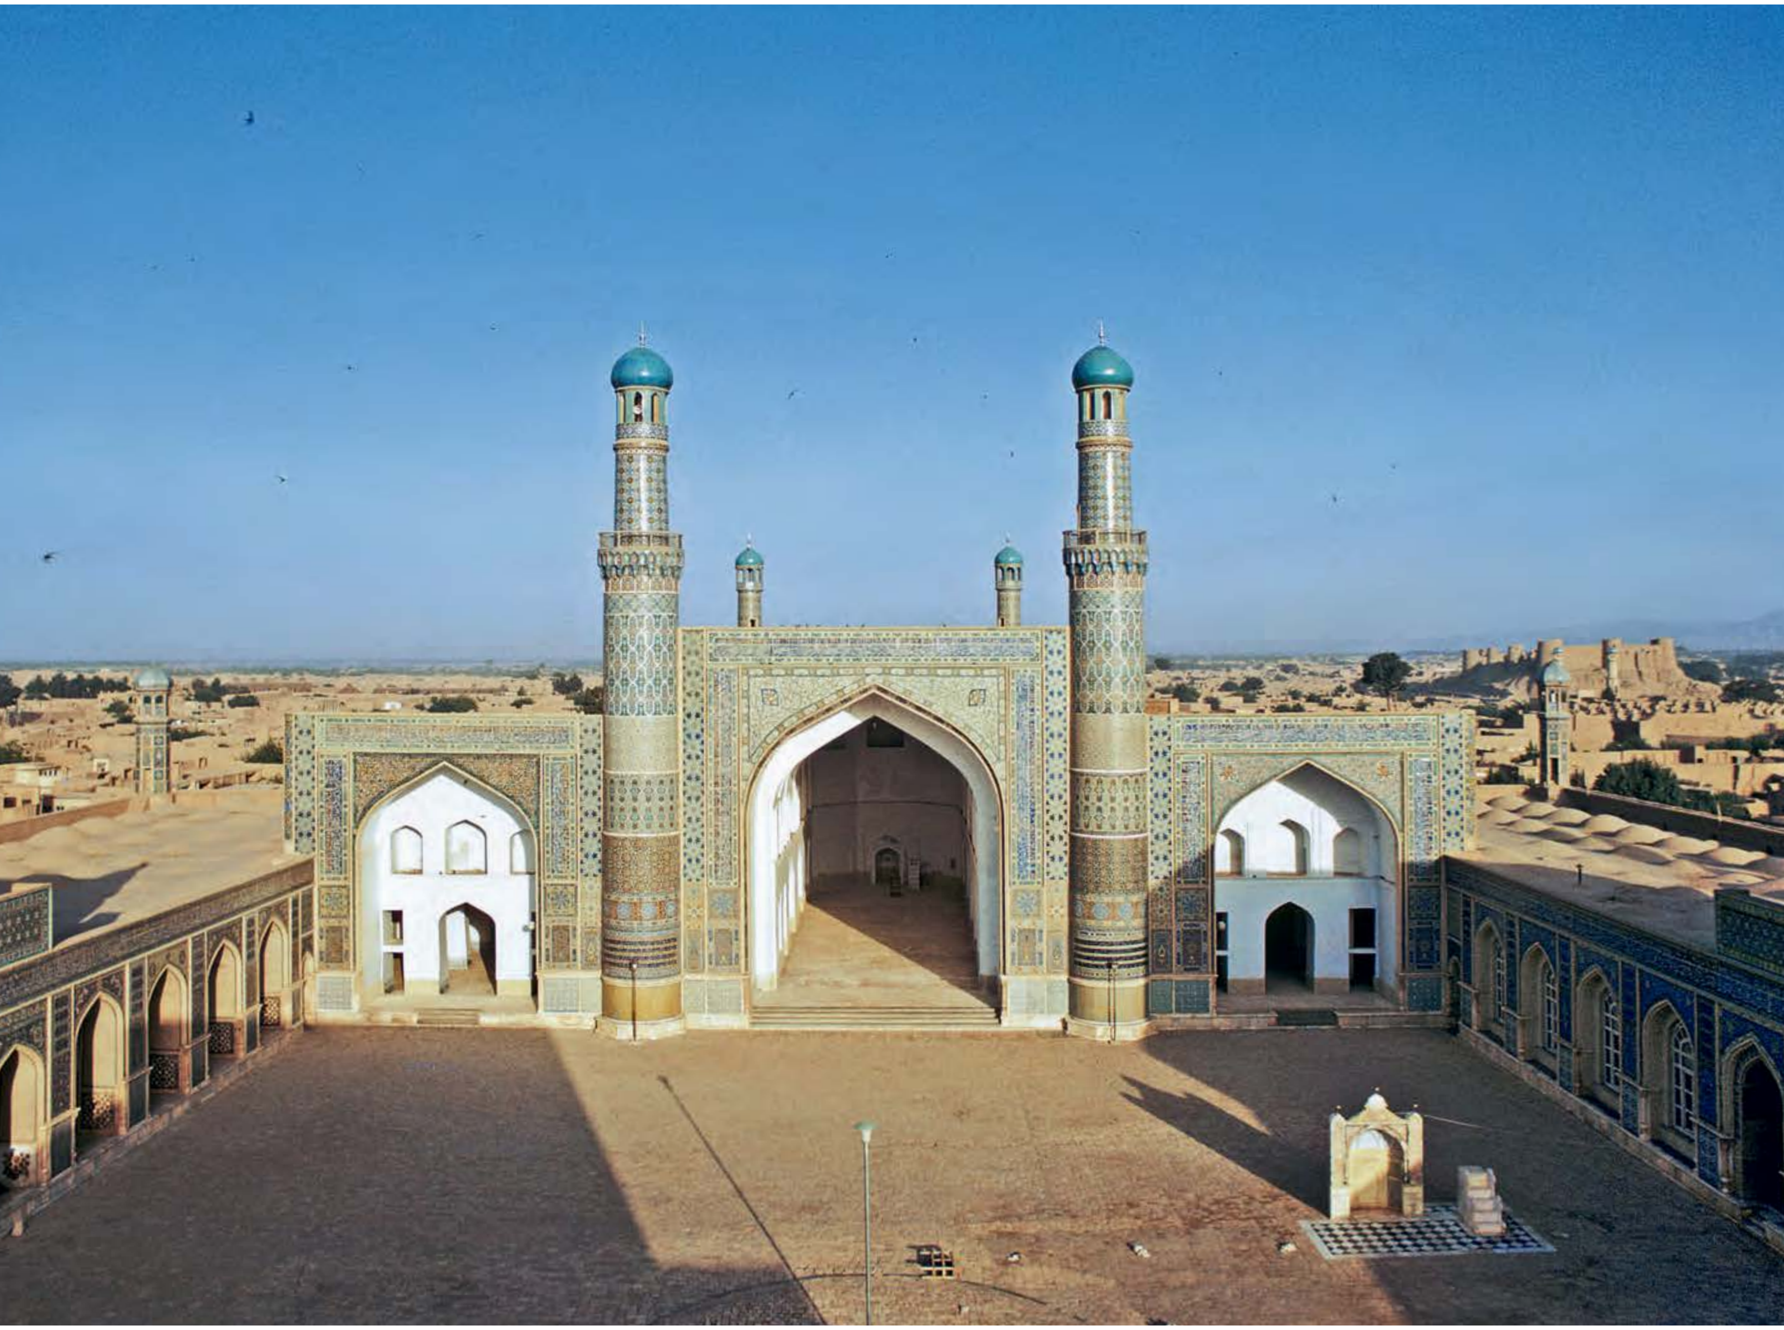
210. The tomb of the Prophet Daniel, known in Islam as Daniyor, was built in Samarkand, Uzbekistan, at the end of the fourteenth century and completely restored in the twentieth. Legend has it that after one of his campaigns in western Asia, Timur-e Lang stole Daniel's mortal remains from his tomb in Susa, in the south-west of Iran, and brought them to Samarkand. The legend goes on to tell how the dead prophet, enraged at his remains being removed, continued to grow for decades to follow, which is why his tomb is now 18 metres long. Photo: 2004.

2. Timur's Successors: the Timurids

After Muhammad Sultan's death, Timur had appointed his grandson **Pir Muhammad ibn Jahangir** (r. in Kandahar 1405–7) to succeed him, passing over his still-living sons Miran Shah and Shah Rukh. But when he died his realm instantly fell apart into four contending regions, all afflicted by their own internal power struggles. Timur's failure to set up durable administrative structures or to forge a consensus regarding the succession among his descendants backfired badly. Only Khorasan, Sistan and Mazandaran remained undisputed, secure in the hands of Shah Rukh, who at first played a waiting game. In Azerbaijan, Miran Shah and his sons Abu Bakr and Omar all tried to carve out territories of their own and fend off the Qara Qoyunlu, while in Fars three sons of Omar Sheykh fought with each other. In Mawarannahr, Timur's grandson Miran Shah's son **Khalil Sultan** (r. in Samarkand 1405–9, d. 1411), the only relative to accompany Timur on the Chinese expedition, had succeeded in winning over the army on his grandfather's death and taking possession of Samarkand.[52] Pir Muhammad, who was governor of Kandahar, failed in his attack on Samarkand in February 1406 and was murdered by his own vizier a year later. In April 1408, Miran Shah and his son Abu Bakr were decisively defeated by Qara Yusuf, and the Timurids were finally driven out of Azerbaijan. The power struggle now came to a head, between Shah Rukh and Khalil Sultan, who had squandered his grandfather's treasury. Thanks to some clever diplomacy, **Shah Rukh Mirza**[53] (viceroy in Khorasan 1405–9, r. 1409–47) was the winner, and on 13 May 1409 he was able to enter Samarkand without a struggle. Although his father Timur had not thought him capable of ruling, it was he who had emerged the victor in the four-year-long battle for supremacy. He appointed his son Mohammad Tariq ibn Shah Rukh, called **Ulugh Beg** (viceroy of Mawarannahr 1409–47, r. 1447–49) to govern Mawarannahr from Samarkand and then returned to Herat as the acknowledged ruler over what remained of the Timurid legacy, making that city the capital of the Timurid Empire.[54]

Shah Rukh bore little resemblance to Timur as a conqueror, but he proved to be a skilful manager of his legacy, and did not hesitate to take the military initiative when necessary. In 1413 he drove out the Jochids from Chorasmia which they had invaded in 1405/6, then consolidated his rule with campaigns against Kerman (1416) and Kabul (1417).[55] Now Shah Rukh could turn his attention to the west, where the ambitious Turkmen dynasty of the Qara Qoyunlu (*ca.* 1380–1468), whose name means 'black sheep' and who now controlled Azerbaijan and Baghdad, represented a growing threat. He therefore undertook three campaigns in Azerbaijan – the first in 1420/21, when he expelled Qara Iskander Qoyunlu (r. with interruptions *ca.* 1420–36, d. 1437) from Azerbaijan and Armenia. As soon as Shah Rukh had returned to Herat, however, Qara Iskander embarked on the reconquest of Azerbaijan, prompting Shah Rukh's second campaign in 1429. Yet Qara Iskander returned to Tabriz two years later, killing the shah's brother, the Timurid governor Abu Said, whereupon Shah Rukh came back again with his army. In a shrewd move, in 1436 he appointed Qara Iskander's brother and rival Jahan Shah (r. 1436–67) as governor of Azerbaijan and ruler of the Qara Qoyunlu, who would remain the shah's vassals until his death.[56] Unlike his father, Shah Rukh maintained good relations with China. An embassy to the Ming emperor Yongle nevertheless almost provoked a serious crisis when the horse Shah Rukh had sent as a gift threw his new master, the emperor. In his rage, Yongle ordered that the seven Timurid envoys be seized and executed, and it was only when two imperial counsellors reminded him of the disagreeable consequences – the killing of envoys was a *casus belli* among the Genghisids and Timurids – that he countermanded his instructions and let the envoys go free.[57] Shah Rukh died at Rayy in March 1447, while on a campaign against his rebellious grandson Sultan Mohammad bin Baysunghur.[58]

211. The Timurid necropolis Shah-i Zinda – the name means 'living Shah' – to the north-east of Samarkand, Uzbekistan. On the site of an older mausoleum, Timur-e Lang commissioned the creation of a necropolis to hold his relatives and high officials. On the right of the picture is the Kasi-sade Rumi mausoleum built in 1435, while on the left are a complex of four mausoleums, with those of Amir-sade and Shadi Mulk Aka in the foreground and the Emir Husain and Shirin Bika Aka mausoleums in the background, Photo: 2004.

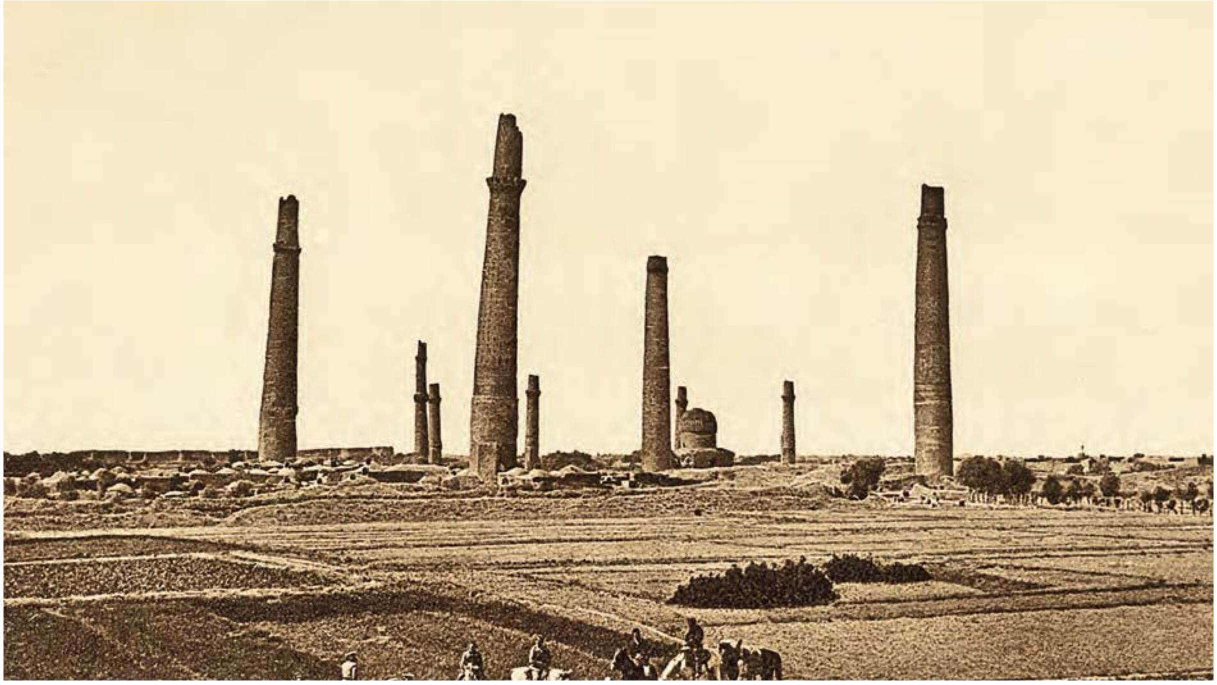


212. Originally built in 1200–01 during the Ghurid era and then destroyed by Timur-e Lang, the Friday Mosque in Herat, Afghanistan was rebuilt by Shah Rukh between 1404 and 1446. Photo: 1970s.

Shah Rukh's son and viceroy Ulugh Beg was a highly gifted mathematician and astronomer, who built a 48-metre-diameter observatory in Samarkand in 1428/29.[59] Before that, in 1417–21, he had a madrasa built on today's Registan Square (fig. 217), where mathematics and astronomy were taught. Khwandamir records: 'In AH 824 [1421] the construction of a sublime madrassa and khanaqah ordered by that peerless prince was completed.'[60] In military matters Ulugh Beg was less gifted, for in 1426, and against the express wishes of his father, he attacked Urus Khan's grandson Baraq at Sighnaq on the lower Syr Darya, only to suffer a crushing defeat the following year.[61] On Shah Rukh's death, just as after Timur's, a power struggle broke out among his descendants that led to both fratricide and patricide. Ulugh Beg (r. 1447–49) considered himself the legitimate heir, but Shah Rukh's widow Gauhar Shad (d. 1457) favoured her grandson Ala al-Daula ibn Baysunghur. Ala al-Daula was a son of Ulugh Beg's brother Baysunghur (1397–1433), who had been a first-class calligrapher and a patron of art and architecture.[62] For now, the other princes bided their time. Gauhar Shad's intrigues came to nothing, however, for in the spring of 1448, Ulugh Beg, who had been able to hold his own in Samarkand, and his ambitious son Abd al-Latif (*ca.* 1420–50) defeated Ala al-Daula at the Battle of Tarnab, near Herat.[63] But then things started to turn against Ulugh Beg, for the Uzbek Abdu'l Khayr took advantage of Ulugh Beg's absence from Samarkand to pillage Transoxiana.[64] As Ulugh Beg hurried back, he was attacked and defeated by Ala al-Daula's half-brother and then suffered badly in another attack, this time by the Uzbeks, while crossing the Oxus.[65] Now, angered by what he saw as his father's lack of regard for him, Ulugh Beg's son **Abd al-Latif** (r. 1449–50) took advantage of his evident military weakness, rose in rebellion and marched on Samarkand, where he defeated his father, and in October 1449 had him murdered, two days after the murder of his brother Abdu'l Aziz. Six months later this murderer of his father and brother was himself killed by discontented military commanders.[66]

Abd al-Latif was succeeded by Shah Rukh's grandson **Abdallah ibn Ibrahim** (r. 1450–51), who in June 1451 was defeated and afterwards killed by **Abu Said** (r. 1451–69, from 1459 also r. in Herat), a

213. Brass celestial globe with silver inlays dating from the Timurid era. An inscription near the south pole states that the placement of the stars was based on calculations made in AH 834 (1430/31 CE). The British Museum, London, no. 1896, 0323.1.



214. Minarets from what was once a huge *musalla* – or prayer hall complex – commissioned by Shah Rukh's wife Gauhar Shad between 1417 and 1438 in Herat, Afghanistan. Only nine minarets remained after Emir Abdur Rahman (r. 1880–1901) and British officers ordered that the prayer hall and the madrasa be demolished to leave the field of fire clear should the Russians target Herat, following their attack on the Panjdeh Oasis on 30 March 1885. As tensions rose fast between Russia and Afghanistan's protector British India, the Russians were expected to strike Herat. In the words of Colonel Thomas H. Holdich, 'we wanted a clear space, smooth and regular, across which not a rabbit might travel without being duly saluted by the garrison.'[37] Photo: 1915–16. Oskar von Niedermayer, *Afghanistan* (Leipzig, 1924), pl. 157.

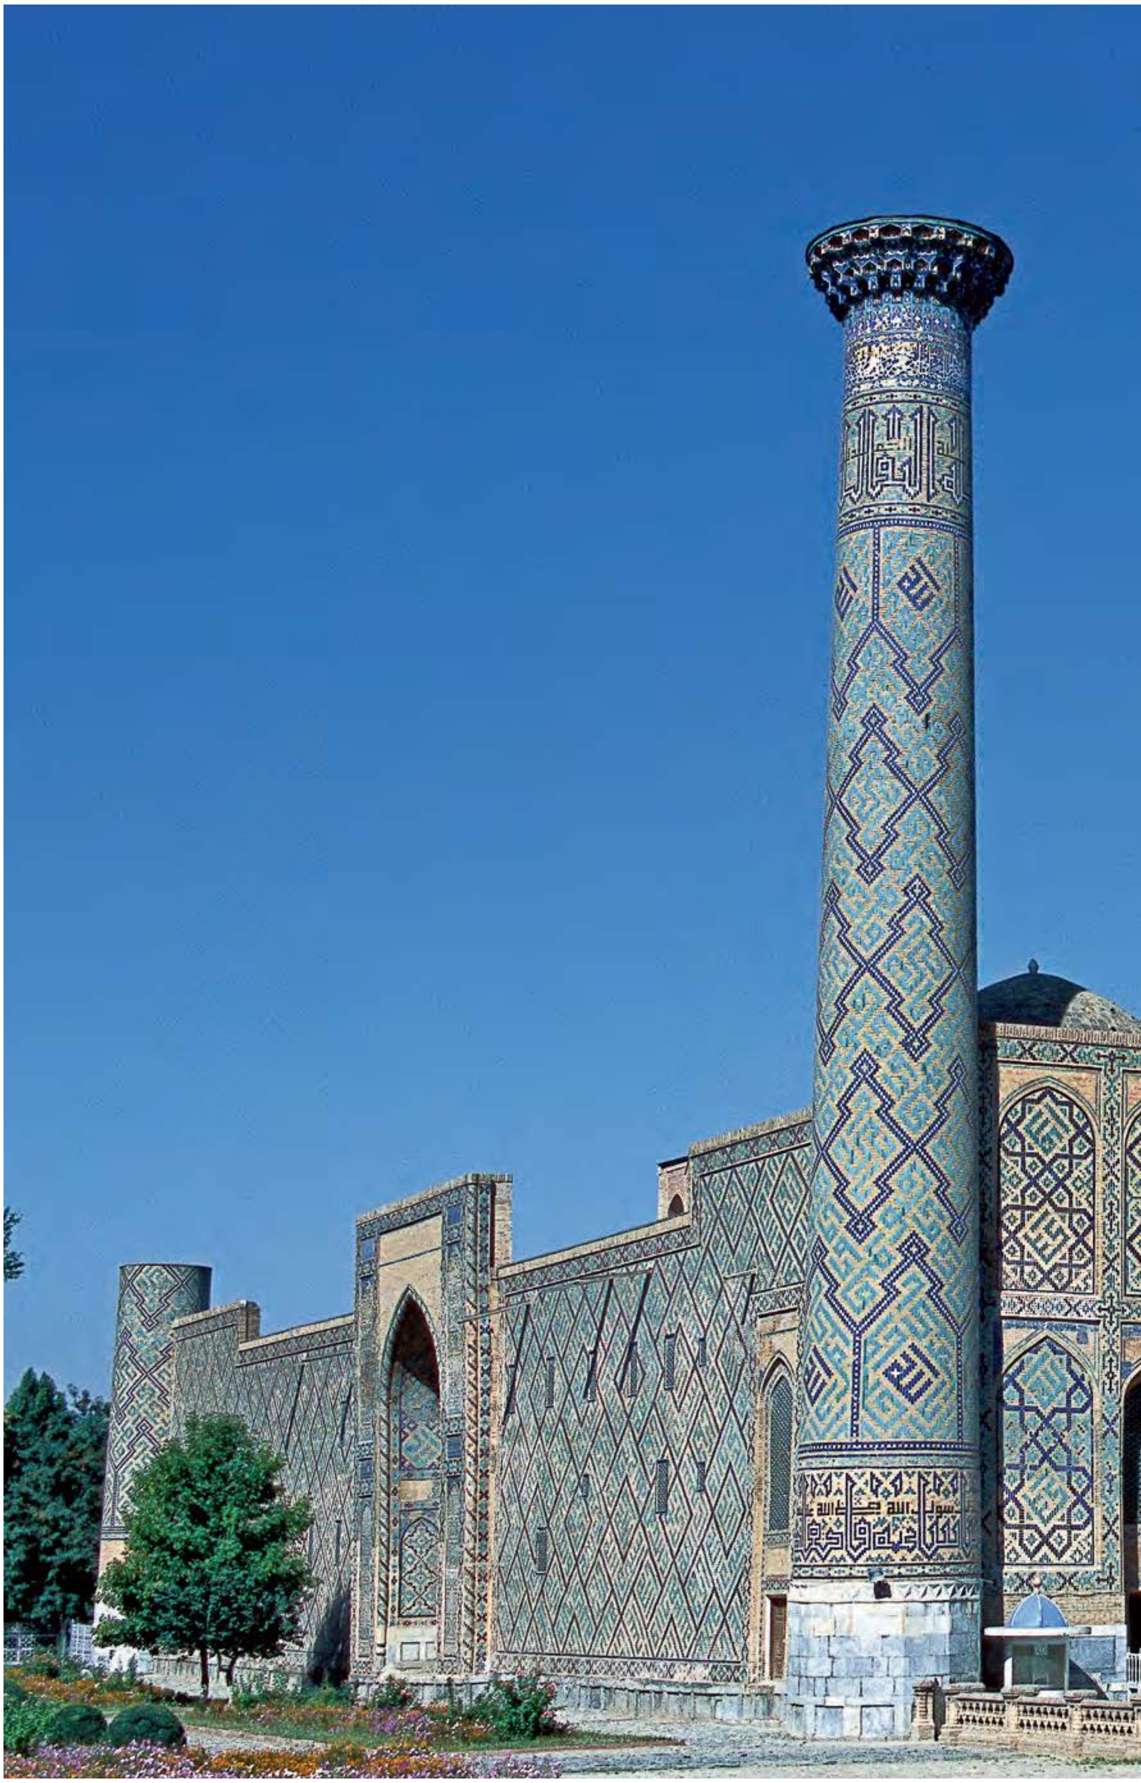
grandson of Miran Shah's, who was assisted by the Uzbek forces of Abdu'l Khayr. At the same time, **Abu'l Qasim Babur** (r. in Herat 1449–57) took advantage of the power vacuum in Herat, taking control of Khorasan in 1449; a year later, though, he was attacked and defeated by his brother, Sultan Mohammad bin Baysunghur of Fars, and was compelled to give up certain territories to him. But when Sultan Muhammad returned to the attack in January 1452, it was Babur who emerged victorious; he took his brother prisoner and had him beheaded.[67] Though Babur was then able to subjugate Shiraz, he quickly found himself exposed to the attacks of the Qara Qoyunlu and so returned to Herat. By the autumn of 1452, the Turkmen Qara Qoyunlu had conquered much of Mesopotamia, and Persia except for Abarkuh and Kerman. In 1454, Babur attempted without success to capture Samarkand, after which he made his peace with Abu Said and accepted the Oxus as the border.[68] On Babur's death, he was succeeded by his minor son **Mahmud ibn Babur** (r. 1457), rapidly followed by **Ibrahim ibn Ala al-Daula** (r. 1457–59). But Abu Said soon marched on Herat and had Gauhar Shad put to death. Failing to overcome the resistance of the citadel, Abu Said then withdrew to Balkh. In the summer of 1458 Jahan Shah of the Qara Qoyunlu advanced as far as Herat and forced Ibrahim to flee. But Jahan Shah had to turn back soon because of a revolt by his son Hasan Ali and also because Abu Said was marching on Tabriz. Now Abu Said could finally take Herat.[69] Ibrahim Ala al-Daula tried to recuperate Herat but in March 1459 he lost the Battle of Sarakhs and the victorious Abu Said was able to consolidate his rule, though he found himself obliged to ward off attacks by Uzbeks from the north and Moghuls from the east.

Abu Said had never given up his ambition to reconquer the western half of his great-uncle Shah Rukh's realm, which he had lost to the Qara Qoyunlu, and to reunite it with the key zones of Timur's empire – Mawarannahr, Khorasan and Azerbaijan.



217. The Ulugh Beg madrasa on Registan Square in Samarkand, Uzbekistan, built between 1417 and 1421. Tradition has it that Ulugh Beg himself taught astronomy here. The unusually large madrasa was the prototype of the Shir Dor Mosque, built between 1611 and 1636, which stands opposite. As the historian Khwandamir (1475–1535) reported, the madrasa was used as the headquarters of Zahir al-Din Mohammed Babur (r. in Samarkand 1497, 1500/01, 1511/12), the last Timurid to reside in the city, during the four-month siege in 1501 by the Uzbek leader Muhammad Khan Shaibani. Babur, Khwandamir tells us, 'took up residence in Mirza Ulughbeg's madrasa in the middle of the city in order to be equidistant from all the city gates and towers. [. . .] Babur pitched his tent on the roof of the madrasa, and his retinue chose their quarters in the chambers.'[38] Photo: 2004.

When he learned that Jahan Shah had died in late 1467, fallen in battle against Uzun Hasan, ruler of the rival tribal confederation of the Aq Qoyunlu ('white sheep'), he immediately embarked on an expedition to Azerbaijan. But his departure was hurried and since he neglected to ensure effective lines of supply, his army in Azerbaijan suffered shortages over the winter of 1468/69, leading to many desertions. When Abu Said met the Aq Qoyunlu on 5 February 1469 with only a small number of weakened and demoralised troops he was defeated and captured. Uzun Hasan handed over the prisoner to his Timurid ally Yadgar Muhammad, a grandson of Baysunghur's, who had Abu Said beheaded.[70] This defeat was decisive for the fate of the Timurids, for it would accelerate the political disintegration of their territories. **Sultan Husayn Bayqara** (r. 1469–1506) took power in Herat, while Abu Said's four sons shared Mawarannahr and eastern Afghanistan between them: **Ulugh Beg Kabuli** (r. 1469–1502) ruled in Kabul and Ghazna, **Sultan Mahmud** (r. 1469–94) in Balkh and Chaganiyan, **Umar Shaykh** (r. 1469–94) in Fergana and **Sultan Ahmad** (r. 1469–94) in Samarkand and Bokhara; the last had to share power with Khwaja Ubaydullah Ahrar (1404–90), the head of the Naqshbandi order of Sufis established by Baha al-Din Naqshband (1318–89), who had lived near Bukhara. The head of the order had already gained great influence over Abu Said and used his position to accumulate immense wealth and become the largest landowner in Mawarannahr.[71] This last generation of Timurid rulers contented themselves with securing their relatively small territories, and this political quiescence enabled the rise of the Uzbeks in the north-east and the expansion of the Safavids in the west.[72]

On Sultan Ahmad's death, his brother **Mahmud** (r. 1494–95), who had ruled northern Afghanistan, took power in Samarkand. His own death a short time later left a power vacuum that enabled the Timurid **Zahir al-Din Mohammed Babur** (r. in Fergana 1494–97, in Samarkand 1497, 1500/01, 1511/12), who would later found the Mughal dynasty in northern India, to capture the city. Although he took it three times, he was never able to hold it: in 1497 a rebellion in Fergana forced him to withdraw, and in 1501 and 1512 he was driven out by the Uzbeks, so that the Timurids lost Mawarannahr for good.[73]

3. Timurid Art and Architecture

The Timurids encouraged two very different types of art: monumental architecture and finely detailed manuscript illumination and illustration. Both drew on the Turco-Persian culture of Central Asia, which took a somewhat eclectic turn under the Timurids. The many different developments in Turco-Persian architecture and manuscript illumination were the consequence of the strategy adopted by the most important Timurid patrons – Timur, Shah Rukh and Ulugh Beg – of inviting or compelling the best architects, artists and artisans to work in their capitals. In architecture, Timur-e Lang sought to make his own greatness visible to the whole world through the rapid construction of awe-inspiring buildings with massive portals and majestic domes. Samarkand's Friday mosque (fig. 208) succeeds in synthesising two architectural styles, on the one hand taking inspiration from Oljeitu's now vanished Friday mosque in Soltaniyeh,[74] and on the other adopting elements from north Indian mosque architecture. As already described above, Timur admired the mosques of north India and deported stonemasons and other artisans from Delhi to Mawarannahr to work for him.[75] By getting architects from Soltaniyeh, Tabriz, Shiraz and Isfahan to carry out most of their ambitious and prestigious projects, Timur, Shah Rukh and Ulugh Beg brought about an impressive revitalisation of the architecture of the Il-Khanids and Muzaffarids, which in Central Asia was now enriched with Indian elements.[76] Typical features of Timurid architecture are, externally, the extensive decoration of the brick walls with polychrome mosaic-faience tiles, and internally the decoration of the underside of the domes with moulded and gilded papier-mâché as well as the use of stalactite-like *muqarnas* (ornamental vaulting) to complete the niches and the squinches that bridge the angle between the square ground plan and the dome.[77] Timur's monumental palace at Kesh (figs. 173, 200) and his Friday mosque in Samarkand (fig. 208) lie in ruins today, but the Gur Emir with its high double dome (figs. 206-7) and the mausoleum for the Sufi master Ahmed Yasawi (1094–1166) built in Yasi (today's city of Turkestan in Kazakhstan) in 1396–97 by the Shirazi architect Khwaja Hasan (figs. 57, 220) are still in a good state of preservation,[78] as are the little mausoleums of the necropolis of Shah-i Zinda in Samarkand (fig. 211).

Shah Rukh and his wife Gauhar Shad, who both commissioned mosques and madrasas in Herat and Mashhad, Ulugh Beg in Samarkand and Sultan Husayn Bayqara in Herat all continued Timur's support for monumental architecture, though without the

The work was carried out in 1396/97 by the Persian architect Khwaja Hasan, who together with other Persian artists and craftsmen, was abducted and taken to Transoxania by Amir Timur after he captured Shiraz in 1393. Photo: 2005.

latter's megalomania. The most outstanding examples of this second generation of Timurid architecture were Ulugh Beg's madrasas in Samarkand (fig. 217) and Bukhara (fig. 218), the Kök Gumbaz Mosque in Shahr-i Sabz (built 1435–36, fig. 216), the Gauhar Shad Mosque in the Imam Reza complex in Mashhad (built 1416–18, fig. 5), and the madrasa and *musalla* (prayer hall) in Herat (built between 1417 and 1438; figs. 214–15). The three monumental buildings in Mashhad and Herat were the work of architect Qavam al-Din (d. 1438) from Shiraz; unfortunately, the last two were completely destroyed in 1885 after a Russian attack on the oasis of Pandjeh, only 80 kilometres north of Herat, because the British advisors inspecting Herat's defences feared that they might offer cover to the advancing Russians should they lay siege to the city (which they did not).[79] In 1481, Sultan Husayn Bayqara finally had the Blue Mosque of Mazar-e Sharif (fig. 6) rebuilt after its destruction by Genghis Khan; it was first built under the Seljuk Sanjar Shah in 1136. A noteworthy example of Timurid chinoiserie, also to be found in manuscript illumination, could be admired on the mosque at Anau in southern Turkmenistan, built under Abu'l Qasim Babur in 1455–56 (fig. 221): the faience mosaic on the tympanum of the main arch of the portal, which was destroyed by an earthquake in 1948, featured two Chinese-looking black and white dragons on a blue background, their serpentine bodies facing each other.[80]

The other art form encouraged by the Timurids was manuscript illumination, which flourished with the schools of Samarkand, Herat and Shiraz (figs. figs. 222–23). Timur-e Lang's successors saw illuminated manuscripts as a way of proclaiming that they were no longer uncultured Turco-Mongol conquerors but sophisticated representatives of Iranian Muslim culture; individual princes like Giyath al-Din Baysunghur were themselves accomplished calligraphers. Themes were dictated by the books to be illustrated, the great epics of the day. The text would generally be rendered in the elegant *nastaliq* script, which developed in Iran in the late fourteenth century and quickly spread to Central Asia. Since the motifs were determined by the text, Timurid miniature painting usually represented standardised scenes and sought artistic accomplishment above all in refinement. Painting had wider scope in its subject matter when it accompanied poetry and in those works not created as illustrations to books, whether as individual paintings or drawings or as part of an album.[81] In these more free-standing

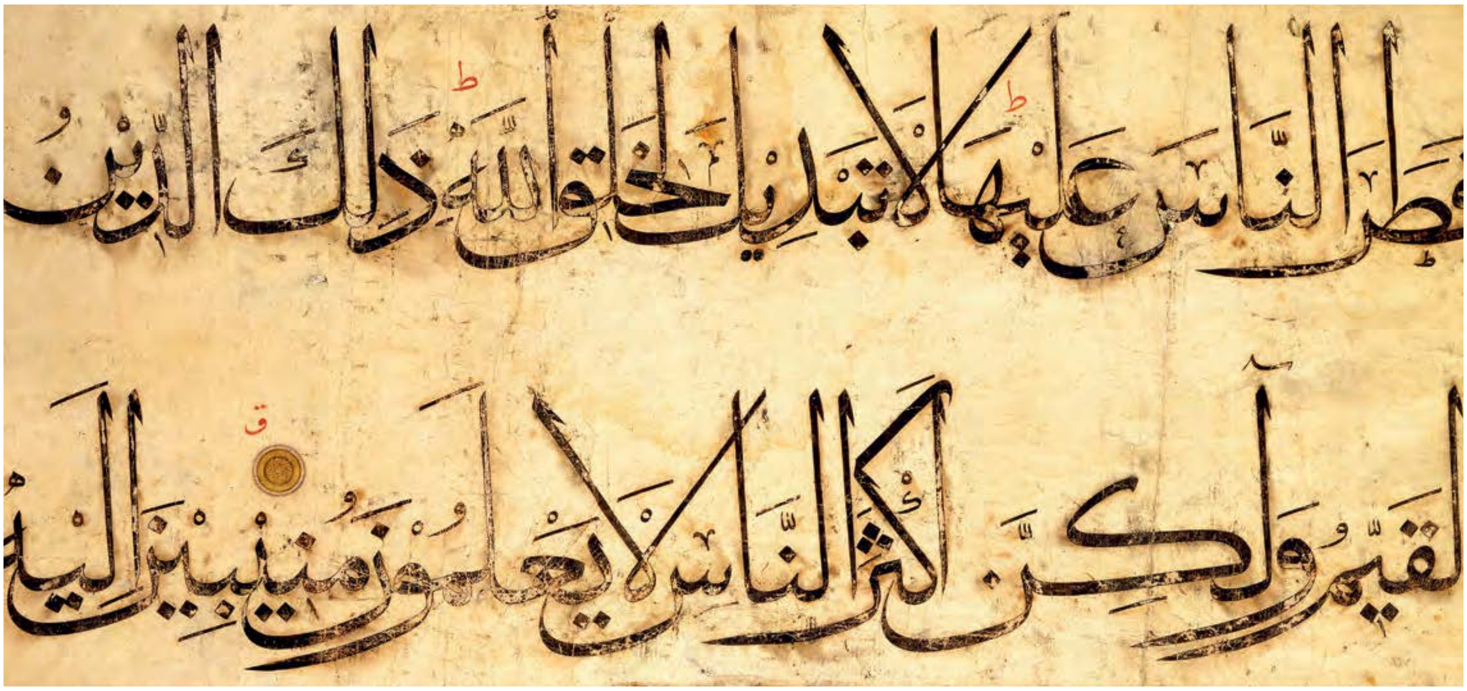
222. Building the great Friday Mosque of Samarkand in 1399–1405. Illustration from the *Zafar Nameh,* or 'Book of Victory', written for Sultan Husayn Bayqara (r. in Herat 1469–1506) around 1480. The work is attributed to the famous painter Kamal al-Din Bihzad (1450–1535). The John Work Garrett Library, The Sheridan Libraries, Johns Hopkins University, Baltimore, USA. Folio 359v.

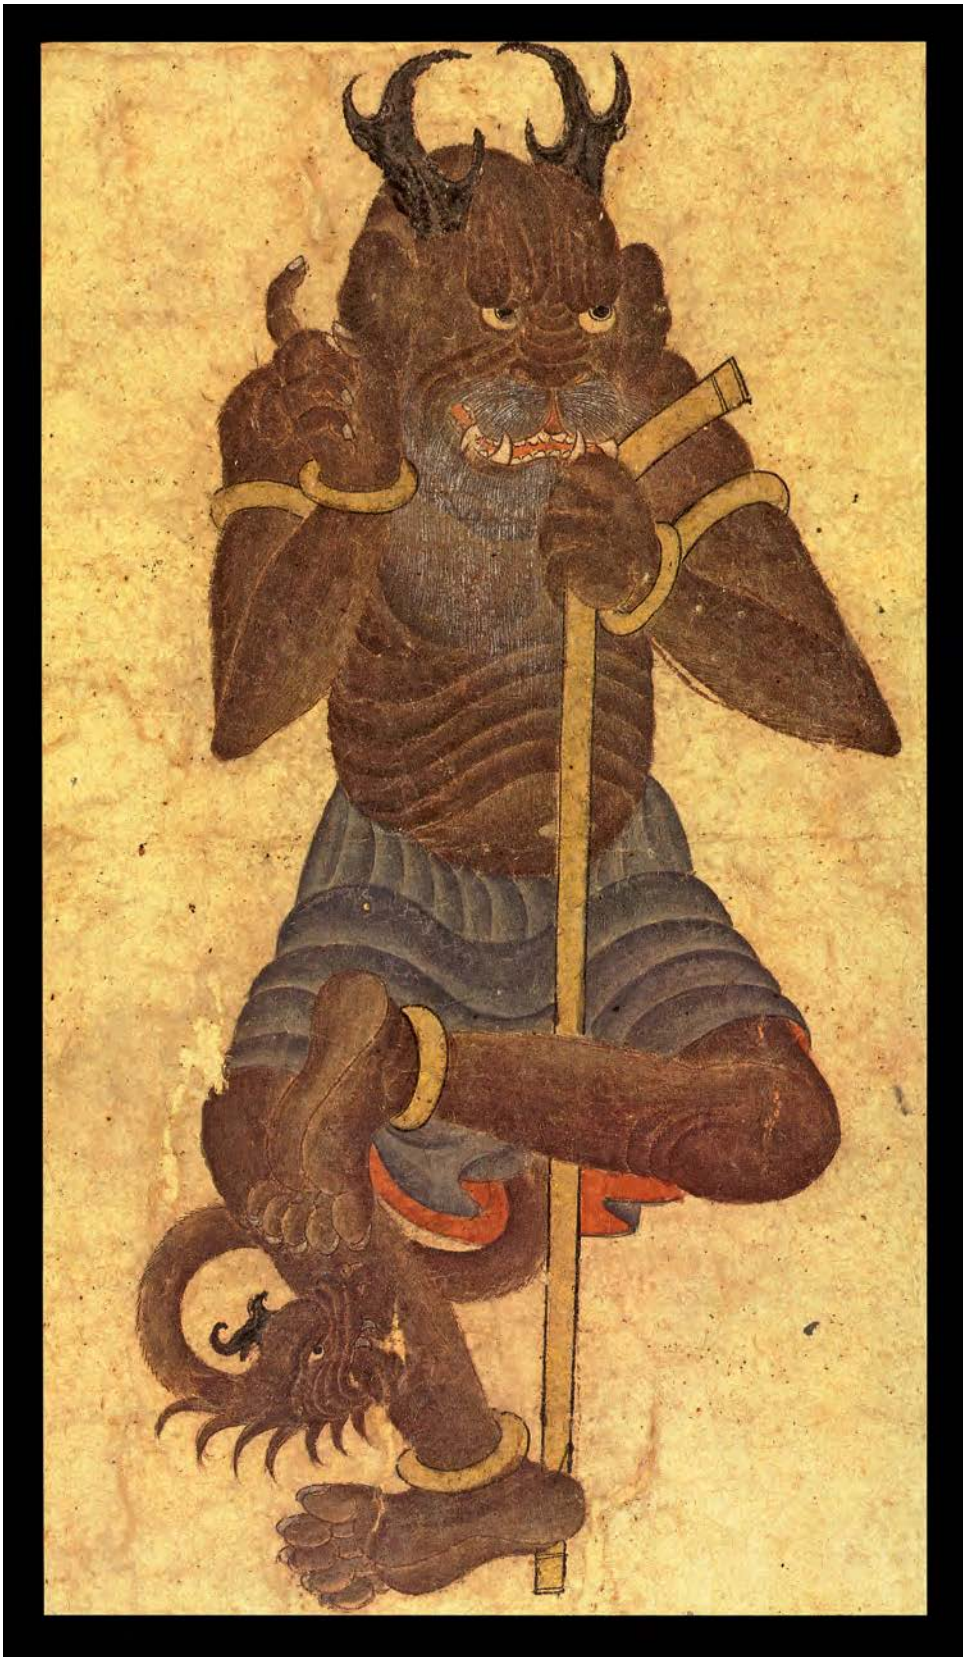


223. Section of a leaf written in Jalil Muhaqqaq, from the largest Qur'an ever produced, published in Samarkand, Uzbekistan, *ca.* 1405. Each paper leaf had seven lines and measured about 222 x 155 centimetres. The David Collection, Copenhagen. Inv. no. 20/1987.

works, which in later Timurid painting increasingly feature scenes of everyday life, we find more use of Chinese elements, greater freedom of line, and an enthusiasm for personal experiment. The introduction of these Chinese elements, such as dragons, phoenixes, *qilin* (mythical creatures), cranes, ducks, stylised clouds and curious rock formations, was encouraged by the more relaxed relationship between Shah Rukh and the Chinese court in the years until around 1425, which found expression in the exchange of commercial and diplomatic missions.[82]

Two particular examples of Chinese influence on miniature painting are the Timurid manuscripts on paper which depict the Prophet Muhammad's night journey and ascent to the heavens. These are the *Miraj Nameh* produced for Shah Rukh in 1436/37, and its copy in the *Nahj al-Faradis* commissioned by Sultan Abu Said in 1465/66. Based on surahs 17:1 and 53:6–18 and some hadiths, the night journey was codified by the Arab historian Ibn Ishaq (d. 768) and the Central Asian scholars al-Bukhari (d. 870) and al-Tabari (d. 923). Each of these Timurid manuscripts contains two illustrations that clearly show the influence of China and Gansu. One is a depiction of an angel of fire and snow, seated cross-legged like a Buddha,[83] the other a 70-headed angel that strongly recalls depictions of the many-headed Bodhisatva Avalokiteshvara (fig. 25).[84] The source of this Buddhist influence was probably Shah Rukh's embassy sent to China's Yongle Emperor between 1419 and 1422: it included not only the Central Asian Bakhshi Malik, principal author of Shah Rukh's *Miraj Nameh,* but also Ghiyath al-Din Naqqash, chronicler of the embassy and court painter to Shah Rukh's son Baysunghur.[85]

Among the most remarkable and powerful Timurid paintings are some 60 works in rather sombre colours by the anonymous artist called Muhammad Siyah Qalam, 'Muhammad of the Black Pen' (fig. 224). Intensely expressive and unrestrained by stylistic conventions, they are painted on coarse, western Chinese paper, and shown without any landscape background. They present a range of fantastical figures – nomads, dervishes, shamans and above all demons – dramatically depicted in face and gesture. The painter, or more probably his workshop, introduced Western European, Persian and Chinese elements into a Central Asian world. Scholars still disagree about the date and place of production of these unique paintings, now in Istanbul's Topkapı Museum. They were probably created either in Tabriz in the time of the Mongol Jalayirid ruler Shaykh Awais (r. 1356–74) or in Herat during the reign of Shah Rukh (r. 1405–47), though other suggestions include Iran in the time of the Turkmen ruler Yaqub Beg Aq Qoyunlu (1478–90), or, less probably, eastern Turkestan in the late fifteenth century.[86] It should also be noted that under the Timurids, just as under the Il-Khanids, distinct schools of painting flourished, enriching Iranian painting with influences from China and Western Europe.



224. A standing demon talking and making a threatening gesture with his right hand. Painting attributed to Muhammad Siyah Qalam; opaque pigment, ink and gold on paper, fourteenth/fifteenth century. Topkapi Sarai Museum, Istanbul, H.2153, fol.48a.

X

Outlook

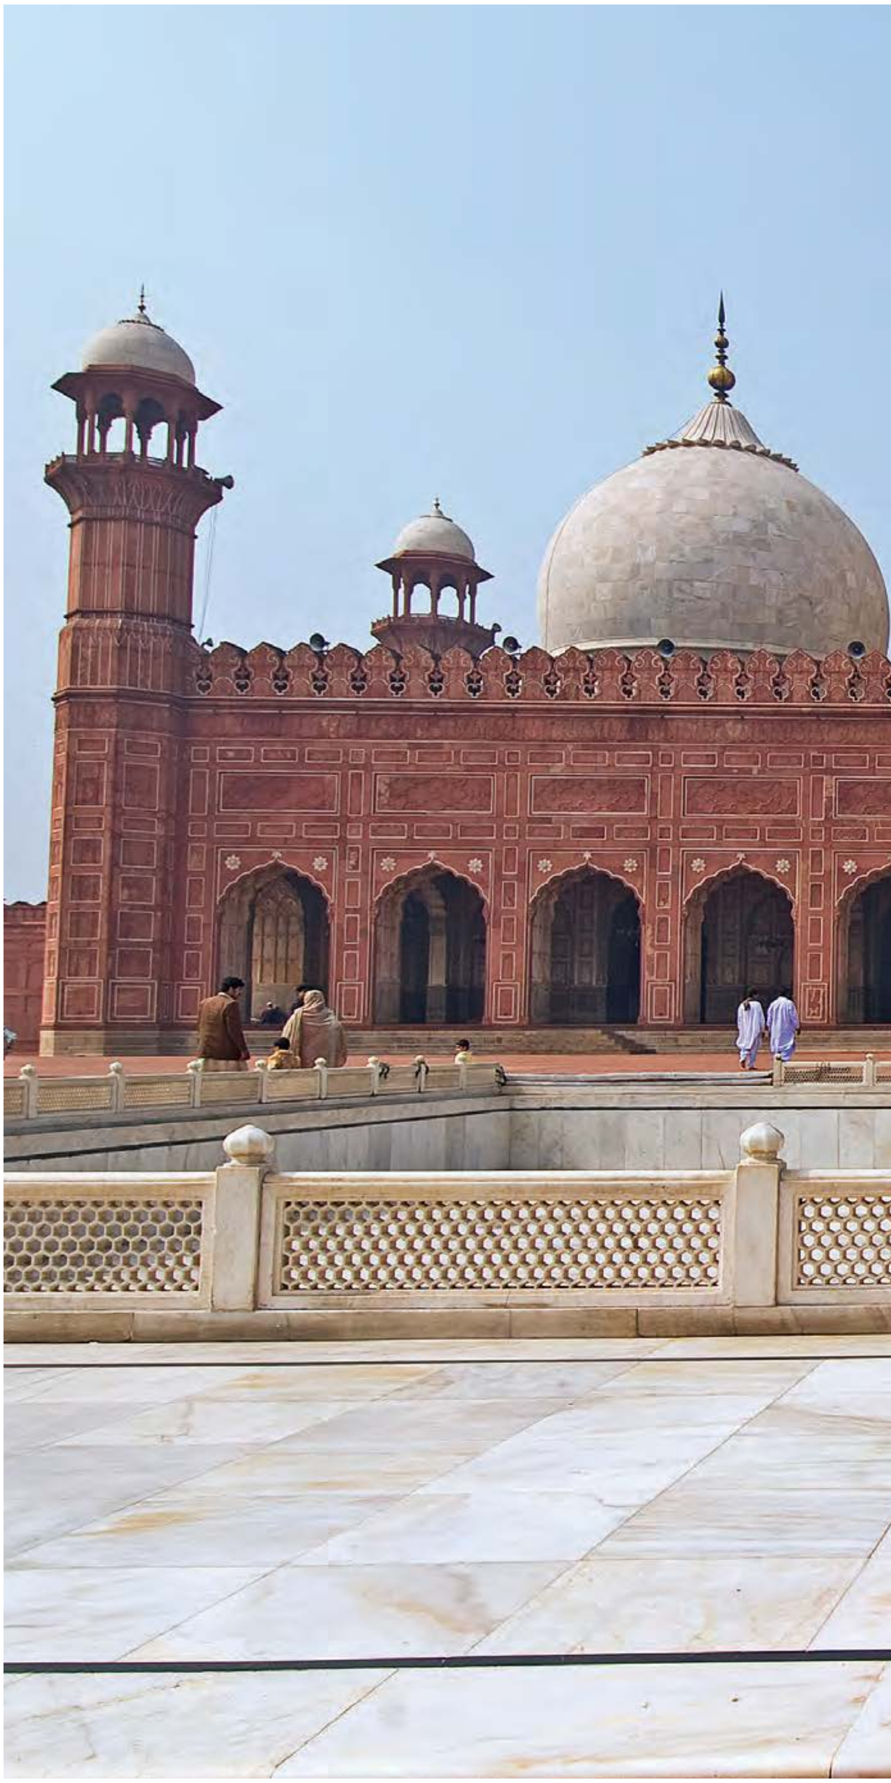
'[General] Skobeleff himself expressed it as follows: "I hold it as a principle that in [Central] Asia the duration of peace is in direct proportion to the slaughter you inflict upon the enemy. [. . .] My system is this: Strike hard, and keep on hitting till resistance is completely over; then at once to form ranks, cease slaughter, and be kind and humane to the prostrate enemy."'

The Russian GENERAL SKOBELEV after the bloody conquest of the Turkmen fortress Geok Tepe in January 1881.[1]

This third volume of *The History of Central Asia* has dealt with two major developments, pulling in opposite directions, which largely determined the shape of Central Asia during the Middle Ages. Thanks to powerful Persian-Muslim influences, towns and cities expanded in the south-west of Central Asia, accompanied by a brilliant effervescence of science, art and architecture. The Turkic horse warriors who began invading at the turn of the millennium soon adapted to this Persian-Muslim culture and further advanced the urbanisation of Mawarannahr, Chorasmia and Khorasan. But from 1219 till about 1250 or 1260, Genghis Khan's Mongols reversed these trends; they epitomised the absolute dominance of steppe warriors over towns, cities and states. They had no qualms about transforming settled agrarian areas into pasturelands, or depopulating certain places so comprehensively and destroying irrigation structure so thoroughly that entire regions turned into deserts. Elsewhere, from the second half of the thirteenth century onwards, they rebuilt some of the cities they had destroyed, having realised that they were essential for trade. In Russia, on the other hand, the Mongols laid the foundations for feudalism and serfdom – social forms that had barely existed in the Russian city-states before the thirteenth and fourteenth centuries. Finally, in China and in Iran the Mongols contributed significantly to the development of unified nation states.

The fourth and final volume of *The History of Central Asia*, with the subtitle *The Age of Decline and Revival*, will explore the history of Central Asia from 1500 to the twenty-first century. The period begins with the successor khanates to the Golden Horde in southern Russia, the Uzbeks and the later Timurids in northern Pakistan and India. But from the late fifteenth century onwards, a series of developments among the Ottomans, Iranian Safavids, in Russia and especially in Western Europe, would profoundly change Central Asia. One of the most decisive was technological – new and improved firearms deprived the steppe warriors armed with bow and arrows of their superiority; moreover, infantry can much better exploit the lethal potential of firearms than cavalry.[2]

Firearms enabled sedentary societies not only to defend themselves effectively against the onslaughts of steppe warriors but also to drive those warriors back into their inhospitable homelands.



225. The Badshahi Mosque in Lahore, Pakistan, completed in 1673/74, can hold 70,000 worshippers. Sitting in front of it is the Sufi Abdul Sater, a member of the Chishti Order. The mosque was commissioned by the Mughal emperor Aurangzeb (r. 1658–1707), a descendant of the Timurids and of the founder of the Mughal dynasty, Zahir al-Din Mohammed Babur. In 1840 the Sikhs closed the mosque and used it as stables and an ammunition dump. It was not restored and returned to its original use until 1939. Photo: 2007.

Tsarist Russia took the first step, wiping out the khanates of Kazan and Astrakhan, which had emerged from the Golden Horde, and pushing back the khanate of Crimea. In a second step, the Russian state began to take control of access to the precious raw materials in southern Siberia, partly following in the footsteps of merchants and Cossacks. Meanwhile, there was a crucial economic change: international trade between Asian suppliers and Western customers shifted almost entirely either to the sea routes or to a northern route directly linking Qing China with Russia, greatly reducing transit trade via Central Asia and the customs revenues derived from it.

Perhaps even more damaging for Central Asia was the absence of anything resembling a Renaissance or Enlightenment, which might have freed the sciences from the shackles of increasingly restrictive religious conventions, and thus helped societies to become more productive. Without any technical innovations, Central Asian states and societies became increasingly backward compared with the leading European powers. The isolation of the Muslim khanates of Bukhara, Khiva and Kokand impeded technical progress in the south-west of Central Asia, making these khanates highly vulnerable in the face of expansive states with sophisticated weaponry.

By the mid-eighteenth century, China and Russia had begun to infiltrate or annex several areas of Central Asia, thus not only securing resources for themselves but also opening up new markets for their products. The last strong Central Asian semi-nomadic state – the Empire of the Zunghar, a tribal confederation of Western Mongol Oirats – suffered a crushing defeat in 1696 against the Qing dynasty ruling China and by 1758 it was wiped out and the Zunghar people were exterminated by the order of Qing emperor Qianlong. While Chinese expansionism came to a halt in the nineteenth century because of internal political conflicts and increasingly outdated weaponry, the British were rapidly seizing more territories in India. The subjugation of the Sikh Empire and the annexation of the Punjab in 1849, along with the Russian conquest of Tashkent, Samarkand, Bukhara, Khiva and Kokand between 1865 and 1875/76, put the two European superpowers on the southern fringe of Central Asia on a collision course. Only politically unstable Afghanistan now separated the two adversaries, who were less interested in territorial expansion than in securing and broadening monopolies of trade and resources, if necessary with military means. This rivalry, known as *The Great Game*, began after the defeat of Napoleon which allowed the two imperial powers, Russia and Great Britain, to focus their energies on foreign policy, and brought the two superpowers more than once to the brink of war. This dangerous contest was mitigated with the Anglo–Russian Convention of 1907 which defined their spheres of influence in Persia, Afghanistan and Tibet.

The Chinese Revolution of 1911 and Russia's October Revolution of 1917 gave the Central Asian peoples hope for reform, independence and statehood. But the Soviet Union soon established the old power relations, albeit under a different, that is, socialist banner. It also moved Mongolia out of the Chinese zone of influence by turning the country into a Soviet satellite. And in 1949 China brought the de facto independence of eastern Turkestan (Xinjiang) to an end. During World War II, Soviet Central Asia was rapidly industrialised when Stalin moved the production of war materials into the area east of the Urals, out of reach of German bombers. He also deported minorities suspected of collaboration, such as the Crimean Tatars, Volga Germans, Chechens, Ingushs, Karelian Finns, Kalmyks and Balkars eastwards, especially to Uzbekistan and also to Kazakhstan.

In 1991, the collapse of the Soviet Union, which had swallowed almost all of Central Asia with the exception of Xinjiang, brought independence for the so-called 'Soviet Socialist Republics', although in three of the five states the First Secretary of the former Communist Party remained president for many years.[3] Whereas Mongolia now rather successfully follows a see-saw policy between China, Russia, Japan and the Western powers, the five former Soviet republics of Kazakhstan, Kyrgyzstan, Uzbekistan, Tajikistan and Turkmenistan are faced with huge challenges. Natural resources are spread very unevenly, some national borders that go back to Stalin are controversial, and water management leads to considerable tension. What all five states do have in common is enormous social inequality, pronounced authoritarian regimes (with the exception of Kyrgyzstan), the fear of fundamentalist currents of Islam, and a manoeuvring between the superpowers Russia, China and the USA. Kazakhstan in particular, which borders directly on Russia, with its large Russian minority and its rich mineral resources, lives in fear of the neo-imperialism of Russian president Vladimir Putin. In August 2014, Putin called into question the legitimacy of the state of Kazakhstan, stressing that 'Kazakhs never had any statehood' and that their country was 'part of the large Russian world'.[4] For Kazakhstan, Russia's virtually bloodless annexation of Crimea in March 2014 and its subsequent armed infiltration of eastern Ukraine are menacing signs on the wall.

Hasan ibn Ali (r. 1130–*ca*. 1132)

Ibrahim II (r. 1132)

Mahmud II ibn Muhammad (r. 1132/33–1141)

Ibrahim III ibn Muhammad (r. 1141–1156)

Mahmud ibn al-Husayn (r. 1156–1158)

Ali ibn Hasan (r. 1158–1161)

Masud II ibn Hasan (r. 1161–1170/71)

Muhammad III ibn Masud (r. 1170/71–1178/79)

Abd al-Khâliq ibn Husayn (r. 1178/79) ?

Ibrahim IV ibn Husayn (r. 1178/79–1202/3)

Uthman (r. 1202/3–1212)

Eastern Khaganate, 1040–1205

Sulayman ibn Yusuf (r. *ca*. 1040–1056, d. 1057)

Muhammad ibn Yusuf (r. 1056–1057)

Ibrahim ibn Muhammad (r. 1057–1062)

Tughril Yusuf ibn Sulayman (r. *ca*. 1062–*ca*. 1083/85)

(Harun) Hasan ibn Sulayman (r. after 1083/85–before 1098/99)

Jibrail ibn Umar (r. before 1098/99–1102)

Ahmad ibn (Harun) Hasan (r. 1102/3–after 1128)

Ibrahim ibn Ahmad (r. after 1128–1131/34, as Ilek Türkmen until 1157/58)

Muhammad ibn Ibrahim (r. 1157/58–1179/80)

Yusuf ibn Muhammad (r. 1179/80–1205)

Muhammad ibn Yusuf (r. ?, d. 1211/12)

Khaganate of Fergana, 1137–*ca*. 1212

Al-Husayn ibn al-Hasan (r. *ca*. 1137–1156)

Ibrahim ibn al-Husayn (r. *ca*. 1156–1178/79)

Ahmad ibn Ibrahim (r. 1178/79–1210/11)

Mahmud ibn Ahmad (r. 1210/11–1211/12 or 1212/13)

Sources: Boris Kočnev, 'La chronologie et la généalogie des Karakhanides du point de vue de la numismatique' (9/2001), pp. 52–66. Svat Soucek, *A History of Inner Asia*, pp. 316–18. Concerning the first three hypothetical Karakhanid rulers see Omeljan Pritsak, 'Die Karakhaniden' (1953), pp. 24f.

The Ghaznavids, 977–1186

Alp Tegin* (r. 962–963)

Abu Ishaq Ibrahim* (r. 963–966)

Bilge Tegin* (r. 966–974/75)

Böri Tegin* (r. 974/75–977)

Sebük Tegin, founder of dynasty (r. 977–997)

Ismail ibn Sebük Tegin (r. 997–998)

Mahmud ibn Sebük Tegin (r. 998–1030)

Muhammad ibn Mahmud (r. 1030)

Mas'ud I ibn Mahmud (r. 1030–1040, d. 1041)

Muhammad ibn Mahmud (second reign 1040–1041)

Maudud ibn Mas'ud I (r. 1041–1048)

Mas'ud II ibn Maudud (r. 1048)

Ali ibn Mas'ud I (r. 1048–1049)

Abd al-Rashid ibn Mahmud (r. 1049–1052)

Tughril (a usurper, r. 1052)

Farrukh-Zad ibn Mas'ud I (r. 1052–1059)

Ibrahim ibn Mas'ud I (r. 1059–1099)

Mas'ud III ibn Ibrahim (r. 1099–1115)

Shirzad ibn Mas'ud III (r. 1115–1116)

Malik Arslan (Arslan Shah) ibn Mas'ud III (r. 1116–1117, d. 1118)

Bahram Shah ibn Mas'ud III (r. 1117–*ca*. 1157)

Khusrau Shah ibn Bahram Shah (r. 1157–1160)

Khusrau Malik ibn Bahram Shah (r. 1160–86, d. 1191)

* Vassal of Samanids

The united Chagatai khanate (1227–1346/47)

Chagatai (r. 1227–1242)

Kara Hülegü (r. 1242–1246)

Yesü Möngke (r. 1246/47–1252)

Kara Hülegü (second reign 1251)

Orghina Khatun as regent for **Mubarak Shah** (r. 1252–1260)

Alghu (r. 1260–1266)

Mubarak Shah (second reign 1266)

Baraq (r. 1266–1271)

Negübei (r. 1271–1272)

Buqa Temür (r. 1272–1282)

Du'a (r. 1282–1307)

Könchek (r. 1307–1308)

Nalighu (r. 1308–1309)

Kebek (r. 1309–1310)

Esen Buqa (r. 1310–1319/20)

Kebek (second reign r. 1319/20–1326)

Eljigidei (r. 1326–1330)

Du'a Temür (r. 1330–1331)

Tarmashirin (r. 1331–1334)

Buzan (r. 1334-1335?)

Changshi (r. 1335–1337)

Yesün Temür (r. 1337–1339/40)

Ali Sultan (Usurper, r. 1339/40–*ca*. 1341/42)

Muhammad ibn Pulad (r. 1342–1343?)

Qazan ibn Yasaur (r. *ca*. 1343–1346/7)*

For the rulers of Mogulistan see vol. IV.

* Possibly identical with a Khalil Sultan mentioned by Ibn Battuta.

Notes

Introduction

1 *The Mission of Friar William of Rubruck. His Journey to the Court of the Great Khan Möngke, 1253–1255,* trans. Peter Jackson (Indianapolis, 2009), p. 236.

2 The classical Muslim culture of the Abbasid period was not only significantly shaped by the Irano-Central Asian culture of the eighth to eleventh centuries, but was also based on its predecessor, the Muslim culture of the Omayyads, which had been strongly influenced by Byzantine Syria.

3 The denomination of the Assyrian Church of the East as "Nestorian" is actually a misnomer, but we will use it for the sake of convenience. See: Christoph Baumer, *The Church of the East* (London, 2006), pp. 7f.

I. Iranian-Muslim Dynasties in South-West Central Asia

1 C. E. Bosworth, 'The Heritage of Rulership in Early Islamic Iran and the Search for Dynastic Connections with the Past', in C. E. Bosworth (ed.), *The Medieval History of Iran, Afghanistan and Central Asia* (London, 1977), vol. VII, pp. 59f.

2 Christoph Baumer, *The History of Central Asia*, vol. II, *The Age of the Silk Roads* (London, 2014), pp. 244–54.

3 Christoph Baumer, *The History of Central Asia,* vol. II, pp. 242f, 276–87.

4 On Shi'ite and Kharijite social and religious ideas see in this chapter the excursus *The most important early Islamic denominations.*

5 E. E. Karimov, 'The Advent of Islam: Extent and Impact', in M. S. Asimov and C. E. Bosworth (eds), *History of Civilizations of Central Asia*, vol. IV, part 2 (Paris, 1998), p. 82.

6 Christoph Baumer, *The History of Central Asia,* vol. II, pp. 253f.

7 Thus the definitive version of the Qur'an was published barely 20 years after the death of the founder of the religion. By way of comparison, the first authoritative version of the Bible in the Roman Catholic Church did not appear until 367.

8 Richard N. Frye, *The Golden Age of Persia* (London, 1993), p. 85.

9 Al-Tabari, Abu Ja'far Muhammad ibn Jarir, *Tarikh al-Rusul wa al-Muluk, Chronique*, trans. from the Persian version by Abdou-Ali Mohammed Belami by M. Hermann Zotenberg, 4 vols (Paris, 1867–1874), vol. III (Paris, 1871), pp. 646–64.

10 Al-Tabari, *Chronique*, vol. III (Paris, 1871), pp. 670–83.

11 Al-Tabari, *Chronique*, vol. III, pp. 706–11.

12 On the period of the disintegration of the Muslim community, see: al-Tabari, *Chronique*, vol. III, pp. 683–711. Hichem Djaït, *La Grande Discorde: Religion et politique dans l'Islam des origines* (Paris, 1989). Wilferd Madelung, *The Succession to Muhammad: A Study in the Early Caliphate* (Cambridge, 1997).

13 Five of these collections of *hadiths* were assembled by Central Asian scholars; see below p. 40. The Shi'ites reject many of the *hadiths* handed down by the first three caliphs and have their own lines of transmission and collections.

14 C. E. Bosworth, 'Legal and political sciences in the eastern Iranian world and Central Asia in the pre-Mongol period', in M.S. Asimov and C. E. Bosworth (eds), *History of Civilizations of Central Asia*, vol. IV, part 2, p. 134.

15 Wilferd Madelung, *Religious Trends in Early Islamic Iran* (Albany, 1988), pp. 26–38.

16 C. E. Bosworth, 'Legal and political sciences in the eastern Iranian world and Central Asia in the pre-Mongol period' in M. S. Asimov and C. E. Bosworth (eds), *History of Civilizations of Central Asia*, vol. IV, part 2, p. 134. Wahhabism, dominant in Saudi Arabia and inimical to Shi'ites, emerged from Hanbalism and radicalised it further. Muhammad Abd al-Wahhab (1703–92) preached an extreme puritanism, condemned the veneration of saints and their graves as polytheism, and called for a *jihad*, a holy war against the Shi'ites. Non-Saudi Wahhabis are known as Salafists.

17 A. C. S. Peacock, *Early Seljüq History: A New Interpretation* (London, 2010), p. 116. See also: Wesley Williams, 'Aspects of the creed of Imam Ahmad ibn Hanbal: A study of anthropomorphism in early Islamic discourse', in *International Journal of Middle East Studies*, 34 (2002), pp. 441–63.

18 The Ash'arites formed a heterogeneous theological school of thought representing the principle of *taqlid*, the acceptance of the interpretations of religious laws by *mujtahids* (competent Islamic scholars).

19 A. C. S. Peacock, *Early Seljüq History* (London: 2010), p. 103.

20 Al-Tabari, *Chronique*, vol. IV (Paris, 1874), pp. 36–46.

55 The city of Baghdad, built by Caliph al-Mansur in 762–67, at first designed as a palace and administration complex, lies close to the former Sassanid capital of Seleucia-Ctesiphon.

56 Abu al-Hasan Ali ibn al-Husayn ibn Ali al-Mas’udi, *Les prairies d’or*, trans. and ed. C. Barbier de Meynard et Pavet de Courteille, 9 vols. (Paris, 1861–1877), vol. IV, pp. 47–49; vol. V, p. 414. Al-Masudi did not seem to know to whom the temple was dedicated, for he wrote that it was sacred to the moon god (IV, p. 48), above whose portal a saying of the Buddha was affixed (IV, p. 49), and later he describes the temple as a fire temple (V, p. 414). The historian and geographer Ibn al-Faqih (tenth century) correctly refers to the temple as Buddhist. 74 See below pp. 25ff.

75 Tahir ibn Husain’s father and grandfather were governors of Pushang, west of Herat. C. E. Bosworth, ‘The Tahirids and Saffarids’, in R. N. Frye (ed.), *The Cambridge History of Iran: The Period from the Arab Invasion to the Saljuqs*, vol. IV, p. 93.

76 Al-Tabari, *Chronique*, vol. IV, pp. 481–97.

77 We use the term ‘of Turkic origin’ to refer to members of the Turkic ethnic or linguistic group, while earlier Arabic-language sources often extended the concept of ‘Turks’ to all inhabitants of the steppes of Central Asia, including for example pastoralists of Fergana or Ustrushana of Iranian origin. Yoshua Frenkel, ‘The Turks of the Eurasian Steppes in Medieval Arabic Writing’, in Reuven Amitai, and Michal Biran (eds), *Mongols, Turks and Others: Eurasian Nomads and the Sedentary World* (Leiden, 2005), pp. 204f.

78 Al-Tabari, *Chronique*, vol. IV, pp. 499–520.

79 The sermon called *khutba* at Friday prayers was always given in the name of the caliph and, according to the power structure, of the recognised local ruler. By omitting the caliph’s name from the khutba, Tahir was demonstrating his independence.

80 Al-Tabari, *Chronique*, vol. IV, p. 521.

81 See below pp. 188ff. For a recent assessment of the extant ruins of Nishapur see: Rocco Rante and Annabelle Collinet, *Nishapur Revisited: Stratigraphy and Pottery of the Qohandez* (Oxford, 2013).

82 As early as the Umayyad period, units of Turkish military slaves were set up in the west of the empire; the governor of Basra, for example, from 674 commanded a troop of more than 2,000 Turkic archers. Jean-Paul Roux, *Histoire des Turcs: Deux milles ans du Pacifique à la Méditerranée* (Paris, 1984), p. 132.

98 The duration of the Samanid dynasty may be dated differently: while the four Samanid brothers Nuh, Ahmad, Yahya and Ilyas ibn Asad were already appointed in 819 as governors of four Central Asian cities and their regions, the Samanid state received caliphal recognition only in 875. The Karakhanids broke up the Samanid dynasty in 999, but a brother of the last Samanid ruler waged war against the new occupants until his death in 1005.

99 The Ghurids were presumably Tajiks, with a mixed Turkic heritage.

100 Saman Khudah is a title, not a proper name; it means 'ruler of Saman'.

106 That slaves or their sons were able to rise to great heights in a political career as early as the ninth century is exemplified by Ahmad ibn Tulun (835–84), the founder of the Egyptian Tulunid dynasty (868–905), for his father Tulun was a Turkic-Oghuz slave who had been given to Caliph al-Ma'mun by the governor of Bukhara. C. E. Bosworth, *The Ghaznavids: Their Empire in Afghanistan and Eastern Iran* (New Delhi, 1992), pp. 208f.

60 C. E. Bosworth, *The Ghaznavids: Their Empire in Afghanistan and Eastern Iran* (New Delhi, 1992), pp. 47, 237. Bill Scheppler, *Al-Biruni: Master Astronomer and Muslim Scholar of the Eleventh Century*, pp. 63–67.

61 See also below pp. 48f.

62 Bill Scheppler, *Al-Biruni*, p. 89.

63 The pre-Islamic Arabian calendar was a lunisolar one; the practice of intercalation had been known from the beginning of the fifth century CE. Thus it could be made sure that pilgrimages such as the pre-Islamic one to Mecca always fell into the same season. Muhammad also removed from the calendar the two periods of armistice, during which war and pillaging were banned. He stressed that wars directed against infidels were allowed at any time. E. G. Richards, *Mapping Time: The Calendar and its History* (Oxford, 1998), p. 231f.

64 Al-Biruni, *The Chronology of Ancient Nations* (London, 1879; reprint 2011), p. 36, see also p. 14.

65 The earth is not a perfect sphere, as al-Biruni assumed; it bulges out slightly at the equator. Bill Scheppler, *Al-Biruni* (New York, 2006), p. 89. Al-Biruni, *Alberuni’s India*, vol. I., pp. 196ff,

274ff, vol. II, pp. 57–61. *The Determination of the Coordinates of Positions for the Correction of Distances between Cities: Al-Biruni’s Kitab tahdid nihayat al-amakin litashih masafat al-masakin,* trans. Jamil Ali (Beirut, 1967), pp. 183–89. See also: J. J. O’Connor and E. F. Robertson, *Abu Arrayan Muhammad ibn Ahmad al-Biruni* (St Andrews, 1999) http://www-groups.dcs.st-and.ac.uk/~history/Biographies/Al-Biruni.html. David Pingree, *Biruni, Abu Rayhan iv. 71 Aisha Khan, *Avicenna*, pp. 41, 48. Jon McGinnis, *Avicenna* (Oxford, 2010), pp. 17–19.

72 The Qarmatians were a syncretistic group which combined utopian political aims with Ismaili elements and a belief in a messianic Mahdi.

88 Nasir ad-Din Tusi, *The Nasirean Ethics*, p. 43.

89 Nasir ad-Din Tusi, *The Nasirean Ethics*, p. 44.

90 Nasir ad-Din Tusi, *The Nasirean Ethics*, p. 44.

91 Nasir ad-Din Tusi, *The Nasirean Ethics*, pp. 45f. The translator translates the last word of the sentence as ‘created’, but the original word *maftur* means also ‘inborn’, ‘hereditary’; see p. 265, n. 174.

92 The Persian word *manand* means ‘resembling’, ‘like’. http://dsalsrv02.uchicago.edu/cgi-bin/philologic/search3advanced?dbname=steingass&query=manand&matchtype=exact&display=utf8. It remains debatable if al-Tusi believed that this ‘first degree of Man’ were resembling the black North Africans or if he believed that the black North Africans were a group of this ‘first degree of Man’ and hence not fully human. The present author opts for the first interpretation.

100 The Fatimid dynasty (909–1171) adhered to Ismaili Sh’ism and ruled over large parts of North Africa, as of 969 also including Egypt. The Fatimid Caliphs claimed descent from Prophet Muhammad’s daughter Fatima.

101 For example, in 1067 the Seljuk sultan Alp Arslan, under pressure from Hanbalites, issued a decree according to which the teaching of the Mu’tazilites represented a delusional faith. A. C. S. Peacock, *Early Seljūq History*, p. 104.

102 M. Dinorshoev, ‘Philosophy, logic and cosmology’, in M. S. Asimov and C. E. Bosworth (eds), *History of Civilizations of Central Asia*, vol. IV, part 2, p. 171.

103 In Islam at the time, apostasy took place either through a declared rejection of Islam or by a clandestine apostasy combined with the adherence to beliefs or practices considered by the respective authority to be un-Islamic.

104 Al-Ghazali, *al-Iqtisad fi-l tiqad*, 250, quoted in Frank Griffel, ‘Toleration and exclusion: al-Shafi’i and al-Ghazali on the treatment of apostates’, *Bulletin of the School of Oriental and African Studies*, vol. 64, no. 3 (London, 2011), p. 354.

105 Al-Ghazali, *Shifa al-Ghalil,* 222, quoted in Frank Griffel, ‘Toleration and exclusion: al-Shafi’i and al-Ghazali on the treatment of apostates’, *Bulletin of the School of Oriental and African Studies*, vol. 64, no. 3, p. 351.

106 Pierre Riché, *Gerbert d’Aurillac. Le pape de l’an mil* (Paris, 1987), pp. 25f. Some authors believe he also studied in Toledo. See Kay Peter Jankrift, *Europa und der Orient im Mittelalter* (Darmstadt, 2007), p. 88. But it remains unlikely that Gerbert ever travelled south to Toledo or Cordoba.

109 Kay Peter Jankrift, *Europa und der Orient im Mittelalter* (Darmstadt, 2007), pp. 100f.

110 The Mozarabs were Iberian Christians who came under Muslim rule from the early eighth century; they remained Christians but adopted many Muslim customs.

111 Even before Gerard, Robert of Chester had translated al-Khwarizmi’s *Hisab a-jabr w’al muqabala* (known as *‘The Compendious Book on Calculation’*) in 1245. Quite often, the same Arabic text was translated at the same time by two European scholars independently of each other, either from an identical Arabic transmission or from different ones.

112 It seems that both Adelard of Bath and Gerard of Cremona translated Euclid’s *Elements* from the same Arabic primary transmission. Gregg de Young, ‘The Latin Translation of Euclid’s Elements Attributed to Gerard of Cremona in Relation to the Arabic Transmission’ (Barcelona, 2004), pp. 318f. http://www.ub.edu/arab/suhayl/volums/volum4/paper%208.pdf

III. The Second Turkic Migration to the West

1 Constantine Porphyrogenitus, *De Administrando Imperio*, trans. R. J. H. Jenkins (Washington, DC, 1967), p. 49; see also p. 51.

2 On the Avars, see: Christoph Baumer, *The History of Central Asia*, vol. II (London, 2014), pp. 208f.

3 On Greater Bulgaria and the Volga Bulgars see: Christoph Baumer, *The History of Central Asia*, vol. II, pp. 209–13.

4 On the Byzantine–West Turkic alliance and the Khazars see: Christoph Baumer, *The History of Central Asia*, vol. II, pp. 175–81, 213–16.

5 As is clarified below, at the time when *De Administrando* was written, the Pechenegs had already lived in their new lands for *ca.* 55 years.

6 Constantine Porphyrogenitus, *De Administrando Imperio*, p. 167.

7 Constantine Porphyrogenitus, *De Administrando Imperio*, p. 173.

8 Constantine Porphyrogenitus, *De Administrando Imperio*, p. 173.

9 *Orkhon Inscriptions. The Kultegin's Memorial Complex,* Türik Bitig (Language Committee of Ministry of Culture and Information of RK [Republic of Kazakhstan]), http://irq.kaznpu.kz. See also: Peter B. Golden, *An Introduction to the History of the Turkic Peoples: Ethnogenesis and State-Formation in Medieval and Early Modern Eurasia and the Middle East* (Wiesbaden, 1992), p. 265. Perhaps the Pechenegs' tribal alliance also included Iranian-speaking elements.

10 Yabghu was a title used by Turkic people, which was originally given to the second-highest dignitary after the khagan. Later it was used for the leaders of large, independent confederations. How much authority was exercised by the Oghuz yabghu in the late eighth century is unknown.

52 The connection between the *Chorni Klobuky* in the service of Kiev and today's Karakalpaks in north-western Uzbekistan, whose name also means 'Black Hats', is disputed.

53 Aziz Başan, *The Great Seljuqs: A History* (London, 2010), pp. 78–81.

54 Some authors, such as A. C. S. Peacock, interpret literally the reference in the *Malik-nameh*, a chronicle of the early Seljuks from *ca.* 1060, today preserved only in fragmentary form, according to which Seljuk served the ruler of the Khazars as army commander. Since the Khazar Empire fell between 965 and 969, this seems improbable; in addition, the allegiance of Seljuk to the Oghuz elite of the Qinik is indisputable. A. C. S. Peacock, *Early Seljüq History: A New Interpretation* (London, 2010), pp. 27–35. See also: Aziz Başan, *The Great Seljuqs*, p. 22.

IV. Turco-Muslim Dynasties in Southern Central Asia

1 Al-Athir, *The Annals of the Seljuk Turks,* trans. D. S. Richards (London, 2002), p. 254.

2 See p. 63.

3 Robert Dankoff, *From Mahmud Kashgari to Evliya Celebi* (Istanbul, 2008), p. 65.

4 Kim Hodong, 'The early History of the Moghul Nomads: the Legacy of the Chagatai Khanate', in Reuven Amitai-Preiss and David O. Morgan (eds), *The Mongol Empire and its Legacy* (Leiden, 1999), pp. 302f.

5 Claude Cahen, 'Le Malik-nâmeh et l'histoire des origines seljukides', in *ORIENS. Journal of the International Society for Oriental Research* (Leiden, 1949), vol. II, p. 42. 'The Malik-Nama and the History of Seljuqid Origins' in C. E. Bosworth (ed.), *The Turks in the Early Islamic World* (Aldershot, 2007), p. 315. Al-Athir mentions three sons by name, but implies that there were others. Al-Athir, *The Annals of the Seljuk Turks,* pp. 31f. Başan mentions as the fourth son Yusuf or Yunus (Jonas). Aziz Başan, *The Great Seljuqs* (London, 2010), pp. 52f.

6 It seems rather far-fetched to derive from the Old Testament names an indirect proof of the hypothesis that Seljuk and Dukak were in the service of the Jewish Khazar rulers.

7 Cahen, 'Le Malik-nâmeh', pp. 43–45. 'The Malik-Nama', pp. 318f.

8 Cahen, 'Le Malik-nâmeh', p. 44. 'The Malik-Nama', p. 318. See also: Başan, *The Great Seljuqs*, pp. 23, 54. A. Sevim and C. E. Bosworth, 'The Seljuqs and the Khwarazm Shahs', in M. S. Asimov and C. E. Bosworth (eds), *History of Civilizations of Central Asia*, vol. IV, part 1 (Paris, 1998), p. 146.

9 Most historians give the year 1020/21 for Ali Tegin's seizure of power. Pritsak gives 1014/15 for the accession to power in Bukhara, soon after which Ali Tegin is said to have spent *ca.* five years in prison. Omeljan Pritsak, 'Die Karakhaniden', *Der Islam*, XXXI, vol. I (Berlin, 1953), p. 34.

10 Like Arslan, Bughra is both a Turkic name and a title; it means 'male camel'.

11 Al-Athir, *The Annals of the Seljuk Turks*, p. 32. See also: Sevim and Bosworth, 'The Seljuqs and the Khwarazm Shahs', pp. 146f.

12 Cahen, 'Le Malik-nâmeh', pp. 50f. 'The Malik-Nama', p. 324.

13 Al-Athir, *The Annals of the Seljuk Turks*, pp. 13, 32f. Cahen, 'Le Malik-nâmeh', p. 52. 'The Malik-Nama', p. 325.

14 In general, Muslim Oghuz were referred to as Turkmen. To differentiate the Oghuz followers of the Seljuk lines of Tughril and Chagri bin Mikhail from the other Muslim Oghuz, in this chapter the term 'Seljuks' is used for soldiers and officials loyal to the Seljuk rulers, and the term 'Turkmen' is used for Muslim Oghuz, who recognised the supremacy of the Seljuk rulers only conditionally or not at all, and partly formed the so-called Iraqiyya.

15 Gardizi, *The Ornament of Histories* (London, 2011), p. 96. See also Zahir al-Din Nishapuri, *The History of the Seljuq Turks(*ed.), C. E. Bosworth, trans. Kenneth Allin Luther (London, 2001), p. 33.

122 Michal Biran, 'Ilak-Khanids, Kara Khanids' in *Encyclopaedia Iranica*, 2001. Pritsak, 'Die Karakhaniden', *Der Islam*, pp. 21–23. Since the Yabghu of the Karluks called Bilge Kül Qadïr Khan took the title of a khagan in 840, Pritsak and some authors following him date the beginning of the Karakhanid alliance to 840. However, the history of this alleged early Karakhanid dynasty remains unknown. Pritsak, 'Die Karakhaniden', pp. 22f.

123 Peter B. Golden, 'The Karakhanids and Early Islam' in Denis Sinor (ed.), *The Cambridge History of Early Inner Asia* (Cambridge, 1990), p. 355.

124 Pritsak, 'Die Karakhaniden', p. 20.

125 Peter B. Golden, *An Introduction to the History of the Turkic Peoples* (Wiesbaden, 1992), p. 215. Pritsak, 'Die Karakhaniden', pp. 23.

126 The traditional ruling lines, first of the united and (from *ca.* 1040) of the divided empire, do not always agree with the numismatic and other recent reconstructions. For a good reconstruction of the Karakhanid successions on a numismatic basis see: Boris Kočnev, 'La chronologie et la généalogie des Karakhanides du point de vue de la numismatique', *Études karakhanides* (Cahiers d'Asie centrale, 9/2001), pp. 49–75.

127 According to Pritsak's reconstruction, Satuk was a nephew of Oghulchak Khan (r. 893–*ca.* 946) and a grandson of Bilge Kül Qadïr Khan (r. 840–93), which would mean very long reigns. Pritsak, 'Die Karakhaniden', pp. 24f.

128 Scott C. Levi and Ron Sela (eds), *Islamic Central Asia. An Anthology of Historical Sources* (Bloomington, 2010), pp. 74–76.

129 Pritsak, 'Die Karakhaniden', p. 25.

V. Buddhist States of the Liao, Qara Khitai and Tanguts

1 P. K. Kozlov, *Mongolija i Amdo i mertvij gorod Xara-Xoto* (Moscow, 1923), p. 1.

2 The exception was Khan Berke (r. 1257–66), one of Genghis Khan's grandsons, who converted to Islam in the 1250s.

3 See p. 66f above.

4 In Turkic this name means 'black Kithai/Khitan'; in Chinese sources they are called *Xi Liao*, 'western Liao'. Why Muslim sources added the epithet *Kara*, 'black', remains unclear; it was probably an honorary title.

5 Since the empire of the Liao was situated outside Central Asia, its history is only outlined briefly here.

6 Herbert Franke, 'The Forest Peoples of Manchuria: Kitans and Jurchens', in Denis Sinor (ed.), *The Cambridge History of Early Inner Asia* (Cambridge, 1990), pp. 402f. Denis Twitchett and Klaus-Peter Tietze, 'The Liao', in *The Cambridge History of China,* vol. VI, *Alien Regimes and Border States, 907–1368* (ed.), Herbert Franke and Denis Twitchett (Cambridge, 1994), pp. 44–52.

7 Ta La, 'Die archäologische Untersuchung der Liao-zeitlichen Stadt Shangjing', in Hsueh-man Shen (ed.), *Schätze der Liao: China's vergessene Nomadendynastie (907–1125)* (Zurich, 2007), pp. 54–59.

8 Denis Twitchett and Klaus-Peter Tietze, 'The Liao', in *The Cambridge History of China*, vol. VI, pp. 52f, 56–64. Karl A. Wittfogel and Feng Chia-Sheng, *History of Chinese Society: Liao (907–1125)* (Philadelphia, 1949), pp. 573–76. Later mentions of the *Liao Shi* refer to the authors' translation in this edition, 'Wittfogel and Feng' to their own writing.

10 G. Kara, 'Pre-Mongol and Mongol Writing Systems', in M. S. Asimov and C. E. Bosworth (eds), *History of Civilizations of Central Asia*, vol. IV, part 2 (Paris, 1998), p. 335.

11 *Liao Shi*, p. 576.

12 Christoph Baumer, *The History of Central Asia,* vol. II (London, 2014), p. 312.

13 Nicolai N. Kradin et al., 'Emgentiin Kherem, a Fortress Settlement of the Khitans in Mongolia', *The Silk Road* 12 (2014), pp. 89, 96.

14 Chinese emperors had not only a family name, but also a reign name, a temple name and a posthumous name. Many earlier emperors (before the Ming and Qing dynasties) changed their reign names on the occasion of a new era within their own reign. The temple name was given after an emperor's death and consisted of two characters. Posthumous names could be much longer.

15 *Liao Shi,* p. 577; Twitchett and Tietze, 'The Liao', pp. 68f.

16 Di Cosmo, 'Geschichte und Gesellschaftsstruktur der Liao-Dynastie', pp. 199–202.

18 *Liao Shi*, pp. 586, 589; Twitchett and Tietze, 'The Liao', pp. 109f, 122.

19 Eric Trombert, 'The Demise of Silk on the Silk Road: Textiles as Money at Dunhuang from the Late Eighth Century to the Thirteenth Century', *Journal of the Royal Asiatic Society* 23:2 (April 2013), p. 347.

20 *Liao Shi*, pp. 586–88; Twitchett and Tietze, 'The Liao', pp. 100–104, 111f.

21 Baumer, *The History of Central Asia*, vol. II, p. 312f.

22 *Liao Shi*, p. 589–91.

23 *Liao Shi*, p. 554.

24 Wittfogel and Feng, *History of Chinese Society: Liao,* pp. 291, 298.

25 Wittfogel and Feng, *History of Chinese Society: Liao,* p. 292.

26 Hsueh-man Shen (ed.), *Schätze der Liao*, pp. 233–35. Some 10,000 inscribed stone tablets were reburied at a solemn ceremony in 1999. The monastery also has a collection of 77,000 double-sided wood printing blocks.

27 Twitchett and Tietze, 'The Liao', pp. 127–38; Wittfogel and Feng, *History of Chinese Society: Liao,* pp. 591–94.

28 *Liao Shi*, pp. 595–98, 627–31; Twitchett and Tietze, 'The Liao', pp. 140–51.

29 Thomas J. Barfield, *The Perilous Frontier: Nomadic Empires and China, 221 BC to AD 1757* (Cambridge, 1992), p. 179.

30 The garrison town of Khedun has been identified as today's Chin Tolgoy Balgas in Bulgan province, in northern Mongolia: Ayudai Ochir and Lkhagvasüren Erdenebold, 'About the Uighur City of Khedun, Mongolia', in Jan Bemmann (ed.), *Current Archaeological Research in Mongolia* (Bonn, 2009), pp. 437–43.

31 *Liao Shi*, pp. 633f; Michal Biran, *The Empire of the Qara Khitai in Eurasian History* (Cambridge, 2005), pp. 27–37. Biran puts the departure from Khedun in March 1130; the reconstruction of Yelü Dashi's progress from Khedun to Balasaghun remains disputed.

32 See p. 107 above and Juvaini, *Tarikh-e Jahan-gusha*, vol. I, pp. 355f; *Liao Shi*, pp. 635–37; Biran, *The Empire of the Qara Khitai*, pp. 37–39.

33 *Liao Shi*, p. 638. As Yelü Dashi did not take personal command of this expedition, it is possible that he may have used it as a way of ridding himself of homesick Khitan.

34 Wittfogel and Feng, *History of Chinese Society: Liao,* p. 674.

35 *Liao Shi*, p. 639. See also Emil Bretschneider, *Mediaeval Researches from Eastern Asiatic Sources,* vol. I (London, 1888), pp. 232f., and Juzjani, *Tabakat-i Nasiri*, vol. I, pp. 154f.

36 See pp. 101f.

37 Christoph Baumer, *The Church of the East* (London, 2006), p. 211; Jean Richard (ed.), *Au-delà de la Perse et de l'Arménie: L'Orient latin et la découverte de l'Asie intérieure* (Turnhout, 2005), pp. 21f. From a European perspective at that time the only religions that existed were the three Semitic religions and pagans, so it was assumed that the victorious non-Muslim was a Christian.

38 Richard (ed.), *Au-delà de la Perse et de l'Arménie*, pp. 30, 41–56. Some 30 years later, Simon de Saint-Quentin wrote that Genghis Khan had killed King David with 'God's permission' because of his sins: ibid., p. 101.

39 Juvaini, *Tarikh-e Jahan-gusha*, vol. I, p. 44, n. 4.

40 This Alp Tegin is of course a different person from the founder of the Ghaznavid dynasty, also called Alp Tegin (r. 962–63).

41 Wittfogel and Feng, *History of Chinese Society: Liao,* p. 642.

42 Even the Gür-Khan and his court did not reside in the city of Balasaghun but in an extensive encampment nearby.

43 Wittfogel and Feng, *History of Chinese Society: Liao,* p. 666.

44 Wittfogel and Feng, *History of Chinese Society: Liao,* pp. 661f, 670. The Qara Khitai's Muslim vassals still continued to strike their traditional coins. See also Biran, *The Empire of the Qara Khitai*, p. 127.

120 *The Secret History,* § 254f, trans. pp. 182–87.

121 Genghis Khan had granted the people and region of the Upper Ienissei to Jochi as his personal *ulus* after his successful campaign against the People of the Forest, among others the Kyrgyz, in 1207. *The Secret History,* § 239, trans. pp. 163–65, commentary p. 857.

122 Rashid al-Din, *Jamia al-Tawarikh* 787f, trans. p. 273. See also: Juvaini, *Tarikh-e Jahan-gusha*, vol. I, p. 40.

123 Rashid al-Din, *Jamia al-Tawarikh* 592–614, trans. pp. 207–13. See also Rashid al-Din, *The Successors of Genghis Khan*, trans. John Andrew Boyle (New York, 1971), pp. 17f. The core Mongol troops were supplemented by about 200,000 non-Mongol auxiliary troops.

124 *The Secret History,* § 272, trans. pp. 203–5. Rashid al-Din, *Jamia al-Tawarikh* 643f, 789–93, trans. pp. 224, 274.

125 Rashid al-Din, *Jamia al-Tawarikh* 612, trans. p. 213.

126 The commander of Khujand, Timur Malik, had an epic escape, sailing down the Syr Darya with a flotilla and fleeing into the Kyzyl Kum Desert. Juvaini, *Tarikh-e Jahan-gusha*, vol. I, pp. 92–95.

127 Richard A. Gabriel, *Subotai the Valiant*, pp. 42f, 79–82.

128 See above p. 136.

129 The Maginot Line, built in the 1930s, was a chain of bunkers along the north-eastern French border. In the early summer of 1940 the *Wehrmacht* bypassed it in the north-west and broke through it at the centre, in Sedan, so that the mobile German tank units were able to advance rapidly at the rear of the now useless Maginot Line, and force France to capitulate after only six weeks.

130 B. H. Liddell Hart, *Great Captains Unveiled* (Boston, 1996), p. 33.

131 The maximum range with sufficient impact was about 300 metres.

132 Carpini, *The History of the Mongols*, p. 72. Matthew Paris, *Chronica Majora*, vol. I, p. 313.

133 The Mongols preferred geldings and milk-producing mares, in contrast to the western knights who used stallions, as strong as possible. Timothy May, *The Mongol Art of War*, p. 54.

22 Great Khan Ögödei usually resided in one of his four yurt palaces outside Karakorum. Rashid al-Din, *Jamia al-Tawarikh* 671f, trans. p. 233.

23 *The Mission of Friar William of Rubruck. His Journey to the Court of the Great Khan Möngke, 1253–1255,* trans. Peter Jackson with David Morgan (Indianapolis, 2009) p. 211.

24 Rashid al-Din, *Jamia al-Tawarikh* 671, trans. p. 233.

25 *The Mission of Friar William of Rubruck,* p. 209f.

26 The attempts at a cover-up by the Soviet archaeologist Sergey Kiselev, who carried out excavations in Karakorum in 1948/49, are very disconcerting. Since he was determined to discover Ögödei's palace, he concealed or destroyed more than 12,000 (!) archaeological finds during the partial excavation of the Buddhist temple. Equally extraordinary is the fact that still in 2005 it was not allowed to photograph or describe the 40 or so mural fragments from Karakorum preserved in the Hermitage in St Petersburg. Becker, *Die altmongolische Hauptstadt Karakorum*, pp. 3f, 124, 132f, 138, 150, 155f, 160, 239.

27 Becker, *Die altmongolische Hauptstadt Karakorum*, pp. 83, 96, 162. Hans-Georg Hüttel, 'Das Projekt "Karakorum-Palast"', *Mongolische Notizen* (Bonn, 2005), pp. 10–12. 63 Rashid al-Din, *Jamia al-Tawarikh* 613, 793, trans. pp. 213, 274.

64 Simon de Saint-Quentin, *Histoire des Tartares* (Paris, 1965), pp. 78–80, Timothy May, *The Mongol Art of War* (Yardley, 2007), p. 21. Rashid's dating of the battle to 1257 is much too late. Rashid al-Din, *Jamia al-Tawarikh* 994, trans. p. 346.

65 Saint-Quentin, *Histoire des Tartares*, pp. 73f.

66 He'tum of Korykos, *La Flor des Estoires d'Orient* (Klagenfurt, 2006), p. 58; introduction pp. 5f, 16, Bayarsaikhan Dashdondog, *The Mongols and the Armenians (1220–1335)* (Leiden, 2011), pp. 66, 79–86. Jean Richard (ed.), *Au-delà de la Perse et de l'Arménie. L'Orient latin et la découverte de l'Asie intérieure. Quelques textes inégalement connus aux origines de l'alliance entre Francs et Mongols (1145–1262)* (Turnhout, 2005), p. 170.

67 The Mongols demanded of new vassals that the ruler should visit the Great Khan in person in Karakorum to testify to his submission. He had to supply hostages and troops, pay tribute and taxes, and submit a register of all households for the purpose of raising taxes and forced recruitment.

68 Matthew Paris, *Chronica Majora*, vol. II, p. 165. Richard (ed.), *Au-delà de la Perse et de l'Arménie*, pp. 63f, 170f.

69 Donald Rayfield, *Edge of Empires* (London, 2012), pp. 126, 128.

70 It seems likely that at the time of the departure of his two ambassadors from Tabriz, Eljigidei had not yet heard of Güyük's death in the spring of 1248. It is also conceivable that Eljigidei warned King Louis of a campaign within the Mongol sphere of influence. Saint-Quentin, *Histoire des Tartares*, p. 98, n. 1. See also: Peter Jackson, *The Mission of Friar William of Rubruck*, commentary, pp. 33–35.

71 Matthew Paris, *Chronica Majora*, vol. I, p. 132.

72 For the wording of the letter from Oghul Qaimish, see: Richard (ed.), *Au-delà de la Perse et de l'Arménie*, p. 163.

73 Jackson, *The Mongols and the West*, pp. 99, 181,*The Mission of Friar William of Rubruck*, commentary, pp. 33–38, Rachewiltz, *Papal Envoys to the Great Khans*, pp. 120–24, Richard (ed.), *Au-delà de la Perse et de l'Arménie*, p. 162.

74 For the wording of Godan's letter, see: Tsepon W. D. Shakabpa, *Tibet: A Political History* (New York, 1984), pp. 61f.

75 Phagpa was only Kublai Khan's second choice, for in 1255 he first sought to work with Karma Pakshi (1203/6–83), the second Karmapa or head of the Karma Kagyü school, who was famous for his miraculous deeds. But Karma Pakshi preferred to leave Kublai again soon and in 1256 offer his services to Great Khan Möngke. His rebuff to Kublai smoothed Phagpa's way to power. Luciano Petech, 'Tibetan Relations with Sung China and with the Mongols', in Rossabi, *China among Equals*, pp. 173f.

76 Phagpa's script was also suitable for transcriptions from Chinese, Tibetan, Uyghur and Sanskrit. Müller and Wenzel (eds), *Dschingis Khan und seine Erben*, p. 29.

77 Stephen G. Haw, 'The Mongol Conquest of Tibet', *Journal of the Royal Asiatic Society* (London, January 2014), pp. 37–49. 36 Rossabi, *Khubilai Khan*, pp. 222–24.

37 Polo, *The Book of Ser Marco Polo*, p. 344.

38 The contention of some historians, Frances Wood among them, that Marco Polo never visited China but relied entirely on secondary sources, is untenable. It is ridiculous, for example, to draw attention to his silence about the Great Wall of China, since it did not even exist as such in his time but was constructed in stone only under the Ming emperors, after the earlier earthen walls had fallen into ruin in the early thirteenth

century. Frances Wood, *Did Marco Polo go to China?* (London, 1998). On this see Haw, *Marco Polo's China*, pp. 52–67, and Igor de Rachewiltz, 'Marco Polo went to China', *Zentralasiatische Studien* 27 (1997), pp. 34–92.

283 Spuler, *Die Goldene Horde*, p. 160.

284 It is debatable when the Khanate of Astrakhan became really independent, in 1466 or only in 1502 as successor to the Great Horde.

285 These dates are drawn from: Frank 'The Western Steppe', pp. 242–58, 305f, and Lebedynsky, *La Horde d'Or*, pp. 55–59, 80. For these successor khanates see vol. IV of the present work: Christoph Baumer, *The History of Central Asia: The Age of Decline and Revival* (forthcoming, London, 2018).

286 Spuler, *Die Goldene Horde*, pp. 181–84.

287 Spuler, *Die Goldene Horde*, p. 204.

IX. Timur-e Lang and the Timurids

1 Ruy González de Clavijo, *Narrative of the Embassy of Ruy González de Clavijo to the Court of Timour at Samarcand, AD 1403–06,* trans. and ed. Clements R. Markham (London, 1859), pp. 102f.

2 The commonly attributed birth date of 8 April 1336 is an invention of astrologers: Markus Hattstein, 'Geschichte Timurs und seiner Nachfolger', in Markus Hattstein and Peter Delius(eds), *Islam. Kunst und Architektur* (Cologne, 2000), p. 408.

3 As Clavijo had already noted in 1404, the name Timur-e Lang was intended as an insult. Arrow wounds and subsequent adhesions had left Timur paralysed in the right leg and shoulder: Clavijo, *Narrative,* pp. 77, 127; Ahmed Ibn Arabshah, *Tamerlane or Timur the Great Amir* [1936] (London, 2007), pp. 2, 6; Markus Hattstein, 'Geschichte Timurs', p. 408.

4 Thomas W. Lentz and Glenn D. Lowry, *Timur and the Princely Vision: Persian Art and Culture in the Fifteenth Century* (Los Angeles, 1989), pp. 27f, 97.

5 Khwandamir, 'Ghiyas ad-Din Muhammad, *Habibu al-Siyar* [Beloved of Careers]' in *Classic Writings of the Medieval Islamic World*, trans. and ed. Wheeler Thrackston, vol. II (London, 2012), 398f, trans. 225. In the following quotes given as Khwandamir *Habibu al-Siyar* (London, 2012).

6 For detail see pp. 248f. Khwandamir, *Habibu al-Siyar*, vol. II, 402–20, trans. pp. 227–34; Beatrice Forbes Manz, *The Rise and Rule of Tamerlane* (Cambridge, 1991), pp. 45–58.

7 Warwick Ball, *The Monuments of Afghanistan* (London, 2008), p. 8.

8 Manz, *The Rise and Rule of Tamerlane*, pp. 13, 90, 107, 112f, 151f; Justin Marozzi, *Tamerlane: Sword of Islam, Conqueror of the World* (London, 2004), pp. 80, 132f; H. R. Roemer, 'Timur in Iran', in *The Cambridge History of Iran,* vol. VI (ed.), Peter Jackson and Laurence Lockhart (Cambridge, 1986), pp. 53, 70, 9f, 96, 98.

9 Manz, *The Rise and Rule of Tamerlane*, p. 69.

10 Mirza Muhammad Haidar Dughlat, *Tarikh-i-Rashidi*, vol. I (New Delhi, 1998), pp. 51–57, also the Introduction p. 101.

11 Khwandamir *Habibu al-Siyar*, 438–43, 446–52, 463–66, trans. pp. 243–45, 247–50, 255f; Iaroslav Lebedynsky, *La Horde d'Or* (Arles, 2013), pp. 51–54; Roemer, 'Timur in Iran', pp. 72f; Bertold Spuler, *Die Goldene Horde* (Leipzig, 1943), pp. 129–34; István Vásáry, 'The Jochid Realm' (Cambridge, 2009), pp. 83f.

12 Miran Shah killed the last Kartids at a banquet in 1396: Roemer, 'Timur in Iran', p. 48. Marozzi gives as date 1389: Marozzi, *Tamerlane*, p. 117.

13 Khwandamir, *Habibu al-Siyar*, vol. II, 443, trans. p. 245; Roemer, 'Timur in Iran', p. 61.

14 Ibn Arabshah, *Tamerlane*, pp. 45f.

15 Johannes Schiltberger, *Bondage and Travels of Johann Schiltberger in Europe, Asia and Africa, 1396–1427*, trans. from the Heidelberg MS ed. in 1859 by K. F. Neumann; J. B. Telfer (London, 1879), p. 22.

16 Roemer, 'Timur in Iran', pp. 55f.

17 Khwandamir, *Habibu al-Siyar*, vol. II, 478, trans. p. 262; Marozzi, *Tamerlane*, pp. 236–74; H. R. Roemer, 'Timur in Iran', p. 70.

18 Khwandamir emphasises that in Sivas only Christians were buried alive: Khwandamir, *Habibu al-Siyar*, vol. II, 491, trans. pp. 268. Schiltberger speaks of 5,000 prisoners buried alive: Schiltberger, *Bondage and Travels,* p. 20.

19 Walter J. Fischel, *Ibn Khaldun and Tamerlane: Their Historic Meeting in Damascus, 1401 AD (803 AH)* (Berkeley, 1952), p. 39. See also Ibn Arabshah, *Tamerlane*, pp. 158f; Ibn Khaldûn, *Le Voyage d'Occident et d'Orient* (Paris, 1980), p. 236; Fischel, *Ibn Khaldun and Tamerlane*, p. 39; Scott Levi and Ron Sela, *Islamic Central Asia: An Anthology of Historical Sources* (Bloomington, 2010), pp. 171–75. According to Khwandamir, who was very well-disposed to Timur, the burning down of Damascus was an accident: Khwandamir, *Habibu al-Siyar*, vol. II, 498, trans. p. 271.

20 Ibn Arabshah, *Tamerlane*, pp. 167f. In Khwandamir, Timur is said to have demanded 'only' one decapitated head of each soldier: Khwandamir, *Habibu al-Siyar*, 500, trans. p. 273. Despite all these massacres, Timur-e Lang is a national hero in today's Uzbekistan, as is Genghis Khan in Mongolia.

21 Clavijo, *Narrative,* Introduction, pp. iif, 4f; Khwandamir, *Habibu al-Siyar*, 508f, trans. pp. 276f.

22 Ibn Arabshah, *Tamerlane*, pp. 176–212.

X. Outlook

1 George N. Curzon, *Russia in Central Asia in 1889 and the Anglo-Russian Question* (London, 1889), pp. 85f.

2 The semi-nomadic Zunghars tried in the seventeenth and eighteenth centuries to adapt to modern warfare by using camel-based artillery: they loaded light field cannons between the humps of camels and fired them while the animal was crouching.

3 In Kazakhstan, former First Secretary of the CP Nursultan Nazarbayev has served as president since 24 April 1990 and in Uzbekistan, former First Secretary of the CP Islom Karimov has been president since 29 December 1991. In Turkmenistan, former First Secretary of the CP Saparmurat Niyazov became president on 27 October 1991 and one year later declared himself *Türkmenbashi*, ‘Leader of all Turkmen’. He died in office on 21 December 2006 or a few days earlier. In Tajikistan, the former First Secretary of the CP Qahhor Mahkamov was President only from 30 November 1990 to 31 August 1991 and in Kyrgyzstan, the First Secretary of the CP Absamat Masaliyev lost the presidential elections on 25 October 1990 to Askar Akayev, who was elected two days later.

28 Translations of the Mongol text of this and similar paizas in English and German works are often wrong since they interpret the Mongolian monqa qa'an as 'Möngke Khan'. But since the 'square' Mongol script was not introduced until 1269, when Möngke Khan had already been dead for ten years, this interpretation is clearly wrong. That one of his successors would have issued an official document in the name of a deceased predecessor can be excluded. As Dr. Banzarov pointed out already in 1955, monqa does not refer to the name of the khan here, who died in 1259, but means 'eternal'.
